Citation and commencement

This planning scheme may be cited as the Townsville City Plan.

A notice was published in the Government Gazette No. 37 on 17 October, 2014 for the planning scheme for the City of Townsville.

The commencement date for the planning scheme was 27 October, 2014.

The Townsville City Plan was amended for alignment with the *Planning Act 2016* (the Act) by the Minister's rules under section 293 of the Act on 27 June 2017.

Amendments to the planning scheme are included at Appendix 2.

Strategic vision

In 2021, our community will be defined by the statement:

Townsville is the northern gateway to Queensland. Our well-built city connects people to their community, via an active lifestyle that is enjoyed by all who live and visit. We are leaders of positive environmental action. We are acclaimed for our business entrepreneurship, government enterprise, innovation, technology and cultural stewardship.

Four Community Plan themes expand on this vision statement:

Strong, connected community
A community that draws on the diversity, skills and expertise of residents to build a community that has pride in its culture and lifestyle.

Environmentally sustainable future
Our community recognises and values the natural environment. We acknowledge the need for a more sustainable future and seek to achieve this through solutions that minimise our impact on the environment.

Sustaining economic growth
The community recognise that it is fundamental to have a strong and balanced economic growth in order to enhance our city's way of life.

Shaping Townsville
Our city will meet the diverse and changing infrastructure and service needs of the community.

(Leading, creating, connecting: shaping a place to be proud of, Townsville Community Plan 2011-2021)

Editor's note—The Strategic vision is extrinsic material to the planning scheme.

Part 1 About the planning scheme

1.1 Introduction

(1) The Townsville City Plan (planning scheme) has been prepared in accordance with the *Sustainable Planning Act 2009* (the SP Act) as a framework for managing development in a way that advances the purpose of the SP Act.

(2) The planning scheme was amended for alignment with the *Planning Act 2016* (the Act) by the Minister's rules under section 293 of the SP Act on 27 June 2017.

(3) In seeking to achieve this purpose, the planning scheme sets out Townsville City Council's intention for the future development in the planning scheme area, over the next 25 years.

(4) The planning scheme seeks to advance state and regional strategies, including state planning policies, through more detailed local responses, taking into account the local context.

(5) While the planning scheme has been prepared with a 25-year planning horizon, it will be reviewed periodically in accordance with the Act to ensure that it responds appropriately to the changes of the community at a local, regional and state level.

(6) The planning scheme applies to the planning scheme area of Townsville City Council including all premises, roads, internal waterways and interrelates with the surrounding local government areas illustrated in Map 1.

Editor's note—In accordance with section 5(2)(a) of the Planning Regulation 2017, the regulated requirements apply to this planning scheme only where specifically identified as regulated requirements in the section containing the administrative definition for minor building work.

Editor's note—Areas which are not subject to the jurisdiction of the planning scheme are noted in the relevant zone codes in Part 6. They include the Department of Defence Estate, strategic port land and certain other major land holdings. In addition, land subject to a community infrastructure designation is listed in Schedule 5.

Editor's note—Under section 26 of the *Sustainable Ports Development Act 2015*, a master plan and port overlay may apply to Port of Townsville land outside designated areas of strategic port land. Where there is a port overlay, it prevails over the planning scheme, to the extent of any inconsistency.

Map 1 - Local government planning scheme area and context

1.2 Planning scheme components

(1) The planning scheme comprises the following components:

- (a) about the planning scheme;
- (b) state planning provisions;
- (c) the Strategic framework;
- (d) the Local government infrastructure plan;
- (e) tables of assessment;
- (f) the following zones:
  - (i) Low density residential zone:
    - (A) Ross River Road corridor precinct;
    - (B) Stables precinct;
    - (C) Marlow Street precinct;
  - (ii) Medium density residential zone:
    - (A) Thuringowa South precinct;
    - (B) Thuringowa East precinct;
    - (C) Rossiter Park precinct;
    - (D) Aitkenvale medium density precinct;
    - (E) Aitkenvale village precinct;
    - (F) Hyde Park medium density precinct;
    - (G) Kings Road medium density precinct;
    - (H) The Strand precinct;
    - (I) North Ward gateway precinct;
    - (J) North Ward villages precinct;

(K) North Ward medium density precinct;

(L) Magnetic Island medium density precinct;

(M) Picnic Bay precinct;

(N) Nelly Bay tourist precinct;

(O) Wills Street precinct;

(iii) High density residential zone:

(A) Palmer Street precinct;

(B) Flinders Street West precinct;

(C) Railway Estate precinct;

(iv) Rural residential zone;

(v) Character residential zone:

(A) 1950s Post War Expansion precinct;

(B) 1960s Defence Housing and 1960s Housing Commission precinct;

(C) Worker's Cottages precinct;

(D) South Townsville precinct;

(E) Queenslanders precinct;

(F) Interwar Gables and Queensland Bungalows precinct;

(G) Interwar to 1950s Asymmetrical Gables precinct;

(H) Churchill Street precinct;

(I) Park Street precinct;

(J) Grand Queenslanders precinct;

(K) French Street precinct;

(L) Mixed 1950s precinct;

(vi) Neighbourhood centre zone;

(vii) Local centre zone:

(A) Rising Sun local centre precinct;

(B) North Ward local centre precinct;

(viii) District centre zone:

(A) Idalia district centre precinct;

(B) Annandale district centre precinct;

(C) Deeragun district centre precinct;

(D) Rasmussen district centre precinct;

(ix) Major centre zone:

(A) Aitkenvale major centre precinct:

Aitkenvale centre core sub-precinct;

Aitkenvale centre frame sub-precinct;

(B) Thuringowa Central major centre precinct:

Thuringowa town centre heart sub-precinct;

Willows sub-precinct;

Thuringowa Drive sub-precinct;

Thuringowa centre support sub-precinct;

(C) Hyde Park major centre precinct;

(x) Principal centre (CBD) zone:

(A) Civic and administration precinct;

(B) Flinders Street retail precinct;

(C) Flinders Street East precinct;

(xi) Specialised centre zone:

(A) Townsville Airport precinct;

(B) Port of Townsville precinct;

(C) Lavarack Barracks precinct;

(D) Domain Central precinct;

(E) Fulham Road medical precinct;

(F) Bayswater Road medical precinct;

(G) James Cook University-Townsville Hospital precinct:

Discovery Central sub-precinct;

Discovery Village sub-precinct;

(xii) Mixed use zone:

(A) Magnetic Island villages precinct:

Nelly Bay sub-precinct;

Picnic Bay sub-precinct;

Horseshoe Bay sub-precinct;

(B) Nelly Bay gateway precinct;

(C) Arcadia Central precinct;

(D) Kirwan Traders precinct;

(E) Charters Towers Road business precinct;

(F) CBD gateway precinct;

(G) South Townsville Railyards and Dean Park precinct;

(H) Wotton Street precinct;

(I) Breakwater precinct;

(J) King Street quarter precinct;

(K) King Road precinct;

(xiii) Sport and recreation zone:

(A) Balgal Beach golf course precinct;

(B) Cluden precinct;

(xiv) Open space zone:

(A) Riverway precinct;

(xv) Community facilities zone:

(A) Picnic Bay community facilities precinct;

(xvi) Environmental management and conservation zone;

(xvii) Low impact industry zone:

(A) Nelly Bay low impact industry precinct;

(xviii) Medium impact industry zone:

(A) Roseneath medium impact industry precinct;

(xix) High impact industry zone;

(xx) Rural zone:

(A) Horticulture precinct;

(B) Mixed farming precinct;

(C) Grazing precinct;

(D) Cungulla precinct;

(E) Jensen precinct;

(xxi) Emerging community zone;

(A) Burdell precinct;

(xxii) Special purpose zone;

(g) the following overlays:

(i) Airport environs overlay;

(ii) Bushfire hazard overlay;

(iii) Coastal environment overlay;

(iv) Cultural heritage overlay;

(v) Extractive resources overlay;

(vi) Flood hazard overlay;

(vii) Landslide hazard overlay;

(viii) Natural assets overlay;

(ix) Water resource catchment overlay;

(h) the following development codes:

(i) Advertising devices code;

(ii) Healthy waters code;

(iii) Landscape code;

(iv) Reconfiguring a lot code;

(v) Telecommunications facilities and utilities code;

(vi) Transport impact, access and parking code;

(vii) Works code;

(i) the following other plans:

(i) Oonoonba development scheme; and

(ii) Townsville City Waterfront Priority Development Area;

(j) schedules and appendices.

(2) The following planning scheme policies support the planning scheme:

(a) SC6.1 Planning scheme policy index;

(b) SC6.2 Character residential planning scheme policy;

(c) SC6.3 Cultural heritage planning scheme policy;

(d) SC6.4 Development manual planning scheme policy;

(e) SC6.5 Economic impact assessment planning scheme policy;

(f) SC6.6 Emerging community planning scheme policy;

(g) SC6.7 Flood hazard planning scheme policy;

(h) SC6.8 Mitigating bushfire hazards planning scheme policy;

(i) SC6.9 Natural assets planning scheme policy;

(j) SC6.10 Parking rates planning scheme policy.

1.3 Interpretation

1.3.1 Definitions

(1) A term used in the planning scheme has the meaning assigned to that term by one of the following:

(a) the *Planning Act 2016* (the Act)

(b) the Planning Regulation 2017 (the Regulation)

(c) the definitions in Schedule 1 of the planning scheme

(d) the *Acts Interpretation Act 1954*

(e) the ordinary meaning where that term is not defined in any of the above.

(2) In the event a term has been assigned a meaning in more than one of the instruments listed in sub-section 1.3.1(1), the meaning contained in the instrument highest on the list will prevail.

(3) A reference in the planning scheme to any act includes any regulation or instrument made under it, and where amended or replaced, if the context permits, means the amended or replaced act.

(4) A reference in the planning scheme to a specific resource document or standard, means the latest version of the resource document or standard.

(5) A reference to a part, section, table or schedule is a reference to a part, section, table or schedule of the planning scheme.

Editor's note—In accordance with section 5(2)(a) of the Planning Regulation 2017, the regulated requirements apply to this planning scheme only where specifically identified as regulated requirements in the section containing the administrative definition for minor building work.

1.3.2 Standard drawings, maps, notes, editor's notes and footnotes

(1) Standard drawings contained in codes or schedules are part of the planning scheme.

(2) Maps provide information to support the outcomes and are part of the planning scheme.

(3) Notes are identified by the title 'note' and are part of the planning scheme.

(4) Editor's notes and footnotes are extrinsic material, as per the *Acts Interpretation Act 1954*, and are identified by the title 'editor's note' and 'footnote' and are provided to assist in the interpretation of the planning scheme; they do not have the force of law.

Note—This is an example of a note.

Editor's note—This is an example of an editor's note.

Footnote[1]—Footnote—This is an example of a footnote.

1.3.3 Punctuation

(1) A word followed by ';' or ', and' is considered to be 'and'

(2) A word followed by '; or' means either or both options can apply.

1.3.4 Zones for roads, closed roads, waterways and reclaimed land

(1) The following applies to a road, closed road, waterway or reclaimed land in the planning scheme area:

(a) if adjoined on both sides by land in the same zone—the road, waterway or reclaimed land is in the same zone as the adjoining land;

(b) if adjoined on one side by land in a zone and adjoined on the other side by land in another zone—the road, waterway or reclaimed land is in the same zone as the adjoining land when measured from a point equidistant from the adjoining boundaries;

(c) if the road, waterway or reclaimed land is adjoined on one side only by land in a zone—the entire waterway or reclaimed land is in the same zone as the adjoining land;

(d) if the road, waterway or reclaimed land is covered by a zone then that zone applies.

Editor's note—The boundaries of the local government area are described by the maps referred to within the *Local Government Regulation 2012*.

1.4 Categories of development

(1) The categories of development under the Act are:

(a) accepted development

Editor's note—A development approval is not required for development that is accepted development. Under section 44(6)(a) of the Act, if a categorising instrument does not apply a category of development to a particular development, the development is accepted development. Schedule 7 of the Regulation also prescribes accepted development.

(b) assessable development

i. code assessment

ii. impact assessment

Editor's note—A development approval is required for assessable development. Schedules 9, 10 and 12 of the Regulation also prescribe assessable development..

(c) prohibited development

Editor's note—A development application may not be made for prohibited development. Schedule 10 of the Regulation prescribes prohibited development.

(2) The planning scheme also states the category of development for certain types of development, and specifies the category of assessment for assessable development in the planning scheme area in Part 5.

Editor's note—Section 43 of the Act identifies that a categorising instrument categorises development and specifies categories of assessment and may be a regulation or local categorising instrument. A local categorising instrument includes a planning scheme, a TLPI or a variation approval.

1.5 Hierarchy of assessment benchmarks

(1) Where there is inconsistency between provisions within the planning scheme, the following rules apply:

(a) relevant codes specified in schedules 6 and 10 of the Regulation prevail over all other components to the extent of the inconsistency;

(b) the strategic framework prevails over all other components to the extent of the inconsistency for impact assessment;

(c) overlays prevail over all other elements (other than the matters mentioned in (a) and (b)) to the extent of the inconsistency;

(d) zone codes prevail over use codes and other development codes to the extent of the inconsistency;

(e) provisions of Part 10 may override any of the above.

1.6 Building work regulated under the planning scheme

(1) Section 17(b) of the Regulation identifies that a local planning instrument must not be inconsistent with the effect of the building assessment provisions stated in the *Building Act 1975*.

(2) The building assessment provisions are listed in section 30 of the *Building Act 1975*.

Editor's note—The building assessment provisions are stated in section 30 of the *Building Act 1975* and are assessment benchmarks for the carrying out of building assessment work or building work that is accepted development subject to any requirements (see also section 31 of the *Building Act 1975*).

(3) This planning scheme, through Part 5, regulates building work in accordance with sections 32 and 33 of the *Building Act 1975*.

Editor's note—The *Building Act 1975* permits planning schemes to:

- regulate, for the *Building Code of Australia* (BCA) or the *Queensland Development Code* (QDC), matters prescribed under a regulation under the *Building Act 1975* (section 32). These include variations to provisions contained in parts MP1.1, MP1.2 and MP1.3 of the QDC such as heights of buildings related to obstruction and overshadowing, siting and design of buildings to provide visual privacy and adequate sight lines, on-site parking and outdoor living spaces. It may also regulate other matters, such as designating land liable to flooding, designating land as bushfire prone areas and transport noise corridors.
- deal with an aspect of, or matter related or incidental to building work prescribed under a regulation under section 32 of the *Building Act 1975*;
- specify alternative boundary clearances and site cover provisions for Class 1 and 10 structures under section 33 of the *Building Act 1975*.

Refer to Schedule 9 of the Regulation to determine assessable development, the type of assessment and any referrals applying to the building work.

(4) The building assessment provisions and designations in the planning scheme are contained in Table 1.6.1.

Table 1.6.1 Designations and Building assessment provisions in the planning scheme for the purpose for the *Building Act 1975*:

Description of designation and Building assessment provisions	Planning Scheme Part	*Building Act 1975* (BA), *Building Regulation* (BR) *2006* or *Queensland Development Code* (QDC) Reference
Bushfire Prone Areas		
Designated bushfire prone area	Schedule 2 – Development constraints overlay map OM-02 (Bushfire hazard)	Section 32(a) BA and section 12 BR; QDC MP 2.4 – Construction in Bushfire Prone Areas; and AS 3959-2009
Flood hazard **Note-** In accordance with section 13 (2) of the *Building Regulation 2006*, the following designation is made under section 13 of the *Building Regulation 2006* for the Flood hazard area in the Townsville City Plan (planning scheme).		
Flood hazard area **Note-** In accordance with section 13 (4) of the *Building Regulation 2006*, the Flood hazard area was designated on 27 October 2014.	Schedule 2 – Development constraints overlay map OM-06.1 and OM-06.2 (Flood hazard)	Section 32(a) BA and section 13(1)(a) BR; and QDC MP 3.5 – Construction of buildings in flood hazard areas
Defined flood level (DFL)	Schedule 1, Table SC1.2.2 Administrative Definitions "defined flood level' and Table 8.2.6.3(a) Flood overlay code, Editor's Note, PO1 and PO4	Section 32(a) BA and section 13(1)(b)(i) BR; and QDC MP 3.5 – Construction of buildings in flood hazard areas
The finished floor level of class 1 buildings built in all or part of the flood hazard area	Table 8.2.6.3(a) Flood hazard overlay code	Section 32(a) BA and section 13(1)(b)(v) BR; and QDC MP 3.5 – Construction of buildings in flood hazard areas
Transport Noise Corridors		
Designated Transport Noise Corridor (State Controlled Road and railway land) **Editor's note**-for the purposes of the *Building Act 1975* and application of the *Queensland Development Code* in relation to declaration of local government transport noise corridors, the planning scheme has not declared such transport noise corridors.	Schedule 2 – Infrastructure overlay map OM-10 (Noise corridors)	Section 246Z and s246ZA(3) BA; Section 32(b) BA; and QDC MP 4.4 – Buildings in a transport noise corridor
Character Residential Zone		
Building assessment provisions – regulated building work in accordance with sections 32 and 33 of the *Building Act 1975*	Character Residential Zone **Editor's note**—This code contains alternative provisions for dwelling houses and dual occupancies to those set out in the *Queensland Development Code* (MP 1.1, MP 1.2 and MP1.3) , for the purposes of section 33 of the *Building Act 1975* .	Sections 32 and 33 BA

Editor's note—A decision in relation to building work that is assessable development under the planning scheme can only be issued as a preliminary approval. See section 83(b) of the *Building Act 1975*.

Editor's note—In a development application, the applicant may request preliminary approval for building work. The decision on that development application can also be taken to be a referral agency's response under section 56 of the Act, for building work assessable against the *Building Act 1975*. The decision notice must state this.

1.7 Local government administrative matters

1.7.1 Declared Mall

(1) A Declared Mall, under section 80A of the *Local Government Act 2009*, exists in the Townsville Local Government Area. The Declared Mall was established by council resolution on 9 June 2011. The Declared Mall is established on Stokes Street, between Flinders Street and Ogden Street.

1.7.2 Declared locality and building form for amenity and aesthetic referral agency assessment

For the purpose of Schedule 9, of the Planning Regulation, building work for a building or structure which is a single detached class 1(a)(i) building, class 1(a)(ii) building comprising not more than 2 attached dwellings or a class 10 building or structure in a locality identified in Table 1.7.2 that does not comply with the relevant QDC acceptable solutions or the acceptable outcomes in the codes identified in Table 1.7.2, is declared to:

(a) have an extremely adverse effect on the amenity or likely amenity of the locality; or

(b) be in extreme conflict with the character of the locality

1.7.2 Declared locality and building form for amenity and aesthetic referral agency assessment

Locality	Codes
Land in the Character residential zone	Character residential zone code
Land in the Flood hazard overlay	Flood hazard overlay code
Land in the Coastal protection overlay	Coastal hazard protection overlay code
Land in the Cultural heritage overlay	Cultural heritage overlay code

Part 2 State planning provisions

2.1 State planning policy

The Minister has identified that the state planning policy July 2014 is integrated in the planning scheme in the following ways:

State interests in the state planning policy appropriately integrated
All

State interests in the state planning policy not integrated
None

State interests in the state planning policy not relevant to Townsville City Council
None

Editor's note–In accordance with section 8(4)(a) of the Act the State Planning Policy applies to the extent of any inconsistency.

2.2 Regional plan

There was no regional plan relevant to the planning scheme area on commencement of the planning scheme.

Editor's note–Schedule 1 of the Regulation identifies the North Queensland region which was declared 8 July 2016.

2.3 Referral agency delegations

Schedule 10 of the Regulation identifies referral agencies for certain aspects of development. The following referral agencies have delegated the following referral agency jurisdictions to Townsville City Council:

Table 2.3.1 - Delegated referral agency jurisdictions

Column 1 **Application involving**	**Column 2** **Referral agency and type**	**Column 3** **Referral jurisdiction**
None	None	None

Editor's note—For the above listed referral agency delegations the applicant is not required to refer the application to the referral agency listed under Schedule 10 of the Regulation because the local government will undertake this assessment role.

2.4 Regulated requirements

The following regulated requirements prescribed in the Planning Regulation 2017 dated 3 July 2017 are appropriately reflected in the planning scheme.

- Administrative definition for Minor Building Work

Editor's note—Otherwise the planning scheme complies with QPPV 4 and does not apply any other aspects of the regulated requirements.

Part 3 Strategic framework

3.1 Preliminary

(1) The strategic framework sets the policy direction for the planning scheme and forms the basis for ensuring appropriate development occurs within the planning scheme area for the life of the planning scheme.

(2) Mapping for the strategic framework is included in Part 3 and Schedule 2.

(3) For the purpose of describing policy direction for the planning scheme, the strategic framework is structured in the following way:

- (a) the strategic intent;
- (b) the following four themes that collectively represent the policy intent of the scheme:
  - (i) Shaping Townsville;
  - (ii) Strong, connected community;
  - (iii) Environmentally sustainable future;
  - (iv) Sustaining economic growth;
- (c) the strategic outcomes proposed for development in the planning scheme area for each theme;
- (d) the elements that refine and further describe the strategic outcomes;
- (e) the specific outcomes sought for each, or a number of, elements;
- (f) the land use strategies for achieving these outcomes.

(4) Although each theme has its own section, the strategic framework in its entirety represents the policy intent for the planning scheme.

Editor's note—The planning scheme has adopted a 25-year planning horizon. However, the planning scheme itself (as a statutory document) is likely to have an operational life of up to 10 years before it is substantively reviewed.

3.2 Strategic intent

3.2.1 Townsville today

Townsville is on the cusp of significant growth and change. It is already the largest city in Queensland outside the south-east. Its population of around 190,000 in 2011 is set to grow to between 270,000 and 300,000 people by 2031.

Townsville is the major economic and service centre for North Queensland. It is the primary port and freight hub, particularly for the agricultural areas of the surrounding region and for the North West minerals province. It provides the highest order community and commercial services for the region, including health and education facilities which serve the whole of North and North West Queensland. As a consequence of its strategic regional position, Townsville enjoys a diverse economic base, with strong projected growth (Figure 3.1 – Regional context plan).

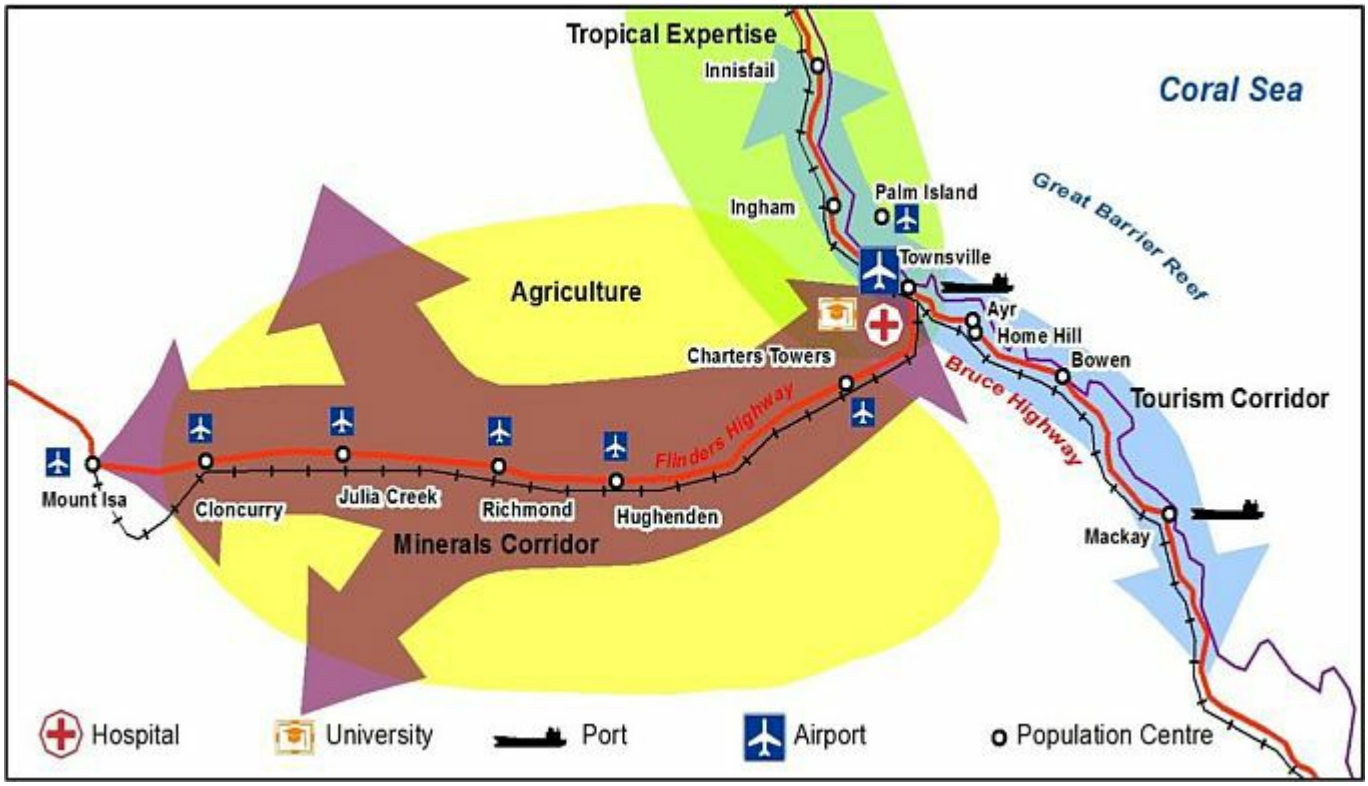

Figure 3.1 – Regional context plan

Townsville is a bioregional junction for the Wet Tropics, Brigalow Belt and Einsleigh Uplands bioregions. In addition, the region includes the UNESCO World Heritage-listed Great Barrier Reef and Wet Tropics as well as the Ramsar-listed Bowling Green Bay wetlands. Townsville's geographic location, tropical climate and unique environmental features are part of what makes Townsville a great place to live and underpins the region's economy.

3.2.2 A second capital for Queensland

Townsville will continue to evolve as the second capital of Queensland and the largest city in Northern Australia. Statewide growth, a focus on regional development and the potential for decentralisation policies will contribute to the city's increasing significance.

This enhanced role is reflected in significant growth in the city's economy, population and cultural status. Planning, new development and infrastructure investment are part of this evolution.

The increasing sustainability of the city and the protection of its natural assets will be key hallmarks of Townsville's growth and development.

3.2.3 Strong and connected community

As the Townsville Community Plan explains, a strong and connected community is cohesive even when people come from diverse backgrounds and abilities. It is a community that is safe and feels safe, enjoys sport and recreation activities, has a say in decision making including planning, and has pride in its culture and lifestyle.

Development, including buildings, streets and public spaces will be well-designed and contribute to the creation of exceptional places within the city. High-quality public spaces will be created to optimise community interaction. Good design also means places will feel safe.

Townsville's open space network will meet the community's needs and integrate with the natural landscape without compromising environmental and hydrological values. An emphasis on co-location and consolidation of sports and community activities will be followed, to best utilise resources.

Magnetic Island, Castle Hill, Mount Stuart, Mount Louisa, Mount Elliot, the Pinnacles, Cape Pallarenda, the Town Common and Cape Cleveland are some of the best known natural features of Townsville. The scenic amenity of such places is to be maintained.

The many small townships around Townsville, including Magnetic Island, Paluma and the beach communities north of

Black River, continue to be enjoyed and appreciated for their special attributes. Substantial changes to the function, scale and character of these communities are not anticipated.

3.2.4 Environmentally sustainable future

Townsville is a biodiverse city with unique tropical landscapes and interconnected areas of high environmental significance. Townsville has some internationally recognised iconic environmental features such as the Great Barrier Reef (including, significantly, Magnetic Island) and Wet Tropics UNESCO World Heritage-listed areas and the Bowling Green Bay Ramsar wetlands as well as national, state and regionally significant environmental features.

Natural areas also underpin Townsville's character and identity and provide the basis for its economic prosperity. Significant landscape values are associated with the coast, the islands, rural areas and elevated, vegetated mountains and ranges. The urban area is defined by prominent natural landscape features such as Castle Hill, Mount Louisa, Mount Stuart, the Town Common, the coastline and the Ross River and Bohle River corridors.

An environmentally sustainable future requires strong and connected biological communities and fully functioning ecological processes. This will provide for a more robust and resilient landscape capable of withstanding minor and even extreme natural disturbances.

New development, including the growth of the city broadly, will protect the integrity of these natural assets and environmental values. The shape of the city has been determined in part to avoid expansion into sensitive and vulnerable areas and corridors.

The significant ecological, landscape and recreation values of Magnetic Island will be protected, including:

- the bold and dramatic landscape of rocky headlands and vegetated ridges;
- the secluded and natural sandy beaches;
- the natural character of the settled bays created by unbroken tree canopies and prominent fringe of coastal vegetation;
- the environmental parks and reserves, including the nationally significant Magnetic Island National Park and foreshore reserves such as Picnic Bay, Nelly Bay, Alma Bay, Geoffrey Bay and Horseshoe Bay;
- the high-value habitats, sensitive marine environments, including the fringing reef and middle reef; and
- the World Heritage values of the Great Barrier Reef.

Fragmentation, loss of habitat and other impacts of development (for example on hydrological regimes, water quality and spread of pest species), will be avoided. In areas where development is intended to occur, impacts will be minimised and mitigated. The ecosystem services provided by these natural assets and their importance in building resilience to the impacts of climate change are recognised and are to be protected.

Exposure of communities to natural hazards, such as bushfire, landslide, flood and coastal risks such as storm surge and sea level rise, will be avoided wherever possible.

3.2.5 Shaping Townsville

To house Townsville's growing population, about 45,000 new homes will be needed over the next 25 years. New and expanded workplaces, shops and all the other activities associated with modern life will be needed in equal measure. This growth needs to be accommodated in a sustainable city form and through the creation of a series of great places within the city.

As the population grows so will its makeup change. Average ages are increasing and the typical household is reducing in size. By 2031, couple-only families are expected to be the dominant household type in Townsville. These changes mean that more housing options are needed in the future. There is also a need to facilitate affordable housing types in locations that support affordable living.

Whether traditional detached homes, inner city apartments or something in between, choice is needed to provide the lifestyle options that residents expect in a capital city, as well as options that everyone can afford. While detached houses will continue to be the most common housing option in Townsville's new and existing areas, about one third of new dwellings need to be smaller and in the form of townhouses or apartments, in order to meet these overall community needs, preferences and budgets.

A cornerstone of Townsville's evolution will be the revitalisation of the central business district (CBD) into a more vibrant and cosmopolitan place. The CBD will re-establish itself as the heart of the city, and attract the greatest investment in a diverse range of city uses, including residential. The CBD will be a great destination for the community and visitors.

The emphasis on the CBD as the city's principal centre is part of a broader strategy to make Townsville a more compact city, structured around a network of activity centres. Major centres at Aitkenvale, Thuringowa Central and Hyde Park, and new centres at Burdell and Julago, will be economic and community hubs. Over time, mixed use development within these centres will broaden their function beyond shopping to become great places to live, work, access services and recreate. New infill residential development will underpin these changes, comprising about a fifth of the city's residential growth to 2031. Similar changes at smaller scales – in keeping with an established activity centres hierarchy - will be promoted at other district, local and neighbourhood centres around the city.

All these changes will help sustain an enhanced public and active (walking and cycling) transport network over time. In particular, Ross River Road will become an initial focus for public transport linking the CBD, Aitkenvale and Thuringowa Central major centres and the James Cook University-Townsville Hospital precinct.

Inner urban lifestyles and sustainable built forms will be supported by green spaces and public places in the city's activity centres. Wherever possible, these spaces will connect with the wider open space network.

New communities at Burdell, Shaw, Cosgrove and Julago will emerge within the designated urban areas of Townsville. These places will be well-connected to the rest of the city and will boast ample local services and jobs, while protecting important natural assets.

A large majority of residential growth will continue to be implemented through greenfield development. Similar to infill areas, a mix of dwelling types will be provided in greenfield developments to meet existing and future community needs.

This planning scheme designates sufficient land supply for future greenfield development, well beyond the requirements of the next few decades. The city will not grow outwards beyond the areas designated in the foreseeable future. This will avoid further encroachment on natural assets and vulnerable coastal areas. The focus on infill development and major greenfield communities will also concentrate infrastructure investment, costing less than continued outwards growth in many directions. The Local Government infrastructure plan (Part 4) is based on this approach. Overall, this will help support a more sustainable Townsville.

Similarly, substantial lands have been allocated for rural residential development. Rural residential areas provide for semi-rural lifestyles, but no additional land for rural residential development beyond what is allocated in this planning scheme is intended.

Older suburbs will not experience substantial change. However, some new housing options in accessible locations are intended, allowing residents to continue to live in their neighbourhood as they age or their housing needs change.

The particular character of special neighbourhoods will remain identifiable and intact. Places of indigenous and non-indigenous cultural heritage are also protected.

The shape of the city will be such that an effective public transport system, focussed on the CBD and activity centres, can be achieved. Greater transport choice, beyond solely the car, is a goal of this planning scheme. Walking and cycling options will be enhanced through new development and new infrastructure investment. National, state and regional road, rail, sea and air freight networks are also identified, their prospects enhanced, and their future use protected from incompatible development.

3.2.6 Sustaining economic growth

Townsville has a diverse and healthy economy. This is driven by population growth, by the traditionally strong defence, port and transport sectors and by Townsville's regional position as the capital of North Queensland and transport hub for the North West minerals province and North Queensland agricultural sector.

Strategic transport links, a skilled workforce and an attractive lifestyle, the metals manufacturing cluster and the presence of major institutions creating capacity for a knowledge-based economy, all provide Townsville's primary

competitive strengths. Revitalisation of the CBD, and improving links between key economic precincts in the city, are also important opportunities to attract investment. The importance of the city's natural environment and attractive lifestyle in underpinning its attractiveness to business investment is also recognised.

Growth is anticipated in transport, storage and logistics industries, manufacturing (metals, food and beverage), defence, the knowledge economy (including education and research), the aviation industry, health, professional services, building and building supplies and tourism. Further economic growth in these and other sectors is required to maintain quality of life for the city's residents. About 50,000 new jobs are required by 2031.

Townsville's key productive precincts needed to accommodate much of this growth include:

- the CBD;
- Port of Townsville, Stuart industrial precinct and Townsville State Development Area;
- James Cook University-Townsville Hospital;
- Lavarack Barracks and other Department of Defence landholdings;
- Townsville Airport and RAAF Base Townsville; and
- Thuringowa Central, Aitkenvale and Hyde Park major centres.

In planning for industrial land, twin strategies are being pursued. Consolidation is promoted in existing industrial areas like Shaw Road and Garbutt, while new land is also made available for industrial development at the Townsville Airport, Roseneath and the Townsville State Development Area. The significance and potential of the Townsville State Development Area is recognised. Industrial land is a valuable resource and is to be used for industrial purposes.

Industrial land, including potential future land resources at Woodstock and Bohle Plains, Department of Defence landholdings and key infrastructure corridors and facilities are to be protected from encroachment of sensitive activities.

Rural, extractive and other natural resources are also recognised as important contributors to Townsville's economy. Their continued viability is ensured and their orderly development managed.

Tourism is also a major part of the regional economy, including nature-based and eco-tourism in key tourism areas at Magnetic Island, and at a smaller scale in Paluma, Rollingstone, Balgal Beach, Toomulla, Toolakea and Saunders Beach. The CBD remains a major focus for tourism activities and infrastructure.

3.3 Theme - Shaping Townsville

Editor's note—What did the Townsville Community Plan 2011-2021 say about *Shaping Townsville*?
Our city will meet the diverse and changing infrastructure and service needs of the community.
Five guiding principles were also set out:

- *A vibrant, sustainable, connected urban form: creating places that provide for a great lifestyle.*
- *Preserve and enhance Townsville's heritage and character: the traditional character, identity and heritage of the city is retained, enhanced or complemented by development.*
- *A lively, diverse and connected city centre: Townsville's CBD will be recognised as Townsville's heart bustling with activity and creativity.*
- *Effective and adequate public infrastructure: the effective design and timely provision of adequate infrastructure will allow a growing population to enjoy a great lifestyle.*
- *Well-connected Townsville: the provision of infrastructure such as public transport, roads, walking and bike paths, communications and digital networks enables access for all in our community.*

3.3.1 Strategic outcome

(1) This planning scheme allocates land for housing, business and community uses, sufficient to meet Townsville's needs for at least 25 years.

(2) The shape of the city becomes more compact and efficient, led by intensified development in and around the principal centre (CBD) and the major activity centres at Aitkenvale, Thuringowa Central and Hyde Park. This makes public transport, walking and cycling more convenient and viable, and supports investment in community facilities and other infrastructure.

(3) A range of housing and lifestyle choices, including affordable and social housing choices, is provided in accessible and affordable locations.

(4) Limited areas for rural residential lifestyles provide residents with a semi-rural living option. These areas do not create conflicts with other rural uses, extractive industry operations or natural assets and environmental values, and do not expand further.

(5) Townsville has areas of special residential character derived primarily from their architecture. Character residential areas are identified in which character is maintained by retaining character houses and ensuring sensitive redevelopment within these streetscapes.

(6) The special character and scenic and environmental values of Magnetic Island and the small townships of Paluma and the northern beaches (Rollingstone, Balgal Beach, Toomulla, Toolakea and Saunders Beach) are protected. These townships do not expand or accommodate any significant additional growth.

(7) The history of Townsville and its people make a major contribution to the identity of the city and its communities. The cultural heritage of Townsville is conserved for the present and future Townsville communities.

(8) The city is structured around a network of activity centres, ranging from the principal centre (CBD) to small neighbourhood centres. These activity centres are focal points for the city and its community. They accommodate the majority of future employment, community and commercial activities. Activity centres are also the focus for transport systems.

(9) A hierarchy of activity centres exists to ensure that the scale and form of development is appropriate to the location, and that the centre plays an appropriate role within the wider city. The hierarchy contributes to an efficient, well-functioning and accessible city. While the scale and form of activity centres varies, all activity centres are founded on a mix of land uses, and are supported by residential areas that enhance each centre's viability.

(10) Efficient, reliable and safe passenger and freight transport networks are provided to support the city's population and economic growth.

(11) Infrastructure and community services are provided in an efficient way and at a standard that best meets community and environmental requirements.

3.3.2 Element - City shape and housing

3.3.2.1 Specific outcomes

City shape and urban containment

(1) The growth of Townsville will occur within the city's existing urban and rural residential areas, and in areas identified for urban expansion through the Emerging community zone. Urban and rural residential development does not occur outside land identified for these purposes.

(2) On the edges of the urban area, urban uses are adequately buffered from nearby rural land and natural assets so that the productive use of rural land and ecological and biophysical processes and values are not compromised.

Infill development

Editor's note—The term "infill" refers to development within existing built up areas that generally involves higher density forms of housing.

(3) Locations for significant infill development include the principal centre (CBD) and surrounds, North Ward, and in and around the Aitkenvale, Thuringowa Central and Hyde Park major centres. This infill development will have a focus on "place making" and enhancement of the public realm. These areas will boast a wide range of housing choices, taking advantage of nearby amenities and existing or planned public transport, and creating more compact, walkable and vibrant urban neighbourhoods.

(4) Development in and around the principal centre (CBD) provides for a highly desirable inner city lifestyle. The highest and most intensive built form is focussed on the centre, framed by high-medium rise buildings. View corridors to Castle Hill along roads are maintained and access to and along Ross Creek and The Strand is maximised (Figure 3.2 – CBD and environs strategy plan).

Click here to view PDF high resolution map.

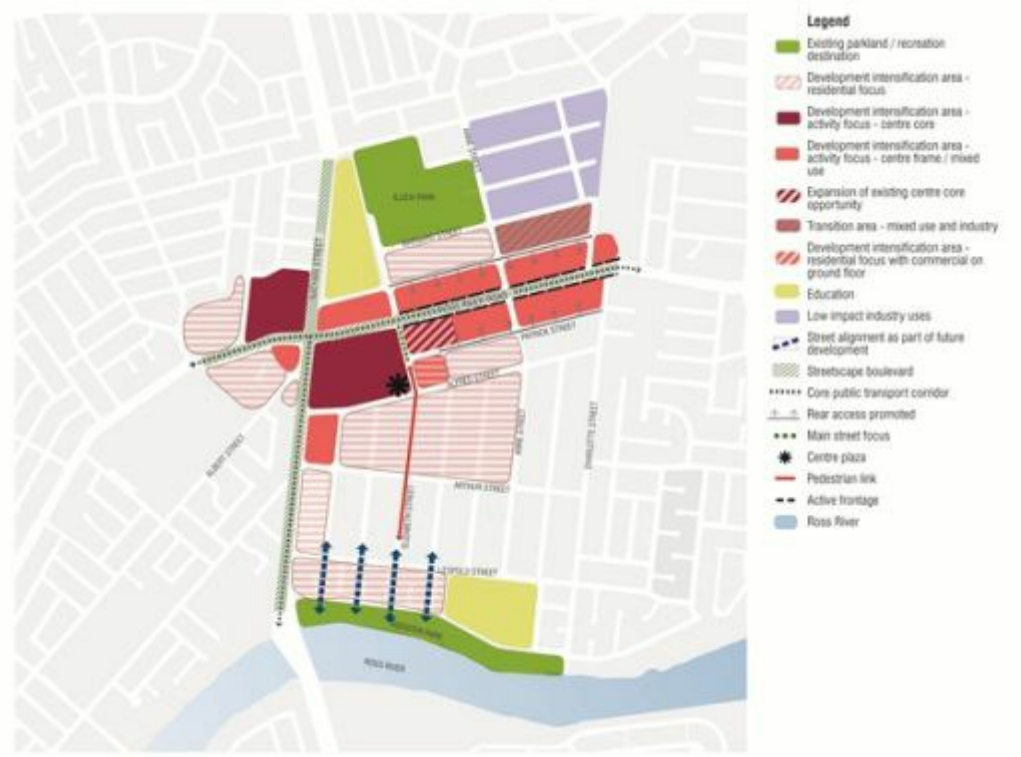
Figure 3.2 – CBD and environs strategy plan

(5) Development in North Ward facilitates medium density residential choices within a high amenity environment. Development is primarily focussed on walkable, mixed use village nodes, with a pedestrian-friendly, active frontage along The Strand. Built form reinforces gateway corridors along Gregory and Landsborough Streets, but does not intensify uses in areas subject to likely flooding or storm surge risk. Buildings exceeding 5 storeys in height do not occur in the Medium density residential zone fronting The Strand. Open space and strong visual connections are maintained between Castle Hill and The Strand (Figure 3.3 – North Ward strategy plan).

Click here to view PDF high resolution map.

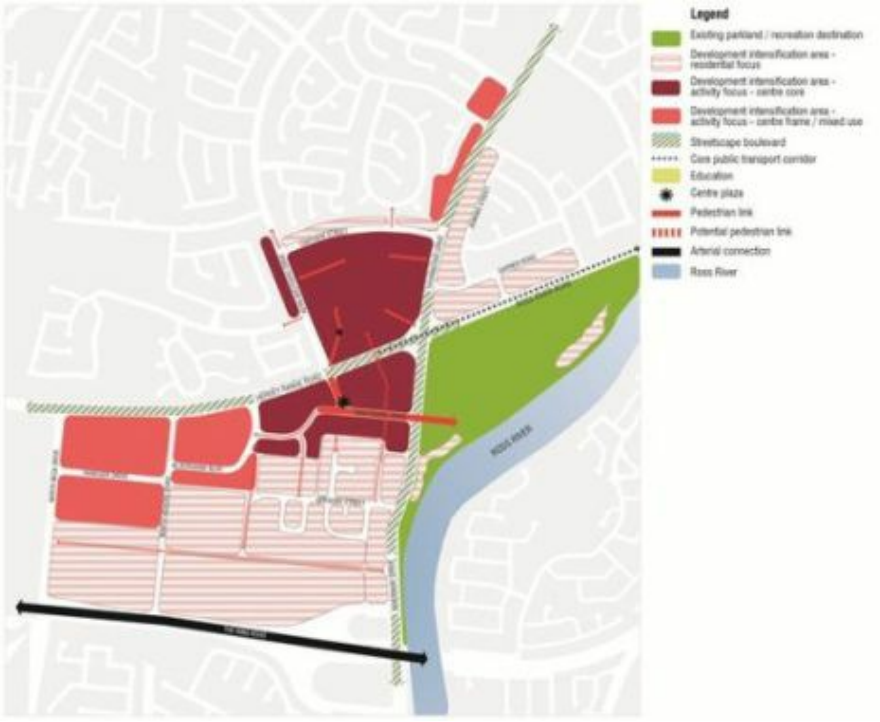
Figure 3.3 – North Ward strategy plan

(6) Development in and around the Aitkenvale, Thuringowa Central and Hyde Park major centres assists in the evolution of vibrant urban neighbourhoods. A mix of uses is established within the centres and surrounding neighbourhoods are well-connected and integrated with the centres. A strong and positive sense of place is created by the establishment of active main street environments, more outward-oriented, street-focussed shopping centres and a boulevard-like streetscape along the major roads. Medium density residential uses increasingly occur within the centres and in the precincts surrounding them. Accessibility by walking, cycling and public transport is maximised (Figure 3.4 – Aitkenvale strategy plan, Figure 3.5 – Thuringowa Central strategy plan and Figure 3.6 – Hyde Park strategy plan).



Click here to view PDF high resolution map.

Figure 3.4 - Aitkenvale strategy plan



Click here to view PDF high resolution map.

Figure 3.5 - Thuringowa Central strategy plan

Click here to view PDF high resolution map.

Figure 3.6 - Hyde Park strategy plan

(7) Outside the identified focus areas for infill development, smaller scale opportunities for greater housing choice (such as housing on smaller lots, townhouses, housing for the aged) are generally limited to locations near shops, community facilities or major streets, and avoiding Character residential zoned areas.

(8) Design of neighbourhoods, streets and buildings is appropriate for Townsville's tropical climate and facilitates sustainable built forms. Infill development is well-integrated with existing communities, infrastructure and open space.

(9) The scale of buildings is well-matched to the size of lots, allowing for primary orientation of buildings to the street and provision of open space at ground level that is appropriate to the character of the neighbourhood.

Greenfield developments

Editor's note—The term "greenfield" refers to development areas that have not previously been used for urban purposes.

(10) Greenfield developments use land and infrastructure efficiently. They accommodate a net residential density of at least 15 dwellings per hectare of land, achieved through a mix of lot sizes and house types, such as detached houses and dual occupancies, units, apartments and townhouses in appropriate locations.

(11) Greenfield developments are designed to be well-connected and easy to get around, both within their boundaries and to the rest of the city. They are planned to support sustainable lifestyles, including pedestrian and cycle transport.

(12) Design of greenfield developments will also:

- (a) provide attractive streets;
- (b) be climate responsive and sustainable;
- (c) protect significant natural assets and ecological and biophysical processes;
- (d) protect significant landscape features and areas of high scenic value;
- (e) avoid natural hazards;
- (f) provide residents with convenient and functional parks, community facilities and activity centres; and
- (g) have their own recognisable character.

Island, Beach and mountain townships

(13) Townsville's northern beach and mountain townships (Paluma, Rollingstone, Balgal Beach, Toomulla, Toolakea and Saunders Beach) do not accommodate any significant additional growth and do not expand beyond current zoned land. Urban and rural residential development is subordinate to the natural character of the townships and respects and maintains the low-rise, village character and scale.

(14) While some short-term, low-density, eco-tourism style accommodation may occur, the special character and

scenic and environmental values of these areas is protected.

(15) No further growth is anticipated in the southern beach communities of Cungulla and Cleveland Palms, which are constrained by coastal processes, the impacts of nearby extractive resources and lack of services.

(16) The character of Townsville's small communities is reflected in the small-scale, tropical architectural design elements and landscaped setting.

(17) Residential and tourist accommodation is subordinate to the conservation values on Magnetic Island. Bayside settlements at Picnic, Nelly and Horseshoe Bays and Arcadia do not expand beyond their current extent. Within these areas, a variety of housing types is provided for residents and tourists, including detached housing, low-rise multiple dwellings and accommodation buildings.

(18) Each village on Magnetic Island retains its role and sense of identity:

(a) Nelly Bay – will continue to serve as the primary service centre and gateway to the island, with tourist accommodation and centre facilities;

(b) Arcadia – will continue to serve as a predominantly residential area, with access to its own local shops, a new community hub, and some small-scale tourism accommodation;

(c) Picnic Bay – will continue to serve as a predominantly residential area, with access to its own local shops, a new community hub, and some small-scale tourism accommodation; and

(d) Horseshoe Bay – will continue to be a predominantly residential community, with some small-scale tourism accommodation and activities.

Rural residential areas

(19) Rural residential areas provide for semi-rural lifestyles in which the primary use of properties is residential, but some, generally domestic scale, rural uses occur. Activities that would significantly disrupt the amenity of these areas are not intended to occur.

(20) New rural residential development does not occur beyond those areas zoned for rural residential purposes.

(21) Rural residential development maintains the character of the area and minimises any intensification of impacts on water quality or nearby natural assets, ecological and biophysical processes, or other natural resources. Minimum lot sizes reflect the capacity of the land to assimilate the wastes produced by residents.

(22) On the edges of rural residential areas, residential uses are buffered from nearby rural land and natural assets so that the productive use of rural land and ecological and biophysical processes and values are not compromised.

(23) Rural residential areas do not offer the full range of urban services. Except in locations where sewer and water are or can be connected, new development establishes adequate on-site servicing at a standard that will not detract from neighbours' amenity, water quality or the quality of the local environment.

3.3.2.2 Land use strategies

Zoning designations closely reflect the strategic intentions regarding the extent of urban growth. Development outside these areas will not be supported.

Major greenfield areas are included in the Emerging community zone to facilitate master planning and orderly development in accordance with best practice neighbourhood planning principles for accessibility, density, land use mix, street networks and lot configuration.

Council will monitor the supply of new land for residential development to ensure at least 10 years' land supply is available and to prevent land supply placing any pressure on housing affordability.

The residential and centre zones reflect intentions for development at a range of densities. The Medium density residential and High density residential zones accommodate the city's key areas for infill development. Within these areas development is desired to capitalise on the proximity to activity centres, public transport and amenity attractors.

The Rural residential zone is used to precisely designate these areas, and the appropriate nature and intensity of development within them.

3.3.3 Element - Character and heritage

3.3.3.1 Specific outcomes

Character residential areas

(1) Townsville city contains a collection of character residential areas with different elements of importance. Common to all of these areas are:

(a) consistency in building and architectural style within a particular street or precinct of character significance; or

(b) built forms that are reflective of a period of pre-war or post-war change in Townsville.

(2) Identified character areas are protected. In these areas, contributing character buildings are retained.

(3) New development or additions and renovations to contributing character buildings within character areas are consistent with the established character in these areas, complementing traditional building elements and the scale of existing development.

Cultural heritage

(4) Development on or near places of cultural heritage significance facilitates their active use but does not detract from their heritage significance and setting, including significant views to the place.

(5) Places that have cultural heritage significance to Aboriginal or Torres Strait Islander peoples are protected. Consistent with the provisions of the *Aboriginal Cultural Heritage Act 2003*, development will take all reasonable and practicable measures to ensure Aboriginal cultural heritage is not harmed.

3.3.3.2 Land use strategies

The planning scheme establishes a Character residential zone and Cultural heritage overlay which are devised to protect character areas and heritage places.

Places of indigenous cultural heritage are acknowledged and respected by this planning scheme, but are primarily protected by other legislation.

Council recognises that the city's natural assets are likely to contain places and attributes of cultural significance to Indigenous Australians.

3.3.4 Element - Activity centres

3.3.4.1 Specific outcomes

Nature of centres

(1) A broad range of uses are encouraged at activity centres, appropriate to the identified hierarchy, to support vibrancy, community life and health and economic development and competition. Day and night-time activity is expected in Townsville's larger, higher level activity centres: CBD, Aitkenvale, Thuringowa Central, Hyde Park and future centres at Julago and Burdell. Residential development is also promoted in activity centres, in a form and density appropriate to the scale of the centre.

Editor's note—The future major centre at Burdell is planned within the North Shore emerging community area.

(2) An activity centre contains a mix of uses and is multi-functional. While the dominant building in activity centres is often a shopping centre, a shopping centre alone does not make an activity centre.

(3) The planning scheme adopts a hierarchy for activity centres in Townsville, the purpose of which is to ensure optimum access to employment, services and facilities across the city, including public transport services, to support the efficient provision of infrastructure and to optimise public investment.

(4) The hierarchy is made up of:

(a) the principal centre (CBD);

(b) major centres;

(c) district centres;

(d) local centres;

(e) neighbourhood centres; and

(f) specialised centres.

Editor's note—Townsville's hierarchy of activity centres is indicated on Strategic Framework Map SFM-002. Local and neighbourhood activity centres are numerous and are not depicted on the map. They are identified through zoning.

(5) Centres in newly developing areas expand commensurate with population growth in their primary catchments. While over the 25-year planning horizon of this planning scheme they may be expected to grow to a particular level in the hierarchy, they are not to perform at this level prematurely.

(6) Development of retail and office activities occurs within the identified activity centres and mixed use areas. These activities do not locate in an out-of-centre location, except where specifically intended in a particular zone or precinct.

(7) Showrooms and retail-based hardware stores are also located within the identified activity centres or mixed use areas. Their design and layout facilitates integration with other centre activities.

Principal centre - Townsville CBD

(8) The principal centre is the Townsville CBD. This is the largest and most important activity centre in North Queensland. It accommodates the greatest extent of administrative, civic, cultural, commercial, retail, tourism and education facilities in Townsville, providing local, city and regional functions.

(9) The principal centre (CBD) provides the greatest diversity in employment and business opportunities, is a focus for public transport and offers the highest density housing choices in the city.

(10) The principal centre (CBD) strengthens its position as the heart of Townsville by expanding its retail functions, developing an identifiable and attractive community heart and major meeting place, and increasing its variety of cultural and entertainment activities. It is also strengthened by the establishment of a public realm that is unique and is an exemplar of successful placemaking.

(11) Uses in the principal centre (CBD) include:

(a) major office developments, including offices forming part of mixed use developments;

(b) the highest order retail functions, including a department store as a signature development;

(c) convenience and boutique retailing for the CBD's workforce, residents and visitors;

(d) dining and entertainment;

(e) additional higher education or training facilities;

(f) tourist accommodation, activities and services; and

(g) in-centre, high density residential accommodation.

(12) Any additional department store in Townsville is to be located in the principal centre (CBD) and not in any other centre.

(13) Major strategic facilities such as a sports stadium, entertainment or convention centre which may be needed during the 25-year planning horizon of the planning scheme are located adjacent to the city centre. The South Townsville Railyards and Dean Street precinct is a preferred location.

Major centres - Aitkenvale, Thuringowa Central, Hyde Park, Burdell (future) and Julago (future)

(14) Major centres in Townsville support but do not undermine the role of the principal centre (CBD), offering diverse business, employment and residential opportunities. These activity centres are accessible to broad catchment areas across the city, offering higher-order shopping and commerce, entertainment, health, education and community facilities, as well as higher density housing choices. They are well serviced by public and active transport networks and increasingly offer active, pedestrian-focussed street level environments.

(15) **Aitkenvale** and **Thuringowa Central** major centres have a broad range of uses and increased vibrancy as community hubs. Integration and connectivity within the centres is improved. The centres contain an array of higher order retailing, with a broad range of commercial, community, cultural and entertainment services. Medium density housing is encouraged as an integrated component of development within the centres. Housing includes student and visitor accommodation to reinforce links with James Cook University and Townsville Hospital.

(16) **Hyde Park** major centre evolves to become a unique and high amenity centre which takes advantage of the amenity potential of adjoining lakes and open space areas. Increased diversity of activity within the centre is encouraged, including integrated medium density residential components. Retail activities are consolidated.

(17) Future major centres at **Burdell** and **Julago** accommodate a broad range of uses in an integrated, street-based format. They provide the main focal point for their respective communities. Ultimately the Burdell and Julago centres will include a diverse range of commercial and community facilities together with community meeting places and recreational facilities. Uses in the centre promote local employment and higher density residential development.

(18) The centres are well-connected to the surrounding community, maximising accessibility by walking, cycling and public transport.

(19) A new department store is not to be located within any of the existing or future major centres.

District centres - Idalia, Deeragun, Rasmussen, Annandale and Shaw (future)

Editor's note—The future district centre at Shaw is planned within the Greater Ascot emerging community area.

(20) District centres provide a mix of activities and services that cater for the weekly and fortnightly needs of surrounding communities. Generally they do not attract people from beyond the district. They contain a diversity of commercial, community and entertainment-related uses, with supermarket-based retailing. They may also include medium density housing.

(21) The **Idalia** district centre services the south-eastern suburbs, the Stuart industrial area and highway traffic. Its primary focus is in bulky goods retailing and service industries, with minor growth in traditional retailing, including supermarket shopping. This centre will become the second major bulky goods showroom development within Townsville (in addition to Domain Central), and will serve the south-eastern suburbs of Townsville.

(22) **Deeragun** district centre becomes a more consolidated centre, with improved integration and connections. More non-retail uses including commercial and medical offices, tavern or casual dining uses are anticipated. Small retail showrooms may also be accommodated. Further outward expansion of the centre or the establishment of additional supermarkets does not occur.

(23) Further development in the **Rasmussen** district centre accentuates the district role of this centre, and includes a mix of local commercial premises and community services.

(24) **Annandale** district centre serves as the main activity centre for Lavarack Barracks and remains a predominantly retail centre, with a range of supporting commercial services. Only limited expansion of this centre occurs.

(25) A new district level centre is also to be established at **Shaw** during the next 25 years. However, within the next 10 years, the centre develops only to a local centre role.

Local and neighbourhood centres

(26) Local centres are convenience-oriented centres focused on a full-line supermarket and complementary and ancillary activities servicing the needs of surrounding communities. New local centres will be established commensurate with the growth of new communities at Julago, Cosgrove and Mount Low (the latter to be located on Mt Low Parkway, directly opposite North Shore Boulevard).

(27) Neighbourhood centres are small-scale centres that provide a limited array of basic, lower order needs including convenience retail, local professional and community services. Existing centres in established suburbs are not anticipated to require significant expansion, although some minor expansion of uses may be warranted. New neighbourhood centres are anticipated in Burdell, Julago and elsewhere in newly developing areas where need can be demonstrated.

Specialised centres

(28) Specialised centres incorporate major nodes of activity with a specific and limited function. These centres are intended to support and not to undermine other activity centres within the hierarchy.

(29) The special regional business roles of Townsville Airport, Lavarack Barracks, the Port of Townsville, Domain Central, Fulham Road medical precinct, Bayswater Road medical precinct and James Cook University-Townsville Hospital precinct, are recognised. These centres do not incorporate the breadth and depth of

activities of other activity centres, but instead provide specific higher order, regional and national functions catering for a specific market or technological role and provide significant employment.

(30) The long-term operation of the **Townsville Airport** is supported for both Department of Defence purposes and to satisfy the primary air transport needs of the Townsville and North Queensland regions. Townsville Airport precinct accommodates a range of businesses with a nexus with aeronautical activities, including offices and low impact industries and research and technology-related industries. Some complementary activities which cater to the needs of businesses and workers within the centres are appropriate. However, this centre does not accommodate office or retail activities to an extent that would undermine the principal centre (CBD) or other centres.

Editor's note—Townsville Airport does not fall within the regulatory jurisdiction of the Townsville City Plan. However, council recognises its important function through this zoning and acknowledges the intentions of Townsville Airport's master planning document.

(31) **Lavarack Barracks** is protected for ongoing Department of Defence-related purposes, including aviation, communications, logistics, administration, training, and accommodation and recreation facilities for Department of Defence personnel.

Editor's note—Lavarack Barracks does not fall within the regulatory jurisdiction of the Townsville City Plan. However, council recognises its important function through this zoning.

(32) The **Port of Townsville** is protected for the benefit of the local and regional economy, and development of the port is integrated with the CBD, Palmer Street and The Strand where possible, to maximise community access to and use of waterfront areas.

Editor's note—The Port of Townsville does not fall within the regulatory jurisdiction of the Townsville City Plan. However, council recognises its important function through this zoning and acknowledges the intentions of Port of Townsville's master planning documents.

(33) **Domain Central precinct** does not expand to include further retail uses, other than small facilities supporting the retail showroom function (such as food and drink outlets).

(34) **Fulham Road medical precinct** will continue to be the focus of private acute medical services in the Townsville region. It accommodates medical facilities, including the hospital and medical centres catering for allied and specialist medical services. It also contains residential uses providing short-term accommodation, particularly to meet demand generated by the primary medical uses in the precinct, and aged care and retirement living and respite care.

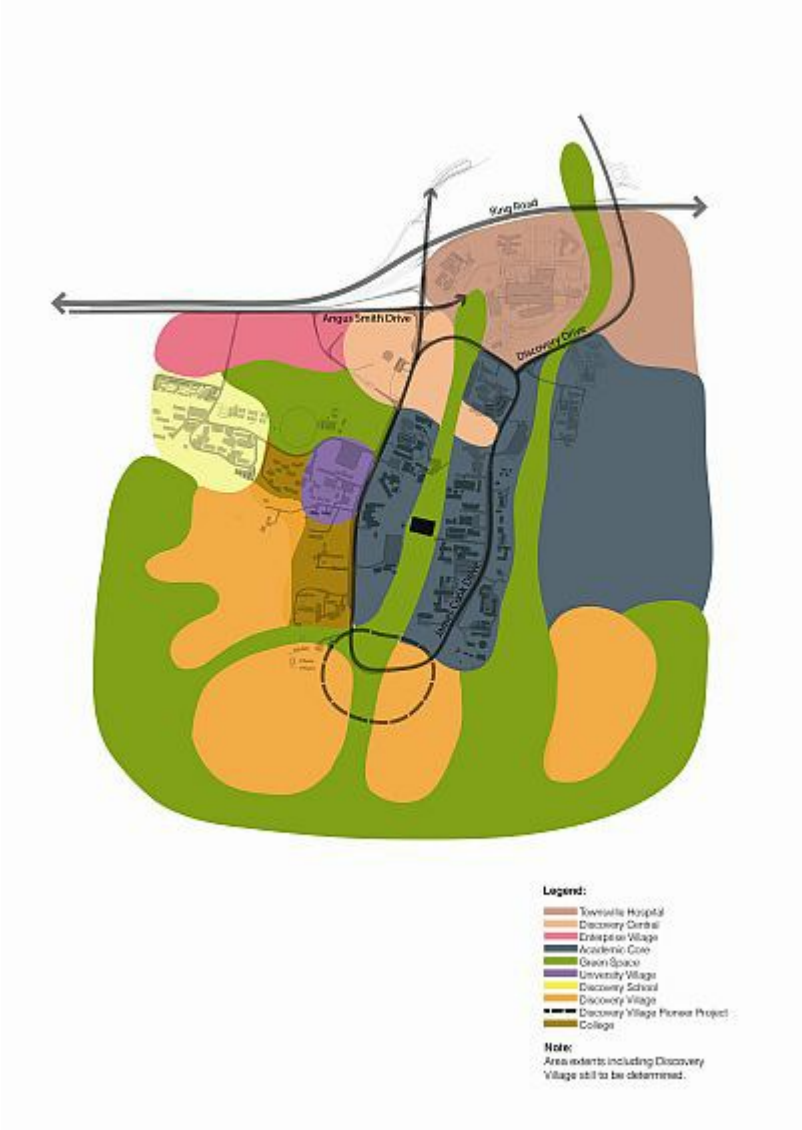
(35) **Bayswater Road medical precinct** accommodates a broad range of medical and associated services, and a mix of medical-oriented and low and medium density residential uses, in a vibrant, mixed use urban village with a strong sense of place and civic identity.

(36) The **James Cook University-Townsville Hospital precinct** evolves into a world-class knowledge community with a focus on the tropics and on sustainability. The centre becomes a mixed use environment, integrating the existing institutions and forming an integral part of Townsville, with strong links to the CBD. It becomes a leader in sustainability, minimising the use of finite resources like land, energy, water and wastewater. Development provides exemplar projects in aspects like public transport, housing, public spaces and community development, as well in its traditional academic, research and healthcare focus. It also exhibits increased self-containment with many people living and working within the centre, although its emerging resident community is well-connected to the wider city by active and public transport.

(37) The land use mix, and scale of development in the James Cook University-Townsville Hospital centre reflects the role of the centre in the city. Its focus is as a knowledge community based on the university, hospital and research and technology activities. Other land uses which benefit and enhance the knowledge community occur, including employment, residential and retail. These other uses are sufficient to facilitate high levels of self-containment on the site. They do not occur at a level that serves a wider role within the city or which may detract from the planned functions of other centres. The level of development will also need to be commensurate with the capacity of infrastructure to serve the area. Development not related to the focus of the centre, but instead designed to compete with other centres, does not occur.

Editor's note—Development of James Cook University (Douglas Campus), which is undertaken in terms of a Ministerial Designation, does not fall within the regulatory jurisdiction of the Townsville City Plan.

(38) The pattern of development is generally consistent with the strategy plan shown in Figure 3.7 – James Cook University-Townsville Hospital strategy plan.



Click here to view PDF high resolution map.

Figure 3.7 - James Cook University-Townsville Hospital centre strategy plan

Mixed use areas

(39) The city contains a number of mixed use areas and corridors, many of which arose from historic strip commercial development. These areas generally evolve to facilitate improved relationship between buildings and the street, a pedestrian-oriented streetscape and improved visual amenity along major roads.

(40) These areas contain a mix of uses including medium density housing (where compatible with the local amenity), convenience retail and small-scale offices and showrooms, community and service industry uses which do not compromise the intended role or successful functioning of centres.

Centre design

(41) The design of centres and mixed use areas in Townsville achieves:

(a) strong integration and consolidation through built form and layout;

(b) a high quality public realm, with attractive, safe and useable public spaces and streets;

(c) active uses that attract people on key pedestrian circulation streets and major frontages;

(d) buildings constructed at or close to the street on key frontages and parking areas and access ways that do not dominate major frontages and pedestrian routes;

(e) a high level of pedestrian and cyclist accessibility and accessibility by public transport;

(f) a human scale and pedestrian comfort (shelter and shade), at street level;

(g) climate responsive design, with the opportunity to adopt sustainable building designs beyond current best practice; and

(h) connectedness between green spaces and the wider network of natural assets, where practicable.

3.3.4.2 Land use strategies

The planning scheme establishes the hierarchy of centres through zoning provisions. These provisions place emphasis on ensuring centres are diverse, accessible and well-designed community hubs. Major development in the district and major centres should be supported by a centre design master plan.

Centre provisions are closely aligned with intentions for medium and higher density living options.

A detailed structure planning process will be undertaken collaboratively between council and James Cook University which may over time be integrated into the planning scheme. A 'strategic infrastructure plan' covering the whole of the centre will also be developed.

3.3.5 Element - Transport, accessibility and mobility

3.3.5.1 Specific outcomes

Transport choices

(1) The city provides choice in mode of transport. Transport systems are planned and built to conveniently and efficiently connect people with places of employment, services and leisure.

(2) The shape of the city and activity centres network establishes the basis for optimum transport outcomes for the city. The pattern supports consolidation around the principal centre (CBD) and major centres on the Ross River Road corridor, which is identified by council and the State Government as a core public transport corridor for the future.

(3) The activity centres network and designation of industrial land also support increased employment opportunities closer to where people live, reducing trip lengths and improving the efficiency and effectiveness of public transport and pedestrian and cyclist networks, and reinforcing the significance of inter-regional freight networks.

(4) The design of centres and residential areas incorporates a network of walking, cycling, public transport and vehicle routes that maximise connectivity and ease of mobility.

(5) The planning scheme places importance on the creation of attractive, climate responsive and safe streets and public spaces, and requires structure planning of centres and greenfield residential areas to ensure that the development pattern allows for high levels of accessibility.

Road and freight network

(6) National, state and regional road, rail, sea and air freight networks are protected from incompatible development and connections to the wider North and Western Queensland regions strengthened.

(7) Appropriate design and access standards are established for development on and near major transport corridors and key freight routes. Further encroachment on these corridors by sensitive land uses such as residential development is avoided and impacts are minimised where development already exists. Key routes include:

(a) the Bruce and Flinders Highways;

(b) the Ring Road;

(c) the Townsville Port Access Road;

(d) Woolcock Street;

(e) Duckworth Street-Nathan Street; and

(f) the rail lines.

(8) The planning scheme encourages co-location of freight and transport-related land uses in industrial areas with

convenient access to the principal road and rail freight network. The Townsville State Development Area will be the pre-eminent location in this regard.

(9) The defence and potential international roles for Townsville Airport will be protected from incompatible development.

3.3.5.2 Land use strategies

Better transport and accessibility outcomes for the city underpin the intentions for the development pattern and densities.

Key corridors and applicable standards for development on and near them are established by the planning scheme.

Council will work with the Queensland Government to develop high-quality public transport, cycling and walking networks, including dedicated bicycle facilities connecting major centres and catering for large volumes of cyclists. Council will also work with the Queensland Government to identify opportunities for park-and-ride facilities near designated public transport stops.

Council will support the relocation of the South Townsville rail yards to the Townsville State Development Area.

3.3.6 Element - Integrated infrastructure planning and provision

City shape

(1) Land use and development patterns support the efficient and cost-effective provision of infrastructure and community facilities.

(2) The city shape and activity centres hierarchy described in this strategic framework establish the basis for the most efficient provision of infrastructure to meet community needs over 25 years. In particular, it minimises the dilution of infrastructure investment across multiple development fronts. While upgrades will be required in the infill development areas, these costs will be less than those that would be involved in continued outward expansion of the urban area.

(3) The settlement pattern supports the co-location of community services and facilities, including in activity centres, where accessibility to communities can be maximised and multiple use of facilities can be coordinated.

(4) Major utilities and community facilities integrate sensitively with the surrounding environment through their built form and management of potential impacts.

Safety and efficiency

(5) The safe and efficient operation or use of infrastructure installations and corridors are protected.

(6) Encroachment of facilities by sensitive land uses is avoided and reasonable standards to manage impacts are established where development already exists. These facilities include:

- (a) energy-related infrastructure including electricity transmission lines, substations, gas lines and the like;
- (b) Lake Ross, Lake Paluma and other water supply areas;
- (c) water and waste water treatment plants and major distribution facilities;
- (d) solid waste treatment and disposal facilities;
- (e) transport and freight networks;
- (f) various Department of Defence landholdings and installations; and
- (g) community facilities and infrastructure.

(7) High standards of development infrastructure are established to effectively manage potential impacts on the community and the environment.

(8) Whole of lifecycle infrastructure costs are minimised.

3.3.6.2 Land use strategies

Council's Local Government infrastructure plan (Part 4 of the planning scheme) documents plans for trunk infrastructure to support the settlement pattern, and development charges are to be levied in accordance with the *Planning Act 2016*.

Council will consider strategies to encourage development within the areas identified as primary infill focus areas in recognition of the overall savings to the community that strategy will facilitate.

Council will negotiate infrastructure agreements as required with development proponents and state agencies as part of the master planning of major development areas.

3.4 Theme - Strong and connected community

Editor's note—What did the Townsville Community Plan 2011-2021 say about *Strong and connected community*?
A community that draws on the diversity, skills and expertise of our residents to build a community that has pride in its culture and lifestyle.
Seven guiding principles were also set out:

- *Strengthen community cohesion: Becoming a supportive and interconnected community that works together to make people feel comfortable and safe within their street, neighbourhood and the wider community.*
- *Value the richness of diversity: The diversity of cultures and community groups represented within Townsville are embraced so that we can all become champions of social inclusion.*
- *Develop a vibrant arts lifestyle: Embracing the richness and talent of the arts community.*
- *Nurture and value families: Providing opportunities to raise children within our unique lifestyle, and providing them with a great place to grow up.*
- *Develop a sense of safety: An environment in which the community feels safe to live, work and play.*
- *Provide active and passive sport and recreation opportunities: An environment where there is a choice of active and passive recreational activities contributes to the health and wellbeing of our city.*
- *Open, honest and accountable leadership: Inclusive engagement and communication encourages community participation in local decision-making.*

3.4.1 Strategic outcomes

(1) The character and identity of communities in urban and rural areas of Townsville evolves and strengthens through the city shape described in this strategic framework and through good urban design of places.

(2) The architectural, cultural, historic, scenic, natural, social or spiritual qualities that create places of local heritage are conserved and enhanced.

(3) Easy access is provided to community services and facilities, and to places to celebrate culture, history and identity. Public spaces and streetscapes are attractive, safe, accessible for all abilities and usable.

(4) A high-quality network of open space and recreation opportunities provides for the needs of the community, supports social interaction, enables connections to natural assets and landscape features, and reinforces the city's identity.

(5) Strong connections to the natural environment and the protection of natural assets contribute to the health and wellbeing of the community.

3.4.2 Element - Urban design

3.4.2.1 Specific outcomes

Design

(1) Design of the built environment (including buildings, streets and public spaces):

- (a) is consistent with the existing or desired character of the local area;
- (b) is oriented to the street and public places;
- (c) enhances the quality of the street;
- (d) is responsive to Townsville's climate;
- (e) creates a human scale at street level;
- (f) protects and celebrates important views, landscape features and natural assets, and places of cultural heritage significance; and

(g) makes it easy to get around, especially when walking or cycling: development is designed to integrate with its surroundings and has ample, not a minimum of, connections.

(2) Good design assists in the success of those areas that will be the focus for growth, change and economic activity.

Public realm

(3) High-quality public spaces are created that optimise opportunities for community interaction.

Prevention of crime and antisocial behaviour

(4) The design of development assists in preventing antisocial behaviour and supporting personal safety.

3.4.2.2 Land use strategies

Good urban design principles (including Crime Prevention Through Environmental Design Principles) form the basis of all planning scheme codes. At a citywide scale, they underpin the development pattern intentions.

3.4.3 Element - Open space network

3.4.3.1 Specific outcomes

Open space network

(1) Townsville has an open space network that:

(a) meets the community's recreation and sporting needs;

(b) offers a diverse range of recreation opportunities and landscape settings that encourage healthy lifestyles and physical activity;

(c) is safe and attractive;

(d) provides equitable and convenient access to sport and recreation facilities, particularly by walking and cycling;

(e) supports community groups and has the capacity to adapt to changing needs over time;

(f) is cost efficient, with a focus on co-locating sports in hubs;

(g) is designed and maintained to a high standard, and is fit for purpose;

(h) incorporates the natural landscape so that people may connect with nature in their recreation;

(i) links recreation spaces and community hubs wherever possible; and

(j) has minimal negative impacts on surrounding communities and land uses.

Types of open space

(2) The open space network provides for the following primary functions:

(a) local, district and regional recreation parks, and corridor or recreation linkages and amenity parks provide informal sport and recreation opportunities; and

(b) district, regional and specialised sports parks provide for formal sports and boast a range of training and competition infrastructure.

3.4.3.2 Land use strategies

The open space network will primarily be delivered through the Local Government infrastructure plan mechanisms. However, planning scheme requirements for reconfiguration and urban development of all types reflect the need for integrated open space and accessibility networks and a high-quality public realm.

3.4.4 Element - Strong and connected community

3.4.4.1 Specific outcomes

(1) Townsville maintains the scenic amenity values and iconic features that contribute to its character and sense of place. Development in areas of high scenic amenity is limited to minimise the potential for deterioration of the scenic values.

(2) Areas of high scenic amenity generally include elevated and vegetated areas which may also contain significant ecological and other environmental values. These include:

  (a) mountainous backdrops, including Mount Elliot, Mount Cleveland, the Pinnacles, Many Peaks Range and Hervey Range to Paluma;

  (b) significant hills and ridgelines within and framing urban areas, including Castle Hill, Mount Stuart and Mount Louisa; and

  (c) coastal headlands, foreshores and waters, including The Strand, Magnetic Island, Cape Pallarenda, Cape Cleveland, Cleveland Bay and Halifax Bay.

(3) Development is sited and designed to be sensitive to the landform, vegetation and other characteristics that contribute to scenic amenity values in all parts of the city.

(4) Non-urban land is protected to define the edges to the city, and to protect non-urban landscape values. Urban and rural residential development does not occur in rural areas.

3.4.4.2 Land use strategies

A primary strategy implemented through the planning scheme is the containment of urban growth within the designated area.

Otherwise, planning scheme requirements for reconfiguration and development of all types reflect the intention to protect areas and features of scenic importance.

3.4.5 Element - Managing the impacts of development

3.4.5.1 Specific outcomes

Protection of amenity

(1) Development mitigates the effects of new development on local character, noise and air quality, access to sunlight, breezes and privacy, and avoids commercial or through traffic in residential streets.

(2) The interface between land zoned for industry and sensitive land uses is managed to protect the health, wellbeing, amenity and safety of the community and protect industrial activities from incompatible development.

(3) The planning scheme does not protect private views, other than where proposed development is inconsistent with the described intent for a local area.

(4) Negative social impacts caused by development are avoided or minimised.

3.4.5.2 Land use strategies

Zone designations, and in some cases precincts, represent the type and scale of development intended for an area. This forms the basis for the community to establish realistic expectations about the type of amenity in an area.

3.5 Theme - Environmentally sustainable future

Editor's note—What did the Townsville Community Plan 2011-2021 say about *Environmentally sustainable future*?

Our community recognises and values our natural environment. We acknowledge the need for a more sustainable future and seek to achieve this through solutions that minimise our impact on the environment.

Three guiding principles were also set out:

- *Valuing our natural environment and urban green spaces: The Townsville community recognises, protects, retains and enhances the values and condition of our natural environment, urban green spaces, and scenic amenity.*

- *Taking responsibility for the health of our local waterways, wetlands and marine areas: The community takes appropriate actions to maintain the values and condition of our local waterways, wetlands and the marine environments.*
- *Adopting an environmentally sustainable lifestyle at home, work and at play: the community understands that our activities have an environmental impact. Individually and collectively we take responsibility for undertaking appropriate actions at home, work and play to minimise these impacts.*

3.5.1 Strategic outcomes

(1) Townsville's natural assets, including its biodiversity, habitat values and biophysical and ecological processes are protected, enhanced and restored to provide life supporting capacities for present and future generations.

(2) The maintenance of biodiversity is dependent on a variety of biophysical elements, functions and processes including an interconnected network of wildlife corridors and habitats. Habitat areas and connecting corridors are retained, and degraded links are restored to provide a continuous network of natural assets that supports the ecological and biophysical functions necessary for ensuring sustainable landscapes.

(3) The network of waterways and wetlands that contribute to terrestrial and aquatic biodiversity including fisheries, marine habitats and the Great Barrier Reef, is protected from the impacts of development to maintain high standards of water quality and aquatic ecosystem health.

(4) Water quality is protected, particularly within the city's drinking water catchments and waters identified as having high ecological value.

(5) The coastal zone is managed to protect, conserve and rehabilitate coastal resources, biological diversity and natural coastal processes.

(6) Risk to life, property and ecosystems as a result of natural hazards is minimised, and development is managed to respond to the likely impacts of climate change.

3.5.2 Element - Natural assets

3.5.2.1 Specific outcomes

(1) Areas of importance for the maintenance of habitat, biodiversity and biophysical and ecological functions are protected. Development avoids or minimises direct and indirect impacts on areas having or supporting significant environmental values, ecological functions and biophysical processes.

(2) As far as possible, natural areas are retained and integrated with the development to maintain and enhance the natural assets network.

(3) Fragmentation of native habitat is avoided to maintain biodiversity and increase ecological resilience, including resilience to climate change.

(4) Ecological corridors are maintained and where appropriate, rehabilitated and expanded, to support:

- (a) the natural movement and proliferation of native species;
- (b) ecological responses to climate change;
- (c) the maintenance of large scale migratory lifecycle processes; and
- (d) connectivity between significant habitat areas and patches of remnant vegetation.

(5) Development maintains suitable buffers to areas of significance, such as endangered and threatened ecological communities and remnant vegetation, wetlands and waterways and priority habitat to ensure the ongoing viability of the significant area and associated ecological functions and ecosystem services.

(6) Corridors and buffers are of a width which provides for:

- (a) movement of native fauna;
- (b) viable habitat areas;
- (c) minimisation of edge effects;
- (d) maintenance of the hydrological functions of the waterway or wetland;
- (e) appropriate recreational opportunities; and
- (f) any additional maintenance and bushfire setback functions to be located outside the areas required for ecological purposes.

(7) Appropriate public access to the city's natural assets is provided.

3.5.2.2 Land use strategies

The city shape and settlement pattern has been determined to avoid further expansion of urban or rural residential development beyond existing designated areas. This will avoid increasing pressures on environmentally important values.

Some areas (predominantly those in the protected estate) are included in the Environmental management and conservation zone. Other natural areas of national, state, regional and local significance are identified in overlay maps and are to be protected and managed through the Natural assets overlay code.

The Natural assets planning scheme policy no. SC6.9 assists in providing guidance to applicants regarding the range of values present across the mapped areas and how environmental assessments should be carried out.

3.5.3 Element - Integrated water cycle management and ecosystem health

3.5.3.1 Specific outcomes

Protection of waterways and wetlands

(1) Wetlands, waterways and associated riparian areas are protected from threatening processes and where practical, enhanced to ensure ecological processes and ecosystem services are fully functional.

(2) The proposed city shape and settlement pattern avoids further expansion of urban development into or nearer to important aquatic ecosystems.

(3) Development is located outside wetlands and avoids adverse effects on wetlands.

(4) Development is buffered from waterways and wetlands, with a buffer width sufficient to:

- (a) maintain ecological and habitat functions;
- (b) minimise potential edge effects; and
- (c) allow for natural hydrological (including flood-related) processes to function effectively and unimpeded.

(5) Where land is required for recreational, land management, bushfire hazard risk reduction and other appropriate purposes, these functions and land uses are located outside the areas required for ecological purposes and water quality improvement or are conducted in such a way that there are no adverse impacts on the environmental values.

Protection of water quality

(6) Intensification of development within the Lake Ross, Lake Paluma and Crystal Creek catchments is avoided.

(7) Water quality of both surface and ground waters, and the ecological and hydrological processes of catchments, are protected.

(8) New development incorporates drainage, stormwater and waste water management measures that protect ground and surface water quality and the environmental values of water.

(9) The release of acid and associated metal contaminants into the environment is avoided through appropriate standards for development involving filling or excavation, so that disturbance to acid sulfate soils is minimised and disturbed acid sulfate soils are appropriately treated.

(10) Best practice water sensitive urban design (adapted to the Dry Tropics environment) and integrated water cycle management responding to regionally specific climate and water quality characteristics, form the basis for engineering standards.

Water use efficiency

(11) Development, including landscaping, uses water efficiently as part of the total water cycle.

3.5.3.2 Land use strategies

Water resources are comprehensively protected through the Natural assets and Water resource catchment overlays, as well as through requirements under the Healthy waters and Works codes, as well as zone codes.

3.5.4 Element - Coastal protection

3.5.4.1 Specific outcomes

Conservation of coastal resources

(1) Coastal resources are conserved, and areas of high ecological significance or scenic amenity along the coast are protected.

Coastal risks

(2) Exposure of communities to coastal hazards, including erosion and storm tide inundation, is minimised, taking into account the projected effects of climate change.

(3) The settlement pattern avoids expansion of urban areas and smaller coastal settlements into environmentally significant coastal areas.

(4) In areas designated for urban development, increase in risk to people and property is avoided.

(5) Outside designated urban areas, only limited forms of development that are compatible with the risks occur within coastal hazard areas.

Public access

(6) Public access to the foreshore is maintained and managed for current and future generations.

3.5.4.2 Land use strategies

The Coastal protection overlay and underlying zoning provisions direct development so that it will be compatible with the hazard and protect coastal processes and areas of high ecological significance.

3.5.5 Element - Natural hazards (bushfire, landslide and flood)

3.5.5.1 Specific outcomes

Avoiding increase to risk

(1) New development in areas subject to bushfire, landslide or flooding hazard is compatible with the nature of the hazard.

(2) Development does not materially increase the extent or the severity of natural hazards, and the safety of people is maintained and damage to property is minimised.

(3) The settlement pattern avoids further expansion of urban and rural residential uses into hazard areas.

(4) Significant areas of Townsville are already established within the floodplains of the Ross and Bohle Rivers. Within these areas, the flood risk will be managed by avoiding intensification of development in high hazard areas and ensuring development is compatible with the hazard in other areas.

3.5.5.2 Land use strategies

Bushfire, Landslide and Flood hazard overlays and underlying zoning provisions direct development so that it will be compatible with the hazard and the desired character for the area.

3.5.6 Element - Sustainability

3.5.6.1 Specific outcomes

(1) Development is designed to sensitively respond to Townsville’s climate through its orientation, layout and design of the built environment.

(2) Development minimises demands for energy use and otherwise promotes efficient use of energy.

(3) Innovation in climate responsive and energy efficient design is encouraged.

(4) Development is located, designed and managed to avoid environmental harm or nuisance.

3.5.6.2 Land use strategies

The city shape and settlement pattern established under the planning scheme provisions underpins the growth of a more sustainable Townsville in which transportation and fossil fuel use will be better managed.

Development requirements also seek development that is climatically responsive and energy efficient at the site and built form scale. However, the planning scheme does not duplicate the jurisdiction of the *Building Act 1975* in this regard.

Planning scheme provisions also address the expected environmental performance of development generally.

3.6 Theme - Sustainable economic growth

Editor's note—What did the Townsville Community Plan 2011-2021 say about *Sustaining economic growth*?

The community recognise that it is fundamental to have a strong and balanced economic growth in order to enhance our city's way of life.

Four guiding principles were also set out:

- *Strong and diverse economy: the community recognises that sustaining a strong and diverse economy is vital for long-term prosperity.*
- *An innovative and highly skilled city: we will create new skills and business opportunities.*
- *A community that benefits from Townsville's economy: we will ensure that the benefits of economic growth are shared throughout the community.*
- *A city that sustains and prospers from its environment: the community will partner with business and industry to create a more resource efficient economy that generates new sustainable development businesses and jobs.*

3.6.1 Strategic outcomes

(1) Economic and employment growth is primarily located in Townsville's centres and industrial areas. The clustering of activities and employment in these areas facilitates improved transport networks (including public transport).

(2) Industrial land is used efficiently, a timely supply of land to meet industry needs is available, and efficient and cost-effective provision of infrastructure is facilitated.

(3) Sensitive uses are prevented from encroaching on the city's freight routes, special purpose areas, industrial areas and specialised centres, particularly Townsville Airport, Port of Townsville, the Townsville State Development Area and the Department of Defence landholdings, to ensure their ongoing efficient operation, minimise risks and avoid conflicts.

(4) Farming activities and the productive capacity of all rural land is protected.

(5) Within rural areas, new enterprises are encouraged that are associated with rural production or the natural environment, and which are not more appropriately located in urban areas.

(6) Development in and adjacent to quarries and other extractive and resource areas does not prejudice the continued and future use of the natural resources.

(7) Tourist accommodation and attractions are established in appropriate locations, and conflict between tourist activities and surrounding uses or values is minimised.

(8) Home based business is supported as an important incubator for new enterprises. However, activities are limited to ensure adverse impacts on neighbours' residential amenity do not occur.

3.6.2 Element - Industrial land

3.6.2.1 Specific outcomes

Sufficient land supply

(1) Land within designated industrial areas is used efficiently, and industries with a similar or compatible nature are co-located.

(2) The significance and potential of the Townsville State Development Area as a dry port, accommodating storage, transport and logistics activities, as well as port-related manufacturing is protected.

(3) The industrial investigation areas at Bohle Plains and Woodstock will not be developed prior to the

establishment of:

(a) a demonstrated need for the land;

(b) the inclusion of the area in council's Priority infrastructure area; and

(c) detailed structure planning which identifies, avoids and buffers significant environmental values, areas and corridors; avoids natural hazards on the site; identifies appropriate mix of industrial activity, identifies appropriate buffers, nominates site layout and circulation networks; and appropriately integrates the site with surrounding land.

(4) Interim uses in the industrial investigation areas at Bohle Plains and Woodstock do not prejudice long-term suitability for industrial use.

(5) Industrial development does not expand beyond the areas zoned for industrial purposes or identified as industry investigation areas on the strategic framework maps.

(6) In Roseneath, industrial uses with a transport and logistics focus are accommodated and are provided with adequate infrastructure, including roads, water, sewer and stormwater networks.

Protection of industry land for industry

(7) Industrial land is designed and remains available for intended industrial use and is protected from encroachment by uses that are sensitive to the impacts of industry.

(8) Industrial development is not intended to occur outside the zoned industrial areas, other than service industries and some low impact industries which may be located within activity centres or mixed use areas.

(9) Retail and commercial activities within industry zones are limited to those that directly support the industries intended for the zones, or are for outdoor sales uses. Bulky goods retailing (showrooms) and retail hardware stores are not accommodated within industry zoned land and are instead located within activity centres or mixed use areas.

(10) Subdivision requirements for industrial areas will be established to provide for a mix of lot sizes and, in particular, provision for larger lot sizes in Medium and High impact industry and Special purpose zoned areas.

Impacts of industry

(11) Industrial development is managed to protect environmental values, avoid risk to life and property and reasonably protect the amenity of surrounding areas.

(12) Alternative solutions to energy use and environmental performance are encouraged where impacts will be no worse than a conventionally designed development.

3.6.2.2 Land use strategies

Industrial areas are included in either the Low, Medium or High impact industry zone or Special purpose zone and the appropriate performance expectations for each are identified.

In addition, provisions are contained within residential zones, where relevant, to address potential reverse amenity issues from industrial areas and major infrastructure corridors. Council will work with the State Government to investigate the potential allocation of the Bohle Plains State land area to accommodate a range of industry types, including transport/freight-related activities. Industrial development of this area would desirably be contiguous with existing industry and appropriately integrate with the Townsville Ring Road.

Industrial land supply and demand will be monitored by council in order to determine when land in the investigation areas may need to be made available.

Council will work with the relevant authorities to ensure the availability of gas and telecommunications infrastructure, as well as to investigate possible alternative freight routes which minimise existing conflicts within the urban area.

3.6.3 Element - Airport, seaport and Department of Defence land

3.6.3.1 Specific outcomes

Protecting special use areas

(1) Townsville Airport, Port of Townsville and Department of Defence landholdings are recognised for their particular strategic and economic value to the community.

(2) The safety and operational efficiency of these areas is maintained. They are protected from encroachment by sensitive uses.

(3) Development in the vicinity of these areas, and the transport/freight routes which serve them, is compatible with the physical and operational characteristics of the special use areas. New development will be located and designed to minimise any potential impacts.

3.6.3.2 Land use strategies

While the planning scheme has no jurisdiction over these areas, it regulates development in the areas surrounding them to avoid conflicts and reverse amenity issues arising.

3.6.4 Element - Natural economic resources (including rural and extractive industry)

3.6.4.1 Specific outcomes

Protecting productivity

(1) The productive capacity of all rural land is optimised within its environmental constraints.

(2) Significant non-rural activities and intensive animal industries do not occur in Townsville's primary horticultural areas.

Avoiding fragmentation

(3) Further fragmentation of rural land is avoided. A lack of viability for existing farms and small holdings does not justify their further subdivision or use for non-agricultural purposes.

(4) Development complies with the nominated minimum lot size for each precinct which will generally range from 10ha for rural lifestyle precincts, to 40ha for horticultural-based precincts to 400ha for grazing-based precincts.

Diversification

(5) Opportunities for diversification of activities within the rural areas is encouraged, provided that:

- (a) the productive capacity of the land is maintained;
- (b) conflicts with existing and intended rural activities in the surrounding area are avoided;
- (c) the existing landscape and natural resource values of the land are maintained; and
- (d) the development is not more appropriately located in another zone.

(6) Industry uses that are not directly related to farming or which do not require separation from urban or rural residential areas are not appropriate in the rural zone. These should be contained within zoned industrial land. In particular, transport depots and food or meat processing industries are to be located in an industrial zone.

(7) Intensive animal industries including feedlots and cattle handling facilities (for live export) are to be directed to the broader hectare lands of the predominantly grazing precincts where potential impacts can be better managed.

Protection of extractive resources

(8) Identified areas of extractive resources and their associated haulage routes are protected from encroachment of incompatible development. Buffers are provided to separate and mitigate the impacts of extractive operations and surrounding sensitive uses.

(9) While houses may be established on existing lots within identified buffer areas and haulage routes, any development which would increase the intensity of people living, visiting or working within these areas is avoided.

(10) Quarrying and extractive industry maintains the integrity of environmental and hydrological processes beyond site boundaries and minimises impacts on such values within the site.

3.6.4.2 Land use strategies

The rural land resources are primarily managed within the planning scheme through the Rural zone.

In addition, a number of overlays also assist in protecting the range of non-urban values, including Natural assets, Extractive resources, Bushfire hazard, Landslide hazard and Coastal environment.

3.6.5 Element - Tourism

3.6.5.1 Specific outcomes

Diversity

(1) A range of tourism opportunities and experiences, particularly nature-based tourism, are encouraged, with the principal centre (CBD) and its immediate environs a focus for larger tourist facilities.

(2) Tourism within the principal centre (CBD) and its immediate environs will be anchored by the Museum of Tropical Queensland and Reef HQ Aquarium, education and research uses and accommodation facilities, with improved links to the Breakwater, Anzac Park and The Strand.

(3) Tourist accommodation and dining will also continue to be encouraged in North Ward (with a focus on The Strand and Gregory Street), the Breakwater and Palmer Street, consistent with desirable built form and urban design outcomes for those areas.

(4) Magnetic Island is a major tourism destination for Townsville and will maintain accommodation and recreation activities at a scale and form that is relative to the overall character of the island. Supporting infrastructure encouraged on the island includes service and convenience of commercial facilities, walkways, foreshore promenades, and gateway treatments at significant junctions for each village.

(5) Small-scale, low-rise tourist accommodation and support facilities are to be facilitated at Paluma, Rollingstone, Balgal Beach, Toomulla, Toolakea and Saunders Beach. Tourism-oriented development in these northern townships focuses on protecting and emphasising the natural character attributes of the local area. The relationship between tourism, the environment and the availability and capacity of local infrastructure in these northern townships is managed so that it is sustainable.

Protecting values

(6) Tourism-related development maintains or enhances Townsville's image, environmental values, ecological processes and scenic quality both within and outside of urban areas.

(7) Outside the urban area, tourism-related development occurs where directly associated with rural activities or other natural resource values. However, such uses should not give rise to conflicts which would prejudice the existing economic activity in the area or adversely affect environmental values, ecological processes values or landscape character.

3.6.5.2 Land use strategies

The relevant zones and precincts identified in the planning scheme establish appropriate performance requirements for tourism-related development in appropriate locations.

Part 4 Local government infrastructure plan

4.1 Preliminary

(1) This local government infrastructure plan has been prepared in accordance with the requirements of the *Sustainable Planning Act 2009*.

(2) The purpose of the local government infrastructure plan is to:

- (a) integrate infrastructure planning with the land use planning identified in the planning scheme;
- (b) provide transparency regarding a local government's intentions for the provision of trunk infrastructure;
- (c) enable a local government to estimate the cost of infrastructure provision to assist its long term financial planning;
- (d) ensure that trunk infrastructure is planned and provided in an efficient and orderly manner; and
- (e) provide a basis for the imposition of conditions about infrastructure on development approvals.

(3) The local government infrastructure plan:

- (a) states in Section 4.2 (planning assumptions) the assumptions about future growth and urban development including the assumptions of demand for each trunk infrastructure network;
- (b) identifies in Section 4.3 (priority infrastructure area) the prioritised area to accommodate urban growth up to 2026;
- (c) states in Section 4.4 (desired standards of service) for each trunk infrastructure network the desired standard of performance;
- (d) identifies in Section 4.5 (plans for trunk infrastructure) the existing and future trunk infrastructure for the following networks:
  - (i) water supply;
  - (ii) sewerage;
  - (iii) roads;
  - (iv) footpaths and cycleways; and
  - (v) parks and land for community facilities.
- (e) provides a list of supporting documents that assist in the interpretation of the local government infrastructure plan in the Editor's note – Extrinsic material at the end of Section 4.5.2.

4.2 Planning assumptions

(1) The planning assumptions state the assumptions about:

(a) population and employment growth; and

(b) the type, scale, location and timing of development including the demand for each trunk infrastructure network.

(2) The planning assumptions together with the desired standards of service form a basis for the planning of the trunk infrastructure networks and the determination of the priority infrastructure area.

(3) The planning assumptions have been prepared for:

(a) the base date 2011 and the following projection years to accord with future Australian Bureau of Statistics census years:

(i) mid 2016;

(ii) mid 2021;

(iii) mid 2026;

(iv) mid 2031; and

(v) ultimate

(b) the LGIP development types in column 2 that include the uses in column 3 of Table 4.2.1.

(c) the projection areas identified on Growth Model Zone Maps 1 to 5 in the extrinsic material (Local Government Infrastructure Plan - planning assumptions & PIA). For reporting purposes, the projections are summarised by the reporting areas identified in Schedule 3 - Local government infrastructure plan mapping and tables, SC3.3.1 - Reporting areas map.

Table 4.2.1-Relationship between LGIP development categories, development types and uses

Column 1 **LGIP development category**	**Column 2** **LGIP development type**	**Column 3** **Uses**
Residential development	Single Dwelling (urban)	Dwelling house (urban)
	Single Dwelling (rural residential)	Dwelling house (rural residential)
	Single Dwelling (rural)	Dwelling house (rural)
	Multiple Dwelling	Dual occupancy Multiple dwelling
	Other Dwelling	Caretaker's accommodation Community residence Dwelling unit Relocatable home park Residential care facility Retirement facility
Non-residential development	Retail	Adult store Agricultural supplies store Bar Bulk landscape supplies Food and drink outlet Function facility Garden centre Hardware and trade supplies Market Outdoor sales Roadside stall Service station Shop Shopping centre Showroom Wholesale nursery

Column 1 LGIP development category	Column 2 LGIP development type	Column 3 Uses
	Services	Animal keeping Brothel Car wash Cemetery Childcare centre Club Community care centre Community use Crematorium Detention facility Educational establishment Environmental facility Funeral parlour Health care services Home based business Hospital Hotel Indoor sport and recreation Major sport, recreation and entertainment facility Motor sport facility Nature-based tourism Nightclub entertainment facility Non-resident workforce accommodation Outdoor sport and recreation Outstation Park Place of worship Resort complex Rooming accommodation Rural workers accommodation Service industry Short-term accommodation Theatre Tourist attraction Tourist park
	Professional	Emergency services Office Sales office Veterinary services
	Industry	Air services High impact industry Landing Low impact industry Marine industry Medium impact industry Parking station Port services Research and technology industry Rural industry Special industry Telecommunications facility Transport depot Warehouse Winery

Column 1 LGIP development category	Column 2 LGIP development type	Column 3 Uses
	Other	Animal husbandry Aquaculture Cropping Extractive industry Intensive animal husbandry Intensive horticulture Major electricity infrastructure Permanent plantation Renewable energy facility Substation Utility installation

(4) Details of the methodology used to prepare the planning assumptions are stated in the extrinsic material.

4.2.1 Population and employment growth

(1) A summary of the assumptions about population and employment growth for the planning scheme area is stated in Table 4.2.1.1-Population and employment assumptions summary.

Table 4.2.1.1-Population and employment assumptions summary

Column 1 Description	Column 2 Assumptions					
	2011	2016	2021	2026	2031	Ultimate
Population	180,114	197,830	212,488	228,049	243,892	404,326
Employment	90,057	98,915	104,817	112,259	119,531	418,035

(2) Detailed assumptions about growth for each projection area and LGIP development type category are identified in the following tables in Schedule 3 Local government infrastructure plan mapping and tables:

(a) Table SC3.1.1 - Existing and projected population, and;

(b) Table SC3.1.2 - Existing and projected employment;

Editor's note—More detailed projections by growth model zone areas are available in the extrinsic material.

4.2.2 Development

(1) The developable area is identified in Schedule 3-Local government infrastructure plan mapping and tables, SC3.3.2 - Developable area map.

(2) The planned density for future development is stated in Table 4.2.2.1 to Table 4.2.2.5.

Editor's note—Locations where infill and broad-hectare densities apply are identified respectively as 'less than threshold' and 'greater than threshold' areas that are mapped in Appendix C and Appendix D of *Local government infrastructure plan - planning assumptions & PIA . Townsville City Council.* (extrinsic material). The densities and other key assumptions in this local government infrastructure plan include:

- Assumed population, housing and employment densities (infill) (Table 4.2.2.1);
- Assumed population, housing and employment densities (broad-hectare) (Table 4.2.2.2);
- Assumed population, housing and employment densities (heritage)(Table 4.2.2.3);
- Assumed population, housing and employment densities (special cases) as shown in Figure 4.2.2.1 (Table 4.2.2.4); and
- Delayed start dates for growth associated with preliminary approvals (Table 4.2.2.5).

(3) A summary of the assumptions about future residential and non-residential development for the planning scheme area is stated in Table 4.2.2.6 - Residential dwelling and non-residential floor space assumption summary.

(4) A summary of the assumptions about future educational enrolments for the planning scheme area is stated in Table 4.2.2.7 - Education assumptions summary.

	Total	3,291,397	3,615,138	3,849,188	4,122,764	4,386,648	15,908,516

Table 4.2.2.7-Education assumptions summary

Column 1 Description		Column 2 - Assumptions					
		2011	2016	2021	2026	2031	Ultimate
Education enrolments	Pre-primary	18,712	19,792	20,473	21,140	21,759	23,752
	Secondary	12,892	13,636	14,104	14,591	15,062	16,500
	Tertiary	13,775	15,137	16,208	17,317	18,411	19,213
	Total	45,379	48,565	50,785	53,048	55,232	59,464

Editor's note—Student enrolments are also a critical aspect of infrastructure planning, so their assumptions and projections have been made in addition, and supplementary to, the statutory requirements of the LGIP.

(5) Detailed assumptions about future development for each projection area and LGIP development type are identified in the following tables in Schedule 3 - Local government infrastructure plan mapping and tables:

(a) Table SC3.1.3 - Existing and projected residential dwellings;

(b) Table SC3.1.4 - Existing and projected non-residential floor space; and

(c) Table SC3.1.5 - Existing and projected education enrolments.

Editor's note—More detailed projections by growth model zone areas are available in the extrinsic material. Projections are based on the Townsville Growth Model (18.5.2016), moderated to provide for an earlier start for Rocky Springs, and a later start for Mt Low Developments.

4.2.3 Infrastructure demand

(1) The demand generation rate for a trunk infrastructure network is stated in Column 4 of Table SC3.1.6a and Table SC3.1.6b, Schedule 3, Local government infrastructure plan mapping and tables.

These rates are for land which is, respectively, less than or greater than thresholds of size that represent infill or broad-hectare development that correlate with the development assumptions in section 4.2.2.

(2) The service catchments are identified in Schedule 3 Local government infrastructure plan mapping and tables, SC3.3.3 – Service area maps. They are also shown in finer detail in the plans for trunk infrastructure[1].

(3) A summary of the projected infrastructure demand for each service catchment is stated in Table 4.2.3.1 to Table 4.2.3.5.

[1] This is different to the LGIP template. Reference to the service catchment maps are made here rather than from the tables.

Table 4.2.3.1 - Water supply demand summary

Service area	Pathways demand (Trip ends/d)					
	2011	2016	2021	2026	2031	Ultimate
Urban	47,012	51,581	55,011	58,693	62,754	93,483
Non-urban	-	-	-	-	-	-
Total	47,012	51,581	55,011	58,693	62,754	93,483

Table 4.2.3.5 - Parks and land for community facilities demand summary

Service area	Parks etc demand (ERP)					
	2011	2016	2021	2026	2031	Ultimate
Urban	157,017	173,427	185,631	198,840	214,763	359,605
Non-urban	23,097	24,403	26,857	29,209	29,130	44,741
Total	180,114	197,830	212,488	228,049	243,892	404,346

4.3 Priority infrastructure area

(1) The priority infrastructure area identifies the area prioritised for the provision of trunk infrastructure to service the existing and assumed future urban development up to 2026.

(2) The priority infrastructure area is identified in Schedule 3 - Local government infrastructure plan mapping and tables, SC3.3.4 - Priority infrastructure area map.

4.4 Desired standards of service

(1) This section states the key standards of performance for a trunk infrastructure network.

(2) Details of the standard of service for a trunk infrastructure networks are identified in the extrinsic material.

4.4.1 Water supply

The water supply desired standards of service is to:

(1) Ensure drinking water complies with the National Health and Medical Research Council (NHMRC) Australian drinking water guidelines for colour, turbidity and microbiology.

(2) Collect, store, treat and convey potable water from source to consumers in accordance with the *Water Act 2000*.

(3) Minimise non-revenue water loss.

(4) Design the water supply network in accordance with council's adopted standards identified in the planning scheme to provide:

  (a) average day consumption (AD) – 600 l/EP/day;

  (b) minimum and maximum supply pressure of 220 kPa and 800 kPa at each property boundary; and

  (c) fire flow for residential (15 l/s for 2 hours), industrial and commercial (30 l/s for 4 hours) development.

(5) Ensure water systems meet the requirements of the *Water Supply (Safety and Reliability) Act 2008*.

4.4.2 Sewerage

The sewerage desired standards of service is to:

(1) Provide a reliable network that collects, stores, transports, treats and releases sewerage from premises.

(2) Design the sewerage network in accordance with:

  (a) council's adopted standards identified in the planning scheme;

  (b) Water Services Association of Australia (WSAA) guidelines;

  (c) the *Water Act 2000*;

  (d) the requirements of the *Water Supply (Safety and Reliability) Act 2008*;

  (e) all Environment Protection (EPA) legislation, regulations and licence conditions; and

  (f) key design parameters identified in Table 4.4.2.1.

Table 4.4.2.1 - Key design parameters for the sewerage network

Infrastructure item	Design parameters
All (network)	average dry weather flow (ADWF) - 230 l/EP/day peak wet weather flow (PWWF) - 5 x ADWF or C1 x ADWF (whichever is larger). C1 = $15x(EP)^{-0.1587}$
Pump stations	emergency storage of 6 hrs @ ADWF in pump stations and contributing gravity sewer catchments. installed large pump capacity - PWWF installed small pump capacity - 2 x ADWF
Gravity sewers	air space of at least 30% of pipe diameter at design flow slope to achieve self-cleansing velocity
Rising mains	minimum velocity for small pump: 0.5 m/s minimum velocity for large pump: 0.75 m/s maximum velocity: 2.5 m/s
Sewerage treatment/release	existing and future DEHP licence conditions, Recycled Water Management Plan requirements, EPBC requirements, biosolids guidelines and other relevant state and federal government guidelines and legislation.

The above table provides a summary of a few of the key design parameters for the sewage network. Reference should be made to the full council planning and design standards in the relevant planning scheme code and policy along with

other nominated standards, guidelines and legalisation for the planning and design of sewerage networks.

4.4.3 Roads

The roads desired standards of service is to:

(1) Provide a functional, safe and efficient road hierarchy that supports settlement patterns, commercial and economic activities, and freight movement.

(2) Design the road network to comply with the following:

(a) adopted standards identified in the planning scheme, and where deficient: the Department of Transport and Main Roads' Interim Guide to Road Planning and Design or the AUSTROADS guides;

(b) maximum road volume to capacity ratios (Table 4.4.3.1); and

(c) maximum degree of saturation for intersections (Table 4.4.3.2).

Table 4.4.3.1 - Maximum volume to capacity ratios for the road network

Infrastructure item	Maximum volume to capacity ratio by land use	
	Residential	Non-residential
Arterial	0.75	0.75
Sub-arterial	0.75	0.75
Major collector	0.75	0.75
Arterial (state-controlled)	0.75	0.75

Table 4.4.3.2 - Maximum degree of saturation for road intersections

Road network item	Maximum degree of saturation
Traffic signals	0.8
Roundabout	0.8
Priority controlled	0.8
Traffic signals (state-controlled)	0.8

4.4.4 Footpaths and cycleways network

The footpaths and cycleways desired standards of service is to:

(1) Provide a safe, attractive and convenient network that links residential areas to major activity nodes and public transport interchanges, thereby encouraging walking and cycling as acceptable travel alternatives; and

(2) Comply with council's adopted standards identified in the planning scheme, and Table 4.4.4.1.

Table 4.4.4.1 - Key footpath and cycleway design characteristics

Characteristic	Description
Coherence	Continuity of routes, consistent quality of routes and facilities, easy to follow, freedom of choice of routes.
Directness	Efficient operating speed, minimal delay times on commuting routes, avoid detour effects.
Safety	Minimal risk of accidents, conflict with motorised traffic or exposure to unsafe infrastructure.
Attractiveness	Lighting, personal safety, aesthetics, integration with surrounding area, access to different activities.
Comfort	Smooth, skid resistant surfaces, gentle gradients, minimal obstructions, minimal need to stop, minimal complicated movements, protection from adverse weather, journey facilities (e.g. seats, shade, drinking fountains).

4.4.5 Public parks and land for community facilities network

The parks and land for community facilities DSS is to:

(1) Provide an accessible network of parks, open space, and opportunities for co-located community facilities that meets the needs of residents and visitors in accordance with the rate of provision identified in Table 4.4.5.1 and accessibility standards outlined in Table 4.4.5.2.

(2) Ensure land for public parks and community facilities has:

(a) minimum land size as identified in Table 4.4.5.3;

(b) configuration, slope, and acceptable level of flood immunity in accordance with adopted standards identified in Table 4.4.5.3; and

(c) embellish public parks to complement the type and purpose of the public park as identified in Table 4.4.5.4.

Table 4.4.5.1 - Park provision

Infrastructure	Rate of provision (m^2/ERP)	
	District	Regional
Recreation parks	4	6
Sports parks	12	5

Table 4.4.5.2 - Park access

Infrastructure	Accessibility standard (km)	
	District	Regional
Recreation parks	2	25
Sports parks	5	10

Table 4.4.5.3 - Land characteristics

Infrastructure	Recreation parks		Sports parks	
	District	Regional	District	Regional
Minimum usable size (ha)	2	6	3	10
Average (desired) size (ha)	4	13	6	18
Shape of land	Preferred square or rectangular aspect ratio no greater than 2:1		To maximise area available for playing fields, a square or rectangle is most efficient	
Minimum desired flood immunity	20% of total area to be above Q50, 10% to be above Q100	50% of total area to be above Q50, 20% to be above Q100	Free of hazards. Fields and courts above Q50. Built facilities above Q100	
Maximum desired grade	Average grade of 1:14 for 50% of site		1:80 for all playing surfaces. Laser levelling to a maximum gradient of 1:100	
Road frontage and visibility	50% of park perimeter to have direct road frontage, preferably on a collector road		Approximately 25-50% of the park perimeter to have direct road frontage

4.5 Plans for trunk infrastructure

(1) The plans for trunk infrastructure identify the trunk infrastructure networks intended to service the existing and assumed future urban development at the desired standard of service up to 2031.

4.5.1 Plans for trunk infrastructure maps

(1) The existing and future trunk infrastructure networks are shown on the following maps in Schedule 3-Local government infrastructure plan mapping and tables:

(a) SC3.3.5 - Plans for trunk water supply infrastructure;

(b) SC3.3.6 - Plans for trunk sewerage infrastructure;

(c) SC3.3.7 - Plans for trunk roads infrastructure;

(d) SC3.3.8 - Plan for trunk footpaths and cycleways infrastructure;

(e) SC3.3.9 - Plan for trunk parks and land for community facilities infrastructure.

(2) The State infrastructure forming part of transport trunk infrastructure network has been identified using information provided by the relevant State infrastructure supplier.

4.5.2 Schedules of works

(1) Details of the existing and future trunk infrastructure networks are identified in the electronic Excel schedule of works model which can be viewed on council's website (Click here).

(2) The future trunk infrastructure is identified in the following tables in Schedule 3-Local government infrastructure plan mapping and tables:

(a) for the water supply network, Table SC3.3.5.1

(b) for the sewerage network, Table SC3.3.6.1

(c) for the road network, Table SC3.3.7.1

(d) for the footpath and cycleway network, Table SC3.3.8.1

(e) for the parks and land for community facilities network, Table SC3.3.9.1

Editor's note—Extrinsic material

The below table identifies the documents that assist in the interpretation of the local government infrastructure plan and are extrinsic material under the *Statutory Instruments Act 1992*.

List of extrinsic material

Column 1 **Title of document**	**Column 2** **Date**	**Column 3** **Author**
Local government infrastructure plan – planning assumptions & PIA. Townsville City Council.	11.4.17	D. Irwin
Local government infrastructure plan – DSS, definitions and demand. Townsville City Council.	11.4.17	D. Irwin
Local government infrastructure plan – PFTI. Townsville City Council.	11.4.17	D. Irwin
Local government infrastructure plan – alignment with the long term financial plan. Townsville City Council.	11.4.17	D. Irwin
Local government infrastructure plan – SOW model user manual. Townsville City Council.	11.4.17	D. Irwin
LGIP projections and densities. EXCEL spreadsheet. Townsville City Council	11.4.17	D. Irwin

4.6 Definitions

This local government infrastructure plan has been prepared as part of a planning scheme compliant with the Queensland Planning Provisions version 3.0, 17 February 2013. As such, terms defined elsewhere in the planning scheme are applicable here. In addition, the following terms also apply.

Table 4.6.1 - Zoning code abbreviations

Note – these are not a complete list, but are relevant to the tables elsewhere in this local government infrastructure plan and relate to zones described in the planning scheme.

Abbreviation	Zoning
CF	Community Facilities
CR	Character Residential
DC	District Centre
EC	Emerging Communities
HDR	High Density Residential
HII	High Impact Industry
LC	Local Centre
LDR	Low Density Residential
LII	Low Impact Industry
MC	Major Centre
MDR	Medium Density Residential
MII	Medium Impact Industry
MU	Mixed Use
NC	Neighbourhood Centre
OS	Open Space
PC	Principal Centre
RR	Rural Residential
RUR	Rural
SC	Specialised Centre
SR	Sport and Recreation

Table 4.6.2 - Precinct code abbreviations

Note - these are not a complete list, but are relevant to the tables elsewhere in this local government infrastructure plan and relate to precincts described in the planning scheme, or growth model precincts identified in the extrinsic material.

Abbreviation	Precinct
AC	Arcadia Central
ACC	Aitkenvale Centre Core
ACF	Aitkenvale Centre Frame
AMC	Aitkenvale Major Centre
AMD	Aitkenvale Medium Density
AV	Aitkenvale Village
BBCG	Balgal Beach Golf Course
BRM	Bayswater Road Medical - Mixed use precinct
C	Cungulla
CA	Civic Administration
CBDG	Sturt Street Gateway
CTR	Charters Towers Road Business - Mixed Use precinct
D	Domain Central (growth model precinct)
FRM	Fulham Road Medical (growth model precinct)
FSR	Flinders Street Retail
H	Horticulture
HPMC	Hyde Park Major Centre

Abbreviation	Precinct
HPMD	Hyde Park Medium Density
J	Jensen
KR	Kings Road
KT	Kirwan Traders
MCF1	Major Centre Fringe 1 (growth model precinct)
MCF2	Major Center Fringe 2 (growth model precinct)
MCF3	Major Center Fringe 3 (growth model precinct)
MCNS	Major Center North Shore (growth model precinct)
MH	Mater Hospital (growth model precinct)
MHF1	Mater Hospital Frame 1 (growth model precinct)
MHF2	Mater Hospital Frame 2 (growth model precinct)
NBG	Nelly Bay Gateway
NBT	Nelly Bay Tourist
NWV	North Ward Villages
PB	Picnic Bay
PS	Palmer Street
R	Riverway
RRRC	Ross River Road Corridor (growth model precinct)
RRRD	Rural Residential Ross Dam (growth model precinct)
S	The Strand
STRD	South Townsville Rail yards and Dean Park
TCMC	Thuringowa Central Major Centre
TSDA	Townsville State Development Area (model precinct)
WS	Wotton Street

Table 4.6.3 - Sub-precinct code abbreviations

Note - these are not a complete list, but are relevant to the tables elsewhere in this local government infrastructure plan and relate to sub-precincts described in the planning scheme, or growth model precincts identified in the extrinsic material.

Abbreviation	Sub-precinct
BP	Buffer (TSDA) – (growth model precinct)
ECP	Environmental Conservation (TSDA) – (growth model precinct)
ECOP	Ecological Corridor & Offsets (TSDA) – (growth model precinct)
HIIP	High Impact Industry (TSDA) – (growth model precinct)
LMI	Low Medium Impact Industry (TSDA) – (growth model precinct)
TCS	Thuringowa Centre Support
TD	Thuringowa Drive

Part 5 Tables of assessment

5.1 Preliminary

The tables in this part identify the category of development, and the category of assessment and assessment benchmarks for assessable development in the planning scheme area.

5.2 Reading the tables

The tables identify the following:

(1) The category of development:

- (a) prohibited;
- (b) accepted, including accepted with requirements; and
- (c) assessable development: that requires code or impact assessment

(2) The category of assessment - code or impact - for assessable development in:

- (a) a zone and, where used, a precinct or sub-precinct of a zone;
- (b) an overlay where used.

(3) the assessment benchmarks for assessable development and requirements for accepted development, including:

- (a) whether a zone code or specific provisions in the zone code apply (shown in the 'assessment benchmarks for assessable development and requirements for accepted development' column);
- (b) if there is an overlay:
  - (i) whether an overlay code applies (shown in Table 5.9.1); or
  - (ii) whether the assessment benchmarks as shown on the overlay map (noted in the 'assessment benchmarks for assessable development and requirements for accepted development' column) applies;
- (c) any other applicable code(s) (shown in the 'assessment benchmarks for assessable development and requirements for accepted development' column).
- (d) any requirements for accepted development which will need to be met in order for the development to remain accepted.

(4) any variation to the category of assessment (shown as an 'if' in the 'Categories of development and assessment' column) that applies to the development.

Note—Development will only be taken to be prohibited development under the planning scheme if it is identified as prohibited development in schedule 10 of the Regulation.

Editor's note—Examples of matters that can vary the categories of development and assessment are gross floor area, height, numbers of people or precinct provisions.

5.3 Categories of development and assessment

5.3.1 Process for determining the category of development and the category of assessment for assessable development

The process for determining a category of development and category of assessment is:

(1) for a material change of use, establish the use by reference to the use definitions in Schedule 1;

(2) for all development, identify the following:

(a) the zone or zone precinct that applies to the premises, by reference to the zone map in Schedule 2;

Editor's note—Local plans are not used in this planning scheme.

(b) if an overlay applies to the premises, by reference to the overlay map in Schedule 2;

(3) determine if the development is accepted development under schedule 6 of the Regulation.

Editor's note—Schedule 6 of the Regulation prescribes development that a planning scheme can not state is assessable development where the matters identified in the schedule are met.

(4) if the development is not regulated by the Regulation, determine the initial level of assessment by reference to the tables in:

- section 5.5 Categories of development and assessment -Material change of use,
- section 5.6 Categories of development and assessment -Reconfiguring a lot,
- section 5.7 Categories of development and assessment -Building work,
- section 5.8 Categories of development and assessment -Operational work;

(5) a precinct of a zone may change the categories of development and assessment and this will be shown in the 'categories of development and assessment' column of each of the tables in sections 5.5, 5.6, 5.7, and 5.8;

(6) if an overlay applies, refer to section 5.9 Categories of development and assessment-Overlays, to determine if the overlay further changes the category of development or assessment;

5.3.2 Determining the category of development and categories of assessment

(1) A material change of use is assessable development:

(a) unless the tables in section 5.5 Categories of development and assessment state otherwise;

(b) if a use is not listed or defined in the tables in section 5.5 Categories of development and assessment;

(c) unless otherwise prescribed within the Act or the Regulation.

(2) Reconfiguring a lot is assessable development requiring code assessment unless the tables in section 5.6 Categories of development and assessment state otherwise or unless otherwise prescribed within the Act or the Regulation.

(3) Building work and operational work are accepted development, unless the tables in sections 5.7 and 5.8 Categories of development and assessment state otherwise or unless otherwise prescribed within the Act or the Regulation.

(4) Where an aspect of development is proposed on premises included in more than one zone or overlay, category of development and assessment for that aspect is the highest category for each aspect of the development under each of the applicable zones or overlays.

(5) Where development is proposed on premises partly affected by an overlay, the category of development for assessment for the overlay only relates to the part of the premises affected by the overlay.

(6) For the purposes of Schedule 6, Part 2 Material change of use section (2)(2)(d)(i) or (ii) of the Regulation, an overlay does not apply to the premises if the development meets the acceptable outcomes that form the requirements for accepted development in the relevant overlay code.

(7) If development is identified as having a different category of development or category of assessment under a zone than under an overlay, the highest category of development or assessment applies as follows:

(a) accepted development subject to requirements prevails over accepted development;

(b) code assessment prevails over accepted development where subject to requirements and accepted

development;

(c) impact assessment prevails over code assessment, accepted development where subject to requirements and accepted development.

(8) Provisions of Part 10 may override any of the above.

(9) The category of development prescribed under schedule 6 of the Regulation overrides all other categories of development or assessment for that development under the planning scheme to the extent of any inconsistency.

(10) Despite all of the above, if development is listed as prohibited development under schedule 10 of the Regulation, a development application cannot be made.

Editor's note - Schedule 7 of the Regulation also identifies development that the state categorises as accepted development. Some development in the schedule may still be made assessable under the planning scheme.

Note—Development is to be taken to be prohibited development under the planning scheme only if it is identified in schedule 10 of the Regulations.

5.3.3 Determining the requirements for accepted development and assessment benchmarks and other matters for assessable development

(1) Accepted development does not require a development approval and is not subject to assessment benchmarks. However, certain requirements or variations may apply to some types of development for it to be accepted development. Where nominated in the categories of development and assessment, accepted development (where stated as 'accepted development subject to requirements') must comply with the requirements contained in the identified assessment benchmark(s) as identified in the 'assessment benchmarks for assessable development and requirements for accepted development' column.

(2) Accepted development that does not comply with one or more of the requirements of an identified assessment benchmark, becomes code assessable development unless otherwise specified in the Categories or development and assessment column.

(3) The following rules apply in determining assessment benchmarks for each category of development and assessment.

Development subject to code assessment:

(a) is to be assessed against all the assessment benchmark(s) identified in the assessment benchmarks for assessable development and requirements for accepted development column;

(b) that occurs as a result of development becoming subject to code assessment pursuant to sub-section 5.3.3(2), must:

(i) be assessed against the assessment benchmark(s) for the development application, limited to the subject matter of the accepted development assessment benchmark(s) acceptable outcomes that were not complied with or were not capable of being complied with under sub-section 5.3.3(2);

(ii) comply with all required acceptable outcomes of the assessment benchmarks identified in sub-section 5.3.3(1), other than those mentioned in sub-section 5.3.3(2);

(c) that complies with:

(i) the purpose and overall outcomes of the code complies with the code;

(ii) the performance or acceptable outcomes complies with the purpose and overall outcomes of the code;

(d) must be assessed against any assessment benchmarks for the development identified in section 30 of the Regulation.

Development subject to Impact assessment:

(a) is to be assessed against the identified assessment benchmarks in the assessment benchmarks column (where relevant);

(b) assessment is to have regard to the whole of the planning scheme, to the extent relevant; and

(c) is to be be assessed against any assessment benchmarks for the development identified in section 30

of the Regulation.

Note—The first row of each of the assessment benchmarks is to be checked to confirm if there are assessment benchmarks that commonly apply to general scenarios in the zone or overlay.

Editor's note— Section 31 of the Regulation identifies the matters that impact assessment must have regard to.

5.4 Regulated categories of development and categories of assessment prescribed by the Regulation

Editor's note— The following schedules of the Regulation are relevant to the Townsville Planning Scheme:

- Schedule 6, Part 2, 6 of the Regulation, Material change of use for community residence
- Schedule 13 of the Regulation, Requirements for cropping involving forestry for wood production
- Schedule 12 of the Regulation, Particular reconfiguring a lot requiring code assessment

And other parts of the Regulation may also be relevant.

5.5 Categories of development and assessment - Material change of use

The following tables identify the categories of development and assessment and the corresponding assessment benchmarks for assessable development and accepted development for development in a zone for making a material change of use.

Table 5.5.1 - Low density residential zone

Use	Categories of development and assessment	Assessment benchmarks for assessable development and requirements for accepted development
Dwelling house Dwelling unit **Editor's note—**This category of development and assessment may be altered by the Water resource catchment, Flood hazard, Coastal environment and Landslide hazard overlays. Refer to Table 5.9.1. Landing **Editor's note—**Landings are separately regulated under the Prescribed Tidal Works Code. Park	**Accepted development**	
		No assessment benchmarks apply
Dual occupancy **Editor's note—**This category of development and assessment may be altered by the Water resource catchment, Flood hazard, Coastal environment and Landslide hazard overlays. Refer to Table 5.9.1.	**Accepted development**	
	If not in the Stables precinct	No assessment benchmarks apply
Major electricity infrastructure Substation Utility installation	**Accepted development**	
	If provided by a public sector entity	No assessment benchmarks apply
Telecommunications facility	**Accepted development**	
	If aerial cabling for broadband purposes	No assessment benchmarks apply
	Accepted development subject to requirements	
	If located in the Stables precinct and associated with a stables use on the same site.	Low density residential zone code Works code

Caretaker's accommodation	**Assessable development - Code-assessment**	
	If: (a) not Accepted development subject to requirements; and (b) in the Stables precinct.	Low density residential zone code Healthy waters code Landscape code Transport impact, access and parking code Works code
Sales office	**Accepted development subject to requirements**	
		Low density residential zone code
Animal keeping **Editor's note—**Council's local laws also establish requirements regarding the keeping of animals.	**Accepted development subject to requirements**	
	If a stable and in the Stables precinct	Low density residential zone code
Home based business	**Accepted development subject to requirements**	
	If: (a) the gross floor area does not exceed 60m²; and (b) the use is contained within an existing domestic outbuilding or dwelling.	Low density residential zone code
Emergency services	**Assessable development - Code assessment**	
		Low density residential zone code Healthy waters code Landscape code Transport impact, access and parking code Works code
Assessable development - Impact assessment		
Any other use not listed in this table. Any use listed in this table and not meeting the description listed in the categories of development and assessment column. Any other undefined use.		The planning scheme

Editor's note—The above categories of development and assessment apply unless otherwise prescribed in the Regulation.

Table 5.5.2 - Medium density residential zone

Use	Categories of development and assessment	Assessment benchmarks for assessable development and requirements for accepted development
Dual occupancy Dwelling house Dwelling unit **Editor's note—**This category of development and assessment may be altered by the Water resource catchment, Flood hazard, Coastal environment and Landslide hazard overlays. Refer to Table 5.9.1. Landing **Editor's note—**Landings are separately regulated under the Prescribed Tidal Works Code. Park	**Accepted development**	
		No assessment benchmarks apply
Major electricity infrastructure Substation Utility installation	**Accepted development**	
	If provided by a public sector entity	No assessment benchmarks apply
Telecommunications facility	**Accepted development**	
	If aerial cabling for broadband purposes	No assessment benchmarks apply
Sales office	**Accepted development subject to requirements**	
		Medium density residential zone code
Home based business	**Accepted development subject to requirements**	
	If: (a) the gross floor area does not exceed 60m²; and (b) the use is contained within an existing domestic outbuilding or dwelling.	Medium density residential zone code
Community use Food and drink outlet	**Assessable development - Code assessment**	
	If: (a) in the Picnic Bay precinct, Nelly Bay tourist precinct, North Ward villages precinct, Hyde Park medium density precinct, The Strand precinct or the Aitkenvale village precinct; and (b) the use is located on the ground floor.	Medium density residential zone code Healthy waters code Landscape code Transport impact, access and parking code Works code
	Assessable development - Code assessment	

Health care services Office Service industry Shop	If: (a) in the Picnic Bay precinct, Nelly Bay tourist precinct, North Ward villages precinct, Hyde Park medium density precinct or the Aitkenvale village precinct; (b) the gross floor area does not exceed 250m²; (c) the use is located on the ground floor; and (d) fronting Gregory Street where in the North Ward villages precinct. **Editor's note—**The gross floor area threshold is calculated for a new use or an extension to an existing use. It is not the cumulative total of the existing use and the additional gross floor area forming part of the development application.	Medium density residential zone code Healthy waters code Landscape code Transport impact, access and parking code Works code
Multiple dwelling Residential care facility Retirement facility Rooming accommodation Short-term accommodation	**Assessable development - Code assessment**	
	If building height does not exceed the number of storeys applicable in Table 5.5.3	Medium density residential zone code Healthy waters code Landscape code Transport impact, access and parking code Works code
Community care centre Emergency services	**Assessable development - Code assessment**	
		Medium density residential zone code Healthy waters code Landscape code Transport impact, access and parking code Works code
Assessable development - Impact assessment		
Any other use not listed in this table. Any use listed in this table and not meeting the description listed in the caterories of development and assessment column. Any other undefined use.		The planning scheme

Editor's note—The above categories of development and assessment apply unless otherwise prescribed in the Regulation.

Thuringowa South precinct

Table 5.5.3-Assessable development - Code assessment building height thresholds for the Medium density residential zone

Location	Number of storeys
Thuringowa South precinct	5 storeys where on a site fronting Riverway Drive 3 storeys otherwise

Thuringowa East precinct

Table 5.5.3-Assessable development - Code assessment building height thresholds for the Medium density residential zone

Location	Number of storeys

Editor's note—The above categories of development and assessment apply unless otherwise prescribed in the Regulation.

Rural

Table 5.6.1-Reconfiguring a lot (Part)

Zone	Categories of development and assessment	Assessment benchmarks for assessable development and requirements for accepted development
Rural zone	**Assessable development - Code assessment**	
	If the size of each lot created is equal to or greater than: (a) in the Horticulture precinct: 40ha; or (b) in the Mixed farming precinct: (i) 400ha if on land to which a Water resource catchment overlay applies; or (ii) 40ha otherwise; or (c) in the Grazing precinct: 400ha; or (d) in the Jensen precinct: 10ha; or (e) in the Cungulla precinct: 10ha.	Rural zone code Reconfiguring a lot code Healthy waters code Transport impact, access and parking code Works code
	Assessable development - Impact assessment	
	Otherwise	The planning scheme including: Rural zone code Reconfiguring a lot code
Assessable development - Code assessment		
Any other reconfiguring a lot not listed in this table, unless otherwise prescribed in the Regulation. Any reconfiguring a lot listed in this table and not meeting the description listed in the categories of development and assessment column.		

Editor's note—The above categories of development and assessment apply unless otherwise prescribed in the Regulation.

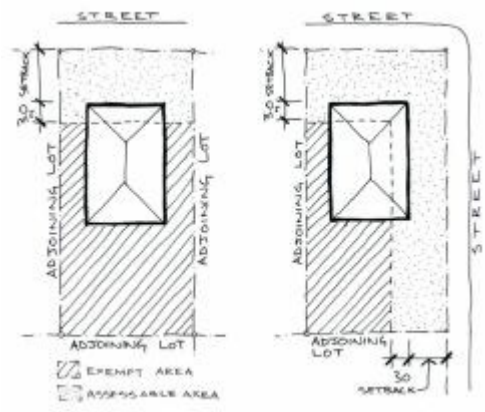
5.7 Categories of development and assessment - Building work

The following table identifies the categories of development and assessment and the assessment benchmarks for assessable development and requirements for accepted development for building work regulated under the planning scheme.

Table 5.7.1 - Building work

Editor's note—The planning scheme also regulates building work through the categories of development and assessment for overlays.
Editor's note—Contributing character buildings and non-contributing properties are identified in Character residential planning scheme policy SC6.2.

Zone	Categories of development and assessment	Assessment benchmarks for assessable development and requirements for accepted development
Character residential zone	**Assessable development - Code assessment**	
	If: (a) involving partial demolition, external alteration, extension (including minor building work and the construction of a class 10a building (as defined by the Building Code of Australia)), to a contributing character building where all or part of the work is in front of or within a depth of 3m from the facade facing any street; or (b) raising or lowering a contributing character building by more than 1m; or (c) relocating a contributing character building within the same site; or (d) involving construction of a class 10a building (as defined by the Building Code of Australia) on the site of a non-contributing property, where all or part of the work is in front of, or within a depth of 3m from the main building façade facing any street; or (e) construction of any new class 1a or class 2 building (as defined by the Building Code of Australia) on either a contributing or non-contributing character site, unless on a rear lot.	Character residential zone code



Assessable development - Impact assessment	
If involving relocation off the site or the total demolition of a contributing character building	The planning scheme including: Character residential zone code Reconfiguring a lot code
Accepted development	
Replacement or refurbishment of stairs on a contributing character building. Raising or lowering a contributing character building by 1m or less. Any other building work not listed in this table. Any building work listed in this table and not meeting the description listed in the categories of development and assessment column.	

Editor's note—The above categories of development and assessment apply unless otherwise prescribed in the Regulation.

5.8 Categories of development and assessment - Operational work

The following tables identify the categories of development and assessment and corresponding assessment benchmarks for assessable development and requirements for accepted development for operational work.

Table 5.8.1 - Operational work

Zone	Categories of development and assessment	Assessment benchmarks for assessable development and requirements for accepted development
All zones	**Assessable development - Code assessment**	
	If operational works (other than filling or excavation) for the reconfiguration of a lot	Healthy waters code Landscape code Reconfiguration of a lot code Transport impact, access and parking code Works code
	If operational works (other than filling or excavation) for a material change of use	Healthy waters code Landscape code Transport impact, access and parking code Works code
	If filling and excavation: (a) within 1.5m of a lot boundary and exceeding a depth of 300mm; or (b) involving: (i) a depth exceeding 1m; or (ii) a volume of 100m³ or more.	Healthy waters code Works code
Accepted development		
Any other operational work not listed in this table. Any operational work listed in this table and not meeting the description listed in the categories of development and assessment column.		

Editor's note—The above categories of development and assessment apply unless otherwise prescribed in the Regulation.

Table 5.8.2-Operational work being placing an advertising device on premises

Editor's note—Council's local laws also establish requirements regarding the placement of advertising devices on a premises.

Editor's note—Advertising devices in unallocated State land, reserve or road may require a permit to occupy under the *Land Act 1994*.

Editor's note—Advertising device within or adjacent to a State-controlled road corridor may require approval by the Department of Transport and Main Roads.

Note—Advertising devices required to meet statutory purposes are exempt.

Editor's note—Refer to Table 9.4.1.3(b) - Types of advertising devices in section 9.4.1 Advertising devices code for descriptions of the various types of advertising devices.

Neighbourhood centre zone

Table 5.8.2—Operational work being placing an advertising device on premises (Part)

Zone	Categories of development and assessment	Assessment benchmarks for assessable development and requirements for accepted development
	Accepted development	
	If: (a) any advertising device located internally within a building and not generally visible from outside; or (b) otherwise: (i) a blind/canopy sign; or (ii) a commercial flag; or (iii) a footway sign; or (iv) a hamper sign; or (v) a stallboard sign; or (vi) a street furniture sign; or (vii) a window sign.	
	Accepted development subject to requirements	

Neighbourhood centre zone	If: (a) an above-awning sign; or (b) an animated sign; or (c) an awning fascia sign; or (d) a banner sign; or (e) a bunting; or (f) a fence sign; or (g) a ground sign; or (h) an inflatable sign; or (i) a panel sign; or (j) a pole sign; or (k) a projecting sign; or (l) a pylon sign; or (m) a roof sign; or (n) an under-awning sign; or (o) a wall sign.	Advertising devices code
	Assessable development - Code assessment	
	If not made accepted development subject to requirements, any advertising device listed in Table 9.3.1.3(b).	Advertising devices code
Accepted development		
Any other operational work not listed in this table. Any operational work listed in this table and not meeting the description listed in the categories of development and assessment column.		

Editor's note—The above categories of development and assessment apply unless otherwise prescribed in the Regulation.

Local centre zone

Table 5.8.2—Operational work being placing an advertising device on premises (Part)

Zone	Categories of development and assessment	Assessment benchmarks for assessable development and requirements for accepted development
Local centre zone	**Accepted development**	
	If: (a) any advertising device located internally within a building and not generally visible from outside; or (b) otherwise: (i) a blind/canopy sign; or (ii) a commercial flag; or (iii) a footway sign; or (iv) a hamper sign; or (v) a stallboard sign; or (vi) a street furniture sign; or (vii) a window sign.	
	Accepted development subject to requirements	
	If: (a) an above-awning sign; or (b) an animated sign; or (c) an awning fascia sign; or (d) a banner sign; or (e) a bunting; or (f) a fence sign; or (g) a ground sign; or (h) an inflatable sign; or (i) a panel sign; or (j) a pole sign; or (k) a projecting sign; or (l) a pylon sign; or (m) a roof sign; or (n) an under-awning sign; or (o) a wall sign.	Advertising devices code
	Assessable development - Code assessment	
	If not made accepted development subject to requirements, any advertising device listed in Table 9.3.1.3(b).	Advertising devices code
Exempt development		
Any other operational work not listed in this table. Any operational work listed in this table and not meeting the description listed in the categories of development and assessment column.		

Editor's note—The above categories of development and assessment apply unless otherwise prescribed in the Regulation.

District centre zone

Table 5.8.2—Operational work being placing an advertising device on premises (Part)

Zone	Categories of development and assessment	Assessment benchmarks for assessable development and requirements for accepted development
District centre zone	**Accepted development**	
	If: (a) any advertising device located internally within a building and not generally visible from outside; or (b) otherwise: (i) a blind/canopy sign; or (ii) a commercial flag; or (iii) a footway sign; or (iv) a hamper sign; or (v) a stallboard sign; or (vi) a street furniture sign; or (vii) a window sign.	
	Accepted development subject to requirements	
	If: (a) an above-awning sign; or (b) an animated sign; or (c) an awning fascia sign; or (d) a banner sign; or (e) a bunting; or (f) a fence sign; or (g) a ground sign; or (h) an inflatable sign; or (i) a panel sign; or (j) a pole sign; or (k) a projecting sign; or (l) a pylon sign; or (m) a roof sign; or (n) an under-awning sign; or (o) a wall sign.	Advertising devices code
	Assessable development - Code assessment	
	If not made accepted development subject to requirements, any advertising device listed in Table 9.3.1.3(b).	Advertising devices code
Exempt development		
Any other operational work not listed in this table. Any operational work listed in this table and not meeting the description listed in the categories of development and assessment column.		

Editor's note—The above categories of development and assessment apply unless otherwise prescribed in the Regulation.

Major centre zone

Table 5.8.2—Operational work being placing an advertising device on premises (Part)

Zone	Categories of development and assessment	Assessment benchmarks for assessable development and requirements for accepted development
Major centre zone	**Accepted development**	
	If: (a) any advertising device located internally within a building and not generally visible from outside; or (b) otherwise: (i) a blind/canopy sign; or (ii) a commercial flag; or (iii) a footway sign; or (iv) a hamper sign; or (v) a stallboard sign; or (vi) a street furniture sign; or (vii) a window sign.	
	Accepted development subject to requirements	
	If: (a) an above-awning sign; or (b) an animated sign; or (c) an awning fascia sign; or (d) a banner sign; or (e) a bunting; or (f) a fence sign; or (g) a ground sign; or (h) an inflatable sign; or (i) a panel sign; or (j) a pole sign; or (k) a projecting sign; or (l) a pylon sign; or (m) a roof sign; or (n) an under-awning sign; or (o) a wall sign.	Advertising devices code
	Assessable development - Code assessment	
	If not made accepted development subject to requirements, any advertising device listed in Table 9.3.1.3(b).	Advertising devices code
Accepted development		

Any other operational work not listed in this table. Any operational work listed in this table and not meeting the description listed in the categories of development and assessment column.

Editor's note—The above categories of development and assessment apply unless otherwise prescribed in the Regulation.

Principal centre (CBD) zone

Table 5.8.2—Operational work being placing an advertising device on premises (Part)

Zone	Categories of development and assessment	Assessment benchmarks for assessable development and requirements for accepted development
	Exempt	
	If: (a) any advertising device located internally within a building and not generally visible from outside; or (b) if in the Flinders Street East precinct: (i) a commercial flag; or (ii) a footway sign; or (iii) a street furniture sign; or (c) otherwise: (i) a blind/canopy sign; or (ii) a commercial flag; or (iii) a footway sign; or (iv) a hamper sign; or (v) a stallboard sign; or (vi) a street furniture sign; or (vii) a window sign.	
	Accepted development subject to requirements	

Principal centre (CBD) zone	If: (a) in the Flinders Street East precinct; (i) an awning fascia sign; or (ii) a blind/canopy sign; or (iii) a hamper sign; or (iv) a stallboard sign; or (v) an under-awning sign; or (vi) a wall sign; or (vii) a window sign; or (b) otherwise: (i) an above-awning sign; or (ii) an animated sign; or (iii) an awning fascia sign; or (iv) a banner sign; or (v) a bunting; or (vi) a fence sign; or (vii) a ground sign; or (viii) an inflatable sign; or (ix) a panel sign; or (x) a pole sign; or (xi) a projecting sign; or (xii) a pylon sign; or (xiii) a roof sign; or (xiv) an under-awning sign; or (xv) a wall sign.	Advertising devices code
	Assessable development - Code assessment	
	If not made accepted development subject to requirements, any advertising device listed in Table 9.3.1.3(b).	Advertising devices code
Exempt development		
Any other operational work not listed in this table. Any operational work listed in this table and not meeting the description listed in the categories of development and assessment column.		

Editor's note—The above categories of development and assessment apply unless otherwise prescribed in the Regulation.

Specialised centre zone

Table 5.8.2—Operational work being placing an advertising device on premises (Part)

Zone	Categories of development and assessment	Assessment benchmarks for assessable development and requirements for accepted development
Specialised centre zone	**Accepted development**	
	If: (a) any advertising device located internally within a building and not generally visible from outside; or (b) otherwise: (i) a blind/canopy sign; or (ii) a commercial flag; or (iii) a footway sign; or (iv) a hamper sign; or (v) a stallboard sign; or (vi) a street furniture sign; or (vii) a window sign.	
	Accepted development subject to requirements	
	If: (a) an above-awning sign; or (b) an animated sign; or (c) an awning fascia sign; or (d) a banner sign; or (e) a bunting; or (f) a fence sign; or (g) a ground sign; or (h) an inflatable sign; or (i) a panel sign; or (j) a pole sign; or (k) a projecting sign; or (l) a pylon sign; or (m) a roof sign; or (n) an under-awning sign; or (o) a wall sign.	Advertising devices code
	Assessable development - Code assessment	
	If not made accepted development subject to requirements, any advertising device listed in Table 9.3.1.3(b).	Advertising devices code
Exempt development		
Any other operational work not listed in this table. Any operational work listed in this table and not meeting the description listed in the categories of development and assessment column.		

Editor's note—The above categories of development and assessment apply unless otherwise prescribed in the Regulation.

Mixed use zone

Table 5.8.2—Operational work being placing an advertising device on premises (Part)

Zone	Categories of development and assessment	Assessment benchmarks for assessable development and requirements for accepted development
Mixed use zone	**Accepted development**	
	If: (a) any advertising device located internally within a building and not generally visible from outside; or (b) otherwise: (i) a blind/canopy sign; or (ii) a commercial flag; or (iii) a footway sign; or (iv) a hamper sign; or (v) a stallboard sign; or (vi) a street furniture sign; or (vii) a window sign.	
	Accepted development subject to requirements	
	If: (a) an above-awning sign; or (b) an animated sign; or (c) an awning fascia sign; or (d) a banner sign; or (e) a bunting; or (f) a fence sign; or (g) a ground sign; or (h) an inflatable sign; or (i) a panel sign; or (j) a pole sign; or (k) a projecting sign; or (l) a pylon sign; or (m) a roof sign; or (n) an under-awning sign; or (o) a wall sign.	Advertising devices code
	Assessable development - Code assessment	
	If not made accepted development subject to requirements, any advertising device listed in Table 9.3.1.3(b).	Advertising devices code
Accepted development		
Any other operational work not listed in this table. Any operational work listed in this table and not meeting the description listed in the categories of development and assessment column.		

Editor's note—The above categories of development and assessment apply unless otherwise prescribed in the Regulation.

Community facilities zone

Table 5.8.2—Operational work being placing an advertising device on premises (Part)

Editor's note—The above categories of development and assessment apply unless otherwise prescribed in the Regulation.

Medium density residential zone

Table 5.8.2—Operational work being placing an advertising device on premises (Part)

Zone	Categories of development and assessment	Assessment benchmarks for assessable development and requirements for accepted development
Medium density residential zone	**Accepted development**	
	If: (a) any advertising device located internally within a building and not generally visible from outside; or (b) a street furniture sign.	
	Accepted development subject to requirements	
	If: (a) a fence sign or a wall sign for a Home based business; or (b) in the Picnic Bay precinct, Nelly Bay tourist precinct, North Ward villages, Hyde Park medium density residential precinct or The Strand precinct; and (i) a blind/canopy sign; or (ii) a commercial flag; or (iii) a footway sign; or (iv) a hamper sign; or (v) a stallboard sign; or (vi) an under-awning sign; or (vii) a window sign.	Advertising devices code
	Assessable development - Code assessment	
	If not made accepted development subject to requirements, any advertising device listed in Table 9.3.1.3(b).	Advertising devices code
Accepted development		
Any other operational work not listed in this table. Any operational work listed in this table and not meeting the description listed in the categories of development and assessment column.		

Editor's note—The above categories of development and assessment apply unless otherwise prescribed in the Regulation.

High density residential zone

Table 5.8.2—Operational work being placing an advertising device on premises (Part)

Zone	Categories of development and assessment	Assessment benchmarks for assessable development and requirements for accepted development
High density residential zone	**Accepted development**	
	If: (a) any advertising device located internally within a building and not generally visible from outside; or (b) a blind/canopy sign; or (c) a commercial flag; or (d) a footway sign; or (e) a hamper sign; or (f) a stallboard sign; or (g) a street furniture sign; or (h) a window sign.	
	Accepted development subject to requirements	
	If: (a) an above-awning sign; or (b) an awning fascia sign; or (c) a banner sign; or (d) a fence sign; or (e) a ground sign; or (f) a panel sign; or (g) a projecting sign; or (h) a roof sign; or (i) an under-awning sign; or (j) a wall sign.	Advertising devices code
	Accepted development subject to requirements	
	If not made accepted development subject to requirements, any advertising device listed in Table 9.3.1.3(b).	Advertising devices code
Accepted development		
Any other operational work not listed in this table. Any operational work listed in the table and not complying with the criteria in the level of assessment column.		

Editor's note—The above categories of development and assessment apply unless otherwise prescribed in the Regulation.

Character residential zone

Table 5.8.2—Operational work being placing an advertising device on premises (Part)

Zone	Categories of development and assessment	Assessment benchmarks for assessable development and requirements for accepted development
Character residential zone	**Accepted development**	
	If: (a) any advertising device located internally within a building and not generally visible from outside; or (b) a street furniture sign.	
	Accepted development subject to requirements	
	If a fence sign or a wall sign for a home based business	Advertising devices code
	Assessable development - Code assessment	
	If not made accepted development subject to requirements, any advertising device listed in Table 9.3.1.3(b).	Advertising devices code
Accepted development		
Any other work not listed in this table. Any operational work listed in this table and not meeting the description listed in the categories of development and assessment column.		

Editor's note—The above categories of development and assessment apply unless otherwise prescribed in the Regulation.

Rural residential zone

Table 5.8.2—Operational work being placing an advertising device on premises (Part)

Zone	Categories of development and assessment	Assessment benchmarks for assessable development and requirements for accepted development
Rural residential zone	**Accepted development**	
	If: (a) any advertising device located internally within a building and not generally visible from outside; or (b) a street furniture sign.	
	Accepted development subject to requirements	
	If a fence sign or a wall sign for a home based business	Advertising devices code
	Assessable development - Code assessment	
	If not made accepted development subject to requirements, any advertising device listed in Table 9.3.1.3(b).	Advertising devices code
Accepted development		
Any other operational work not listed in this table. Any operational work listed in this table and not meeting the description listed in the categories of development and assessment column.		

Editor's note—The above categories of development and assessment apply unless otherwise prescribed in the Regulation.

Emerging community zone

Table 5.8.2—Operational work being placing an advertising device on premises (Part)

Zone	Categories of development and assessment	Assessment benchmarks for assessable development and requirements for accepted development
Emerging community zone	**Accepted development**	
	If: (a) any advertising device located internally within a building and not generally visible from outside; or (b) a street furniture sign.	
	Accepted development subject to requirements	
	If a fence sign or a wall sign for a Home based business	Advertising devices code
	Assessable development - Code assessment	
	If not made accepted development subject to requirements, any advertising device listed in Table 9.3.1.3(b).	Advertising devices code
Accepted development		
Any other operational work not listed in this table. Any operational work listed in this table and not meeting the description listed in the categories of development and assessment column.		

Editor's note—The above categories of development and assessment apply unless otherwise prescribed in the Regulation.

Rural zone

Table 5.8.2—Operational work being placing an advertising device on premises (Part)

Zone	Categories of development and assessment	Assessment benchmarks for assessable development and requirements for accepted development
Rural zone	**Accepted development**	
	If: (a) any advertising device located internally within a building and not generally visible from outside; or (b) a street furniture sign.	
	Accepted development subject to requirements	
	(a) If for a business activity, roadside stall or winery and: (i) an above-awning sign; or (ii) an awning fascia sign; or (iii) a banner sign; or (iv) a bunting; or (v) a commercial flag; or (vi) a fence sign; or (vii) a footway sign; or (viii) a ground sign; or (ix) a panel sign; or (x) a projecting sign; or (xi) a wall sign ; or (b) a roof sign.	Advertising devices code
	Assessable development - Code assessment	
	If not made accepted development subject to requirements, any advertising device listed in Table 9.3.1.3(b).	Advertising devices code
Accepted development		
Any other operational work not listed in this table. Any operational work listed in this table and not meeting the description listed in the categories of development and assessment column.		

Editor's note—The above categories of development and assessment apply unless otherwise prescribed in the Regulation.

Sport and recreation zone

Table 5.8.2—Operational work being placing an advertising device on premises (Part)

Zone	Categories of development and assessment	Assessment benchmarks for assessable development and requirements for accepted development
Sport and recreation zone	**Accepted development**	
	If: (a) any advertising device located internally within a building and not generally visible from outside; or (b) any advertising device for a major sport, recreation and entertainment facility comprising a sports stadium or motor sport facility; or (c) for a club, food and drink outlet, functions facility, indoor sport and recreation, outdoor sport and recreation, bar or shop, and: (i) a blind/canopy sign; or (ii) a commercial flag; or (iii) a hamper sign; or (iv) a stallboard sign; or (v) an under-awning sign; or (vi) a window sign; or (d) otherwise: (i) a street furniture sign; or (ii) footway sign.	
	Accepted development subject to requirements	
	If: (a) an above-awning sign; or (b) an awning fascia sign; or (c) a banner sign; or (d) a bunting; or (e) a fence sign; or (f) a ground sign; or (g) a panel sign; or (h) a projecting sign; or (i) a wall sign.	Advertising devices code
	Assessable development - Code assessment	
	If not made accepted development subject to requirements, any advertising device listed in Table 9.3.1.3(b).	Advertising devices code
Accepted development		

Any other operational work not listed in this table. Any operational work listed in this table and not meeting the description listed in the categories of development and assessment column.

Editor's note—The above categories of development and assessment apply unless otherwise prescribed in the Regulation.

5.9 Categories of development and assessment—Overlays

The following table identifies where an overlay changes the categories of development and assessment from that stated in a zone and the relevant assessment benchmarks.

Airport environs overlay

Table 5.9.1 - Assessment benchmarks for overlays

Development	Categories of development and assessment	Assessment benchmarks for assessable development and requirements for accepted development
Airport environs overlay		
Any material change of use, reconfiguring a lot or operational work within: (a) the airport's operational airspace shown on overlay Map OM-01.1; or (b) the lighting area buffer zones shown on overlay Map OM-01.5; or (c) aviation facilities' buffers areas shown on overlay Map OM-01.3.	No change to the category of development and assessment	Airport environs overlay code where the development is accepted development subject to requirements or assessable development under the categories of development and assessment for the relevant zone. **Editor's note—**This overlay code is applicable to accepted development subject to requirements development.
Any material change of use: (a) within 13km of an airport runway shown on overlay Map OM-01.2; or (b) within a public safety area shown on overlay Map OM-01.2.	No change to the category of development and assessment	Airport environs overlay code where the development is accepted development subject to requirements or assessable development under the categories of development and assessment for the relevant zone.
Any material change of use above the 20 ANEF contour shown on overlay Map OM-01.4 for: (a) Dwelling house; or (b) Dual occupancy.	Accepted development subject to requirements.	Airport environs overlay code
Any other material change of use above the 20 ANEF contour shown on overlay Map OM-01.4.	No change to the category of development and assessment	Airport environs overlay code where the development is accepted development subject to requirements or assessable development under the categories of development and assessment for the relevant zone.

Bushfire hazard overlay (high hazard area)

Table 5.9.1 - Assessment benchmarks for overlays

Development	Categories of development and assessment	Assessment benchmarks for assessable development and requirements for accepted development
Bushfire hazard overlay (high hazard area)		
Material change of use for: (a) Child care centre; or (b) Detention facility; or (c) Educational establishment; or (d) Emergency services; or (e) Hospital; or (f) Industry activities involving manufacture or storage of hazardous materials in bulk; or (g) Multiple dwelling; or (h) Residential care facility; or (i) Retirement facility; or (j) Relocatable home park; or (k) Rooming accommodation; or (l) Shopping centre; or (m) Short-term accommodation; or (n) Telecommunications facility; or (o) Tourist park; or (p) Tourist attraction; or (q) Transport depot; or (r) Utility installation.	Assessable development - impact assessable	Bushfire hazard overlay code
Any other material change of use	No change to the category of development and assessment	Bushfire hazard overlay code where the development is assessable development under the categories of development and assessment for the relevant zone. **Editor's note—**This overlay code is not applicable to accepted development subject to requirements development.
Reconfiguration of a lot	No change to the category of development and assessment	Bushfire hazard overlay code where the development is assessable development under the categories of development and assessment for reconfiguration of a lot.

Bushfire hazard overlay (medium hazard area)

Table 5.9.1 - Assessment benchmarks for overlays

Development	Categories of development and assessment	Assessment benchmarks for assessable development and requirements for accepted development
Bushfire hazard overlay (medium hazard area)		
Any material change of use	No change to the category of development and assessment	Bushfire hazard overlay code where the development is assessable development under the categories of development and assessment for the relevant zone. **Editor's note—**This overlay code is not applicable to accepted development subject to requirements development.
Reconfiguration of a lot	No change to the category of development and assessment	Bushfire hazard overlay code where the development is assessable development under the categories of development and assessment for reconfiguration of a lot.

Coastal environment overlay

Table 5.9.1 - Assessment benchmarks for overlays

Development	Categories of development and assessment	Assessment benchmarks for assessable development and requirements for accepted development
Coastal environment overlay		
Material change of use for: (a) Dwelling house; or (b) Community residence.	Accepted development subject to requirements.	Coastal environment overlay code
Material change of use for a Dual occupancy	Assessable development - code assessment	Coastal environment overlay code
Building work involving the lowering of floor levels or enclosure of a ground floor storey on an existing: (a) Dwelling house; or (b) Dual occupancy; or (c) Community residence.	Accepted development subject to requirements.	Coastal environment overlay code
Any other material change of use	No change to the category of development and assessment	Coastal environment overlay code where the development is assessable development under the categories of development and assessment for the relevant zone.
Reconfiguration of a lot	No change to the category of development and assessment	Coastal environment overlay code where the development is assessable development under the categories of development and assessment for reconfiguration of a lot.
Operational work	No change to the category of development and assessment	Coastal environment overlay code where the development is assessable development under the categories of development and assessment for operational work.

Cultural heritage overlay

On a heritage place

Table 5.9.1 - Assessment benchmarks for overlays

Development	Categories of development and assessment	Assessment benchmarks for assessable development and requirements for accepted development
Cultural heritage overlay		
On a heritage place		
Building work where an 'Exemption Certificate' has been issued for work under Section 75 of the *Queensland Heritage Act 1992*	Accepted development	No assessment benchmarks applicable
Material change of use	No change to the category of development and assessment	Cultural heritage overlay code where the development is assessable development under the categories of development and assessment for the relevant zone. **Editor's note—**This overlay code is not applicable to accepted development subject to requirements development.
Building work, where involving the total demolition or relocation of a heritage place	Assessable development - impact assessment	Cultural heritage overlay code
Building work, including minor building work, where involving: (a) alterations to a heritage place, including alterations to the interior of buildings; or (b) extensions to a heritage place; or (c) erecting a new or separate building on a heritage place site; or (d) the partial demolition of a heritage place	Assessable development - code assessment	Cultural heritage overlay code
Operational work where involving a change to landscaping, fencing or natural features of land referred to in the citation for a heritage place listed in SC6.3 Cultural heritage planning scheme policy	Assessable development - code assessment	Cultural heritage overlay code
Reconfiguration of a lot	No change to the category of development and assessment	Cultural heritage overlay code where the development is assessable development under the categories of development and assessment for reconfiguration of a lot.

Cultural heritage overlay

Adjoining a heritage place

Table 5.9.1 - Assessment criteria for overlays

Development	Categories of development and assessment	Assessment benchmarks for assessable development and requirements for accepted development
Cultural heritage overlay		
Adjoining a heritage place		
Material change of use	No change to the category of development and assessment	Cultural heritage overlay code where the development is assessable development under the categories of development and assessment for the relevant zone. **Editor's note—**This overlay code is not applicable to accepted development subject to requirements development.
Reconfiguration of a lot	No change to the category of development and assessment	Cultural heritage overlay code where the development is assessable development under the categories of development and assessment for reconfiguration of a lot.

Natural assets overlay

Table 5.9.1 - Assessment benchmark for overlays

Development	Categories of development and assessment	Assessment benchmarks for assessable development and requirements for accepted development
Natural assets overlay		
Material change of use	No change to the category of development and assessment	Natural assets overlay code where the development is assessable development under the categories of development and assessment for the relevant zone. **Editor's note—**This overlay code is not applicable to accepted development subject to requirements.
Reconfiguration of a lot	No change to the category of development and assessment	Natural assets overlay code where the development is assessable development under the categories of development and assessment for reconfiguration of a lot.
Operational work being clearing of vegetation	Assessable development - code assessment if: (a) within an urban area; (b) not associated with an assessable development material change of use or reconfiguration of a lot; and (c) in the very high importance area shown on the overlay map OM-08. **Editor's note—** Urban area has the same meaning as in the Regulations.	Natural assets overlay code

Any other operational work	No change to the category of development and assessment	Natural assets overlay code where the development is assessable development under the categories of development and assessment for operational work. **Editor's note—**This overlay code is not applicable to accepted development subject to requirements development.

Extractive resources overlay

Table 5.9.1 - Assessment benchmarks for overlays

Development	Categories of development and assessment	Assessment benchmarks for assessable development and requirements for accepted development
Extractive resources overlay		
Material change of use	No change to the category of development and assessment	Extractive resources overlay code where the development is assessable development under the categories of development and assessment for the relevant zone. **Editor's note—**This overlay code is not applicable to accepted development subject to requirements.
Reconfiguration of a lot	No change to the category of development and assessment	Extractive resources overlay code where the development is assessable development under the categories of development and assessment for reconfiguration of a lot.

Flood hazard overlay (high and medium hazard areas)

Table 5.9.1 - Assessment benchmarks for overlays

Development	Categories of development and assessment	Assessment benchmarks for assessable development and requirements for accepted development
Flood hazard overlay (high and medium hazard areas) **Note—**to avoid any doubt, the term medium hazard area includes areas shown on the overlay maps as medium hazard — further investigation areas.		
Material change of use for a telecommunications facility	Assessable development - code assessment	Flood hazard overlay code
Material change of use for: (a) Dwelling house; or (b) Dual occupancy; or (c) Community residence.	Accepted development subject to requirements	Flood hazard overlay code
Material change of use for: (a) Emergency services; or (b) Hospital; or (c) Special industry; or (d) High impact industry; or (e) Residential care facility; or (f) Retirement facility; or (g) Major electricity infrastructure; or (h) Air services.	Assessable development - code assessment	Flood hazard overlay code

Building work involving the lowering of floor levels or enclosure of a ground floor storey on an existing: (a) Dwelling house; or (b) Dual occupancy; or (c) Community residence.	Accepted development subject to requirements	Flood hazard overlay code
Any other material change of use	No change to the category of development and assessment	Flood hazard overlay code where the development is assessable development under the categories of development and assessment for the relevant zone. **Editor's note—**This overlay code is applicable to accepted development subject to requirements identified in the categories of development and assessment for the relevant zone.
Reconfiguration of a lot	No change to the category of development and assessment	Flood hazard overlay code where the development is assessable development under the categories of development and assessment for reconfiguration of a lot.
Operational Works involving filling or excavation of more than $10m^3$ of material	Code assessment	Flood hazard overlay code
Any other operational works	No change to the category of development and assessment	Flood hazard overlay code where the development is assessable development under the categories of development and assessment for operational works.

Flood hazard overlay (low hazard area)

Table 5.9.1 - Assessment benchmarks for overlays

Development	**Categories of development and assessment**	**Assessment benchmarks for assessable development and requirements for accepted development**
Flood hazard overlay (low hazard area)		
Material change of use for: (a) Emergency services; or (b) Hospital; or (c) Special industry; or (d) High impact industry; or (e) Residential care facility; or (f) Retirement facility; or (g) Major electricity infrastructure; or (h) Air services.	Assessable development - code assessment	Flood hazard overlay code

Landslide hazard overlay (high and potential debris flow hazard areas or slope angle greater than 23 degrees)

Table 5.9.1 - Assessment benchmarks for overlays

Development	Categories of development and assessment	Assessment benchmarks for assessable development and requirements for accepted development
Landslide hazard overlay (high and potential debris flow hazard areas or slope angle greater than 23 degrees)		
Material change of use for: (a) Dwelling house; or (b) Dual occupancy.	Assessable development - code assessment	Landslide hazard overlay code
Any other material change of use	No change to the category of development and assessment	Landslide hazard overlay code where the development is assessable development under the categories of development and assessment for the relevant zone. **Editor's note-**This overlay code is not applicable to accepted development subject to requirements.
Reconfiguration of a lot	No change to the category of development and assessment	Landslide hazard overlay code where the development is assessable development under the categories of development and assessment for the reconfiguration of a lot.
Operational work	No change to the category of development and assessment	Landslide hazard overlay code where the development is assessable under the table of assessment for operational work. **Editor's note-**This overlay code is not applicable to Accepted development subject to requirements development.

Landslide hazard overlay (very low, low and medium hazard areas)

Table 5.9.1 - Assessment benchmarks for overlays

Development	Categories of development and assessment	Assessment benchmarks for assessable development and requirements for accepted development
Landslide hazard overlay (very low, low and medium hazard areas)		
Material change of use	No change to the category of development and assessment	Landslide hazard overlay code where the development is assessable under the table of assessment for the relevant zone **Editor's note—**This overlay code is not applicable to accepted development subject to requirements development.
Reconfiguration of a lot	No change to the category of development and assessment	Landslide hazard overlay code where the development is assessable under the table of assessment for reconfiguration of a lot
Operational work	No change to the category of development and assessment	Landslide hazard overlay code where the development is assessable under the table of assessment for operational work **Editor's note—**This overlay code is not applicable to accepted development subject to requirements development.

Water resource catchment overlay

Table 5.9.1 - Assessment benchmarks for overlays

Development	Categories of development and assessment	Assessment benchmarks for assessable development and requirements for accepted development
Water resource catchment overlay		
Material change of use for a Dwelling house	Accepted development subject to requirements	Water resource catchment overlay code
Any other material change of use	No change to the category of development and assessment	Water resource catchment overlay code **Editor's note—**This overlay code is applicable to accepted development subject to requirements.
Reconfiguration of a lot	No change to the category of development and assessment	Water resource catchment overlay code where the development is assessable development under the categories of development and assessment for reconfiguration of a lot.
Operational works	No change to the category of development and assessment	Water resource catchment overlay code where the development is assessable development under the categories of development and assessment for operational works. **Editor's note—**This overlay code is not applicable to accepted development subject to requirements operational work.

Note—Some overlays may only be included for information purposes. This should not change the category of development and assessment or assessment benchmarks in the planning scheme.

Editor's note—The Transport noise corridor overlay is contained in the planning scheme for information purposes only. The Transport noise corridor overlay identifies land affected by transport noise in accordance with Chapter 8B of the *Building Act 1975*. In these areas, building work will be assessable against the Queensland Development Code Part 4.4 — Buildings in a Transport Noise Corridor.

Part 6 Zones

6.1 Preliminary

(1) Zones organise the planning scheme area in a way that facilitates the location of preferred or acceptable land uses.

(2) Zones are mapped and included in Schedule 2.

(3) The categories of development and assessment for development in a zone are in Part 5.

(4) Assessment benchmarks for zones are contained in a zone code.

(5) A precinct may be identified for part of a zone.

(6) Precinct provisions are contained in the zone code.

(7) Each zone code identifies the following:

- (a) the purpose of the code;
- (b) the overall outcomes that achieve the purpose of the code;
- (c) the performance outcomes that achieve the overall outcomes and the purpose of the code;
- (d) the acceptable outcomes that achieve the performance and overall outcomes and the purpose of the code; and
- (e) the performance and acceptable outcomes for the precinct.

(8) The following are the zone codes for the planning scheme:

- (a) Residential zones category:
  - (i) Low density residential zone code;
  - (ii) Medium density residential zone code;
  - (iii) High density residential zone code;
  - (iv) Rural residential zone code;
  - (v) Character residential zone code;
- (b) Centres zones category:
  - (i) Neighbourhood centre zone code;
  - (ii) Local centre zone code;
  - (iii) District centre zone code;
  - (iv) Major centre zone code;
  - (v) Principal centre (CBD) zone code;
  - (vi) Specialised centre zone code;
  - (vii) Mixed use zone code;
- (c) Community facilities and open space zones category:
  - (i) Sport and recreation zone code;
  - (ii) Open space zone code;
  - (iii) Community facilities zone code;
  - (iv) Environmental management and conservation zone code;
- (d) Industry zones category:
  - (i) Low impact industry zone code;
  - (ii) Medium impact industry zone code;
  - (iii) High impact industry zone code;
- (e) Rural zones category:
  - (i) Rural zone code;
- (f) Other zones category:

(i) Emerging community zone code;

(ii) Special purpose zone code.

6.2 Residential zones category

6.2.1 Low density residential zone code

6.2.1.1 Application

This code applies to development where the code is identified as applicable in the categories of development and assessment.

When using this code, reference should be made to section 5.3.2 and where applicable, section 5.3.3 located in Part 5.

6.2.1.2 Purpose

(1) The purpose of the Low density residential zone code is to provide for predominately dwelling houses.

(2) The particular purpose of the code is to:

- (a) primarily accommodate dwelling houses and dual occupancy dwellings;
- (b) provide for housing choice and affordability by allowing for a range of lot sizes;
- (c) maintain the low-rise and lower density character of Townsville's suburbs;
- (d) maintain a high level of residential amenity; and
- (e) achieve accessible, well-serviced and well-designed communities.

(3) The purpose of the zone will be achieved through the following overall outcomes:

- (a) built form is of a house compatible scale and consistent with the local streetscape character;
- (b) reconfiguration facilitates a range of lot sizes to accommodate dwelling houses and dual occupancy dwellings, typically on lots 400m^2 or greater (unless otherwise intended in a precinct);
- (c) development maintains a high level of residential amenity on the site and in the neighbourhood;
- (d) residential development is protected from the impacts of any nearby industrial activities, transport corridors, infrastructure, installations and major facilities such as the port, airport and Department of Defence landholdings;
- (e) the design of development promotes accessibility by walking, cycling and public transport;
- (f) the design of development is responsive to the city's climate and promotes sustainable practices including energy efficiency and water conservation;
- (g) low-rise multiple dwellings, residential care or retirement facilities may be acceptable within this zone where provided in locations that are within a convenient walkable distance to centres, public transport and community activities, and where of a scale that is consistent with the local character;
- (h) non-residential uses only occur within the zone where they primarily support the day-to-day needs of the immediate residential community, do not unreasonably detract from the residential amenity of the area and are not better located in nearby centre zones;
- (i) development minimises impacts on remaining areas of ecological significance within the zone; and
- (j) the natural bushland setting and village character of the northern beaches and Magnetic Island townships are maintained. Tourism accommodation in these communities is of a house compatible scale.

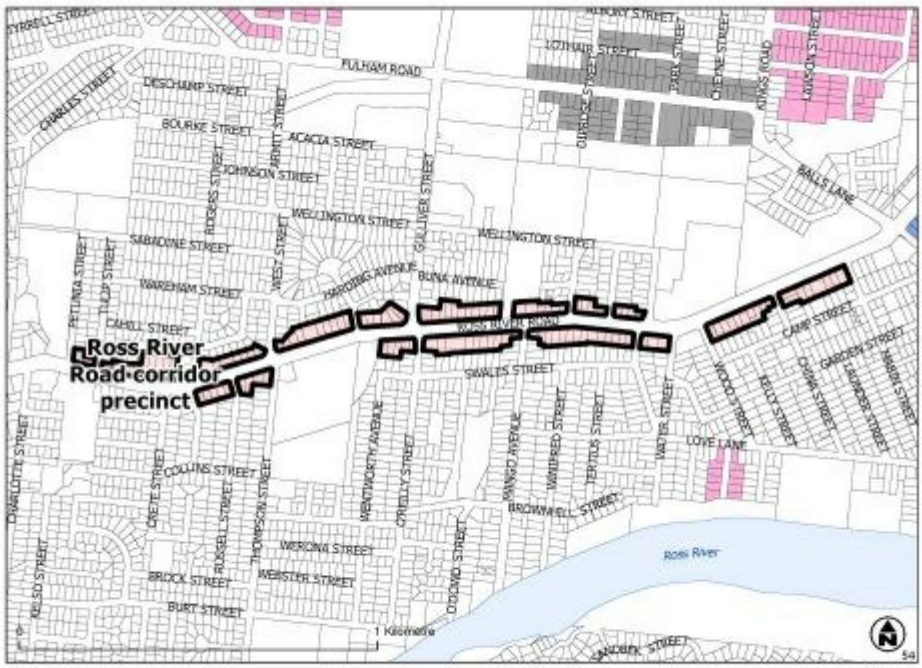
(4) The purpose of the zone will also be achieved through the following additional overall outcomes for particular precincts:

Ross River Road corridor precinct:

(a) existing non-residential uses continue operation without significantly expanding;

(b) no additional non-residential development is established within the precinct to avoid the continuation of strip commercial development; and

(c) redevelopment of sites within this precinct may occur for the purposes of low-rise multiple dwellings, residential care or retirement facilities.



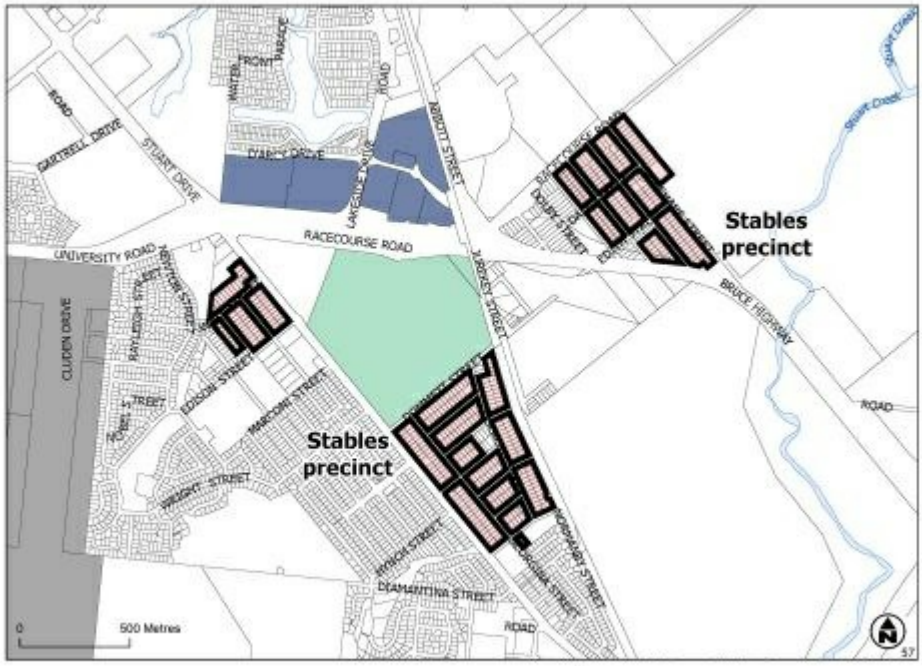
Click here to view high resolution image.

Figure 6.1 Ross River Road corridor precinct

Stables precinct:

(a) stables are established in a manner that minimises impacts on residential amenity; and

(b) residential uses in the precinct do not intensify.



Click here to view high resolution image.

Figure 6.2 Stables precinct

Marlow Street precinct:

(a) residential development occurs primarily in the form of dwelling houses on large lots with a limited site cover;

(b) lots are not smaller than 750m^2 and the minimum average lot size across the whole of the precinct is not less than 1,700m^2;

(c) development facilities viable wildlife corridors through the precinct; and

(d) built form and infrastructure is sub-ordinate to the vegetation and the natural landform.

Click here to view high resolution PDF.

Figure 6.3 — Marlow Street precinct

6.2.1.3 Assessment benchmarks

Table 6.2.1.3 Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
Home based business	
PO1 The use does not adversely impact on the amenity of the surrounding residential land uses and local character.	**AO1.1** The home based business: (a) is carried out in an existing building or structure; (b) does not use more than 60m² of the gross floor area of the building or structure; (c) involves at least one or more residents of the dwelling house; (d) involves not more than one non-resident employee; (e) where bed and breakfast accommodation, does not exceed three bedrooms; (f) does not generate more than 1 heavy vehicle trip per week; **Editor's note—**a heavy vehicle is a vehicle with more than 4.5 tonnes gross vehicle mass. (g) does not generate more than 14 vehicle trips per day by other vehicles, where one trip includes arriving and departing the site. These trips are additional to normal domestic trips associated with the dwelling; (h) contains visitor parking within the site; (i) does not involve hiring out of materials, goods, appliances or vehicles; and (j) does not involve the repair or maintenance of vehicles, other than minor maintenance of vehicles used in conjunction of the home based business on the site. **Editor's note—**home based business operators should also refer to signage requirements under Table 5.8.2 -Operational work being placing an advertising device on a premises and Section 9.3.1-Advertising devices code.
	AO1.2 Functional aspects of the use such as service areas, material storage or use activities are not visible from the street.
	AO1.3 Other than where a bed and breakfast or home based childcare, the business use does not operate outside the hours of 8am to 5pm Monday to Friday, 8am to 2pm Saturday and does not operate on Sunday.
	AO1.4 Noise levels do not exceed acoustic quality objectives under the Environmental Protection (Noise) Policy 2008.

PO2 Commercial vehicle parking: (a) has a direct nexus with a home based business carried out on the site; and (b) does not adversely affect the amenity of neighbouring properties.	**AO2.1** Not more than one commercial vehicle is parked on the site.
	AO2.2 While on-site, vehicles: (a) are not left idling for more than 5 minutes at any one time; and (b) do not have a refrigeration unit running.
	AO2.3 Any commercial vehicle does not exceed 4.5 tonnes gross vehicle mass and is housed behind the building line.

Table 6.2.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	**Acceptable outcomes**
For accepted development subject to requirements and assessable development	
Sales office	
PO3 The use does not adversely impact on the amenity of the surrounding land uses and local character.	**AO3** Development of the sales office is in place for no more than two years.

Table 6.2.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	**Acceptable outcomes**
Additional benchmarks for accepted development subject to requirements and assessable development in precincts **Note—**Townsville City Council has an animal keeping local law that also sets out requirements for stables. These must also be complied with.	
For accepted development subject to requirements and assessable development	
Stables precinct	
PO4 Only dwelling houses or caretaker's accommodation are established in the precinct.	**AO4** The development does not involve a dual occupancy, rooming accommodation, multiple dwelling, retirement facility, residential care facility, short-term accommodation or tourist park.
PO5 Reconfiguration does not result in additional lots being created.	**AO5** Lot size is no less than 1,000m^2.
PO6 The site is of a size to accommodate stables and associated service areas and allows for setback of stables from adjacent houses.	**AO6** Where stables are proposed, the site has a minimum area of 1,000m^2.
PO7 Stables are established where provision is made for a manager living on-site.	**AO7** Stables are established on the same site as a dwelling house or caretaker's accommodation.
PO8 Residential uses in the precinct do not intensify.	**AO8** Not more than one dwelling house or caretaker's accommodation unit is established on each lot.

Table 6.2.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Amenity	
PO9 Development minimises impacts on surrounding land and provides for an appropriate level of amenity within the site, having regard to: (a) noise; (b) hours of operation; (c) traffic; (d) visual impact; (e) odour and emissions; (f) lighting; (g) access to sunlight; (h) privacy; and (i) outlook.	No acceptable outcome is nominated.
PO10 Landscaping is provided to enhance the appearance of the development, screen unsightly components, create an attractive on-site environment and provide shading.	No acceptable outcome is nominated.
PO11 Development for the purposes of a sensitive use within 500m of land included in the High impact industry zone or Special purpose zone, or within 250m of land in the Medium impact industry zone: (a) achieves indoor noise levels consistent with the objectives set out in the Environmental Protection (Noise) Policy 2008; (b) achieves air quality levels consistent with the objectives set out in the Environmental Protection (Air) Policy 2008 and the relevant national standard; and (c) does not experience offensive odours.	No acceptable outcome is nominated.

Table 6.2.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Crime prevention through environmental design	
PO12 Development facilitates the security of people and property having regard to: (a) opportunities for casual surveillance and sight lines; (b) exterior building design that promotes safety; (c) adequate lighting; (d) appropriate signage and wayfinding; (e) minimisation of entrapment locations; and (f) building entrances, loading and storage areas that are well lit and lockable after hours. **Editor's note—**Applicants should have regard to Crime Prevention through Environmental Design Guidelines for Queensland.	No acceptable outcome is nominated.

Table 6.2.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
General	
PO13 Development minimises impacts on remaining areas of ecological significance within the zone.	No acceptable outcome is nominated.
PO14 On elevated or steeply sloping sites: (a) development is sympathetic to the natural landform through the use of terraced or split level building forms; (b) the understoreys of buildings are screened to maintain the quality of views from public vantage points below; and (c) buildings avoid highly reflective finishes.	No acceptable outcome is nominated.

Table 6.2.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Parking and servicing	
PO15 Parking facilities are located to be concealed from public view to ensure an attractive streetscape.	**AO15** Vehicle parking structures are located: (a) behind the building setback; or (b) behind the building; or (c) at basement level. Figure 6.4 – Concealment of parking structure illustrates.

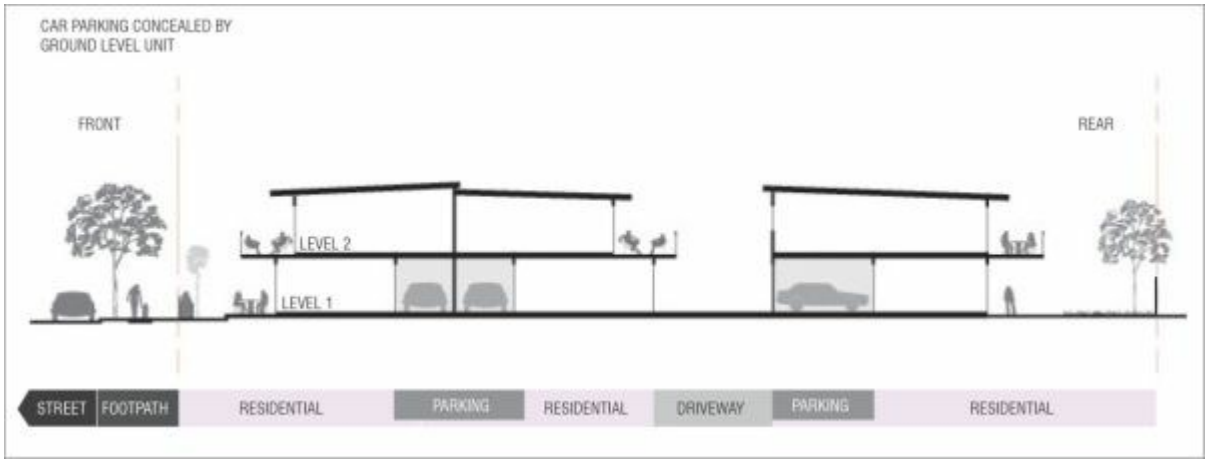


Figure 6.4 Concealment of parking structure

PO16 Waste disposal and servicing areas are screened from public view and do not have adverse amenity impacts on adjoining properties.	No acceptable outcome is nominated.

Table 6.2.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	**Acceptable outcomes**
For assessable development — where a non-residential or tourist accommodation use	
PO17 Non-residential uses are established only where: (a) compatible with local character and amenity; (b) limited in scale and supporting the day-to-day needs of the local community; and (c) not impacting on the role and function of the city's network of centres or more appropriately located in another zone.	No acceptable outcome is nominated. **Editor's note—**Applicants should have regard to Economic impact assessment planning scheme policy no. SC6.5 for guidance on how to demonstrate compliance with this performance outcome.
PO18 Tourist accommodation occurs only within the townships of Paluma, Balgal Beach, Toomulla, Toolakea and Saunders Beach and the Magnetic Island townships, and is compatible with the village character of these communities.	No acceptable outcome is nominated.
PO19 Development is of a house compatible scale.	**AO19.1** The use does not involve any building work or only minor building work. OR
	AO19.2 Where a new building is proposed: (a) buildings and other structures do not exceed 8.5m or 2 storeys, whichever is the lesser; (b) the building does not exceed 250m^2 in gross floor area; (c) site cover does not exceed 60%; and (d) the maximum length of any wall is 12m.

Table 6.2.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development – where a multiple dwelling, residential care facility or retirement facility development	
Location	
PO20 Multiple dwelling, residential care facility or retirement facility development occur only in locations where: (a) they can be designed to be compatible with local character and low density scale of development; (b) having convenient walkable access to the city's network of centres; (c) having convenient walkable access to public transport; and (d) having convenient walkable access to recreational facilities.	**AO20** The premises: (a) is located within 400m of a centre zone or public transport stop on a major road; (b) has a minimum site area of 1,000m² and 20m frontage where for a multiple dwelling; (c) has a minimum site area of 3,000m² and 20m frontage where for a residential care facility or retirement facility; and (d) is located within 400m of a park.
PO21 Buildings are low-rise and of a house compatible scale.	**AO21** Building design achieves: (a) a site cover that does not exceed 65% of site area; (b) a building height that does not exceed 2 storeys and 8.5m if it is within 10m of a site boundary, and 3 storeys if it is 10m or more from a site boundary; and (c) the maximum length of any wall is 12m.
PO22 Building setbacks and landscaping: (a) create an attractive, consistent and cohesive streetscape; (b) maintain appropriate levels of light and solar penetration, air circulation, privacy and amenity for existing and future buildings; and (c) do not prejudice the development or amenity of adjoining sites.	**AO22.1** Buildings are set back from street frontages: (a) within 20% of the average front setback of adjoining buildings; or (b) where there are no adjoining buildings, 3m. Figure 6.5 – Appropriate front setbacks illustrates.
	AO22.2 A landscape area with a minimum dimension of 1m is provided along the full frontage of any road frontage (excluding crossover and pedestrian access only). Figure 6.6 – Appropriate front and rear setbacks illustrates.
	AO22.3 The side boundary setback is a minimum of: (a) 1.5m for a wall up to 4.5m high; (b) 2m for a wall up to 7.5m high; and (c) 2.5m for any part of a wall over 7.5m high. **Editor's note—**Development should also comply with the requirements of AO21 (b), such that any part of the building that is 3 storeys is 10m or more from a site boundary.
	AO22.4 The rear boundary setback is a minimum of 6m. Figure 6.6 - Appropriate front and rear setbacks illustrates.

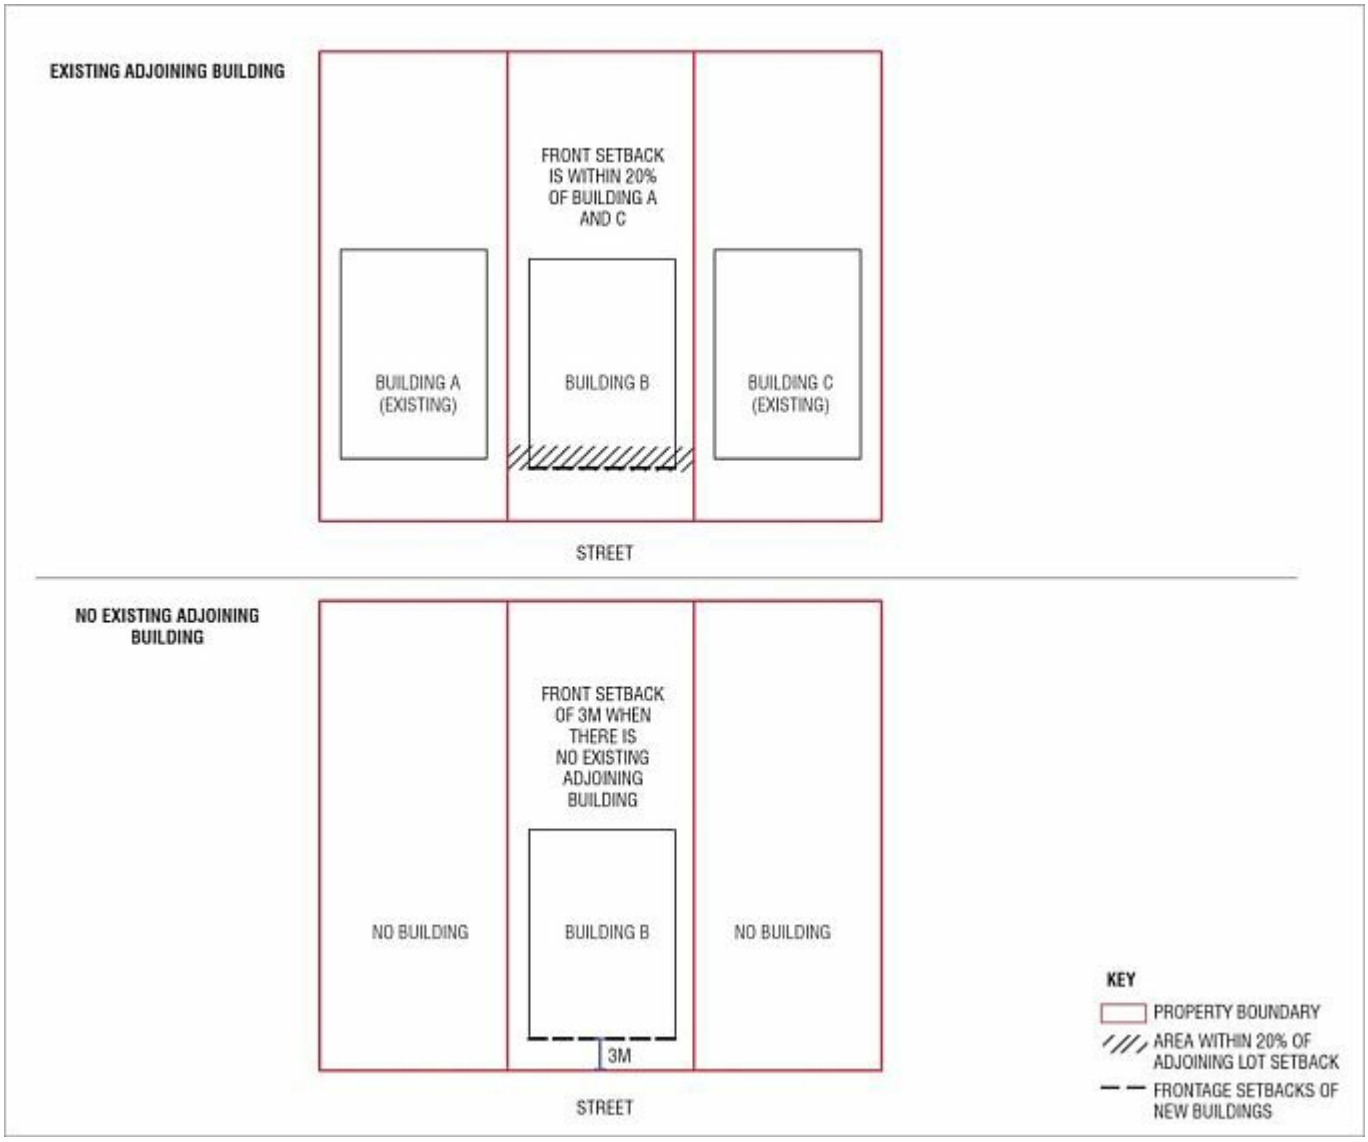

Figure 6.5 Appropriate front setbacks

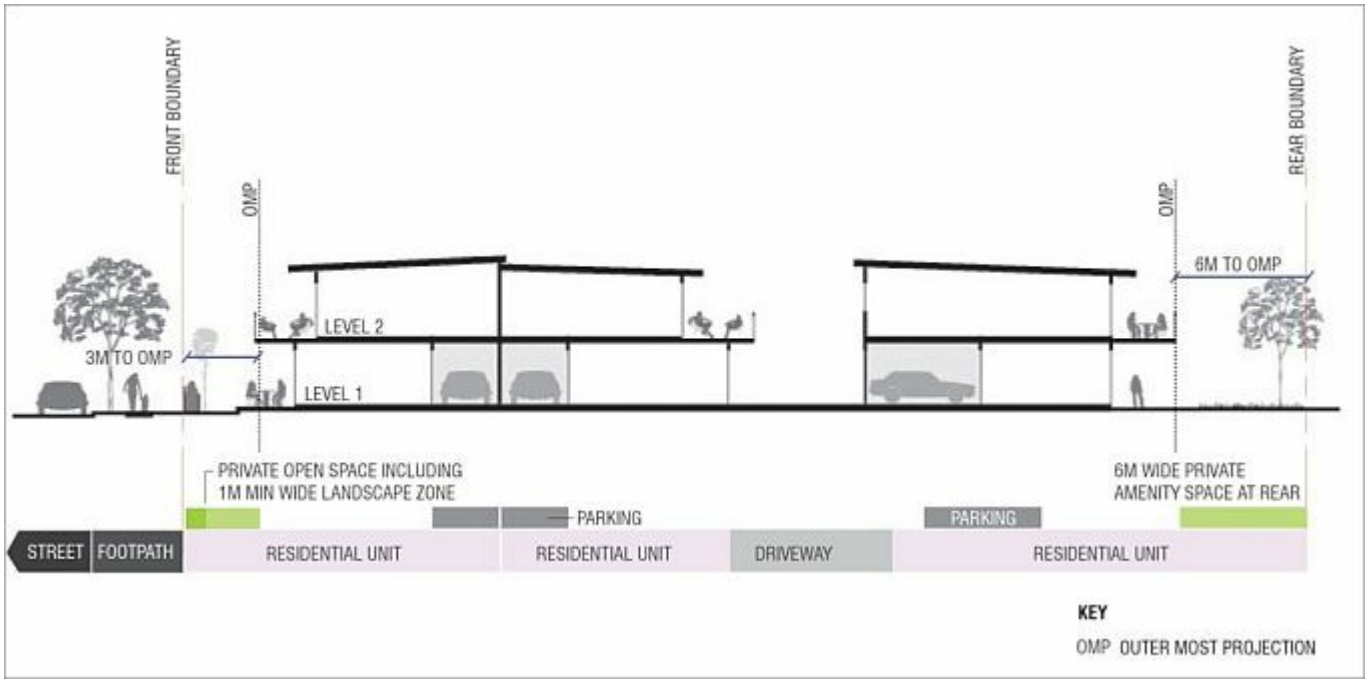

Figure 6.6 Appropriate front and rear setbacks

PO23 Built to boundary walls do not impact on the amenity or privacy of adjoining premises.	**AO23** Built to boundary walls: (a) are for non-habitable rooms or spaces only; (b) are not located within the front or rear setback; (c) are not located within 1.5m of a habitable room or house on an adjoining lot; (d) have a maximum height of 3m; and (e) have a maximum length of 9m.
PO24 Buildings are designed to achieve good solar access by: (a) minimising the extent of shadows on usable private open space or public spaces; and (b) providing adequate sunlight to habitable rooms.	No acceptable outcome is nominated.
PO25 Design elements contribute to an interesting and attractive streetscape and building through: (a) the provision of projections and recesses in the façade which reflect changes in internal functions of buildings, including circulation; (b) variations in material and building form; (c) modulation in the façade, horizontally or vertically; (d) articulation of building entrances and openings; (e) corner treatments to address both street frontages; (f) elements which assist in wayfinding and legibility; and (g) elements which relate to the context including surrounding buildings, parks, streets and open spaces. Figure 6.7 – Building design elements provides indicative guidance.	No acceptable outcome is nominated.
PO26 Roof form assists in reducing the appearance of building bulk by: (a) articulating individual dwellings; and (b) incorporating variety in design through use of roof pitch, height, gables and skillions. Figure 6.7 – Building design elements provides indicative guidance.	No acceptable outcome is nominated.

Figure 6.7 Building design elements

PO27 Development promotes the safety of residents and visitors, particularly through casual surveillance of the street and public spaces.	**AO27.1** Buildings are designed to have balconies, windows and building openings overlooking streets and other public spaces. Figure 6.8 – Design for casual surveillance illustrates.
	AO27.2 Fences or walls along a street frontage have a maximum height of 1.2m where solid, or 1.8m where that portion of the fence above 1.2m high is at least 50% transparent.

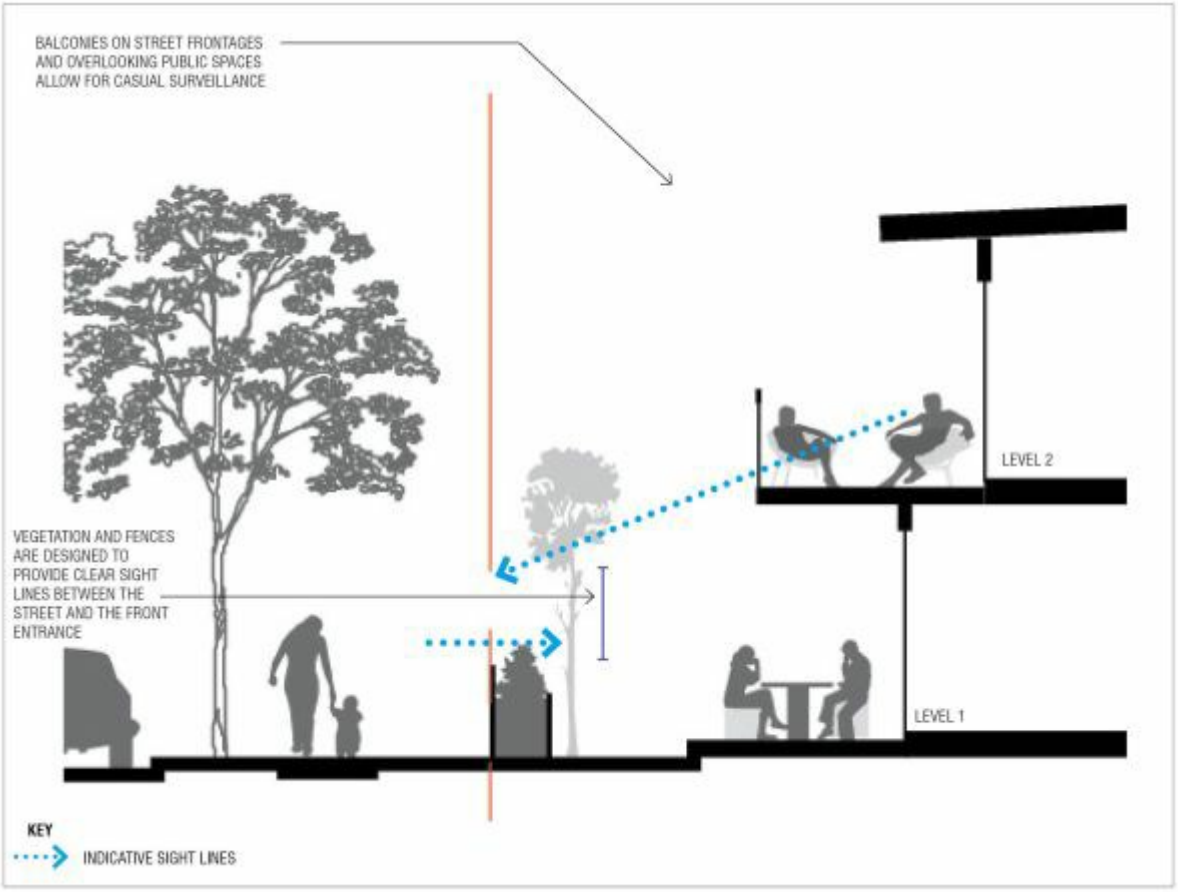

Figure 6.8 Design for casual surveillance

PO28 Development provides private open space that is: (a) well-proportioned, appealing, functional and easily accessible, and promotes outdoor living as an extension of the dwelling; (b) provides a high level of privacy for residents and neighbours; and (c) has sufficient size and shape to meet the needs of a diversity of potential residents.	**AO28.1** For a ground floor dwelling (where a multiple dwelling), ground floor private open space is provided with: (a) a minimum area of 35m²; (b) a minimum dimension of 3m; and (c) clear of any utilities such as gas, water tanks or air-conditioning units.
	AO28.2 For a dwelling above ground storey, private open space is provided as a balcony with: (a) a minimum area of 9m² for a 1 bedroom unit or 16m² for a 2 or more bedroom unit; (b) a minimum dimension of 3m; and (c) clear of any utilities such as air conditioning units or drying space.
	AO28.3 Where clothes drying areas are provided on private balconies they are screened from public view and do not take up more than 10% of the balcony area.
	AO28.4 Private open space is located or screened so it does not directly overlook main living areas or private open space of adjoining dwellings. Where screening is used, it is at least 50% translucent.
PO29 Sufficient communal open space is provided to create flexible spaces suitable for a range of activities.	No acceptable outcome is nominated.
PO30 Communal open space provides facilities including seating, landscaping and shade. Treatments such as green roofs, green walls or community gardens contribute to the attractiveness of these spaces.	No acceptable outcome is nominated.
PO31 Air conditioning units are insulated so that adjoining properties are not affected by the noise source, and are not significantly visible from the street.	No acceptable outcome is nominated.

Table 6.2.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	**Acceptable outcomes**
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Ross River Road corridor precinct	
PO32 No new non-residential development is established within the precinct.	No acceptable outcome is nominated.
PO33 Expansion of existing non-residential development is minor in nature and does not significantly increase the intensity of non-residential activity.	**AO33** New gross floor area is only added through internal building work to an existing building.

Table 6.2.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Marlow Street precinct	
PO34 Reconfiguration creates large residential lots which support the protection of environmental values.	**AO34** Lots are not smaller than 750m^2 and the minimum average lot size across the whole of the precinct is not less than 1,700m^2.
PO35 Residential development occurs primarily in the form of dwelling houses on large lots with a limited site cover.	No acceptable outcome is nominated.
PO36 Built form and infrastructure is subordinate to vegetation and the natural landform.	No acceptable outcome is nominated.

6.2.2 Medium density residential zone code

6.2.2.1 Application

This code applies to development where the code is identified as applicable in the categories of development and assessment.

When using this code, reference should be made to section 5.3.2 and where applicable, section 5.3.3 located in Part 5.

6.2.2.2 Purpose

(1) The purpose of the Medium density residential zone code is to provide for a range and mix of dwelling types including dwelling houses and multiple dwellings.

(2) The particular purpose of the code is to:

- (a) provide opportunities for medium density living close to centres and other community nodes in a generally low to medium-rise built form;
- (b) maintain a high level of residential amenity; and
- (c) achieve accessible, well-serviced and well-designed communities.

(3) The purpose of the zone will be achieved through the following overall outcomes:

- (a) residential development consists primarily of low-rise (up to 3 storeys in building height) apartments or town house style dwellings, together with a mix of lot sizes or duplex housing types. Taller, more intensive built form will generally be limited to key infill locations near the city's major centres, as specifically intended in particular precincts;
- (b) built form creates an attractive and pedestrian oriented streetscape which integrates with nearby centres, public transport and community activities;
- (c) reconfiguration creates lots which facilitate the location of dwellings which address the street and allow for climate-responsive building orientation;
- (d) residential uses may also include residential care facilities, retirement facilities, rooming accommodation and short-term accommodation;
- (e) development maintains a high level of residential amenity on the site and in the neighbourhood;
- (f) residential development is protected from the impacts of nearby centres, industrial activities, transport corridors and infrastructure installations and major facilities such as the port, airport and Department of Defence landholdings;
- (g) the design of development promotes accessibility by walking, cycling and public transport;
- (h) the design of development is responsive to the city's climate by taking into account prevailing breezes, slope and solar orientation, provision of awnings and promotes sustainable practices including energy efficiency and water conservation; and
- (i) non-residential uses only occur where they are specifically intended in particular precincts or where they primarily support the day-to-day needs of the immediate residential community, do not unreasonably detract from the residential amenity of the area and are not better located in nearby centres.

(4) The purpose of the zone will also be achieved through the following additional overall outcomes for particular precincts:

Thuringowa South precinct:

(a) medium density housing reinforces the role and vibrancy of Thuringowa Central major centre, and includes student and visitor accommodation to reinforce economic links with James Cook University and Townsville Hospital;

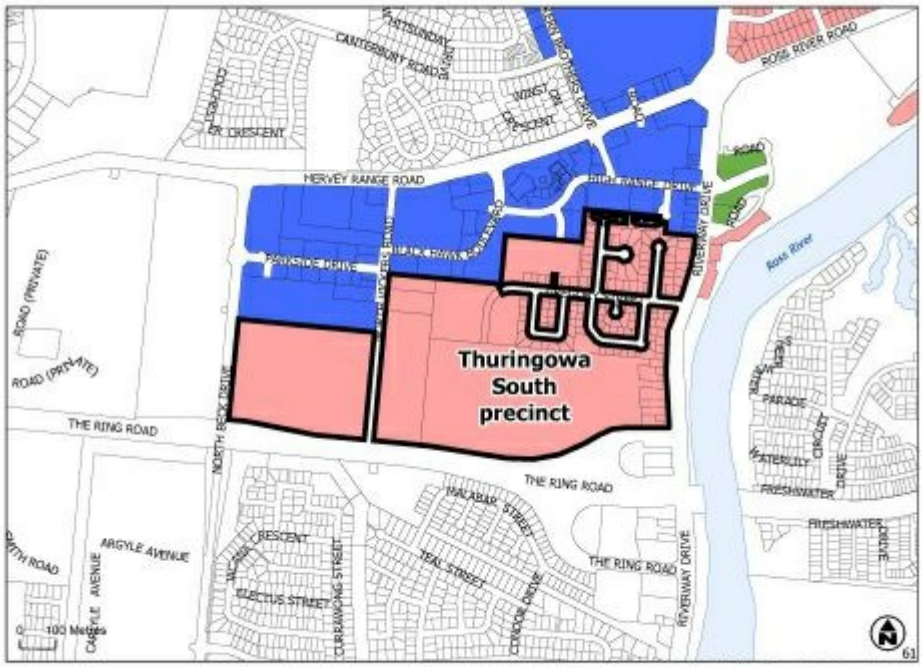
(b) development facilitates improved accessibility to the major centre for pedestrians and cyclists and promotes access to public transport facilities;

(c) a new east-west road link is created through the precinct providing an alternative route to High Range Drive;

(d) built form creates a medium-rise environment (up to 5 storeys in building height) along Riverway Drive;

(e) otherwise, built form within the precinct is generally low-rise (up to 3 storeys in building height); and

(f) Riverway Drive becomes a tropical boulevard providing a sense of arrival at the centre and strong landscape amenity. This is achieved through street tree planting, stronger definition of road edges by buildings fronting the street and screening of parking areas.



Click here to view high resolution PDF.

Figure 6.9 Thuringowa South precinct

Thuringowa East precinct:

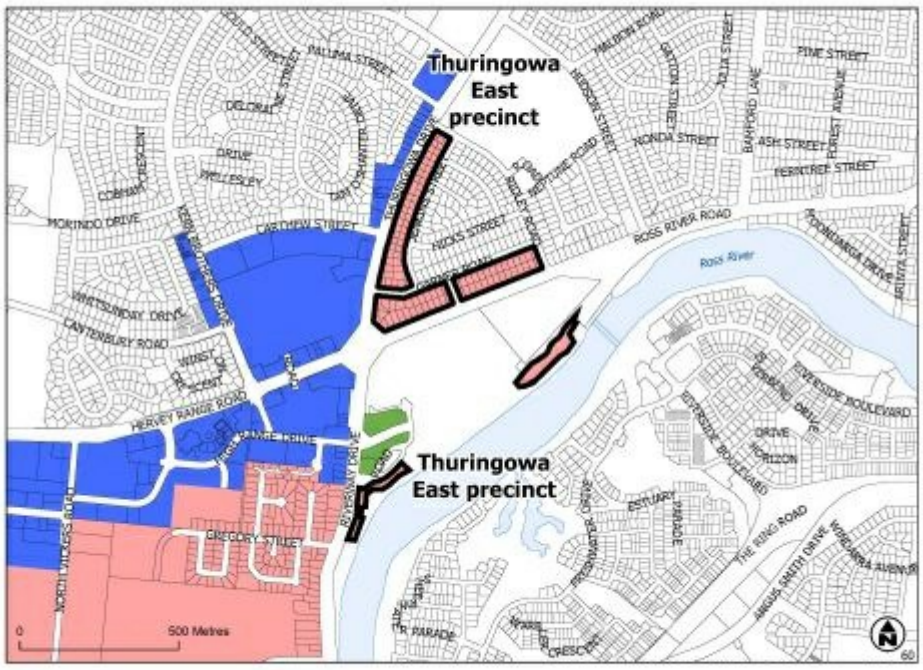
(a) medium density housing reinforces the role and vibrancy of Thuringowa Central major centre, and includes student and visitor accommodation to reinforce economic links with James Cook University and Townsville Hospital;

(b) built form creates a medium-rise environment (up to 5 storeys in building height) along Thuringowa Drive and Ross River Road and transitions down to surrounding low-rise residential areas;

(c) development facilitates improved accessibility to the major centre for pedestrians and cyclists, provides for safer and shadier pedestrian routes and road crossings and promotes access to public transport facilities;

(d) Thuringowa Drive, Riverway Drive and Ross River Road become tropical boulevards providing a sense of arrival at the centre and strong landscape amenity. This is achieved through street tree planting, stronger definition of road edges by buildings fronting the street and reduction in vehicular access points and screening of parking areas; and

(e) existing non-residential uses do not significantly expand and no additional non-residential development is established within the precinct.



Click here to view high resolution PDF.

Figure 6.10 Thuringowa East precinct

Rossiter Park precinct:

(a) the precinct redevelops into a medium density residential community, through amalgamation of existing lots into larger sites that provide the opportunity for better designed medium density residential development;

(b) built form creates a medium-rise environment (up to 6 storeys in building height) fronting Rossiter Park and transitions down (up to 3 storeys in building height) to surrounding low-rise residential areas;

(c) development creates a strong orientation to the street and to Rossiter Park; and

(d) the redevelopment of this precinct aligns new streets with the existing street grid alignment to the north to integrate the emerging precinct into the surrounding Aitkenvale locality and re-establishes direct travel connections between the Aitkenvale major centre and Ross River and its parkland via Elizabeth Street.

Click here to view high resolution image.

Figure 6.11 Rossiter Park precinct

Aitkenvale medium density precinct:

(a) medium density housing reinforces the role and vibrancy of the Aitkenvale major centre, and includes student and visitor accommodation to reinforce economic links with James Cook University and Townsville Hospital;

(b) built form creates a medium-rise environment (up to 5 storeys in building height) throughout the precinct; and

(c) new development facilitates improved accessibility for pedestrians and cyclists, provides for safer and shadier pedestrian routes and road crossings and promotes access to public transport facilities.

Click here to view high resolution PDF.

Figure 6.12 Aitkenvale medium density precinct

Aitkenvale village precinct:

(a) non-residential uses occur in this precinct but are limited to small-scale retail, dining and entertainment activities accommodated on the ground floor of a residential development, and having direct frontage to Patrick Street or Elizabeth Street;

(b) built form creates a medium-rise environment (up to 5 storeys in building height);

(c) Patrick Street and Elizabeth Street are activated by small-scale shop fronts and kerbside activities at the ground storey with awnings providing protection from the elements;

(d) non-residential activities within the precinct do not impact on the role and function of the Aitkenvale major centre;

(e) large format retail and showroom uses do not establish within this precinct;

(f) development creates a safe environment, balancing vibrant street activity and the protection of visual amenity;

(g) linkages between the Aitkenvale centre and centre core sub-precinct, the Aitkenvale centre frame precinct and the Aitkenvale medium density precinct are improved through the strengthening of primary pedestrian linkages along Elizabeth Street and Patrick Street;

(h) streetscaping along Elizabeth Street and Patrick Street frontages occurs to improve the interface between the site and the street whilst also improving the pedestrian environment and experience; and

(i) Elizabeth Street is the focus for the creation of an active main street environment.

Click here to view high resolution PDF.

Figure 6.13 Aitkenvale village precinct

Hyde Park medium density precinct:

(a) land adjoining the open space corridor through Hyde Park provides for the emergence of a new residential community which complements the Hyde Park major centre;

(b) development provides for the improvement of access to the adjoining open space corridor for recreational use, whilst preserving its drainage function;

(c) a mix of housing types is provided within the precinct in generally low to medium-rise built form (up to 5 storeys in building height) which is oriented to the open space and assists in activating this interface;

(d) provision of a new road off Woolcock Street defines the precinct from adjoining commercial activities and connects it to the existing local street network via Dillane Street;

(e) the precinct connects with Virgil Street and development facilitates this becoming the major east-west pedestrian thoroughfare through the locality;

(f) non-residential uses may be established in the precinct where fronting Woolcock Street. Non-residential uses are generally small-scale and accommodated on the ground storey of a residential development; and

(g) non-residential activities within the precinct do not impact on the role and function of the Hyde Park major centre.

Click here to view high resolution PDF

Figure 6.14 Hyde Park medium density precinct

Kings Road medium density precinct:

(a) development creates a medium-rise built form (up to 5 storeys in building height), with variation in built form to create visual interest across the precinct;

(b) the interface with the showgrounds is enhanced; and

(c) impacts on residential amenity from the rail corridor are minimised.

Click here to view high resolution PDF.

Figure 6.15 Kings Road medium density precinct

The Strand precinct:

(a) this precinct enhances its role as Townsville's pre-eminent residential and tourist destination built on the amenity offered by The Strand parklands;

(b) The Strand forms the central focus of activity and concentration of medium density accommodation for tourists and residents;

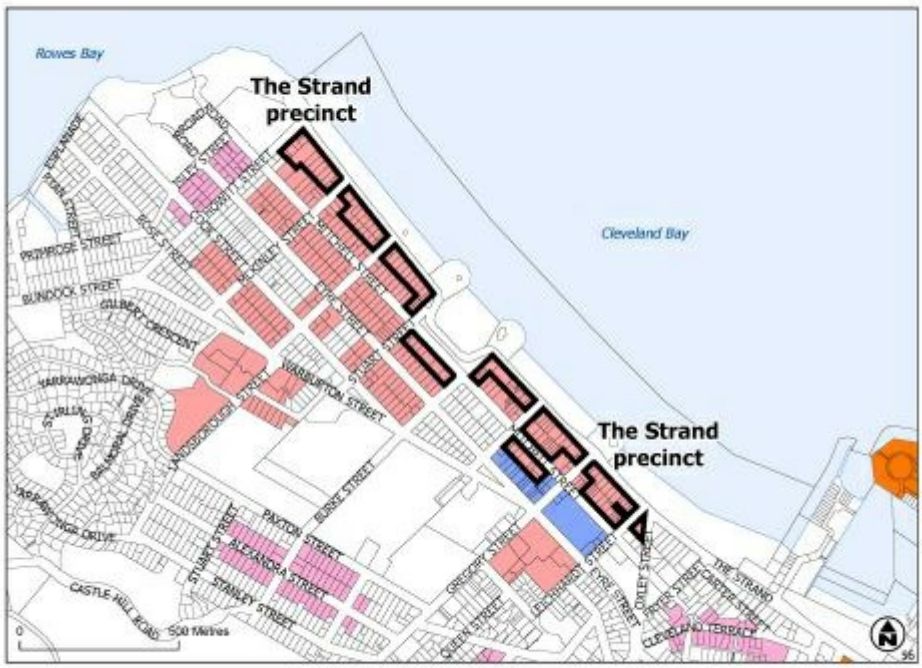
(c) development creates a safe environment balancing vibrant street activity and the protection of residential amenity;

(d) The Strand plays a secondary role to nearby centres in accommodating non-residential uses. Non-residential uses are generally limited to small-scale cafes and restaurants accommodated on the ground storey of a residential development, to activate the street frontage and parkland;

(e) non-residential activities within the precinct do not impact on the role and function of the North Ward local centre;

(f) buildings within this precinct are designed to address The Strand parklands; and

(g) built form creates a medium-rise environment (up to 5 storeys in building height).



Click here to view high resolution PDF.

Figure 6.16 The Strand precinct

North Ward gateway precinct:

(a) the precinct provides a key connectivity route between The Strand and Warburton Street by creating a distinctive built form along Landsborough Street;

(b) development reinforces the gateway role of the routes, creating a view corridor to The Strand and contributing to a sense of arrival and assisting in wayfinding to The Strand;

(c) built form creates a higher-medium rise environment (up to 8 storeys in building height); and

(d) an attractive tropical streetscape is created.

Click here to view high resolution PDF.

Figure 6.17 North Ward gateway precinct

North Ward villages precinct:

(a) the North Ward villages are envisaged to contain the highest levels of activity and residential density in North Ward;

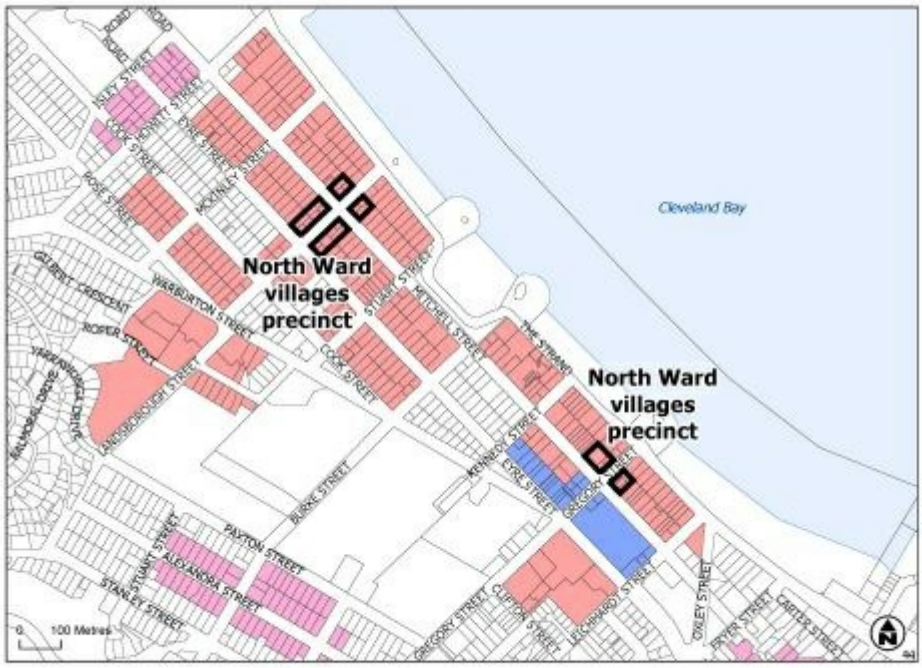
(b) the precinct plays a secondary role to nearby centres in accommodating non-residential uses. Non-residential uses are generally limited to small-scale cafes and restaurants accommodated on the ground floor of a residential development;

(c) Gregory Street village will expand its existing role and function as a destination for street dining and entertainment;

(d) non-residential activities within the precinct do not impact on the primacy of the principal centre or the role and function of the North Ward local centre;

(e) Landsborough Street village will develop into a secondary lifestyle focus of activity in North Ward. The role of Landsborough Street village will be to complement (not compete) with Gregory Street; and

(f) built form creates a higher-medium rise environment (up to 8 storeys in building height) along Gregory and Landsborough Streets.



Click here to view high resolution PDF.

Figure 6.18 North Ward villages precinct

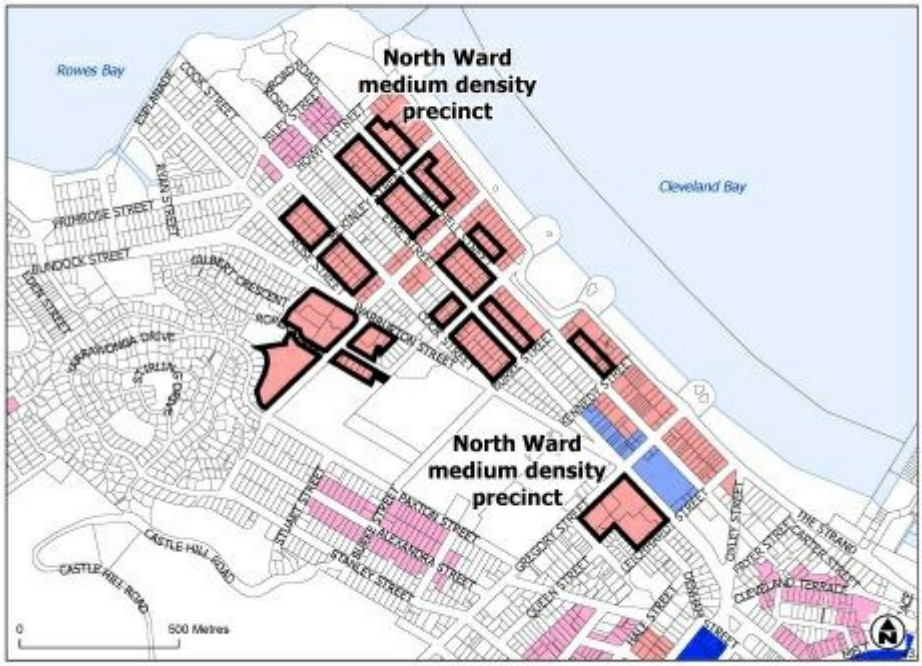
North Ward medium density precinct:

(a) medium density housing reinforces the role and vibrancy of North Ward;

(b) built form creates a medium-rise environment (up to 5 storeys in building height) throughout the precinct;

(c) development of the former hospital site facilitates reuse of the hospital building for residential purposes and provides for improved accessibility for pedestrians and cyclists; and

(d) development creates a strong orientation to the street and to The Strand wherever possible.



Click here to view high resolution PDF.

Figure 6.19 North Ward medium density precinct

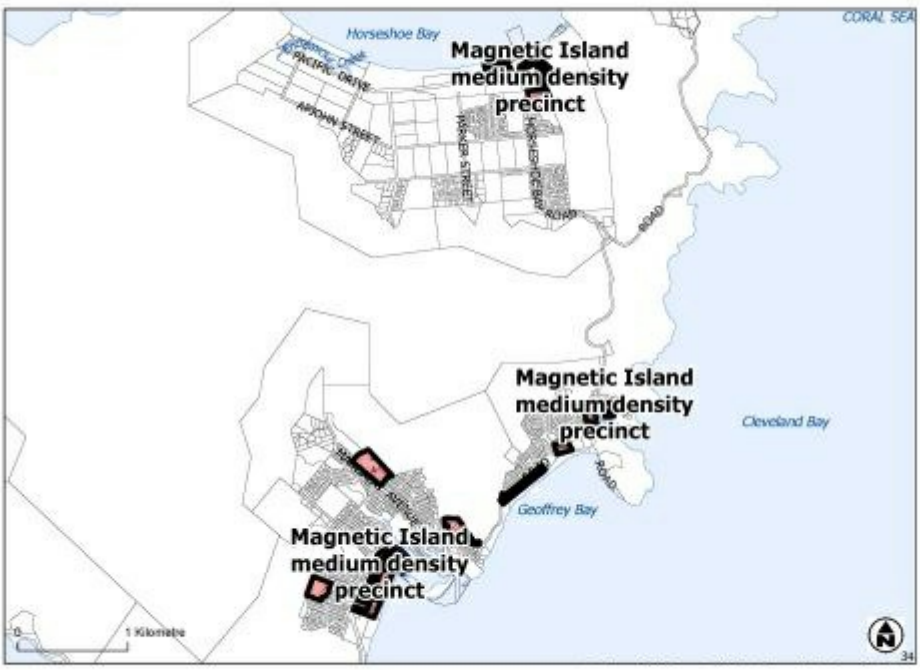
Magnetic Island medium density precinct:

(a) the precinct allows for the growth of short-term accommodation which minimises visual impact on the local natural setting, whilst providing opportunity for new investment in tourism;

(b) buildings within the precinct are low-rise (up to 2 storeys in building height) and are located to capitalise on views and beachfront settings;

(c) building scale and massing limits the impact on the natural character of Magnetic Island when viewed from the ocean and foreshore; and

(d) new buildings are in a design style that builds local character by articulation of individual units, incorporating extensive planting and climatically responsive design elements.



Click here to view high resolution PDF.

Figure 6.20 Magnetic Island medium density precinct

Picnic Bay precinct:

(a) family oriented short-term accommodation is the predominant use established within the precinct with some non-residential uses on the ground floor;

(b) built form within the precinct consists of detached dwellings and multiple dwellings up to 2 storeys in building height; and

(c) new buildings are in a design style that builds local character by articulation of individual units, incorporating extensive planting and climatically responsive design elements.

Click here to view high resolution PDF.

Figure 6.21 Picnic Bay precinct

Nelly Bay tourist precinct:

(a) the role of this precinct is to provide an attractive arrival place for the entire island, whilst also providing an accessible and convenient tourist hub, including accommodation and supporting tourist information and service facilities;

(b) built form accommodates the highest density short-term tourist accommodation on the island, with building heights up to 4 storeys;

(c) the ground floor of buildings within this precinct is activated by small scale café and restaurant uses where addressing the bay to create a waterfront promenade;

(d) tourist based businesses and services are located along Harbour Drive to support tourist needs for the island; and

(e) new buildings and streetscape improvements are in a design style that builds local character by articulation of buildings, incorporating extensive planting, use of a variety of materials and finishes and climatically responsive design elements.

Click here to view high resolution PDF.

Figure 6.22 Nelly Bay tourist precinct

Wills Street precinct:

(a) built form creates a medium-rise environment (up to 4 storeys in building height) throughout the precinct and provides for a sensitive transition in scale to nearby Character residential zoned land.

6.2.2.3 Assessment benchmarks

Table 6.2.2.3(a)-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
Home based business	
PO1 The use does not adversely impact on the amenity of the surrounding residential land uses and local character.	**AO1.1** The home based business: (a) is carried out in an existing building or structure; (b) does not use more than 60m² of the gross floor area of the building or structure; (c) involves at least one or more residents of the dwelling house; (d) involves not more than one non-resident employee; (e) where bed and breakfast accommodation does not exceed three bedrooms; (f) does not generate more than 1 heavy vehicle trip per week; **Editor's note—**A heavy vehicle is a vehicle with more than 4.5 tonnes gross vehicle mass. (g) does not generate more than 14 vehicle trips per day by other vehicles, where one trip includes arriving and departing the site. These trips are additional to normal domestic trips associated with the dwelling; (h) contains visitor parking within the site; (i) does not involve hiring out of materials, goods, appliances or vehicles; and (j) does not involve the repair or maintenance of vehicles, other than minor maintenance of vehicles used in conjunction of the home business on the site. **Editor's note—**Home based business operators should also refer to signage requirements under Table 5.8.2 -Operational work being placing an advertising device on a premises and Section 9.3.1-Advertising devices code.
	AO1.2 Functional aspects of the use such as service areas, material storage or use activities are not visible from the street.
	AO1.3 Other than where a bed and breakfast or home based childcare the business use does not operate outside the hours of 8am to 5pm Monday to Friday, 8am to 2pm Saturday and does not operate on Sunday.
	AO1.4 Noise levels do not exceed acoustic quality objectives under the Environmental Protection (Noise) Policy 2008.

Table 6.2.2.3(a)-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
Sales office	
PO2 The use does not adversely impact on the amenity of the surrounding land uses and local character.	**AO2** Development of the sales office is in place for no more than two years.

Table 6.2.2.3(a)-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Amenity	
PO3 Development minimises impacts on surrounding land and provides for an appropriate level of amenity within the site, having regard to: (a) noise; (b) hours of operation; (c) traffic; (d) visual impact; (e) odour and emissions; (f) lighting; (g) access to sunlight; (h) privacy; and (i) outlook.	No acceptable outcome is nominated.
PO4 Landscaping is provided to enhance the appearance of the development, screen unsightly components, create an attractive on-site environment and provide shading.	No acceptable outcome is nominated.

Table 6.2.2.3(a)-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Crime prevention through environmental design	
PO5 Development facilitates the security of people and property having regard to: (a) opportunities for casual surveillance and sight lines; (b) exterior building design that promotes safety; (c) adequate lighting; (d) appropriate signage and wayfinding; (e) minimisation of entrapment locations; and (f) building entrances, loading and storage areas that are well lit and lockable after hours. **Editor's note–**Applicants should have regard to Crime Prevention through Environmental Design Guidelines for Queensland.	No acceptable outcome is nominated.
PO6 Development promotes the safety of residents and visitors, particularly through casual surveillance of the street and public spaces.	**AO6.1** Buildings are designed to have balconies, windows and building openings overlooking streets and other areas which are accessible to the public. Figure 6.24 – Design for casual surveillance illustrates.
	AO6.2 Fences or walls along a street frontage have a maximum height of 1.2m where solid, or 1.8m where that portion of the fence above 1.2m high at least 50% transparent.

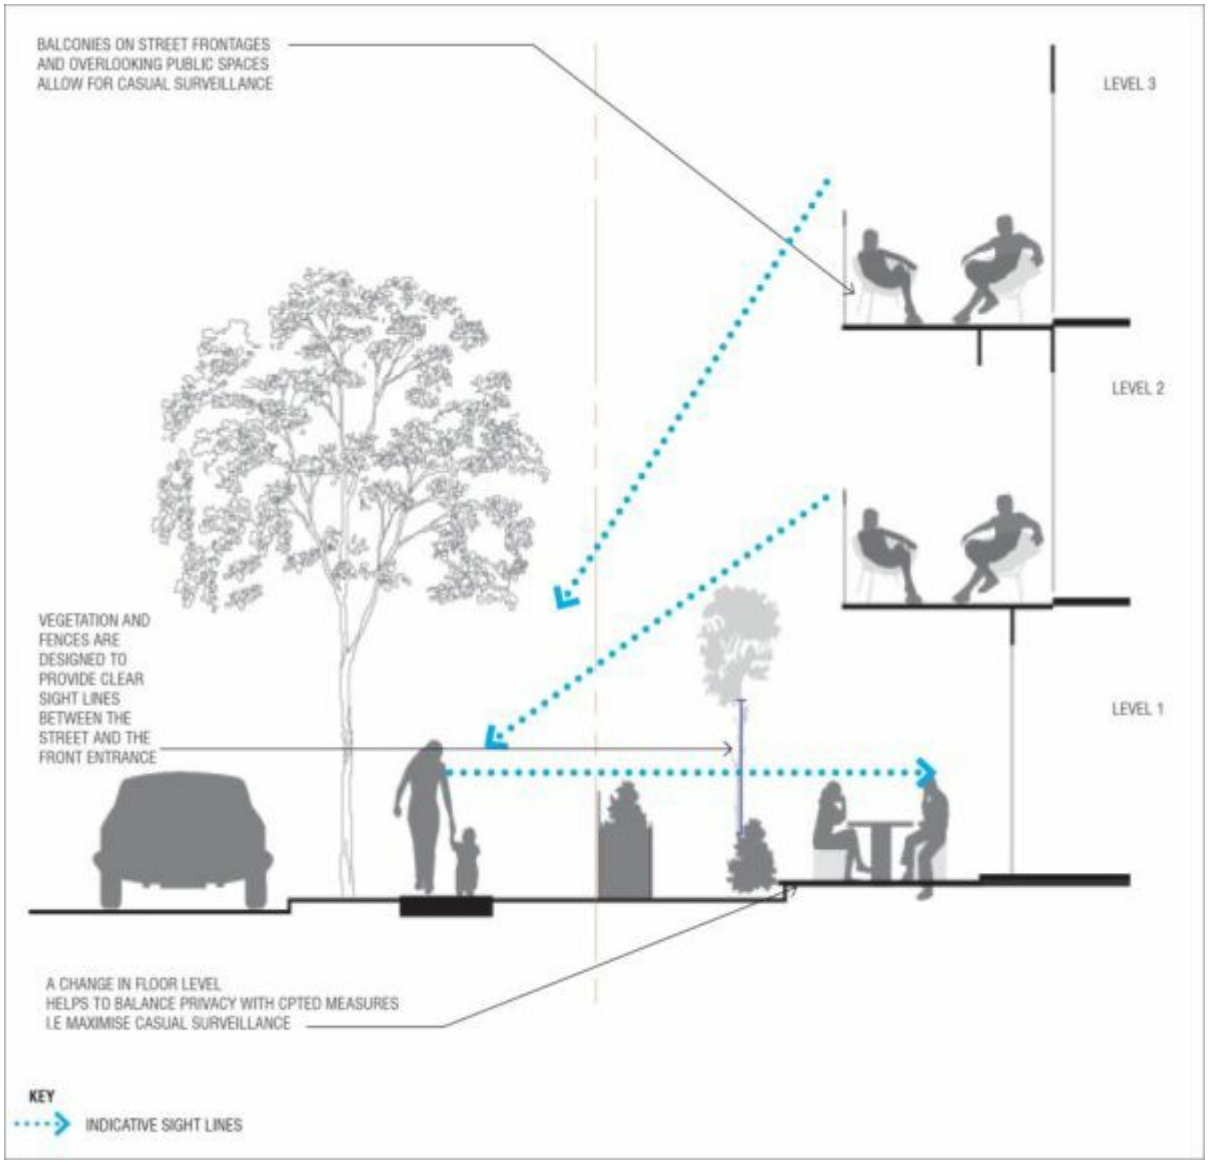

Figure 6.24 – Design for casual surveillance

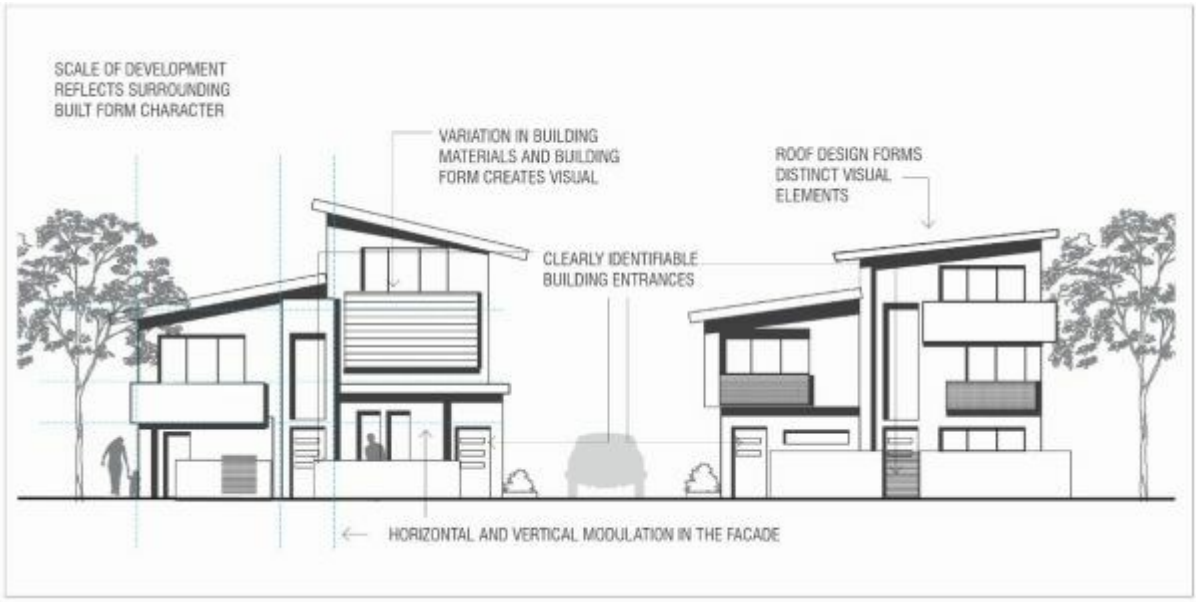
Table 6.2.2.3(a)-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Built form	
PO7 Design elements contribute to an interesting and attractive streetscape and building through: (a) the provision of projections and recesses in the façade which reflect changes in internal functions of buildings including circulation; (b) variations in material and building form; (c) modulation in the façade, horizontally or vertically; (d) articulation of building entrances and openings; (e) corner treatments to address both street frontages for a premises on a corner; (f) elements which assist in wayfinding and legibility; and (g) elements which relates to the context including surrounding buildings, parks, streets and open spaces. Figure 6.25 – Building design elements provides indicative guidance.	No acceptable outcome is nominated.



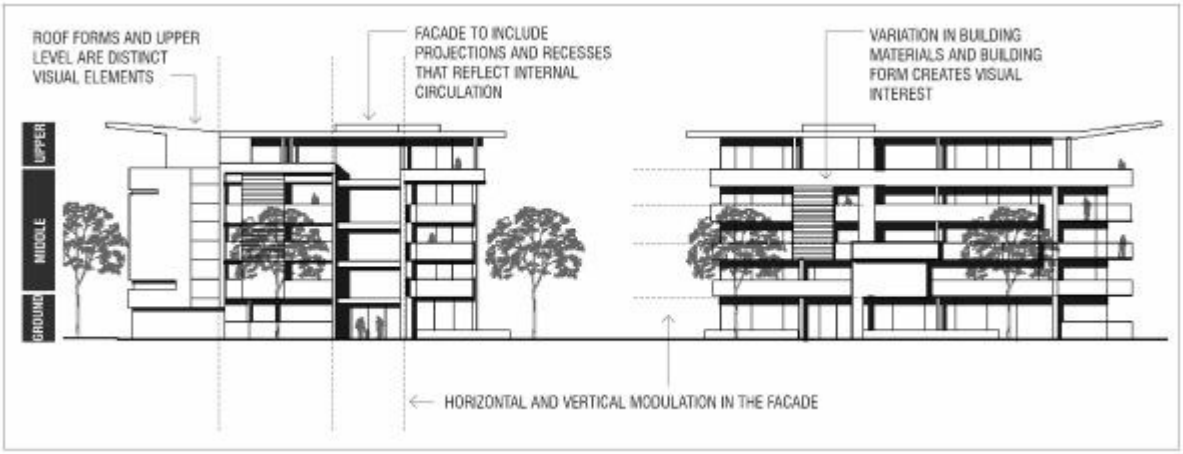


Figure 6.25 – Building design elements

PO8 Air conditioning units are insulated so that adjoining properties are not affected by the noise source, and are not significantly visible from the street.	No acceptable outcome is nominated.

Table 6.2.2.3(a)-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Parking and servicing	
PO9 Parking facilities are located to be concealed from public view to ensure an attractive streetscape.	**AO9** Vehicle parking structures are located: (a) behind the building setback; or (b) behind the building; or (c) at basement level. Figure 6.26 – Concealment of parking structures illustrates.

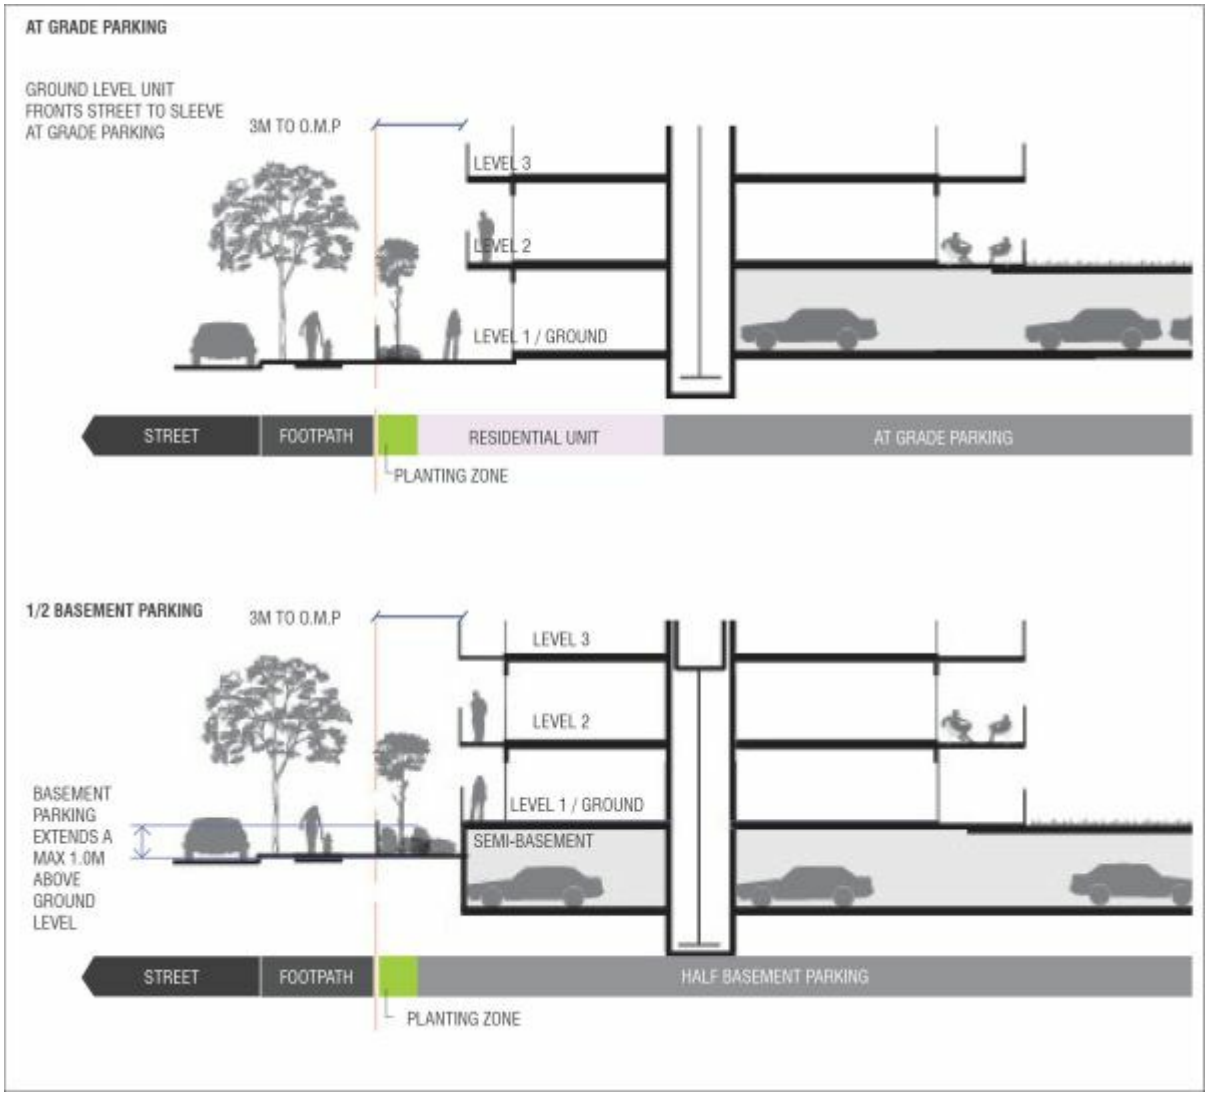

Figure 6.26 – Concealment of parking structures

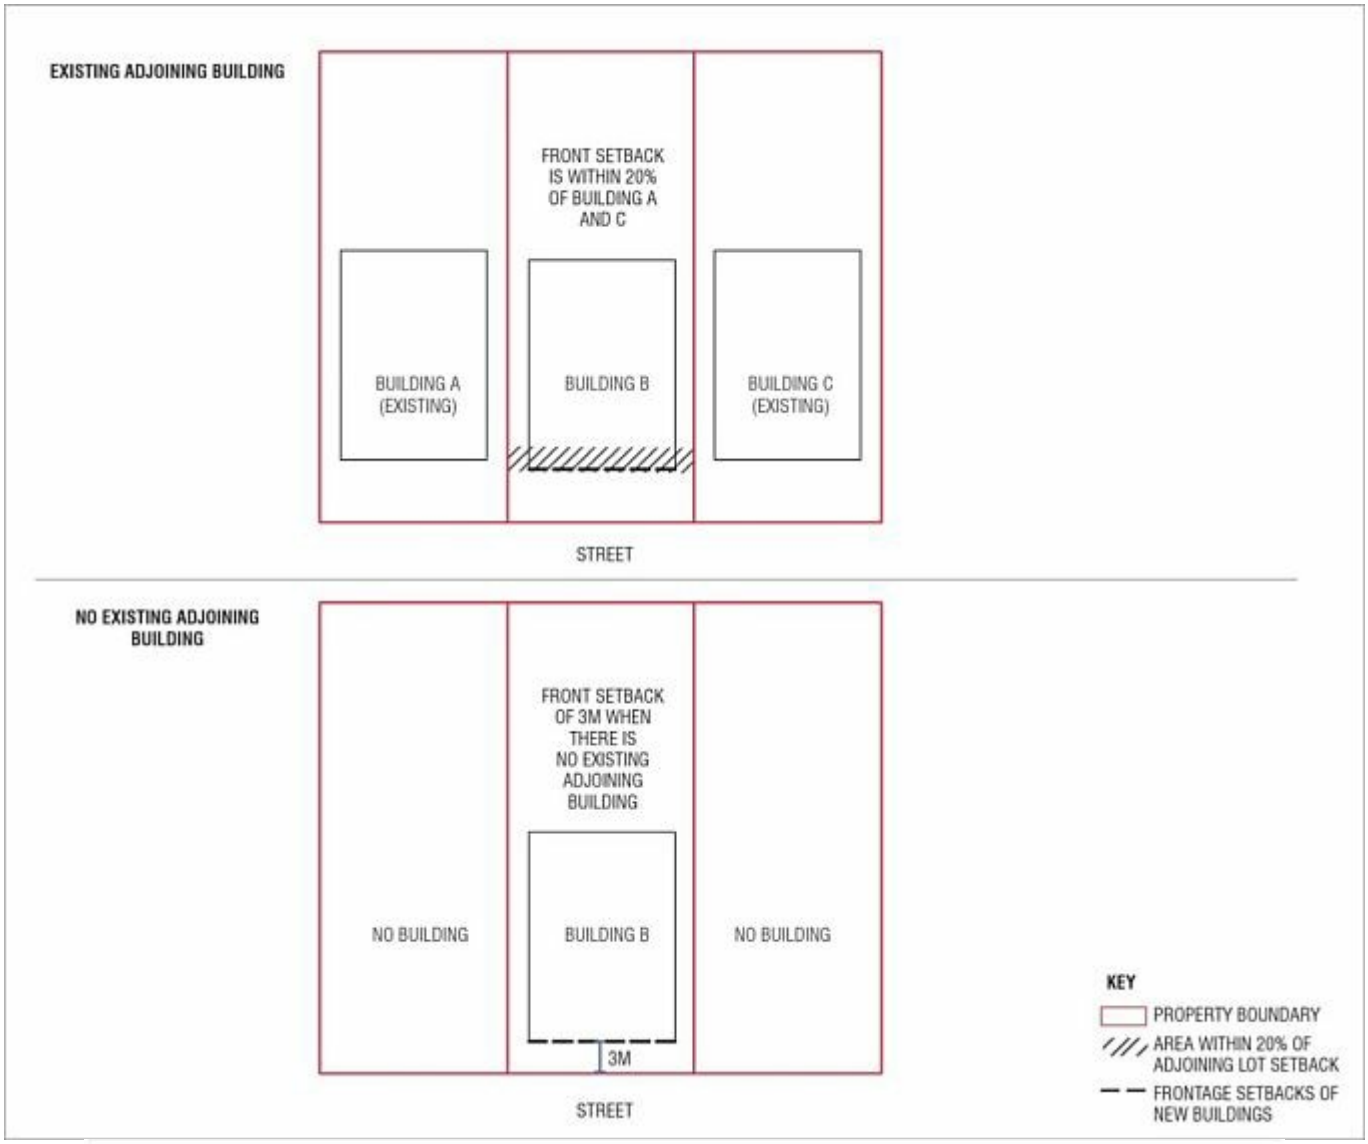
PO10 Waste disposal and servicing areas are screened from public view and do not have adverse amenity impacts on adjoining properties.	No acceptable outcome is nominated.

Table 6.2.2.3(a)-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development – where a non-residential use	
PO11 Non-residential uses establish only where: (a) compatible with local character and amenity; (b) limited in scale and supporting the day-to-day needs of the local community or as specifically intended for a particular precinct; and (c) not impacting on the role and function of the city's network of centres or more appropriately located in another zone.	No acceptable outcome is nominated. **Editor's note—**Applicants should have regard to Economic impact assessment planning scheme policy SC6.5 for guidance on how to demonstrate compliance with the performance outcome.

Table 6.2.2.3(a)-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development – where a multiple dwelling, residential care facility, retirement facility or short-term accommodation with a building height of 3 storeys or less	
Built form	
PO12 Building height and scale is proportionate to the size of the premises and the desired low-rise character of the area.	**AO12** Building design achieves: (a) a site cover that does not exceed 65%; and (b) a building height that does not exceed 3 storeys.
PO13 Building design and setbacks: (a) create an attractive, consistent and cohesive scale along the streetscape; (b) maintain appropriate levels of light and solar penetration, air circulation, privacy and amenity for existing and future buildings; and (c) do not prejudice the development of adjoining sites.	**AO13.1** Buildings are set back from street frontages: (a) within 20% of the average front setback of adjoining buildings; or (b) where there are no adjoining buildings, 3m. Figure 6.27 – Building setbacks illustrates.
	AO13.2 The side boundary setback, except for a wall built to the boundary, is a minimum of: (a) 1.5m for a wall up to 4.5m high; (b) 2m for a wall up to 7.5m high; and (c) 2.5m for any part of a wall over 7.5m high. Figure 6.27 – Building setbacks illustrates.
	AO13.3 The rear boundary setback is a minimum of 6m. Figure 6.27 – Building setbacks illustrates.
	AO13.4 A landscape area with a minimum dimension of 1.5m is provided along the full frontage of any road frontage (excluding crossover and pedestrian access only).



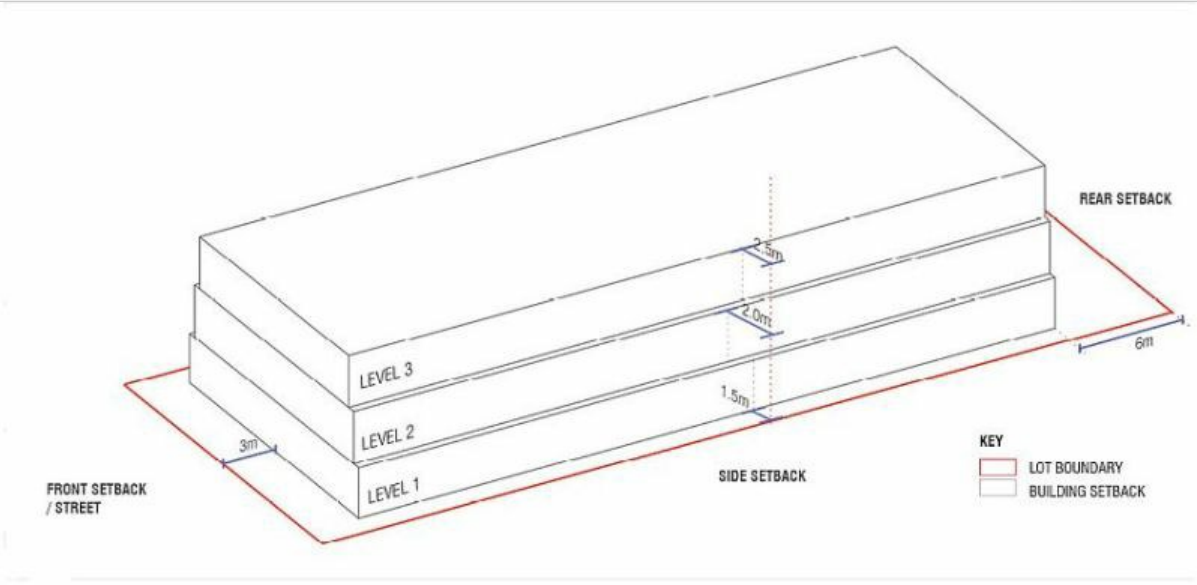


Figure 6.27 – Building setbacks

PO14 Built to boundary walls do not impact on the amenity or privacy of adjoining premises. **Editor's note–**Built to boundary wall heights and lengths may be increased where abutting an existing or proposed built to boundary wall on an adjoining property.	**AO14** Built to boundary walls: (a) are for non-habitable rooms or spaces only; (b) are not located within 1.5m of a habitable room or house on an adjoining site; (c) are not located within the front or rear setback; (d) have a maximum height of 3m; and (e) have a maximum length of 15m.
PO15 Roof form assists in reducing the appearance of building bulk by: (a) articulating individual dwellings; and (b) incorporating variety in design through use of roof pitch, height, gables and skillions.	No acceptable outcome is nominated.
PO16 Development provides private open space that is: (a) well-proportioned, appealing, functional and easily accessible, and promotes outdoor living as an extension of the dwelling; (b) provides a high level of privacy for residents and neighbours; and (c) has sufficient size and shape to meet the needs of a diversity of potential residents.	**AO16.1** For a ground floor dwelling, ground floor private open space is provided with: (a) a minimum area of 25m²; (b) a minimum dimension of 4m; and (c) clear of any utilities such as gas, water tanks or air-conditioning units
	AO16.2 Balconies are provided with a minimum area of 9m² for a 1 bedroom unit or 16m² for a 2 or more bedroom unit, with a minimum dimension of 4m and clear of any air conditioning unit or drying space.
	AO16.3 Where clothes drying areas are provided on private balconies they are screened from public view.
	AO16.4 Private open space is located or screened so it does not directly overlook main living areas or private open space of adjoining dwellings.
PO17 Sufficient communal open space is provided to create flexible spaces suitable for a range of activities.	No acceptable outcome is nominated.
PO18 Communal open space provides facilities including landscaping and shade treatments such as green roofs, green walls or community gardens contribute to the attractiveness of these spaces.	No acceptable outcome is nominated.

Table 6.2.2.3(a)-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development – where a multiple dwelling, residential care facility, retirement facility or short-term accommodation within a precinct intended for building heights of 4 storeys or more	
Built form	
PO19 Building design creates an enjoyable pedestrian environment and experience through the use of: (a) design elements that promote a sense of human scale at the street level, including use of awnings where appropriate; (b) design that breaks up the ground floor elevation on the principle street frontage into distinct elements; and (c) articulation of the built form above ground floor through use of balconies, recesses and changes in material.	No acceptable outcome is nominated.
PO20 Building design and setbacks: (a) create an attractive, consistent and cohesive scale along the streetscape; (b) maintain appropriate levels of light and solar penetration, air circulation, privacy, landscaping and amenity for existing and future buildings; and (c) do not prejudice the development of adjoining land.	**AO20.1** The design meets the setback requirements outlined by Table 6.2.2.3(b) — Building setbacks Medium density residential zone. Figure 6.28 – Building setbacks illustrates.
	AO20.2 A deep planting landscape area with a minimum width of 1.5m is provided along the full frontage of any road frontage (excluding crossover and pedestrian access). Figure 6.28 – Building setbacks illustrates.
	AO20.3 A deep planting landscape area with a minimum width of 1.5m is provided along the rear site boundary. Figure 6.28 – Building setbacks illustrates.

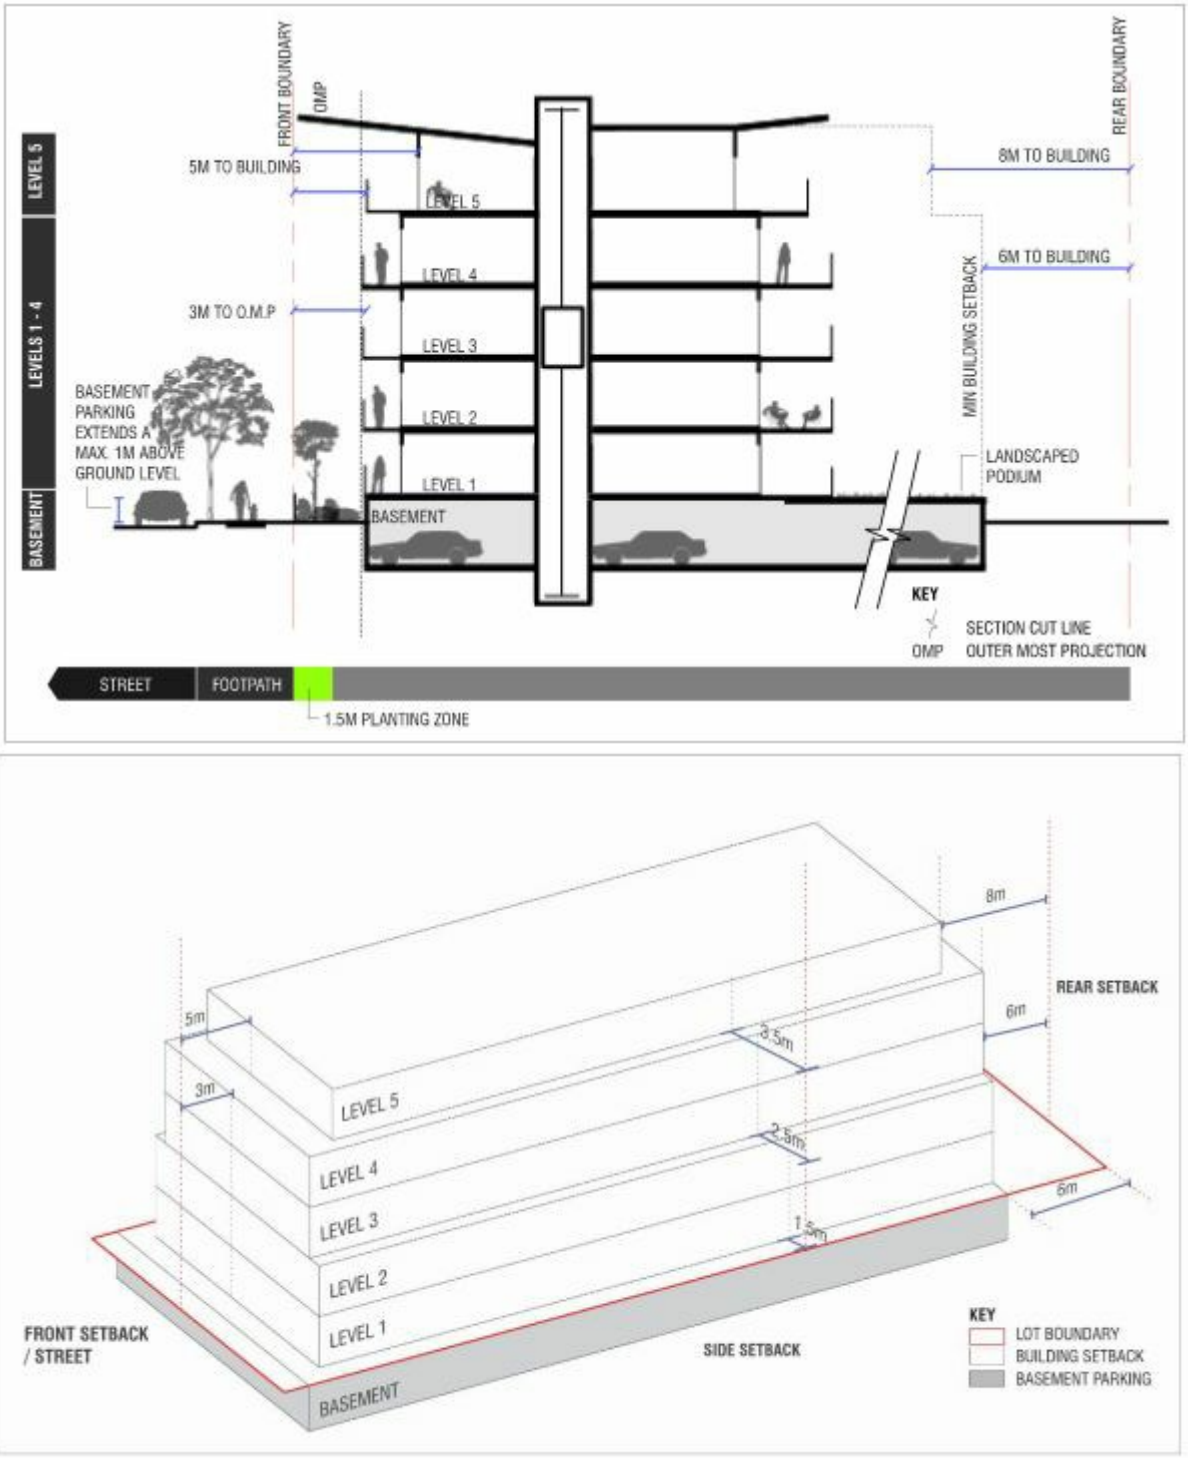

Figure 6.28 – Building setbacks

PO21 Roof forms assist in articulating the facade as a combination of distinct elements integrated with the facade design.	No acceptable outcome is nominated.
PO22 Roof top plant and equipment are contained within roof forms and are screened from the street and from adjoining buildings using a consistent range of non-reflective materials to provide a cohesive design element.	No acceptable outcome is nominated.

PO23 Development provides private open space that is: (a) well-proportioned, appealing and functional and easily accessible, and promotes outdoor living as an extension of the dwelling; (b) provides a high level of privacy for residents and neighbours; and (c) has sufficient size and shape to meet the needs of a diversity of potential residents.	**AO23.1** Balconies are provided with a minimum area of 9m² for a 1 bedroom unit or 16m² for 2 or more bedroom unit, with a minimum dimension of 4m and clear of any air conditioning unit or drying space.
	AO23.2 Where clothes drying areas are provided on private balconies they are screened from public view.
	AO23.3 Private open space is located or screened so it does not directly overlook main living areas or private open space of adjoining dwellings.
PO24 Sufficient communal open space is provided to create flexible spaces suitable for a range of activities and to mitigate the intensity of the built form.	No acceptable outcome is nominated.
PO25 Communal open space provides facilities including seating, shade, flexible spaces suitable for a range of activities. Treatments such as green roofs, green walls or community gardens contribute to the attractiveness of these spaces.	No acceptable outcome is nominated.

Table 6.2.2.3(a)-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	**Acceptable outcomes**
Additional benchmarks for assessable development in precincts **Note–**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Thuringowa South precinct	
PO26 New road linkages are created in accordance with Figure 6.29 – Thuringowa South precinct concept plan, including an alternative east west link from Riverway Drive to North Beck Drive and to provide a direct link into the Thuringowa Central major centre precinct.	No acceptable outcome is nominated.
PO27 Development creates a compatible interface with the centre activities and facilitates pedestrian and cyclist access to the Thuringowa Central major centre precinct in accordance with Figure 6.29 – Thuringowa South precinct concept plan.	No acceptable outcome is nominated.
PO28 Building height and scale is consistent with the character desired for the precinct. The size of the development site allows for the primary orientation of buildings to the street, and the provision of building setbacks, on-site services and circulation and open space at ground storey.	**AO28.1** Building height does not exceed 5 storeys where fronting Riverway Drive in the area shown on Figure 6.29 – Thuringowa South precinct concept plan, and 3 storeys otherwise.
	AO28.2 Where accommodating a building of more than 3 storeys, development sites have a minimum size of 1,000m2.

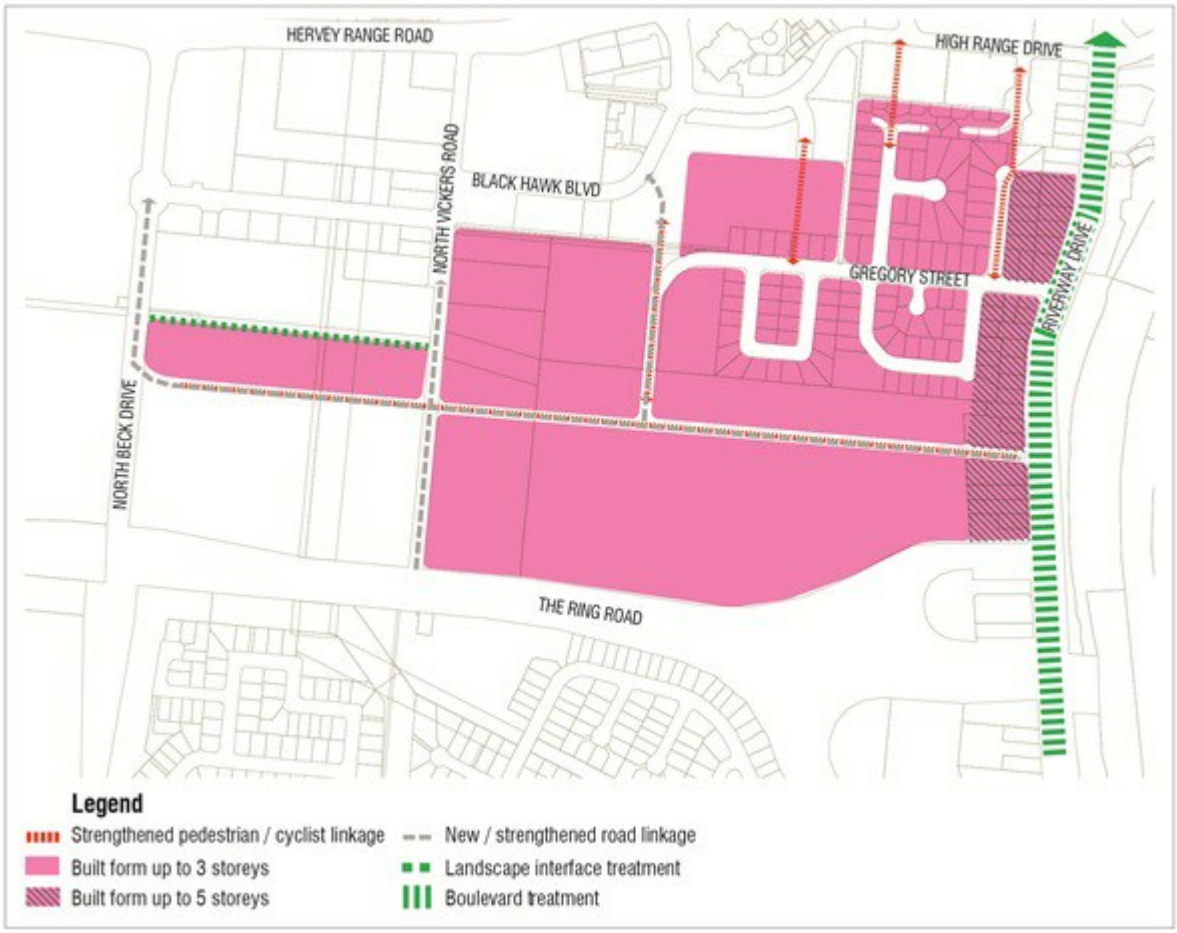

Figure 6.29 – Thuringowa South precinct concept plan

PO29 Development contributes to the boulevard treatment of Riverway Drive, through landscaping and streetscape treatments along the road frontage.	No acceptable outcome is nominated.

Table 6.2.2.3(a)-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	**Acceptable outcomes**
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Thuringowa East precinct	
PO30 Development contributes, through street improvements, to the boulevard treatment of Thuringowa Drive, Riverway Drive and Ross River Road.	No acceptable outcome is nominated.
PO31 Building height and scale is consistent with the character desired for the precinct. The size of the development site allows for the primary orientation of buildings to the street, and the provision of building setbacks, on-site services and circulation and open space at ground storey. Built form provides for sensitive transitioning in height and scale to nearby Low density residential zoned land.	**AO31.1** Building height does not exceed 5 storeys in the areas shown on Figure 6.30 – Thuringowa East precinct concept plan, and 3 storeys otherwise.
	AO31.2 Where accommodating a building of more than 3 storeys, development sites have a minimum size of 1,000m^2.

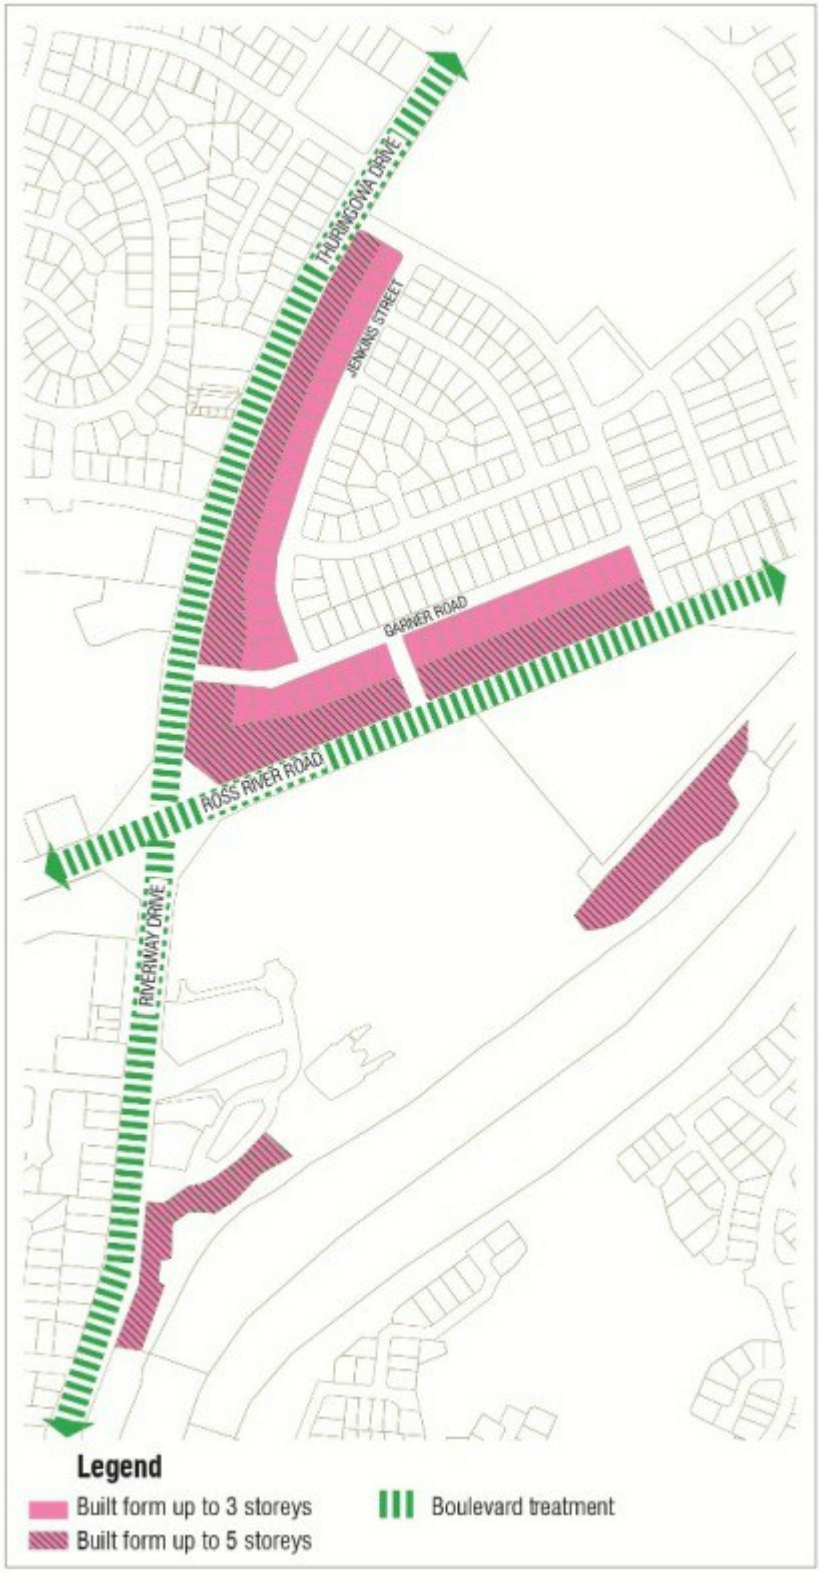

Figure 6.30 – Thuringowa East precinct concept plan

PO32 Access to Ross River Road, Thuringowa Drive and Riverway Drive is consolidated.	**AO32.1** Development sites have a minimum size of 1,000m2 and contain no more than 1 access driveway.
	AO32.2 Access driveways are provided from rear or side streets rather than Thuringowa Drive or Riverway Drive.
PO33 No new non-residential development is established within the precinct.	No acceptable outcome is nominated.
PO34 Expansion of existing non-residential development is minor in nature and does not significantly increase the intensity of non-residential activity.	**AO34** New gross floor area is only added through internal building work to an existing building.

Table 6.2.2.3(a)-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	**Acceptable outcomes**
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Rossiter Park precinct	
PO35 Development achieves a coordinated redevelopment of this precinct into a high quality medium density urban environment which is highly responsive to the amenity offered by Ross River and its parklands through building orientation, intensity of built form and landscaping treatment. Development site planning is undertaken in accordance with Figure 6.31 – Rossiter Park precinct concept plan.	No acceptable outcome is nominated.
PO36 Building height and scale is consistent with the character desired for the precinct. The size of the development site allows for primary orientation of buildings to the street, the provision of building setbacks, on-site services and circulation and open space at ground storey. Development over 3 storeys occurs only on large, amalgamated sites that facilitate well-proportioned buildings permitting primary orientation to the park.	**AO36.1** Building height does not exceed 6 storeys in the area shown on Figure 6.31 – Rossiter Park precinct concept plan, and 3 storeys otherwise.
	AO36.2 Where accommodating a building of more than 3 storeys, development sites have a minimum size of 1,000m2.
PO37 Development facilitates new street connections and promotes visual and pedestrian connectivity through the precinct to Rossiter Park to the south and Aitkenvale major centre precinct to the north, in accordance with Figure 6.31 – Rossiter Park precinct concept plan.	No acceptable outcome is nominated.

PO38 On frontages shown on Figure 6.31 – Rossiter Park precinct concept plan as having a responsive edge, buildings contribute to the creation of a strong and pedestrian oriented edge to the street, by: (a) having a primary orientation overlooking the street and Rossiter Park; and (b) having facades which contain windows, doors, materials and features which generate visual interest at the street level.	No acceptable outcome is nominated.

Figure 6.31 – Rossiter Park precinct concept plan

Table 6.2.2.3(a)-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Aitkenvale medium density precinct	
PO39 Building height and scale is consistent with the character desired for the precinct. The size of the development site allows for the primary orientation of buildings to the street, and the provision of building setbacks, on-site services and circulation and open space at ground storey.	**AO39.1** Building height does not exceed 5 storeys.
	AO39.2 Where accommodating a building of more than 3 storeys, development sites have a minimum size of 1,000m^2.
PO40 Pedestrian routes are defined by building streetscape improvements that provide shade and improve pedestrian comfort.	No acceptable outcome is nominated.

Table 6.2.2.3(a)-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in Aitkenvale village precinct **Note**-Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Aitkenvale village precinct	
PO41 Supermarket and showroom retail uses do not occur in this precinct.	No acceptable outcome is nominated.
PO42 Food and drink outlets are established where they are (a) orientated to the street; (b) incorporate outdoor dining; and (c) are located on the ground floor with accommodation above.	No acceptable outcome is nominated.
PO43 Where incorporating ground floor non-residential use, the design of buildings provides for pedestrian friendly and visually interesting frontages.	**AO43.1** Front setbacks at the ground floor do not exceed 3m.
	AO43.2 Ground floor tenancies where including a non-residential use are articulated through: (a) variation in use of materials (glass, timber, steel, masonry); and (b) a change in plane of a minimum 0.5m for any length of the facade exceeding 10m.
	AO43.3 Ground floor tenancies are designed to be adaptable and flexible in configuration allowing for creation of indoor and outdoor spaces through use of large openings.

PO44 Building height and scale is consistent with the character desired for the precinct. The size of the development site allows for the primary orientation of buildings to the street, and the provision of building setbacks, on-site services and circulation and open space at the ground storey.	**AO44.1** Building height does not exceed 5 storeys.
	AO44.2 Where accommodating a building of more than 3 storeys, development sites have a minimum size of 1,000m^2.
PO45 Where incorporating ground floor non-residential uses, weather protection is provided to usable outdoor spaces at the street frontage.	**AO45** Awnings are provided over outdoor spaces.
PO46 On the frontage shown on Figure 6.32 - Aitkenvale village precinct concept plan as having built form edge, buildings contribute to the creation of a strong and pedestrian-oriented edge to the street, by: (a) creating a generally continuous building alignment; (b) having facades which contain windows, doors, materials and features which generate visual interest at the street level; and (c) incorporating an attractive streetscape and planting theme.	No acceptable outcome is nominated.

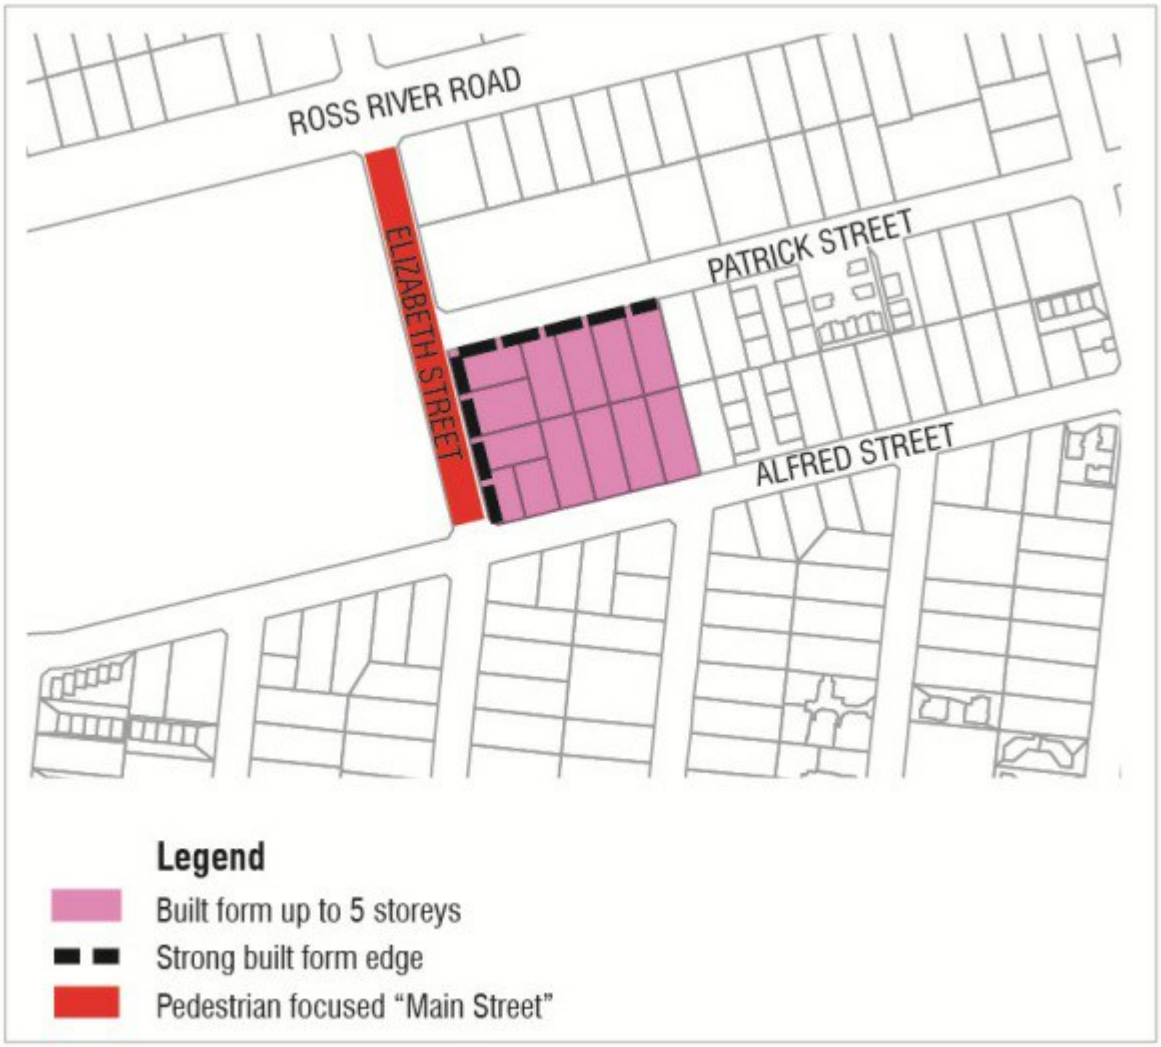

Figure 6.32 Aitkenvale village precinct concept plan

Table 6.2.2.3(a)-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Hyde Park medium density precinct	
PO47 Building height creates a low to medium-rise environment, and transitions to nearby Low density residential zoned land.	**AO47** Building height does not exceed 3 storeys in the area shown on Figure 6.33 – Hyde Park medium density precinct concept plan, and 5 storeys otherwise.
PO48 Development provides for improvements to the open space corridor such that it provides a major recreational node for the precinct and surrounding area, in a manner generally consistent with Figure 6.33 – Hyde Park medium density precinct concept plan.	No acceptable outcome is nominated.
PO49 Development adjacent to the open space corridor incorporates pedestrian access along the interface, in accordance with Figure 6.33 – Hyde Park medium density precinct concept plan.	No acceptable outcome is nominated.

PO50 Development overlooks and provides for casual surveillance of the open space corridor.	No acceptable outcome is nominated.
PO51 Development facilitates the establishment of a new road linkage connecting Woolcock Street to Dillane Street, in accordance with Figure 6.33 – Hyde Park medium density precinct concept plan. This new road assists in creating an active and attractive interface between the major centre and the Hyde Park medium density precinct.	No acceptable outcome is nominated.
PO52 Development facilitates the establishment of Virgil Street as the major east-west pedestrian thoroughfare connecting across into the Hyde Park major centre and the open space corridor, in accordance with Figure 6.33 – Hyde Park medium density precinct concept plan.	No acceptable outcome is nominated.
PO53 Non-residential uses may establish on the ground floor where fronting Woolcock street and where integrated with residential development in accordance with Figure 6.33 - Hyde Park medium density precinct concept plan.	No acceptable outcome is nominated.
PO54 Where incorporating ground floor non-residential uses, the design of buildings provides for pedestrian-friendly and visually interesting frontages.	**AO54** Ground floor tenancies where including a non-residential use are articulated through: (a) variation in use of materials (glass, timber, steel, masonry); and (b) a change in plane of a minimum of 0.5m for any length of facade exceeding 10m.
PO55 Where incorporating ground floor non-residential uses, weather protection is provided to usable outdoor spaces at the street frontage.	**AO55** Awnings are provided over outdoor spaces.

Figure 6.33 – Hyde Park medium density precinct concept plan

PO56 Development assists in creating a primary pedestrian and cycle pathway and improving the quality of the pedestrian environment along Woolcock Street.	No acceptable outcome is nominated.

Table 6.2.2.3(a)-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note–**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Kings Road medium density precinct	
PO57 Building height creates a medium-rise environment.	**AO57** Building height does not exceed 5 storeys.
PO58 Residential uses are appropriately buffered from the railway corridor.	No acceptable outcome is nominated.
PO59 Development provides for enhanced public realm and pedestrian connectivity throughout the precinct and connecting to the showground.	No acceptable outcome is nominated.
PO60 Safe pedestrian access is provided for across Kings Road.	No acceptable outcome is nominated.
PO61 Development assists in creating a primary pedestrian and cycle pathway and improving the quality of the pedestrian environment along Kings Road, in accordance with Figure 6.34 – Kings Road medium density precinct concept plan.	No acceptable outcome is nominated.

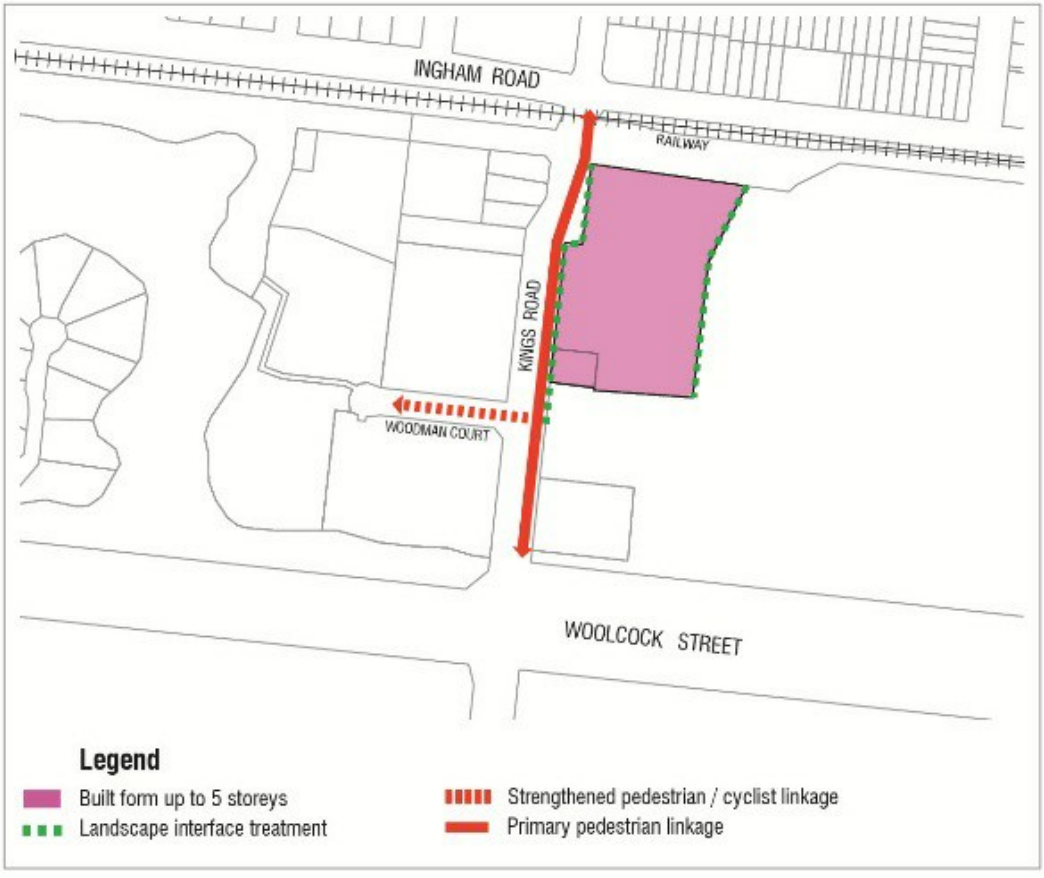

Figure 6.34 – Kings Road medium density precinct concept plan

Table 6.2.2.3(a)-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note–**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
The Strand precinct	
PO62 Building height and scale is consistent with the character desired for the precinct. The size of the development site allows for the primary orientation of buildings to the street and parkland, and the provision of building setbacks, on-site services and circulation and open space at ground storey.	**AO62.1** Building height does not exceed 5 storeys. Figure 6.35 – The Strand conceptual built form illustrates the desired built form.
	AO62.2 Where accommodating a building of more than 3 storeys, development sites have a minimum size of 1,000m^2.
PO63 Food and drink outlets are established where they are: (a) oriented to the street and parkland; (b) incorporate outdoor dining; and (c) are located on the ground floor with accommodation above. Figure 6.35 – The Strand conceptual built form illustrates the desired design principles.	No acceptable outcome is nominated.
PO64 Where incorporating ground floor non-residential use, the design of buildings provides for pedestrian friendly and visually interesting frontages.	**AO64.1** Front setbacks at the ground floor do not exceed 3m.
	AO64.2 Ground floor tenancies where including a non-residential use are articulated through: (a) variation in use of materials (glass, timber, steel, masonry); and (b) a change in plane of a minimum 0.5m for any length of the facade exceeding 10m.
	AO64.3 Ground floor tenancies are designed to be adaptable and flexible in configuration allowing for creation of indoor and outdoor spaces through use of large openings.
PO65 Where incorporating ground floor non-residential uses, weather protection is provided to usable outdoor spaces at the street frontage. Figure 6.35 – The Strand conceptual built form illustrates the desired design principles.	**AO65** Awnings are provided over outdoor spaces.

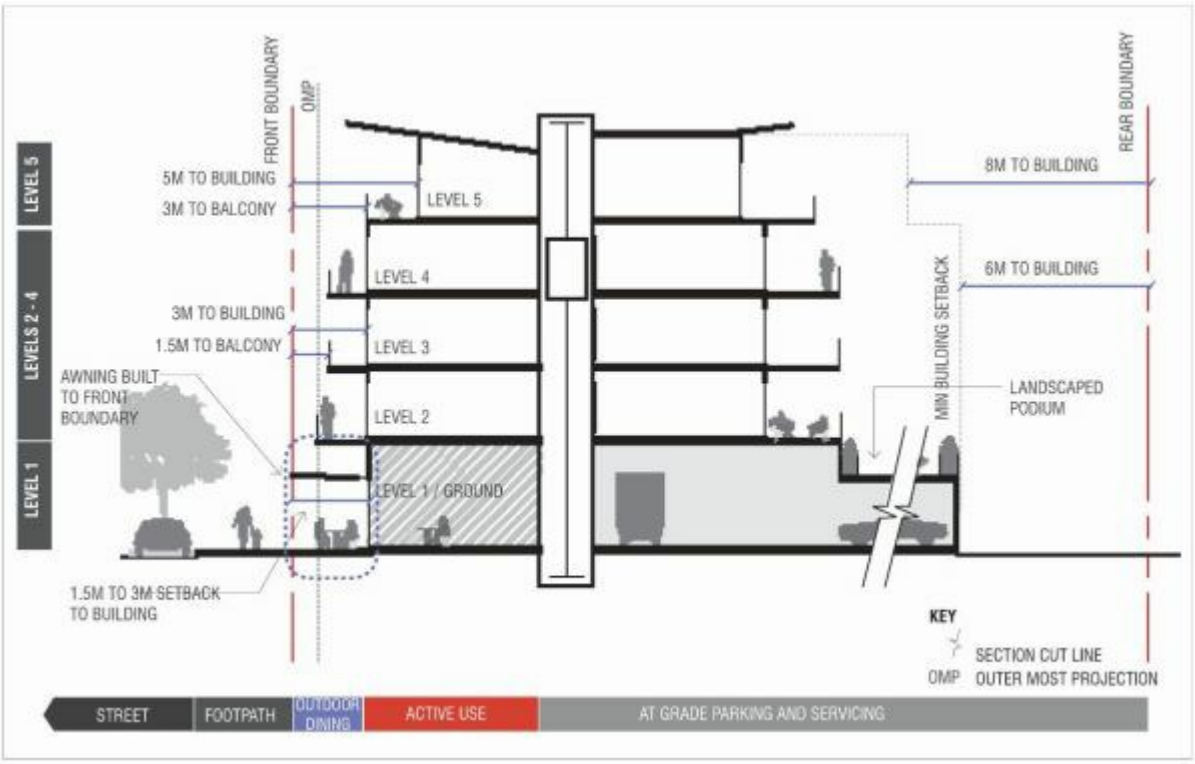

Figure 6.35 – The Strand conceptual built form

Table 6.2.2.3(a)-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note–**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
North Ward gateway precinct	
PO66 Building height and scale is consistent with the character desired for the precinct and reinforces Landsborough Street as a primary gateway to The Strand. The size of the development site allows for the primary orientation of buildings to the street, and the provision of building setbacks, on-site services and circulation and open space at ground storey. Figure 6.36 – North Ward gateway and villages conceptual built form illustrates.	**AO66.1** Building height does not exceed 8 storeys. **AO66.2** Development sites have a minimum size of 1,000m^2 where buildings of 5 storeys or above are proposed.
PO67 The design of buildings in this precinct provides for an arrival and wayfinding statement by: (a) addressing the street and are located to frame the edge of the street and focus view lines to The Strand; (b) creating an entry aesthetic by defining the street edge with a medium density built form; and (c) incorporating a streetscape and planting theme that creates a boulevard treatment of the street.	No acceptable outcome is nominated.

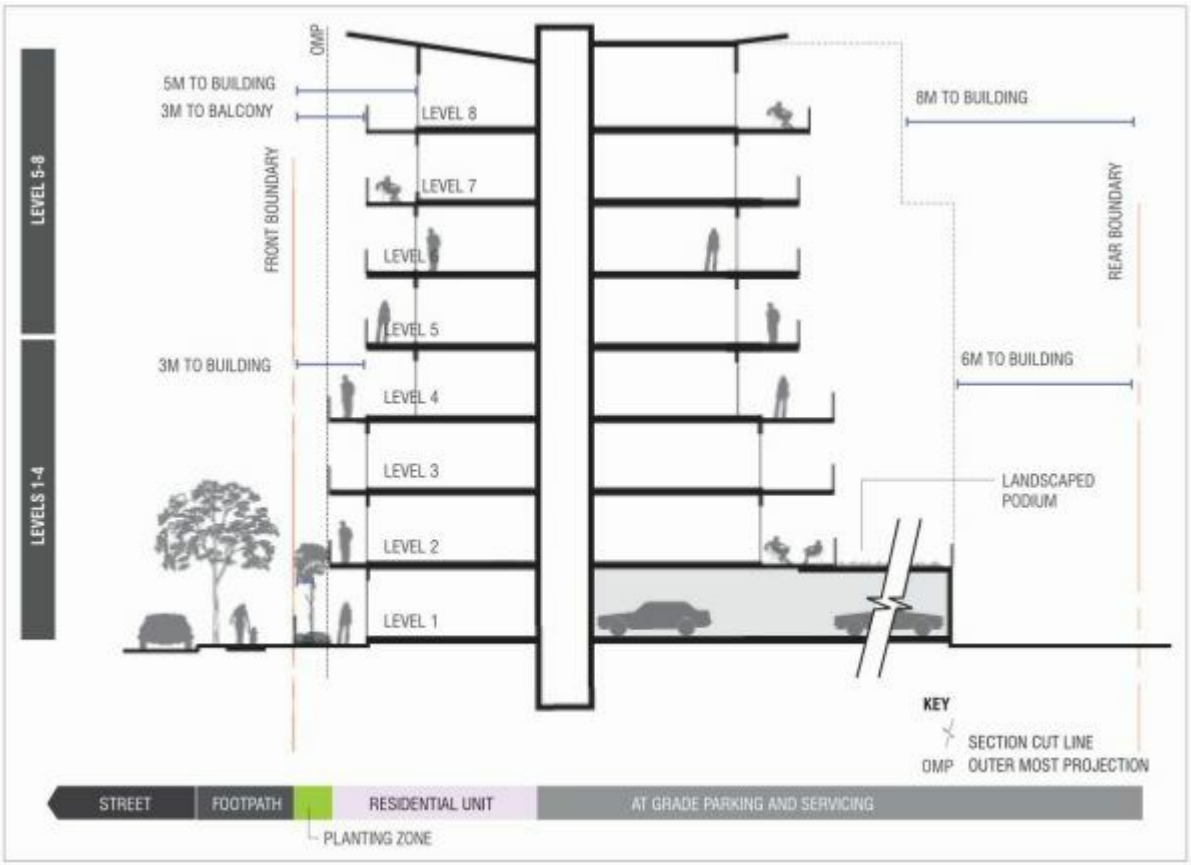

Figure 6.36 – North Ward gateway and villages conceptual built form

Table 6.2.2.3(a)-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note–**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
North Ward villages precinct	
PO68 Building height and scale is consistent with the character desired for the precinct and reinforces Gregory and Landsborough Streets as the primary activity spines and gateways to The Strand. The size of the development site allows for the primary orientation of buildings to the street, and the provision of building setbacks, on-site services and circulation and open space at ground storey. Figure 6.36 – North Ward gateway and villages conceptual built form.	**AO68.1** Building height does not exceed 8 storeys. **AO68.2** Development sites have a minimum size of 1,000m^2 where buildings of 5 storeys or above are proposed.
PO69 Non-residential uses are established where they are: (a) oriented to the street; (b) incorporate outdoor dining; and (c) are located on the ground floor with accommodation above.	No acceptable outcome is nominated.

PO70 Where incorporating non-residential uses, the design of buildings in this precinct provides for pedestrian friendly and visually interesting frontages.	**AO70.1** Front setbacks at the ground floor do not exceed 3m.
	AO70.2 Ground floor tenancies where including a non-residential use are articulated through: (a) variation in use of materials (glass, timber, steel, masonry); and (b) a change in plane of a minimum 0.5m for any length of the facade exceeding 10m.
	AO70.3 Ground floor tenancies are designed to be adaptable and flexible in configuration allowing for creation of indoor and outdoor spaces through use of large openings.
PO71 Where incorporating ground floor non-residential uses, weather protection is provided to usable outdoor spaces at the street frontage.	**AO71** Awnings are provided over outdoor spaces.
PO72 The design of buildings in this precinct provides for an arrival and wayfinding statement by: (a) focussing view lines to The Strand; (b) creating an entry aesthetic by defining the street edge with a medium density built form; and (c) incorporating a streetscape and planting theme that creates a boulevard treatment of the street. Figure 6.36 – North Ward gateway and villages conceptual built form.	No acceptable outcome is nominated.

Table 6.2.2.3(a)-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	**Acceptable outcomes**
Additional benchmarks for assessable development in precincts **Note–**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
North Ward medium density precinct	
PO73 Building height and scale is consistent with the character desired for the precinct. The former hospital building remains as the most significant building in the precinct. The size of the development site allows for the primary orientation of buildings to the street, and the provision of building setbacks, onsite services and circulation and open space at ground storey.	**AO73.1** Building height does not exceed 5 storeys other than the existing hospital building which is retained at its present height.
	AO73.2 Where accommodating a building of more than 3 storeys, development sites have a minimum size of 1,000m^2.
PO74 Building layout and design on the former hospital site facilitates a high level of pedestrian and cyclist permeability through the site.	No acceptable outcome is nominated.

Table 6.2.2.3(a)-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note–**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Magnetic Island medium density precinct	
PO75 Building design and massing is consistent with the low density scale of the locality and articulates individual dwellings.	**AO75** Building height does not exceed 2 storeys and is predominately in the form of single, single unit or multiple pavilions. Figure 6.37 – Magnetic Island indicative built form outcomes illustrates.

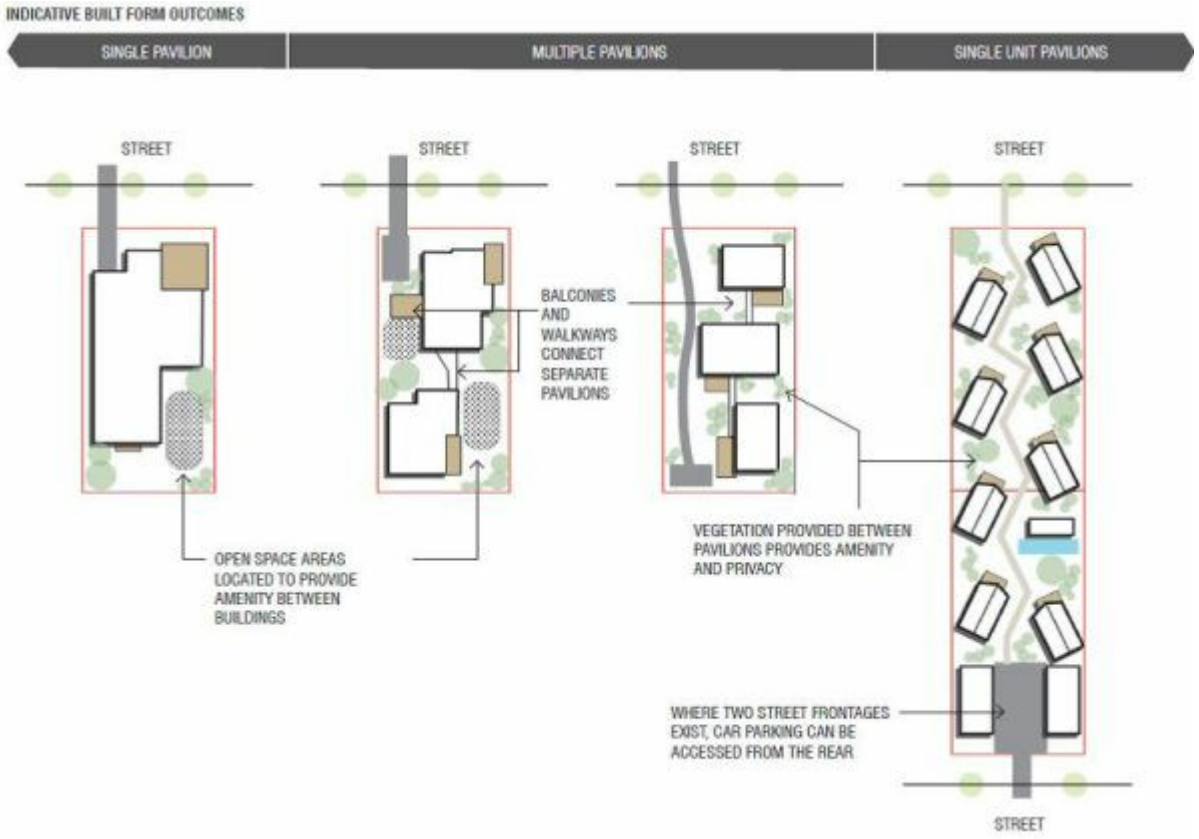

Figure 6.37 – Magnetic Island indicative built form outcomes

PO76 Design and articulation of buildings contribute to the creation of the local tropical character through: (a) use of tropical building design typologies; (b) natural setting of buildings within the landscape; and (c) maximising views to the bay. Figure 6.38 – Examples of the desired tropical building design typologies.	No acceptable outcome is nominated.

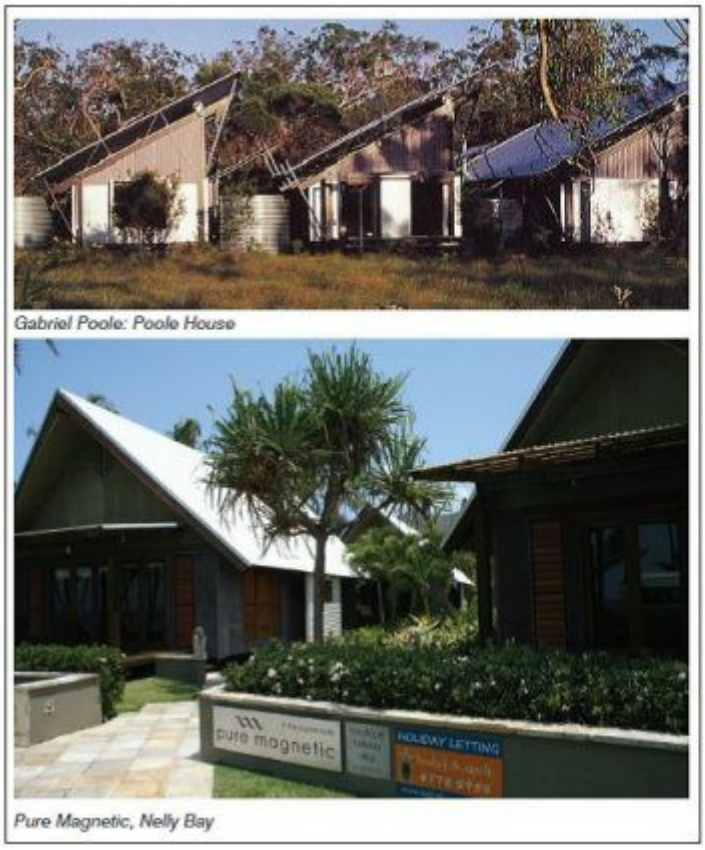

Figure 6.38 – Examples of the desired tropical building design typologies

Table 6.2.2.3(a)-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note–**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Picnic Bay precinct	
PO77 Non-residential uses are provided on the ground floor as part of a mixed use development along Granite Street and along the water frontage.	No acceptable outcome is nominated.
PO78 Building design and massing is consistent with the low density scale of the bay and articulates individual dwellings.	**AO78** Building height does not exceed 2 storeys and is predominately in the form of single, single unit or multiple pavilions. Figure 6.37 – Magnetic Island indicative built form outcomes illustrates.

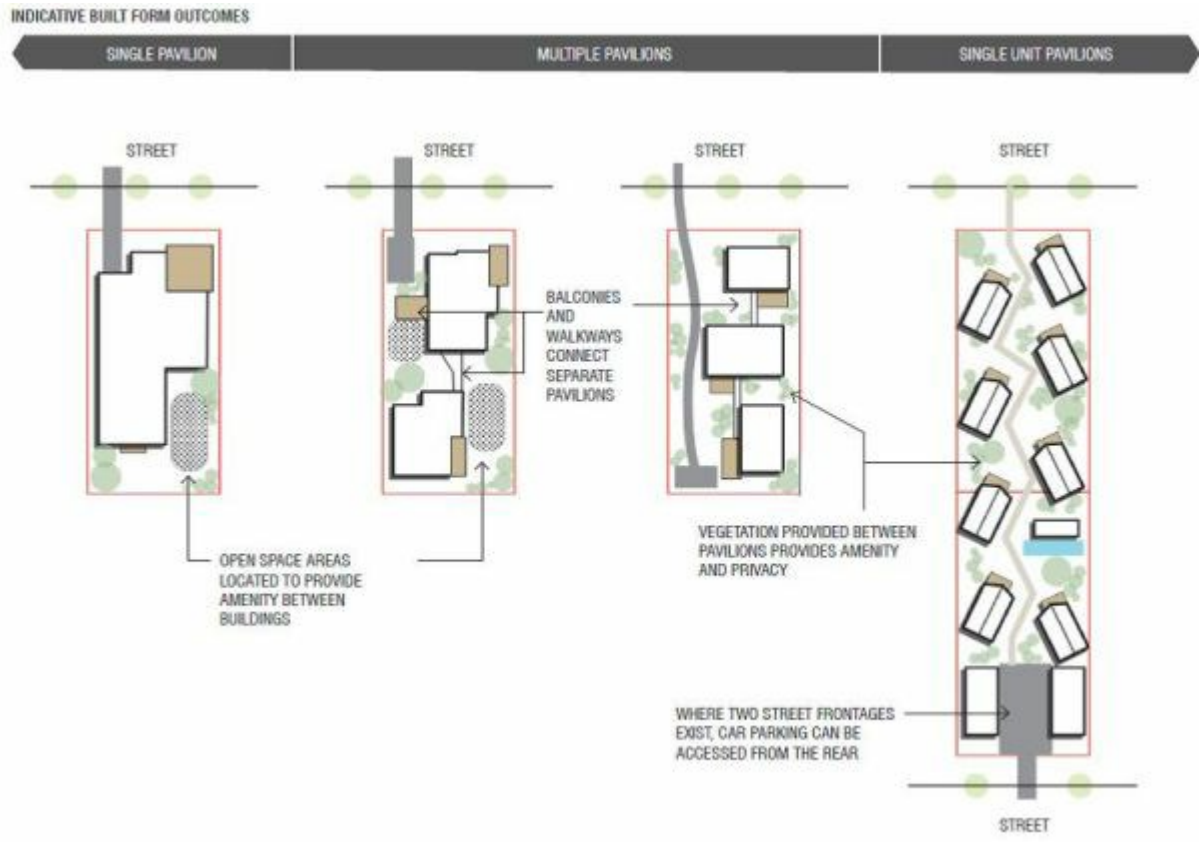

Figure 6.37 – Magnetic Island indicative built form outcomes

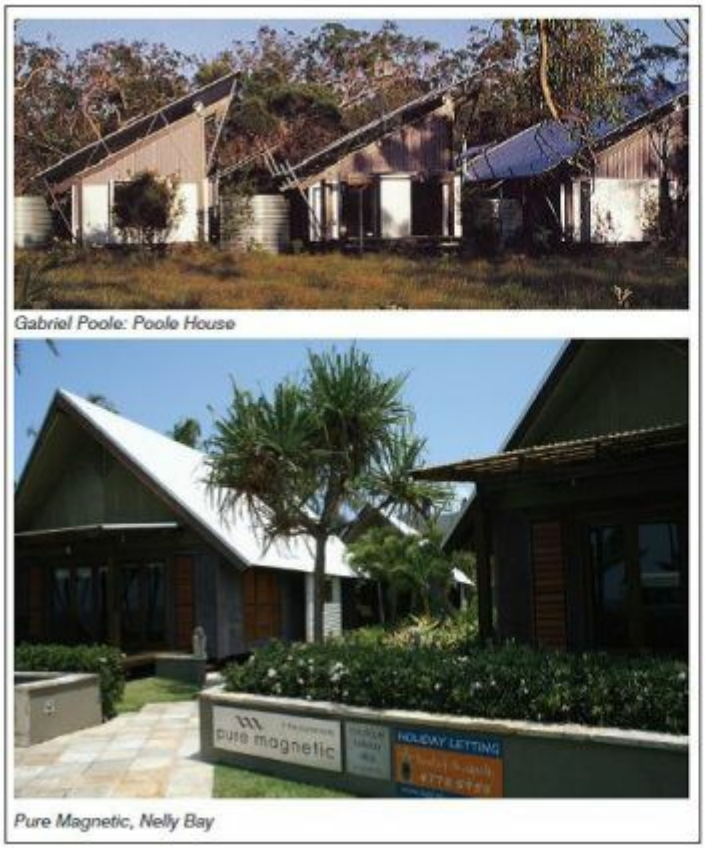
PO79 Design and articulation of buildings contribute to the creation of the local tropical character through: (a) use of tropical building design typologies; (b) natural setting of buildings within the landscape; and (c) maximising views to the bay. Figure 6.38 – Examples of the desired tropical building design typologies illustrates.	No acceptable outcome is nominated.



Gabriel Poole: Poole House

Pure Magnetic, Nelly Bay

Troppo Architects: Thiel House, Cullen Bay

Balconies and walkways connect individual pavilions and create transition between indoor and outdoor spaces

Figure 6.38 – Examples of the desired tropical building design typologies

PO80 Where incorporating non-residential uses, the design of buildings in this precinct provides for pedestrian friendly and visually interesting frontages.	**AO80.1** Front setbacks at the ground floor do not exceed 3m.
	AO80.2 Ground floor tenancies where including a non-residential use are articulated through: (a) variation in use of materials (glass, timber, steel, masonry); and (b) a change in plane of a minimum 0.5m for any length of the facade exceeding 10m.
	AO80.3 Ground floor dining tenancies are designed to be adaptable and flexible in configuration allowing for creation of indoor and outdoor spaces through use of large openings.
PO81 Where incorporating ground floor non-residential uses, weather protection via permanent or operable awnings is provided to usable outdoor spaces at the street frontage.	**AO81** Awnings are provided over outdoor spaces.

Table 6.2.2.3(a)-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note–**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Nelly Bay tourist precinct	
PO82 Non-residential uses are provided on the ground floor as part of a mixed use development and contribute to the creation of a waterfront promenade. Figure 6.39 – Nelly Bay waterfront promenade illustrates	No acceptable outcome is nominated.

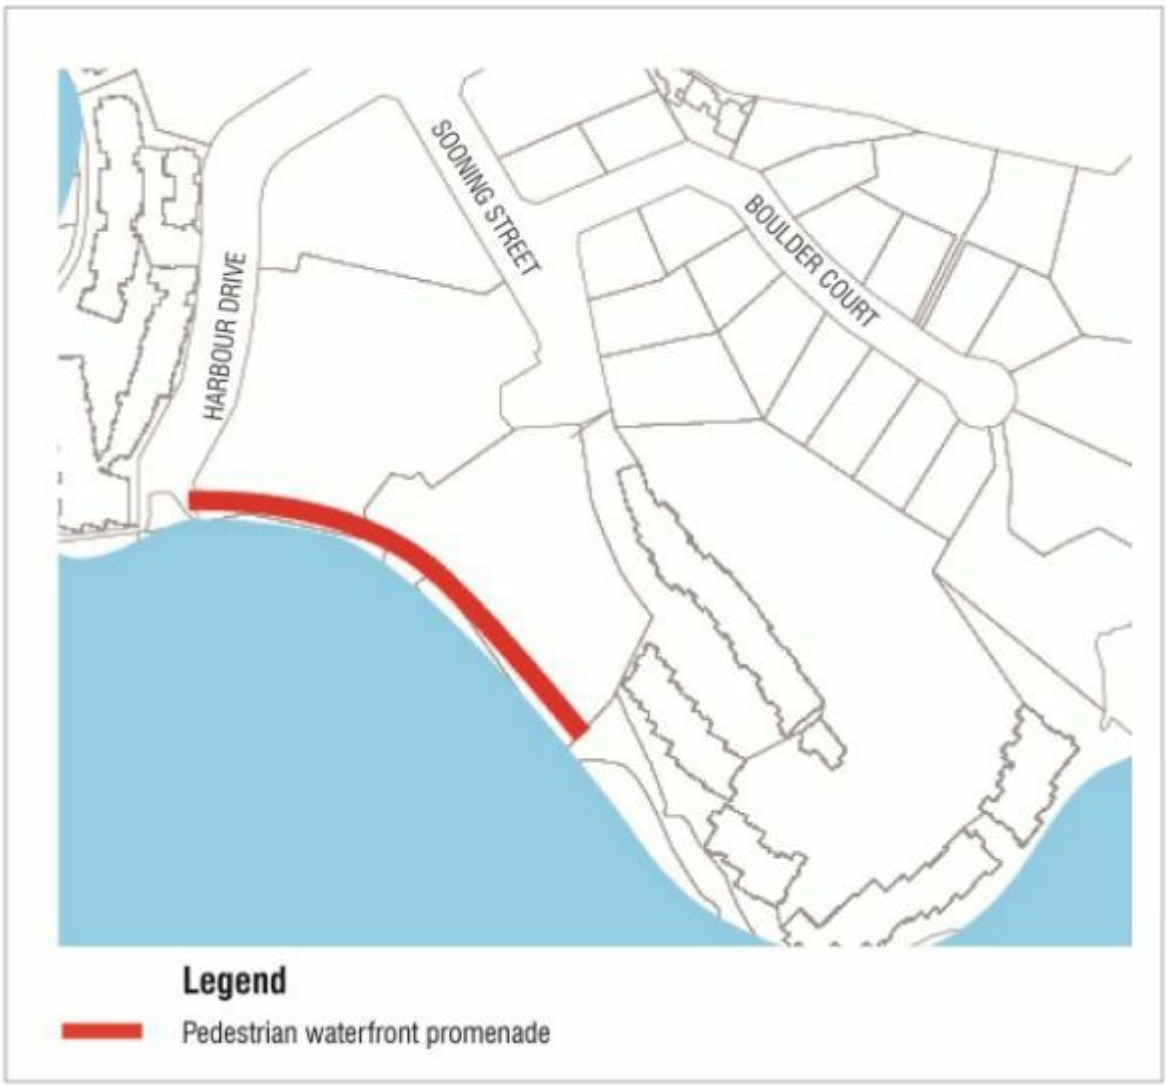

Figure 6.39 – Nelly Bay waterfront promenade

Performance outcomes	Acceptable outcomes
PO83 Tourist based services are located along Harbour Drive.	No acceptable outcome is nominated.
PO84 Building height is of a low to medium-rise scale and building massing is consistent with the low density character of the island.	**AO84.1** Building height does not exceed 4 storeys.
	AO84.2 Development consists of a number of distinct buildings where site frontage exceeds 20m. Figure 6.40 – Indicative building massing illustrates

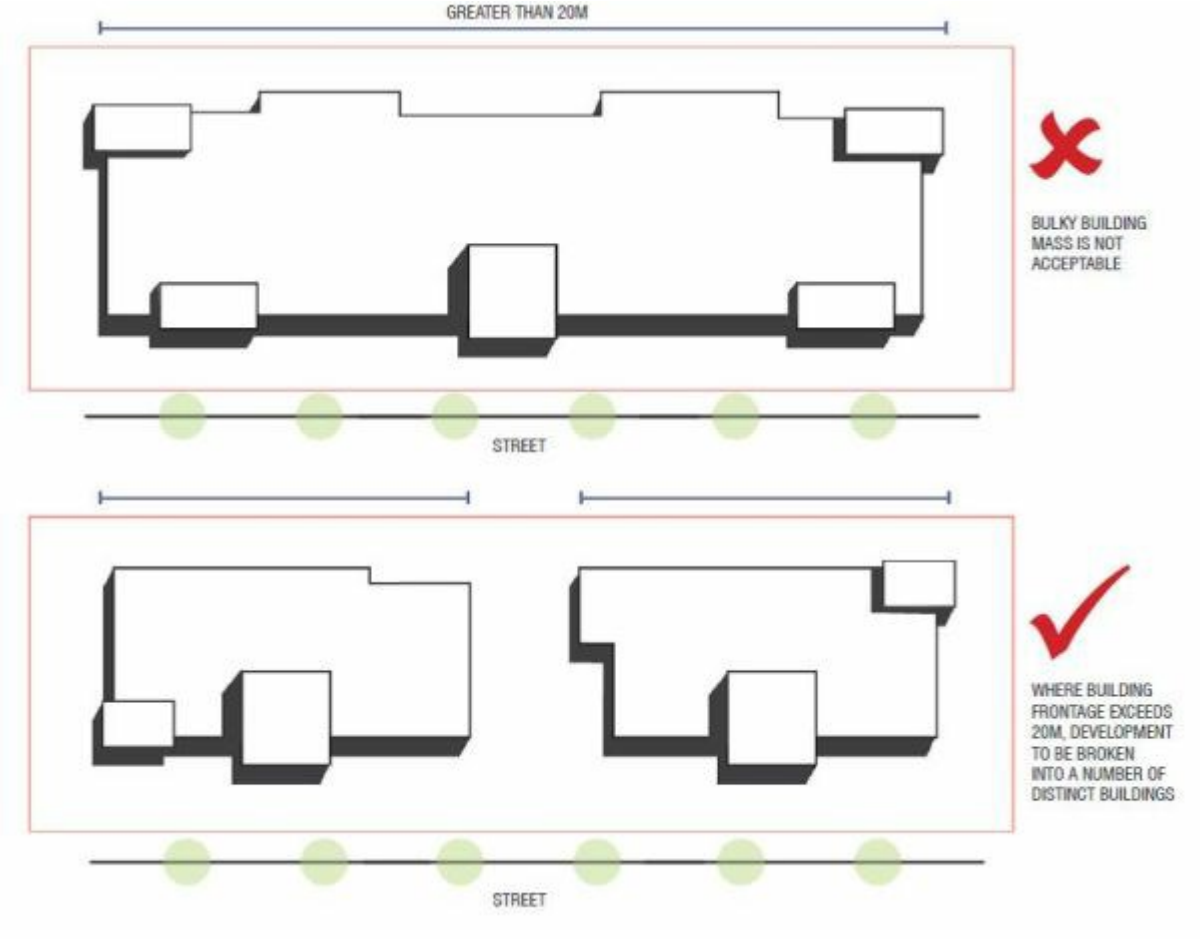

Figure 6.40 – Indicative building massing

PO85 Design of buildings contribute to the creation of an attractive and safe arrival through maximising views to the bay through use of: (a) balconies, verandas or windows overlooking the bay; and (b) opportunities for indoor and outdoor living spaces.	No acceptable outcome is nominated.
PO86 Where incorporating non-residential uses, the design of buildings in this precinct provides for pedestrian friendly and visually interesting frontages with active ground floors where feasible.	**AO86.1** Front setbacks at the ground floor do not exceed 3m.
	AO86.2 Ground floor tenancies where including a non-residential use are articulated through: (a) variation in use of materials (glass, timber, steel, masonry); and (b) a change in plane of a minimum 0.5m for any length of the facade exceeding 10m.
	AO86.3 Ground floor dining tenancies are designed to be adaptable and flexible in configuration allowing for creation of indoor and outdoor spaces through use of large openings.
PO87 Where incorporating ground floor non-residential uses, weather protection is provided to usable outdoor spaces at the street frontage.	**AO87** Awnings are provided over outdoor spaces.

Table 6.2.2.3(a) - Accepted development subject to requirements and assessable development (Part)

Performance outcomes	**Acceptable outcomes**
Additional benchmarks for assessable development in precincts **Note-**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcome takes precedence.	
Wills Street precinct	
PO88 Building height and scale is consistent with the character desired for the precinct. The size of the development site allows for the primary orientation of buildings to the street, and the provision of building setbacks, on-site services and circulation, and open space at ground storey.	**AO88.1** Building height does not exceed 4 storeys.
	AO88.2 Where accommodating a building of more than 3 storeys, development sites have a minimum size of 1,000m².
PO89 Built form provides for sensitive transitioning in height and scale to nearby Character residential zoned land.	No acceptable outcome is nominated.

6.2.3 High density residential zone code

6.2.3.1 Application

This code applies to development where the code is identified as applicable in the categories of development and assessment.

When using this code, reference should be made to section 5.3.2 and where applicable, section 5.3.3 located in Part 5.

6.2.3.2 Purpose

(1) The purpose of the High density residential zone is to provide for higher density multiple dwellings.

(2) The particular purpose of the code is to:

- (a) optimise opportunities for higher density living close to the city's principal centre, in order to maximise accessibility to services, employment and public transport, promote affordable living and maximise day and night-time vibrancy of the centres;
- (b) maintain a level of residential amenity that is consistent with an inner urban and near centre lifestyle; and
- (c) create well-designed built form and public spaces that are pedestrian friendly and provide opportunities for community interaction.

(3) The purpose of the zone will be achieved through the following overall outcomes:

- (a) development provides for high-rise and high density multiple dwellings and short-term accommodation in locations clustered around or near the principal centre (CBD);
- (b) building height steps down from taller buildings in the Principal centre (CBD) zone, and is generally up to 12 storeys;
- (c) development maintains a high level of residential amenity on the site and in the neighbourhood;
- (d) development is designed to incorporate sustainable practices including maximising energy efficiency, water conservation and public and active transport use;
- (e) development is supported by transport infrastructure which is designed to provide and promote safe and efficient public transport use, walking and cycling; and
- (f) non-residential uses occur where they directly support the day-to-day needs of the immediate residential community, do not unreasonably detract from the residential amenity of the area and are not better located in nearby centres.

(4) The purpose of the zone will also be achieved through the following additional overall outcomes for particular precincts:

Palmer Street precinct:

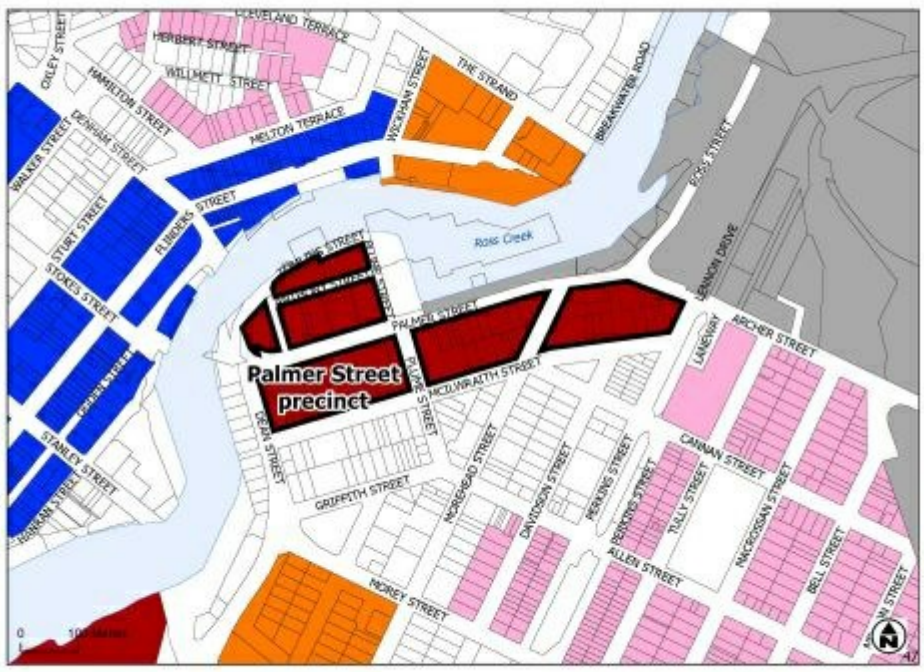
(a) this precinct continues to grow as Townville's primary contemporary entertainment and accommodation destination;

(b) Palmer Street is the continued focus for the establishment of restaurants, cafes and retail at the ground floor within a high quality streetscape;

(c) permanent residential accommodation occurs within this precinct where it does not compromise the function of Palmer Street as an entertainment destination;

(d) the public realm along the Ross Creek waterfront is of a high quality and provides continuous pedestrian access including the linking of the north and south banks by a new pedestrian bridge; and

(e) large-scale offices and other commercial activities are not established within the precinct.



Click here to view high resolution PDF.

Figure 6.41 – Palmer Street precinct

Flinders Street West precinct:

(a) this precinct grows to accommodate high density residential living;

(b) residential accommodation is provided in slender towers and takes advantage of the amenity of Ross Creek and views of Castle Hill, whilst protecting the heritage values of the historic railyards area;

(c) a hub of cultural activities is established within the historic railyards area, including a mix of education and entertainment activities;

(d) high quality public realm in and around the rail buildings is created and utilised for informal and formal performance spaces or events. Dining and local convenience retail may be located at ground storey; and

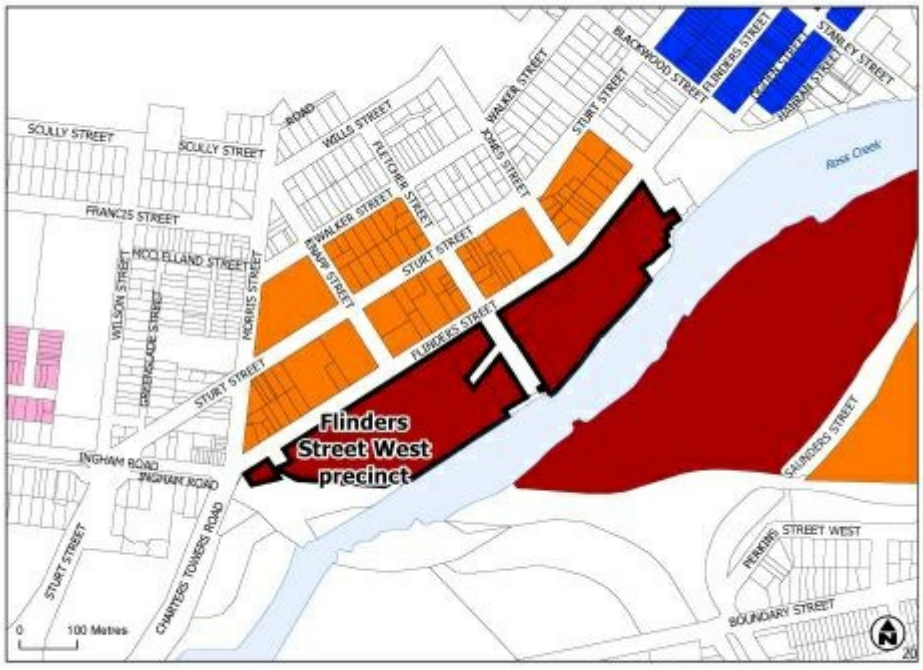
(e) new pedestrian connections are established within the precinct to:

(i) provide a linear connection along the edge of Ross Creek;

(ii) provide new connections to the Railway Estate precinct;

(iii) enhance the connectivity provided by the east west heritage rail path; and

(iv) provide connectivity within the precinct.



Click here to view high resolution PDF.

Figure 6.42 – Flinders Street West precinct

Railway Estate precinct:

(a) development provides a high quality residential environment which capitalises on the precinct's proximity to the principal centre (CBD) and Ross Creek;

(b) development is predominantly residential in nature set in an attractive urban setting;

(c) a new neighbourhood centre is envisaged within this precinct to service the needs of residents;

(d) a high level of integration with existing and future development in surrounding areas is achieved, having regard to movement networks, open space and recreational facilities and community infrastructure;

(e) movement networks are established to promote walking and cycling and public transport; and

(f) development which is, or has the potential to become, incompatible with future urban development of the area does not occur.

Figure 6.43 – Railway Estate precinct

6.2.3.3 Assessment benchmarks

Table 6.2.3.3(a)-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
Home based business	
PO1 The use does not adversely impact on the amenity of the surrounding residential land uses and local character.	**AO1.1** The home based business: (a) is carried out in an existing building or structure; (b) does not use more than 60m² of the gross floor area of the building or structure; (c) involves at least one or more residents of the dwelling house; (d) involves not more than one non-resident employee; (e) where bed and breakfast accommodation does not exceed three bedrooms; (f) does not generate more than 1 heavy vehicle trip per week; **Editor's note—**A heavy vehicle is a vehicle with more than 4.5 tonnes gross vehicle mass. (g) does not generate more than 14 vehicle trips per day by other vehicles, where one trip includes arriving and departing the site. These trips are additional to normal domestic trips associated with the dwelling; (h) contains visitor parking within the site; (i) does not involve hiring out of materials, goods, appliances or vehicles; and (j) does not involve the repair or maintenance of vehicles, other than minor maintenance of vehicles used in conjunction of the home business on the site. **Editor's note—**Home based business operators should also refer to signage requirements under Table 5.8.2 -Operational work being placing an advertising device on a premises and Section 9.3.1-Advertising devices code.
	AO1.2 Functional aspects of the use such as service areas, material storage or use activities are not visible from the street.
	AO1.3 Other than where a bed and breakfast or home based child care, the business use does not operate outside the hours of 8am to 5pm Monday to Friday, 8am to 2pm Saturday and does not operate on Sunday.
	AO1.4 Noise levels do not exceed acoustic quality objectives under the Environmental Protection (Noise) Policy 2008.

Table 6.2.3.3(a)-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
Sales office	
PO2 The use does not adversely impact on the amenity of the surrounding residential land uses and local character.	**AO2** Development of the sales office is in place for no more than two years.

Table 6.2.3.3(a)-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Amenity	
PO3 Development minimises impacts on surrounding land and provides for an appropriate level of amenity within the site, having regard to: (a) noise; (b) hours of operation; (c) traffic; (d) visual impact; (e) odour and emissions; (f) lighting; (g) access to sunlight; (h) privacy; and (i) outlook.	No acceptable outcome is nominated.
PO4 Landscaping is provided to enhance the appearance of the development, screen unsightly components, create an attractive on-site environment and provide shading.	No acceptable outcome is nominated.

Table 6.2.3.3(a)-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Crime prevention through environmental design	
PO5 Development facilitates the security of people and property having regard to: (a) opportunities for casual surveillance and sight lines; (b) exterior building design that promotes safety; (c) adequate lighting; (d) appropriate signage and wayfinding; (e) minimisation of entrapment locations; and (f) building entrances, loading and storage areas that are well lit and lockable after hours. **Editor's note—**Applicants should have regard to Crime Prevention through Environmental Design Guidelines for Queensland.	No acceptable outcome is nominated.
PO6 Development promotes the safety of residents and visitors, particularly through casual surveillance of the street and public spaces.	**AO6.1** Buildings are designed to have balconies, windows and building openings overlooking streets and other areas which are accessible to the public. Figure 6.44 — Design for casual surveillance illustrates
	AO6.2 Fences or walls along a street frontage have a maximum height of 1.2m where solid, or 1.8m where that portion of the fence above 1.2m high is at least 50% transparent.

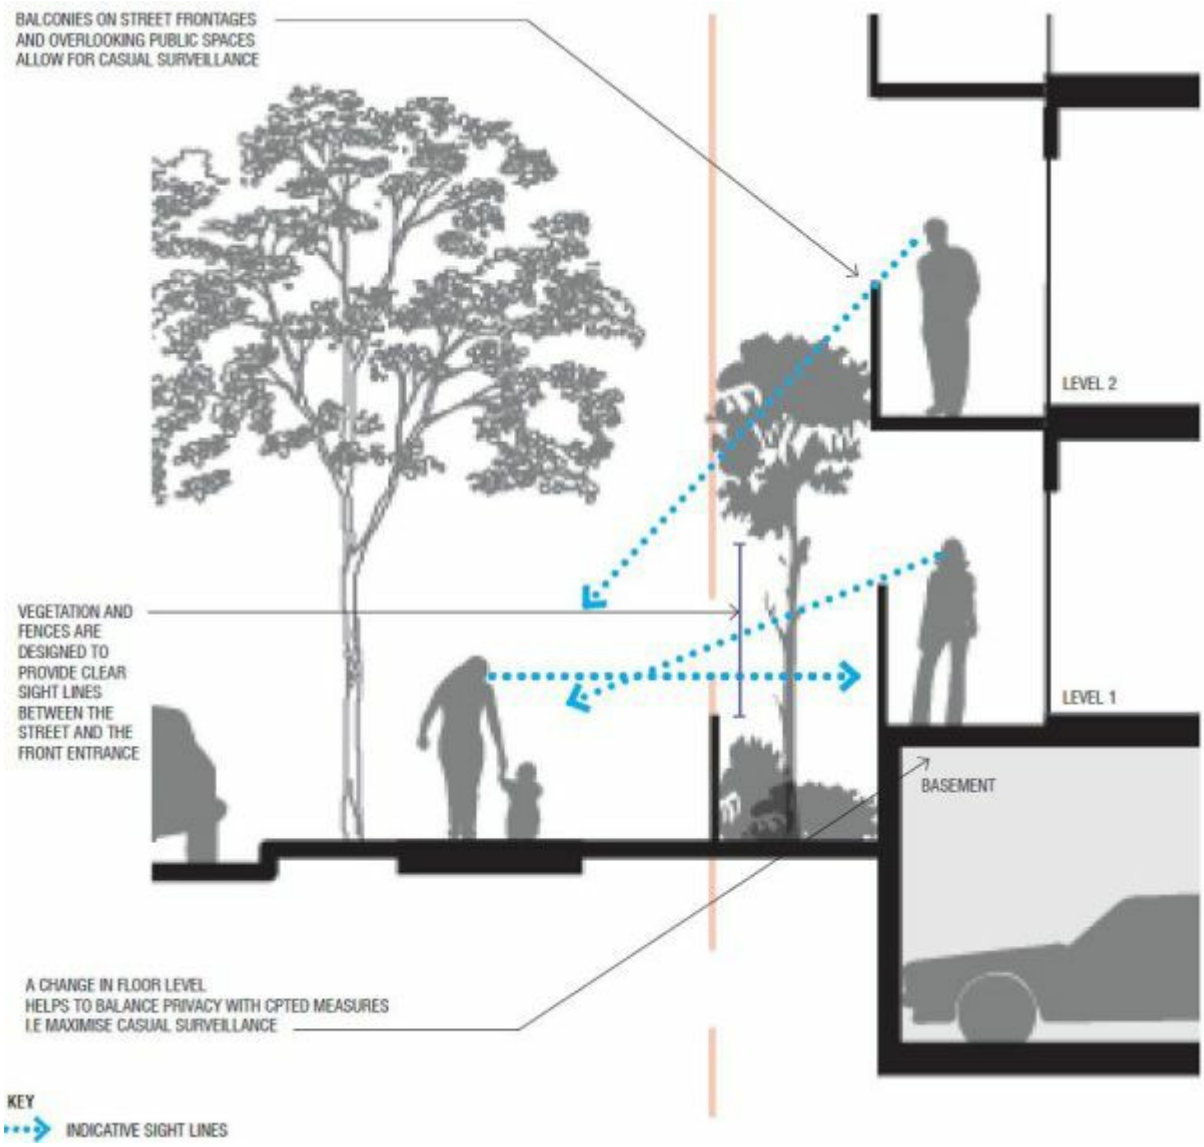

Figure 6.44 – Design for casual surveillance

Table 6.2.3.3(a)-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Built form	
PO7 Design elements contribute to an interesting and attractive streetscape and building through: (a) the provision of projections and recesses in the façade which reflect changes in internal functions of buildings including circulation; (b) variations in material and building form; (c) modulation in the façade, horizontally or vertically; (d) articulation of building entrances and openings; (e) corner treatments to address both street frontages for a premises on a corner; (f) at lower levels creates human/pedestrian scale experiences; (g) for upper levels, frames streets and public spaces; (h) elements which assist in wayfinding and legibility; and (i) elements which relates to the context including surrounding buildings, parks, streets and open spaces. Figure 6.45 – Building design elements provides indicative guidance.	No acceptable outcome is nominated.

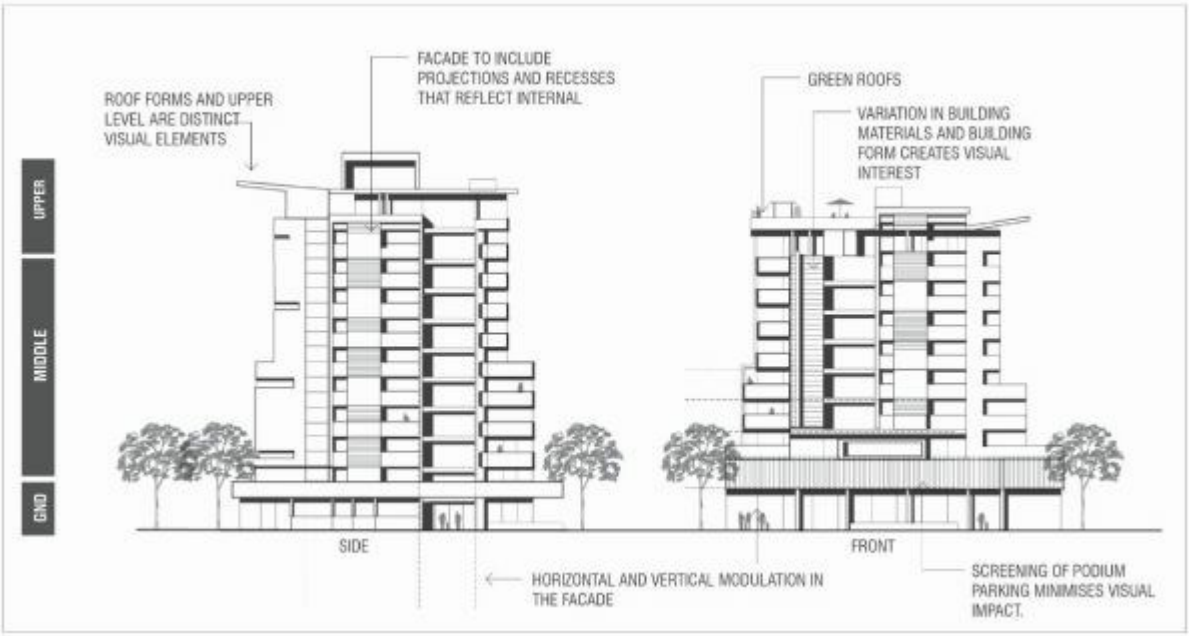

Figure 6.45 – Building design elements

PO8 Air conditioning units are insulated so that adjoining properties are not affected by the noise source, and are not significantly visible from the street.	No acceptable outcome is nominated.
PO9 The overall shape, configuration and placement of buildings create usable outdoor spaces.	No acceptable outcome is nominated.
PO10 Building height and scale, maintains the primacy of the principal centre (CBD) and is consistent with the character desired for the precinct.	**AO10** Building height does not exceed 12 storeys.
PO11 The size of the development site allows for primary orientation of buildings to the street, and the provision of building setbacks, on-site services and circulation and open space at ground storey.	**AO11** Where accommodating a building of 5 storeys or more, development sites have a minimum size of 1,000m^2.
PO12 Building design and setbacks: (a) create an attractive, consistent and cohesive scale along the streetscape; (b) maintain appropriate levels of light and solar penetration, air circulation, privacy and amenity for existing and future buildings; (c) do not prejudice the development or amenity of adjoining land; (d) retain the openness of street vistas, including to the sky, along major elements of the city grid; and (e) transition to lower scale heritage places and precincts.	**AO12** The design meets the setback requirements outlined by Table 6.2.3.3(b) - Building setbacks High density residential zone unless varied by a relevant precinct.
PO13 Built to boundary walls do not impact on the amenity or privacy of adjoining premises. **Editor's note—**Built to boundary wall heights and lengths may be increased where abutting an existing or proposed built to boundary wall on an adjoining property.	**AO13** Built to boundary walls: (a) are for non-habitable rooms or spaces only; (b) are not located within 1.5m of a habitable room on an adjoining site; (c) have a maximum height of 3m; and (d) have a maximum length of 15m.
PO14 Buildings are designed to achieve good solar access by: (a) minimising the extent of shadows on usable private open space or public spaces; and (b) maintaining access to sunlight for habitable rooms within adjoining premises.	No acceptable outcome is nominated.
PO15 Building caps and rooftops contribute to the: (a) architectural design of the building; and (b) the creation of an attractive roofscape.	No acceptable outcome is nominated.

PO16 Roof top levels incorporate open space or recreational spaces for the users of the building or are significantly dedicated to 'green roof' vegetation.	No acceptable outcome is nominated.
PO17 Development provides private open space that is: (a) well-proportioned, appealing, functional and easily accessible, and promotes outdoor living as an extension of the dwelling; (b) provides a high level of privacy for residents and neighbours; and (c) has sufficient size and shape to meet the needs of a diversity of potential residents.	**AO17.1** Balconies are provided with a minimum area of 9m² for 1 bedroom unit or 16m² for 2 or more bedroom unit, with a minimum dimension 4m and clear of any air conditioning unit or drying space.
	AO17.2 Where clothes drying areas are provided on private balconies they are screened from public view.
	AO17.3 Private open space is located or screened so it does not directly overlook main living areas or private open space of adjoining dwellings.
PO18 Sufficient communal open space is provided to create flexible spaces suitable for a range of activities.	**AO18** No acceptable outcome is nominated.
PO19 Communal open space provides facilities including seating, shade, flexible spaces suitable for a range of activities. Treatments such as green roofs, green walls or community gardens contribute to the attractiveness of these spaces.	No acceptable outcome is nominated.
PO20 Where incorporating ground floor non-residential use, the design of buildings provides for pedestrian-friendly and visually interesting frontages.	**AO20.1** Ground floor tenancies where including a non-residential use are articulated through: (a) variation in use of materials (glass, timber, steel, masonry); and (b) a change in plane of a minimum of 0.5m for any length of the facade exceeding 10m.
	AO20.2 Ground floor tenancies are designed to be adaptable and flexible in configuration allowing for creation of indoor and outdoor spaces through use of large openings.
PO21 Where incorporating ground floor non-residential use, weather protection is provided to usable outdoor spaces at the street frontage.	**AO21** Awnings are provided over outdoor spaces.

Table 6.2.3.3(a)-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Parking and servicing	
PO22 Parking facilities are located to be concealed from public view to ensure an attractive streetscape. Figure 6.46 — Concealment of parking structures.	No acceptable outcome is nominated.

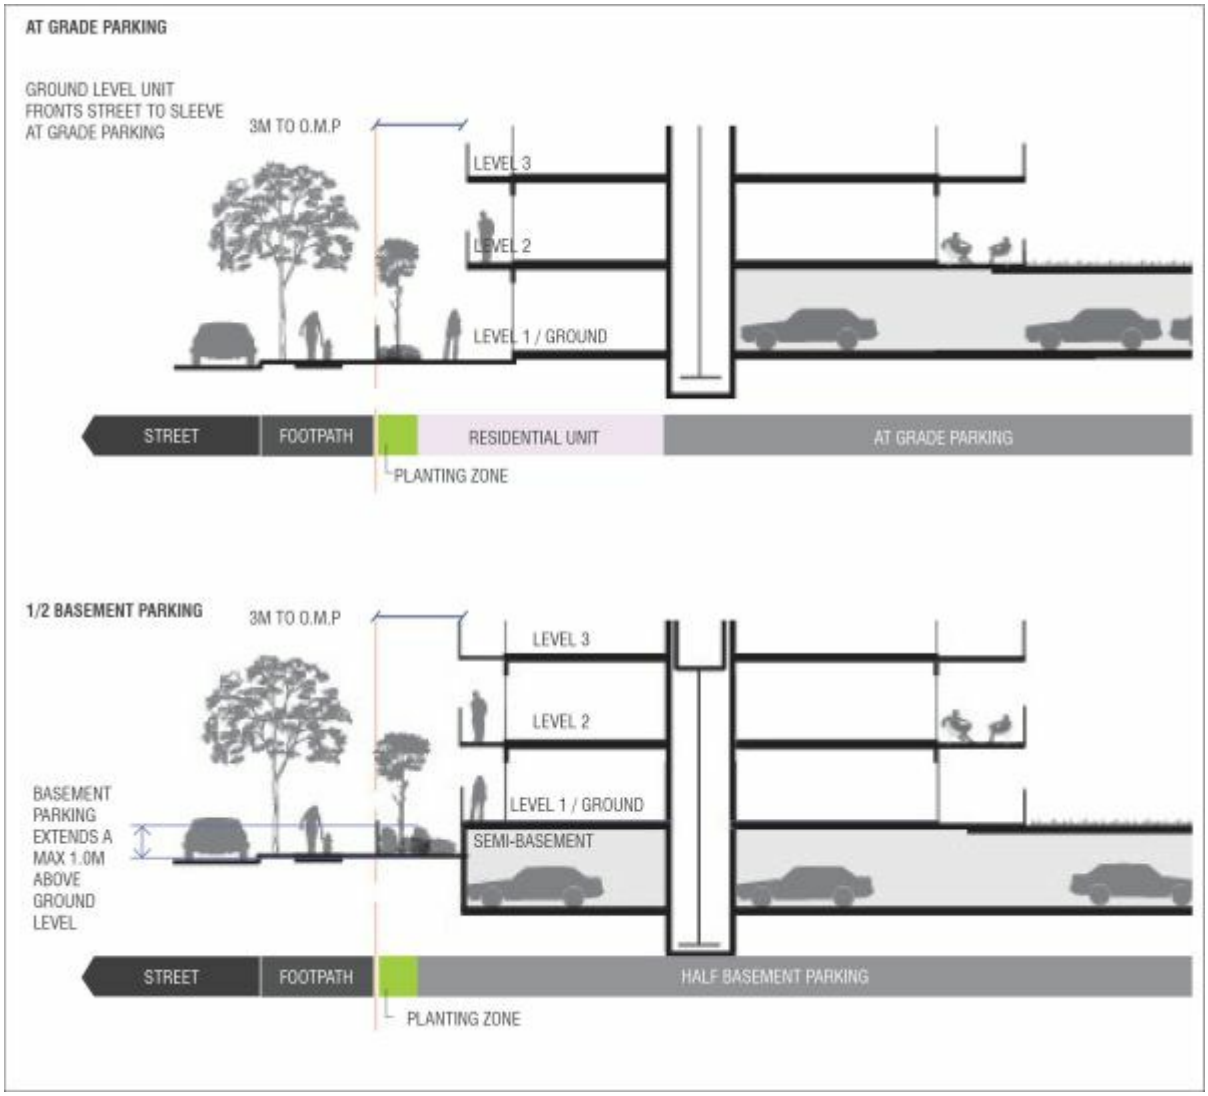

Figure 6.46 – Concealment of parking structures

PO23 Waste disposal and servicing areas are screened from public view and do not have adverse amenity impacts on adjoining properties.	No acceptable outcome is nominated.

Table 6.2.3.3(a)-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development — where a non-residential use	
PO24 Non-residential uses establish only where: (a) compatible with local character and amenity; (b) limited in scale and supporting the day-to-day needs of the local community or as specifically intended for a particular precinct; and (c) not impacting on the role and function of the city's network of centres or more appropriately located in another zone.	No acceptable outcome is nominated. **Editor's note—**Applicants should have regard to Economic impact assessment planning scheme policy SC6.5 for guidance on how to demonstrate compliance with this performance outcome.

Table 6.2.3.3(a)-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Palmer Street precinct	
PO25 Building height transitions down to create a low-rise interface with the Ross Creek Marina.	**AO25** Building height is in accordance with Figure 6.47 — Palmer Street precinct concept plan.
PO26 The design of buildings contributes to the creation of an interesting and attractive streetscape along Palmer Street by: (a) creating an entry aesthetic which defines the street edge with a high density built form; and (b) incorporating a streetscape and planting theme that creates a boulevard treatment of the street.	No acceptable outcome is nominated.
PO27 Development facilitates or supports primarily high density short-term or permanent accommodation uses.	No acceptable outcome is nominated.
PO28 An open space and pedestrian network is provided in accordance with Figure 6.47 — Palmer Street precinct concept plan which: (a) opens up opportunities for residents and visitors to view Ross Creek; and (b) creates quality walkable pathways along the creek edge in an attractive landscaped environment.	No acceptable outcome is nominated.
PO29 A new public space is provided along the Ross Creek frontage in accordance with Figure 6.47 — Palmer Street precinct concept plan which: (a) reduces the impact of traffic or service areas on pedestrians; (b) furnishes the space to provide a range of opportunities for sitting and social interaction; (c) connects the open space in the west with the yacht club in the east; and (d) provides an attractive environment for buildings to front.	No acceptable outcome is nominated.

PO30 On frontages shown on Figure 6.47 — Palmer Street precinct concept plan as having a built form edge, buildings contribute to the creation of a strong and pedestrian oriented edge to the street, by: (a) being built to the street frontage at the ground storey; (b) creating a generally continuous building alignment; (c) providing awnings over the footpaths; and (d) having facades which contain windows, doors, materials and features which generate visual interest at the street level.	No acceptable outcome is nominated.
PO31 Dining, entertainment and tourist oriented uses occur at ground storey within development identified on the Figure 6.47 — Palmer Street precinct concept plan as active frontage.	No acceptable outcome is nominated.

Figure 6.47 – Palmer Street precinct concept plan

PO32 Buildings contribute to the creation of an attractive and activated edge to Ross Creek by having facades which contain windows, doors, materials and features which generate visual interest.	No acceptable outcome is nominated.

Table 6.2.3.3(a)-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Flinders Street West precinct	
PO33 Building height transitions down from the principal centre (CBD) interface to lower rise buildings around the historic railyards and surrounding neighbourhoods.	**AO33** Building height is in accordance with Figure 6.48 — Flinders Street West precinct concept plan.
PO34 Development primarily facilitates or supports high density accommodation uses.	No acceptable outcome is nominated.
PO35 Non-residential uses occur at ground storey and may include small-scale offices, retail, community uses and dining where on an active frontage identified on the Figure 6.48 — Flinders Street West precinct concept plan.	No acceptable outcome is nominated.
PO36 Heritage buildings within the historic railyards are refurbished and reused for educational, cultural and community uses.	No acceptable outcome is nominated.
PO37 The ground floor of all non-heritage buildings within the historic railyards are used for educational, cultural and community uses or complementary activities.	No acceptable outcome is nominated.
PO38 An open space and pedestrian network is provided in accordance with Figure 6.48 — Flinders Street West precinct concept plan. Central access within the precinct is designed to be a pedestrian focused shared zone, ensuring that while vehicle access is available pedestrian accessibility is prioritised.	No acceptable outcome is nominated.
PO39 New development or redevelopment within the historic railyards protects heritage values and provides high quality public realm including: (a) informal and formal performance spaces; and (b) spaces for public events or gatherings.	No acceptable outcome is nominated.

PO40 New public spaces are provided in accordance with Figure 6.48 — Flinders Street West precinct concept plan which: (a) create quality walkable connections to public walkways on the river; (b) reduce the impact of traffic or service areas on pedestrians; (c) furnish the space to provide a range of opportunities for sitting and social interaction; and (d) provide an attractive environment for adjoining buildings to front.	No acceptable outcome is nominated.
PO41 On frontages shown on Figure 6.48 — Flinders Street West precinct concept plan as having a built frontage, buildings contribute to the creation of a strong and pedestrian oriented edge to Ross Creek and the street, by: (a) creating a generally continuous building alignment; (b) providing awnings over the footpaths; and (c) having facades which contain windows, doors, materials and features which generate visual interest at the street level.	No acceptable outcome is nominated.
PO42 Where shown as “built frontage” on Figure 6.48 – Flinders Street West precinct concept plan buildings contribute to the creation of an attractive and activated edge to Ross Creek and road frontage by having facades which contain windows, doors, materials and features which generate visual interest.	No acceptable outcome is nominated.

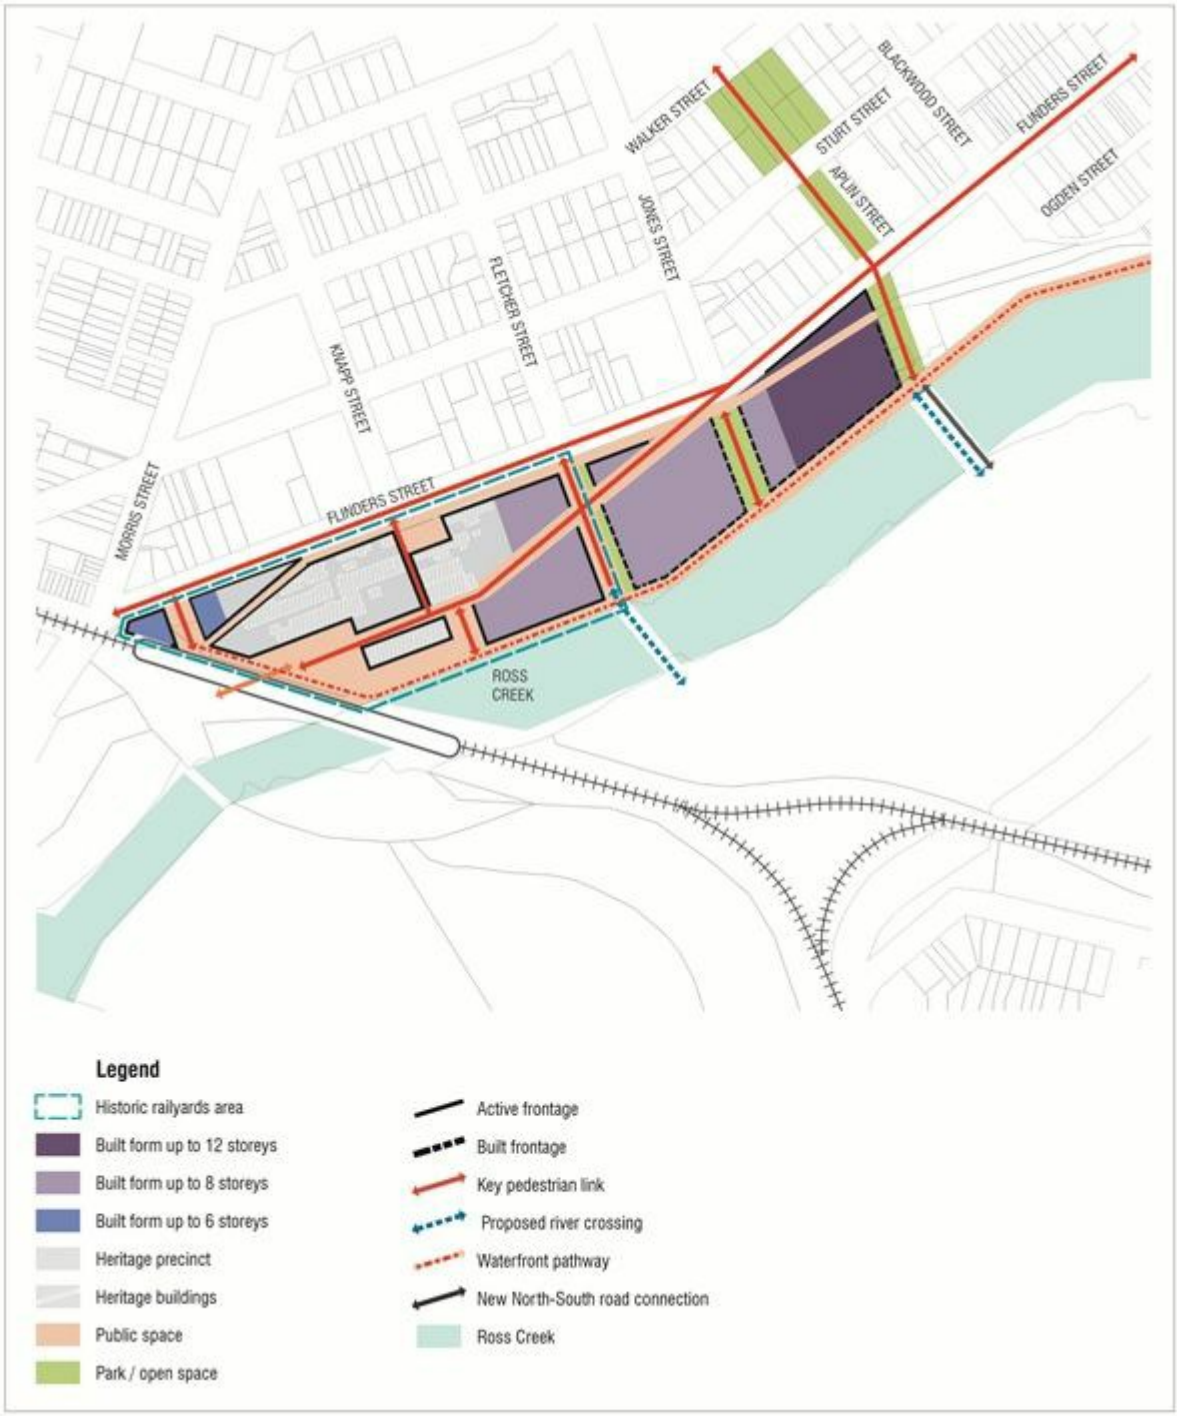

Figure 6.48 – Flinders Street West precinct concept plan

Table 6.2.3.3(a)-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Railway Estate precinct	
PO43 Development primarily facilitates or supports high density accommodation uses.	No acceptable outcome is nominated.
PO44 A new neighbourhood level centre may establish within the precinct in accordance with Figure 6.49 — Railway Estate precinct concept plan. The new centre is designed to create: (a) a coherent and integrated built form, public realm and circulation networks; (b) central, accessible and attractive public spaces for people to congregate and interact; (c) continuity of streetscape and landscape characteristics; (d) pedestrian friendly and visually interesting frontages to streets and public spaces; and (e) active primary frontages with car parking areas sleeved by buildings.	No acceptable outcome is nominated.
PO45 Development does not compromise or compete with the principal centre (CBD) or successful functioning of other centres in the network.	No acceptable outcome is nominated.
PO46 High level pedestrian and cyclist permeability is achieved, and primary elements of an open space, street and pedestrian network are provided in accordance with Figure 6.49 — Railway Estate precinct concept plan.	No acceptable outcome is nominated.

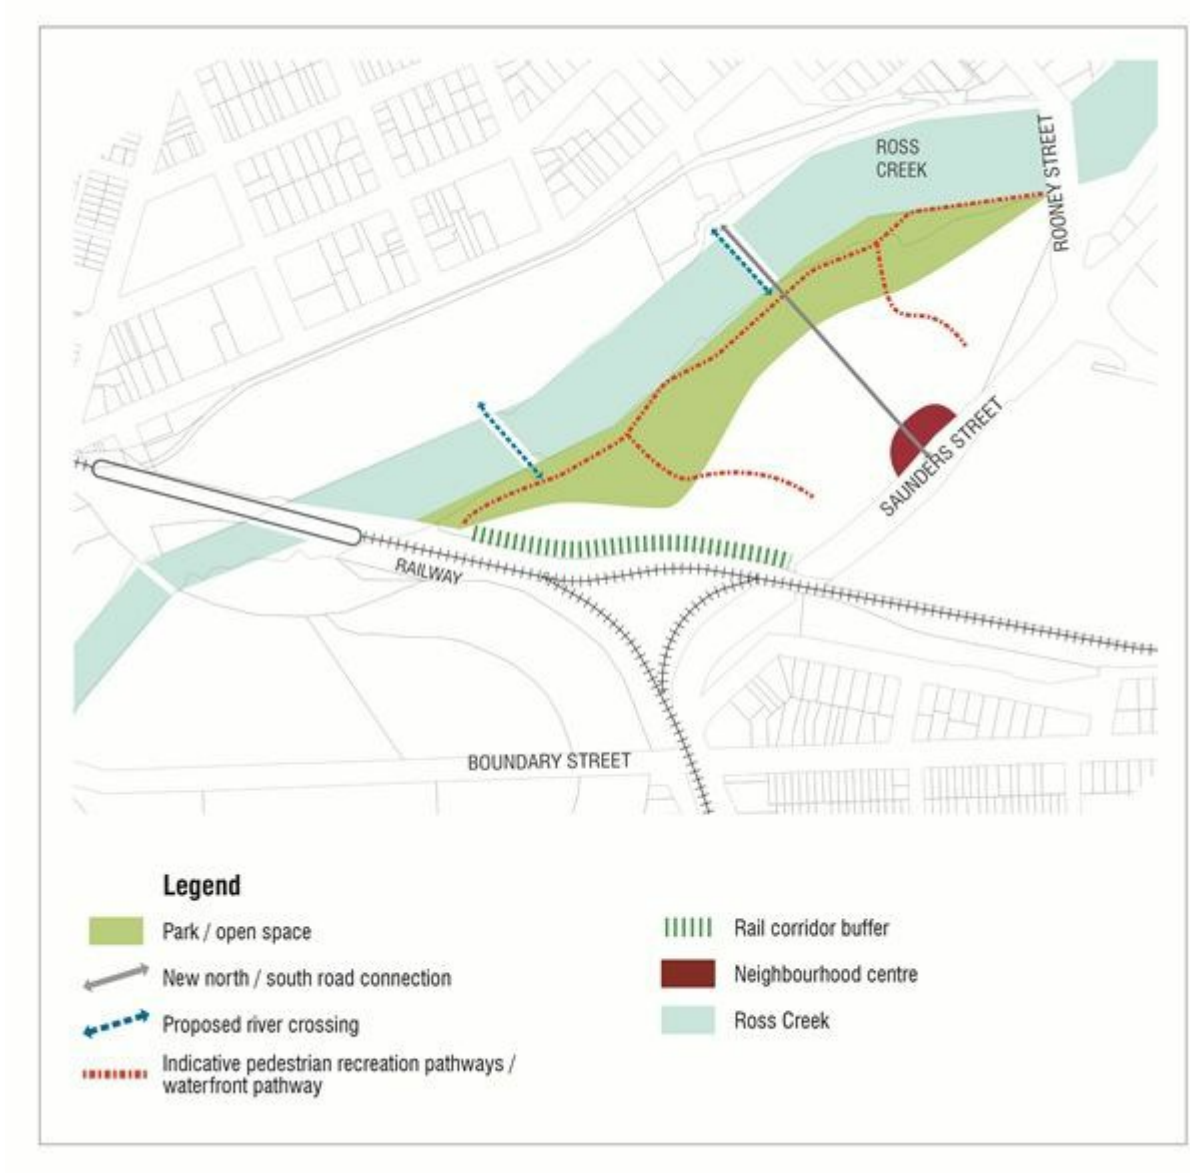

Figure 6.49 – Railway Estate precinct concept plan

PO47 New development provides high quality public realm including: (a) informal and formal performance spaces; (b) spaces for public events or gatherings; and (c) the creation of an attractive and activated edge to Ross Creek.	No acceptable outcome is nominated.
PO48 Development is attractively buffered from the railway, to achieve an acceptable level of residential amenity.	No acceptable outcome is nominated.

6.2.4 Rural residential zone code

6.2.4.1 Application

This code applies to development where the code is identified as applicable in the categories of development and assessment.

When using this code, reference should be made to section 5.3.2 and where applicable, section 5.3.3 located in Part 5.

6.2.4.2 Purpose

(1) The purpose of the Rural residential zone code is to provide for residential development on large lots where the intensity of residential development is dispersed.

(2) The particular purpose of the code is to:

- (a) provide for semi-rural lifestyles in which the primary use is dwelling houses on large lots which may have limited access to infrastructure and services;
- (b) provide for some subordinate, and generally domestic scale, rural activities and home based business to occur;
- (c) ensure development maintains the character and amenity of the rural residential locality; and
- (d) ensure any intensification of impacts on nearby ecological values or natural resources is avoided.

(3) The purpose of the zone will be achieved through the following overall outcomes:

- (a) residential development occurs in the form of dwelling houses, to the general exclusion of other more intensive residential uses;
- (b) reconfiguration creates large lots which support a semi-rural lifestyle and avoid intensification of impacts on on-site and on nearby ecological values, natural resources or rural activities;
- (c) lot sizes are sufficient to ensure the protection of environmental values and water quality objectives;
- (d) further expansion of existing rural residential areas does not occur beyond those areas zoned for this purpose;
- (e) home businesses occur to an extent that does not unduly diminish the semi-rural residential amenity, having regard to noise, odour, dust, traffic and other impacts;
- (f) roadside stalls and other sales of produce produced on the site are of a limited scale that is consistent with the semi-rural lifestyle;
- (g) non-residential uses occur within the zone where they primarily support the day-to-day needs of the immediate residential community and do not unreasonably detract from the residential amenity of the area;
- (h) development is buffered from nearby rural land such that the productive use of the rural land is not constrained;
- (i) residential development is protected from the impacts of nearby industrial activities, transport corridors and infrastructure installations and major facilities such as Department of Defence landholdings;
- (j) the natural bushland setting and village character of Balgal Beach and the Magnetic Island townships are maintained. Tourism accommodation in these communities is of a house compatible scale; and
- (k) development does not diminish water quality and does not intensify impacts on other environmental values including remaining areas of ecological significance within the zone.

6.2.4.3 Assessment benchmarks

Table 6.2.4.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
Home based business	
PO1 The use does not adversely impact on the amenity of the surrounding residential land uses and local character.	**AO1.1** The home based business: (a) is carried out in an existing building or structure (excluding truck parking); (b) does not use more than 60m² of the gross floor area of the building or structure; (c) involves at least one or more residents of the dwelling house; (d) involves not more than two non-resident employees; (e) where bed and breakfast or farm stay accommodation does not exceed three bedrooms; (f) does not generate more than 1 heavy vehicle trip per week; **Editor's note—**A heavy vehicle is a vehicle with more than 4.5 tonnes gross vehicle mass. (g) does not generate more than 14 vehicle trips per day by other vehicles, where one trip includes arriving and departing the site. These trips are additional to normal domestic trips associated with the dwelling; (h) contains visitor parking within the site; (i) does not involve hiring out of materials, goods, appliances or vehicles; and (j) does not involve the repair or maintenance of vehicles, other than minor maintenance of vehicles used in conjunction of the home business on the site. **Editor's note—**Home based business operators should also refer to signage requirements under Table 5.8.2 - Operational work being placing an advertising device on a premises and Section 9.3.1-Advertising devices code.
	AO1.2 Functional aspects of the use such as service areas, material storage or use activities are not visible from the street.
	AO1.3 Other than where a bed and breakfast, farm stay or home based childcare, the business use does not operate outside the hours of 8am to 5pm Monday to Friday, 8am to 2pm Saturday and does not operate on Sunday.
	AO1.4 Noise levels do not exceed acoustic quality objectives under the Environmental Protection (Noise) Policy 2008.

PO2 Heavy vehicle parking: (a) has a direct nexus with a home based business or rural use carried out on the site; and (b) does not adversely affect the amenity of neighbouring properties. **Editor's note—**A heavy vehicle is a vehicle with more than 4.5 tonnes gross vehicle mass.	**AO2.1** Not more than one heavy vehicle is parked on the site. **AO2.2** While on-site, vehicles: (a) are not left idling for more than 5 minutes at any one time; and (b) do not have a refrigeration unit running.

Table 6.2.4.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
Roadside stall	
PO3 Roadside stalls are small in scale and do not impact negatively upon the amenity, character or safety of the locality and the safety and efficiency of roads.	**AO3.1** Any structure used for the sale of goods or produce is limited to 20m^2 gross floor area.
	AO3.2 Access to the structure is via the primary property access point.
	AO3.3 Produce or goods sold is grown, made or produced on the land on which the road side stall is erected.

Table 6.2.4.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
Sales office	
PO4 The use does not adversely impact on the amenity of the surrounding land uses and local character.	**AO4** Development of the sales office is in place for no more than two years.

Table 6.2.4.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
Animal keeping and cropping	
PO5 Animal keeping and cropping do not adversely impact on the amenity of the surrounding residential land uses and local character.	**AO5.1** Non-residential buildings, animal enclosures, storage facilities and waste disposal areas are set back 50m from any dwelling on an adjoining or nearby site.
	AO5.2 The height of non-residential buildings or facilities does not exceed 2 storeys or 8.5m above ground level, whichever is the lesser.
	AO5.3 Cropping does not involve chemical spraying unless a 40m wide vegetated buffer is provided on the site between the crops which are being sprayed and adjoining land.

Table 6.2.4.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development - where a non-residential or tourist accommodation use	
PO6 Non-residential uses established only where: (a) compatible with local character and amenity; (b) limited in scale and supporting the day-to-day needs of the local community; and (c) not more appropriately located in another zone.	No acceptable outcome is nominated. **Editor's note—**Applicants should have regard to Economic impact assessment planning scheme policy no. SC6.5 for guidance on how to demonstrate compliance with this performance outcome.
PO7 Tourism accommodation within Balgal Beach and the Magnetic Island townships is compatible with the village character of these communities.	No acceptable outcome is nominated.

Table 6.2.4.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Built form	
PO8 Development is consistent with the height and scale of surrounding buildings and includes features that contribute to an attractive streetscape.	No acceptable outcome is nominated.

Table 6.2.4.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Amenity	
PO9 Development minimises impacts on surrounding land and provides for an appropriate level of amenity within the site, having regard to: (a) noise; (b) hours of operation; (c) traffic; (d) visual impact; (e) odour and emissions; (f) lighting; (g) privacy; and (h) outlook.	No acceptable outcome is nominated.
PO10 Landscaping is provided to contribute positively to the city image, particularly along major roads.	No acceptable outcome is nominated.
PO11 Development does not compromise the ongoing productive use of nearby rural land.	No acceptable outcome is nominated.

PO12 Development for the purposes of a sensitive use within 500m of land included in the High impact industry zone or Special purpose zone, or within 250m of land in the Medium impact industry zone: (a) achieves indoor noise levels consistent with the objectives set out in the Environmental Protection (Noise) Policy 2008; (b) achieves air quality levels consistent with the objectives set out in the Environmental Protection (Air) Policy 2008 and the relevant national standard; and (c) does not experience offensive odours.	No acceptable outcome is nominated.

Table 6.2.4.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Protection of natural values	
PO13 The site layout, size and design responds sensitively to on-site and surrounding topography, drainage patterns and ecological values by: (a) minimising earthworks; (b) maximising retention of natural drainage patterns; (c) ensuring existing drainage capacity is not reduced; (d) maximising the retention of existing vegetation; (e) providing buffers to protect the ecological functions of waterways; and (f) protecting environmental values and water quality objectives of receiving waters. **Editor's note—**The environmental values and water quality objectives are established under the Environmental Protection Policy (2009). For Townsville, they are specified in the Ross River Basin Environmental Values and Water Quality Objectives 2012 and Black River Basin Environmental Values and Water Quality Objectives (2012).	No acceptable outcome is nominated.

6.2.5 Character residential zone code

6.2.5.1 Application

This code applies to development where the code is identified as applicable in the categories of development and assessment.

When using this code, reference should be made to section 5.3.2 and where applicable, section 5.3.3 located in Part 5.

6.2.5.2 Purpose

(1) The purpose of the Character residential zone code is to provide for a particular character of a predominantly residential area.

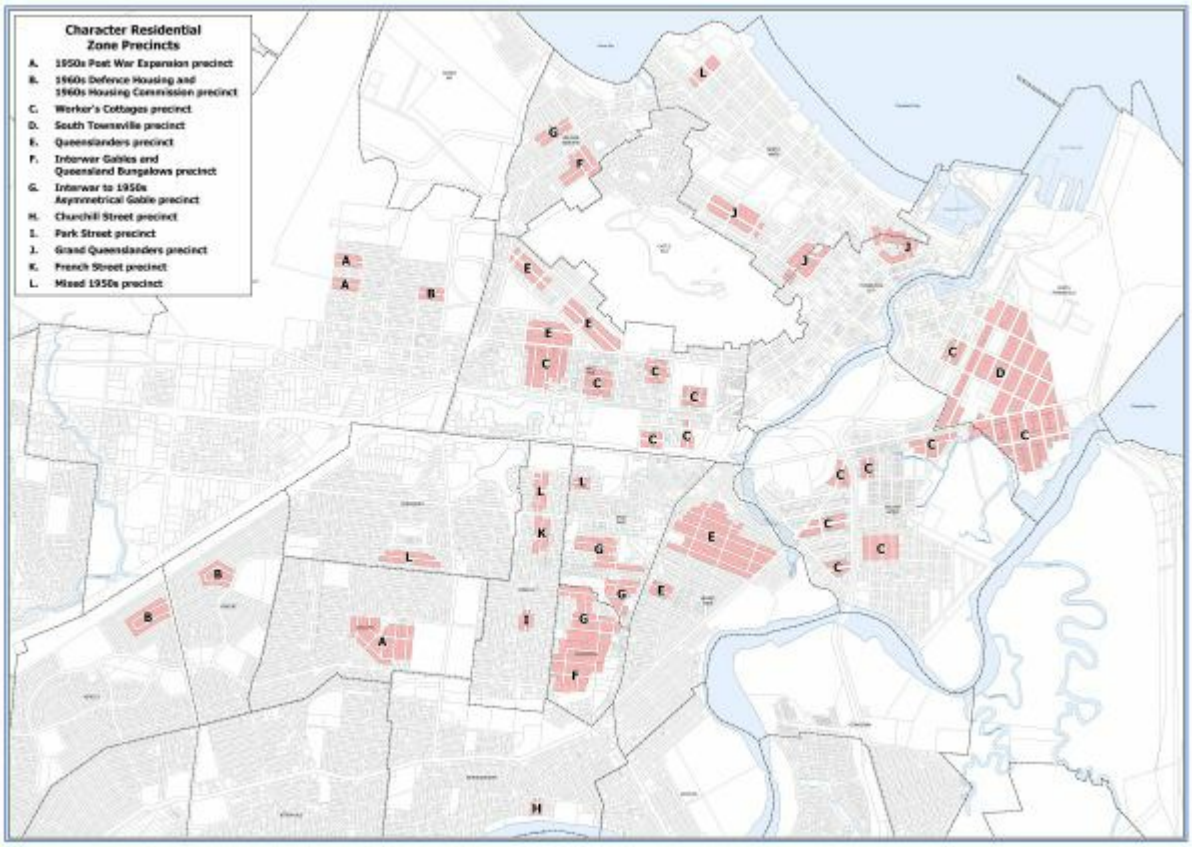
(2) The particular purpose of the code is to:

- (a) protect traditional character and streetscape values of the Character residential zone code by:
  - (i) preventing relocation off the site and demolition of contributing character buildings; and
  - (ii) ensuring the design of any new development is compatible with the places of character value within the zone.
- (b) primarily accommodate dwelling houses and ensure new development is sympathetic to the established character of the street or locality;
- (c) maintain a high level of residential amenity;
- (d) achieve accessible, well serviced and well-designed communities; and
- (e) maintain the low-rise and lower density character of Townsville's suburbs.

(3) The purpose of the zone will be achieved through the following overall outcomes:

- (a) contributing character buildings are protected and retained so they continue to contribute to the traditional character and amenity of the street and neighbourhood;
- (b) new development is limited to that which does not diminish the vernacular architectural character of houses or the traditional streetscape character;
- (c) new development incorporates design elements that are compatible with the established character;
- (d) reconfiguration of lots does not diminish the traditional streetscape character;
- (e) carports and garages do not dominate the frontage and are subservient to contributing character buildings;
- (f) dwelling houses are predominately low-rise, but may be low set or high set;
- (g) development maintains a high level of residential amenity on the site and in the precinct;
- (h) residential development is protected from the impacts of nearby industrial activities, transport corridors and infrastructure installations and major facilities such as the Port of Townsville, Townsville Airport and Department of Defence landholdings; and
- (i) non-residential uses only occur within the zone where they primarily support the day-to-day needs of the immediate residential community, do not unreasonably detract from the residential amenity, and are not better located in nearby centres.

Editor's note—The term "low set" refers to a building elevated 900mm or less. "High set" refers to buildings generally elevated 2,000mm above ground level.



Click here to view PDF high resolution map.

Figure 6.50 – Character residential zone precincts

(4) The purpose of the zone will also be achieved through the following additional overall outcomes for particular precincts:

1950s Post War Expansion precinct:

(a) this precinct consists mostly of compact, low set dwelling houses typical of the Queensland Housing Commission in the 1950s;

(b) buildings within this precinct have a low-set appearance and scale consistent with the predominant character of the precinct;

(c) built form maintains the existing setting and rhythm of the streetscape;

(d) the roof profile and overhang of buildings is consistent with that of contributing character buildings; and

(e) window scale and proportions of buildings are sympathetic to the predominant character of the precinct.

1960s Defence Housing and 1960s Housing Commission precinct:

(a) this precinct consists mostly of intact Defence housing and Queensland Housing Commission design homes of the 1960s;

(b) buildings within this precinct are elevated, generally high set, and light weight, ventilated design features, and maintains regularity of form and street presentation;

(c) the roof profile and overhang of buildings is consistent with that of contributing character buildings;

(d) window scale and proportions of buildings are sympathetic to the predominant character of the precinct; and

(e) enclosing the ground floor of a contributing character building does not have an adverse impact on the character of the building.

Worker's Cottages precinct:

(a) this precinct consists of low and high set Queensland worker's cottages and bungalows, constructed of lightweight materials;

(b) the consistent character of worker's cottages and interwar houses constructed of lightweight materials is maintained;

(c) buildings in this precinct have open facades which address the street and are consistent with the predominant front façade profile that contributes to the precinct's character;

(d) building floor level height in new development is consistent with adjoining contributing character buildings;

(e) enclosing the ground floor of a contributing character building does not have an adverse impact on the character of the building;

(f) the roof profile of buildings is consistent with that of contributing character buildings; and

(g) window scale and proportions of buildings are sympathetic to the predominant character of the precinct.

South Townsville precinct:

(a) this precinct contains predominantly low set Queensland worker's cottages and a large portion of non-residential facilities that are key attributes to the precinct's character;

(b) building floor level height in new development is consistent with adjoining contributing character buildings;

(c) enclosing the ground floor of a character building does not have an adverse impact on the character of the building;

(d) the roof profile of buildings is consistent with that of contributing character buildings;

(e) the front façade of buildings is consistent with the predominant front façade profiles of contributing character buildings and does not result in blank facades or facades with small openings;

(f) window scale and proportions of buildings are sympathetic to the predominant character of the precinct; and

(g) additions, alterations and adaptive reuse of existing non-residential contributing character buildings maintains the legibility of the historic use and is sympathetic to the prevailing residential character of the precinct.

Queenslanders precinct:

(a) this precinct consists of low and high set Queensland workers' cottages and bungalows;

(b) the consistent character of Queensland workers' cottages and interwar houses constructed of lightweight materials is maintained;

(c) building floor level height in new development is consistent with adjoining contributing character buildings;

(d) enclosing the ground floor of a contributing character building does not have an adverse impact on the character of the building;

(e) the roof profile of buildings is consistent with that of contributing character buildings;

(f) buildings have a verandah to the front façade which addresses the street and development does not result in blank facades or facades with small openings; and

(g) the subdivision pattern of the precinct is maintained.

Interwar Gables and Queensland Bungalows precinct:

(a) this precinct predominately consists of inter-war high-set dwelling houses and villa style residences with large workers' bungalows which have significant street presence;

(b) building floor level height in new development is consistent with adjoining contributing character buildings;

(c) enclosing the ground floor of a contributing character building does not have an adverse impact on the character of the building;

(d) the roof profile of buildings is consistent with that of contributing character buildings;

(e) the front facade of buildings is consistent with the predominant front facade profiles of contributing character buildings;

(f) window scale and proportions of buildings are sympathetic to the predominant character of the precinct;

(g) the front facade of buildings addresses and retains street presence; and

(h) the subdivision pattern of the precinct is maintained.

Interwar to 1950s Asymmetrical Gable precinct:

(a) the precinct consists of a mix of Queensland bungalows and inter-war designs;

(b) building floor level height in new development is consistent with adjoining contributing character buildings;

(c) enclosing the ground floor of a contributing character building does not have an adverse impact on the character of the building;

(d) the roof profile of buildings is consistent with that of contributing character buildings;

(e) window scale and proportions of buildings are sympathetic to the predominant character of the precinct;

(f) the front facade of buildings is consistent with the predominant front facade profiles of contributing character buildings; and

(g) the subdivision pattern of the precinct is maintained.

Churchill Street precinct:

(a) this precinct contains predominantly older detached, lightweight, post-war dwelling houses, displaying pre-war design elements;

(b) dwelling houses in this precinct are elevated and generally high set;

(c) building floor level height in new development is consistent with adjoining contributing character buildings;

(d) enclosing the ground floor of a contributing character building does not have an adverse impact on the character of the building;

(e) buildings within this precinct retain or enhance the setting and rhythm of the streetscape;

(f) the roof profile and overhang of buildings is consistent with that of contributing character buildings; and

(g) window scale and proportions of buildings are sympathetic to the predominant character of the precinct.

Park Street precinct:

(a) this precinct contains a mix of high and low set designs from the inter-war period;

(b) building floor level height in new development is consistent with adjoining contributing character buildings;

(c) enclosing the ground floor of a contributing character building does not have an adverse impact on the character of the building;

(d) buildings in this precinct retain or enhance the setting and rhythm of the streetscape;

(e) the roof profile and overhang of buildings is consistent with that of contributing character buildings;

(f) window scale and proportions of buildings are sympathetic to the predominant character of the precinct; and

(g) the front facade of buildings is consistent with the predominant front facade profiles of contributing character buildings.

Grand Queenslanders precinct:

(a) this precinct which contains Stanton Hill and Melton Hill, consists of large Queenslanders and other inter-war traditional timber buildings which have an iconic townscape appearance;

(b) building floor level height in new development is consistent with adjoining contributing character buildings;

(c) enclosing the ground floor of a contributing character building does not have an adverse impact on the character of the building;

(d) the roof profile of buildings is consistent with that of contributing character buildings; and

(e) the front facade of buildings is consistent with the predominant front facade profiles of contributing character buildings.

French Street precinct:

(a) this precinct consists of large inter-war gabled Queenslander dwelling houses;

(b) dwelling houses in this precinct are elevated and generally high set;

(c) building floor level height in new development is consistent with adjoining contributing character buildings;

(d) enclosing the ground floor of a contributing character building does not have an adverse impact on the character of the building;

(e) development maintains the uniformity and consistency of dwelling design style, setting and the rhythm of the streetscape;

(f) the roof profile and overhang of buildings is consistent with that of contributing character buildings;

(g) the front facade of buildings is consistent with the predominant front facade profiles of contributing character buildings; and

(h) window scale and proportions of buildings are sympathetic to the predominant character of the precinct.

Mixed 1950s precinct:

(a) the precinct contains older timber dwelling houses and gabled, inter-war and post-war designs;

(b) building floor level height in new development is consistent with adjoining contributing character buildings;

(c) enclosing the ground floor of a contributing character building does not have an adverse impact on the character of the building;

(d) the roof profile and overhang of buildings is consistent with that of contributing character buildings;

(e) window scale and proportions of buildings are sympathetic to the predominant character of the precinct;

and

(f) the front facade of buildings is consistent with the predominant front facade profiles of contributing character buildings.

6.2.5.3 Assessment benchmarks

Table 6.2.5.3—Accepted development subject to requirements and assessable development (Part)

Editor's note—This code contains alternative provisions for dwelling houses and dual occupancies to those set out in the Queensland Development Code (MP 1.1, MP 1.2 and MP1.3), for the purposes of section 33 of the *Building Act 1975*.

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
Home based business	
PO1 The use does not adversely impact on the amenity of the surrounding residential land uses and local character.	**AO1.1** The home based business: (a) is carried out in an existing building or structure; (b) does not use more than 60m² of the gross floor area of the building or structure; (c) involves at least one or more residents of the dwelling house; (d) involves not more than one non-resident employee; (e) where bed and breakfast accommodation does not exceed three bedrooms; (f) does not generate more than 1 heavy vehicle trip per week; **Editor's note—**A heavy vehicle is a vehicle with more than 4.5 tonnes gross vehicle mass. (g) does not generate more than 14 vehicle trips per day by other vehicles, where one trip includes arriving and departing the site. These trips are additional to normal domestic trips associated with the dwelling; (h) contains visitor parking within the site; (i) does not involve hiring out of materials, goods, appliances or vehicles; and (j) does not involve the repair or maintenance of vehicles, other than minor maintenance of vehicles used in conjunction of the home business on the site. **Editor's note—**Home based business operators should also refer to signage requirements under Table 5.8.2 - Operational work being placing an advertising device on a premises and Section 9.3.1-Advertising devices code.
	AO1.2 Functional aspects of the use such as service areas, material storage or use activities are not visible from the street.

	AO1.3 Other than where a bed and breakfast or home based childcare the business use does not operate outside the hours of 8am to 5pm Monday to Friday, 8am to 2pm Saturday and does not operate on Sunday.
	AO1.4 Noise levels do not exceed acoustic quality objectives under the Environmental Protection (Noise) Policy 2008.
PO2 Commercial vehicle parking: (a) has a direct nexus with a home based business carried out on the site; and (b) does not adversely affect the amenity of neighbouring properties.	**AO2.1** Not more than one commercial vehicle is parked on the site.
	AO2.2 While on-site, vehicles; (a) are not left idling for more than 5 minutes at any one time; and (b) do not have a refrigeration unit running.
	AO2.3 Any commercial vehicle does not exceed 4.5 tonnes gross vehicle mass and is housed behind the building line.

Table 6.2.5.3—Accepted development subject to requirements and assessable development (Part)

Editor's note—This code contains alternative provisions for dwelling houses and dual occupancies to those set out in the Queensland Development Code (MP 1.1, MP 1.2 and MP 1.3), for the purposes of section 33 of the *Building Act 1975*.

Performance outcomes	Acceptable outcomes
For assessable development	
Amenity	
PO3 Development minimises impacts on surrounding land and provides for an appropriate level of amenity within the site, having regard to: (a) noise; (b) hours of operation; (c) traffic; (d) visual impact; (e) odour and emissions; (f) lighting; (g) access to sunlight; (h) privacy; and (i) outlook.	No acceptable outcome is nominated.

PO4 Development for the purposes of a sensitive use within 500m of land included in the High impact industry zone or Special purpose zone, or within 250m of land in the Medium impact industry zone: (a) achieves indoor noise levels consistent with the objectives set out in the Environmental Protection (Noise) Policy 2008; (b) achieves air quality levels consistent with the objectives set out in the Environmental Protection (Air) Policy 2008 and the relevant national standard; and (c) does not experience offensive odours.	No acceptable outcome is nominated.

Table 6.2.5.3—Accepted development subject to requirements and assessable development (Part)

Editor's note–This code contains alternative provisions for dwelling houses and dual occupancies to those set out in the Queensland Development Code (MP 1.1, MP 1.2 and MP 1.3), for the purposes of section 33 of the *Building Act 1975*.

Performance outcomes	Acceptable outcomes
For assessable development	
Crime prevention through environmental design	
PO5 Development facilitates the security of people and property having regard to: (a) opportunities for casual surveillance and sight lines; (b) exterior building design that promotes safety; (c) adequate lighting; (d) appropriate signage and way finding; (e) minimisation of entrapment locations; and (f) building entrances, loading and storage areas that are well lit and lockable after hours. **Editor's note–**Applicants should have regard to Crime Prevention through Environmental Design Guidelines for Queensland.	No acceptable outcome is nominated.
PO6 Development minimises impacts on remaining areas of ecological significance within the zone.	No acceptable outcome is nominated.

Table 6.2.5.3—Accepted development subject to requirements and assessable development (Part)

Editor's note–This code contains alternative provisions for dwelling houses and dual occupancies to those set out in the Queensland Development Code (MP 1.1, MP 1.2 and MP 1.3), for the purposes of section 33 of the *Building Act 1975*.

Performance outcomes	Acceptable outcomes
For assessable development	
Demolition and removal	
PO7 The removal, relocation or a partial or total demolition of a contributing character building only occurs if it can be demonstrated that the: (a) total or partial loss of the building will not contribute to the loss of the character values; (b) total or partial loss of the building will not impact on the rhythm of the streetscape; or (c) the building or part proposed for demolition is not capable of structural repair.	No acceptable outcome is nominated. **Editor's note–**An impact statement produced by a suitably qualified professional may be required to demonstrate that there is no adverse impact on the character of the precinct due to the loss of the place, or a suitably qualified professional provides a report on the buildings condition, demonstrating that the place is not capable of repair. **Editor's note–**Applicants should have regard to the Character Residential planning scheme policy no. SC6.2 for guidance on how to write an impact statement.

Table 6.2.5.3—Accepted development subject to requirements and assessable development (Part)

Editor's note–This code contains alternative provisions for dwelling houses and dual occupancies to those set out in the Queensland Development Code (MP 1.1, MP 1.2 and MP 1.3), for the purposes of section 33 of the *Building Act 1975*.

Performance outcomes	Acceptable outcomes
For assessable development	
Carports and garages	
PO8 When viewed from a street, ancillary buildings such as carports and garages: (a) do not visually dominate the streetscape character; (b) are subservient to existing buildings on the site; (c) do not detract from the character or appearance of the contributing character buildings; and (d) are consistent with the established rhythm of the streetscape.	**AO8** Class 10a structures such as carports, garages: (a) are set back an equal or greater distance from the street as the main building; (b) have a maximum width not exceeding 3m; (c) do not have a garage door or solid face presented to the street; (d) are detached or semi-detached structures with minimum carport roof gap to the building face of 0.6m (as shown in Figure 6.51 – Appropriate carport or garage type and roof gap); (e) have a roof pitch which matches the main building's predominant roof pitch or has a roof pitch no greater than 3 degrees (as shown in Figure 6.52 - Appropriate roof pitch of a carport or garage); (f) have their highest point lower or equal to the gutter/facia level of the main building (as shown in Figure 6.53 - Appropriate height relative to the main building); and (g) are built using materials that complement the existing dwelling (as shown in Figure 6.54 - Appropriate complementary building materials).

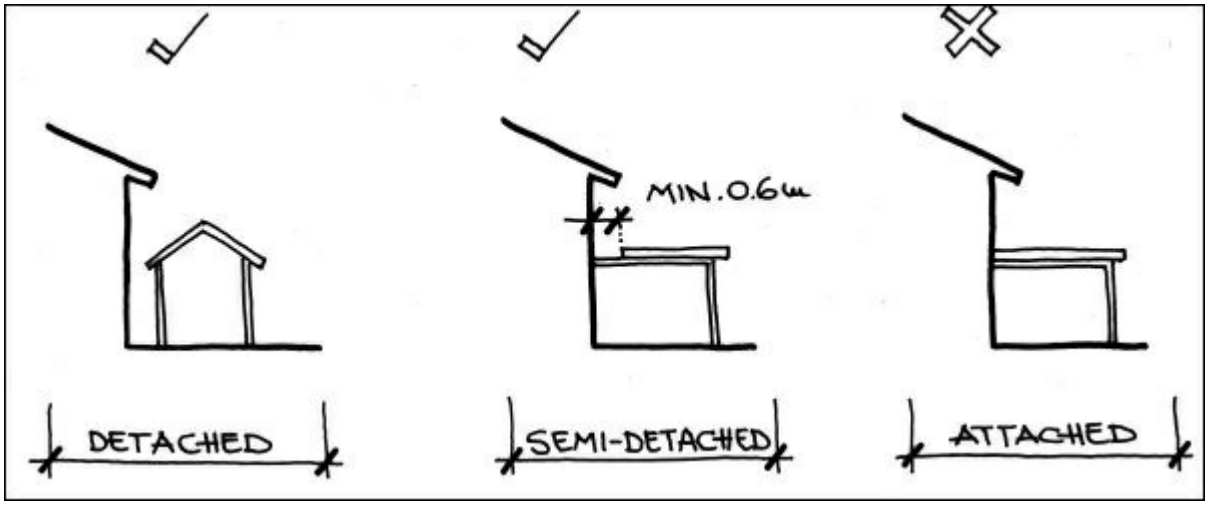

Figure 6.51 - Appropriate carport or garage type and roof gap

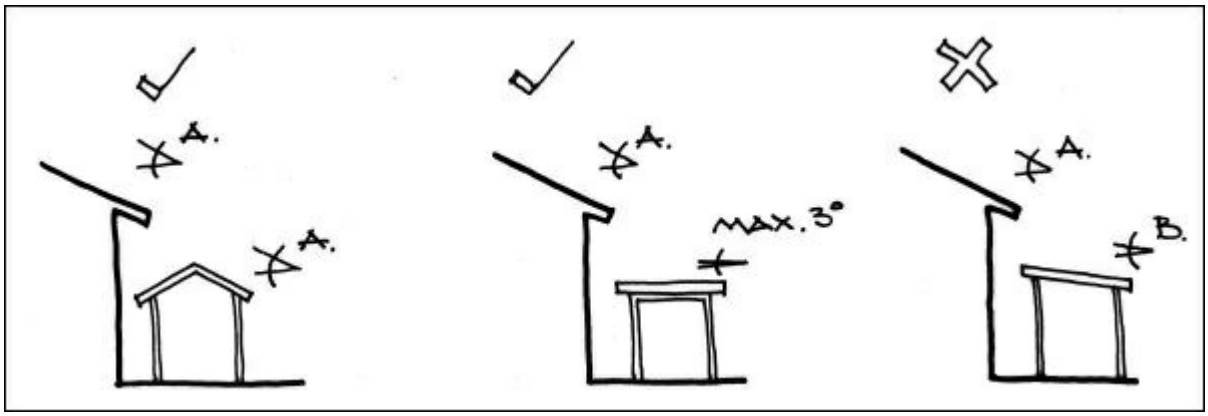

Figure 6.52 - Appropriate roof pitch of a carport or garage

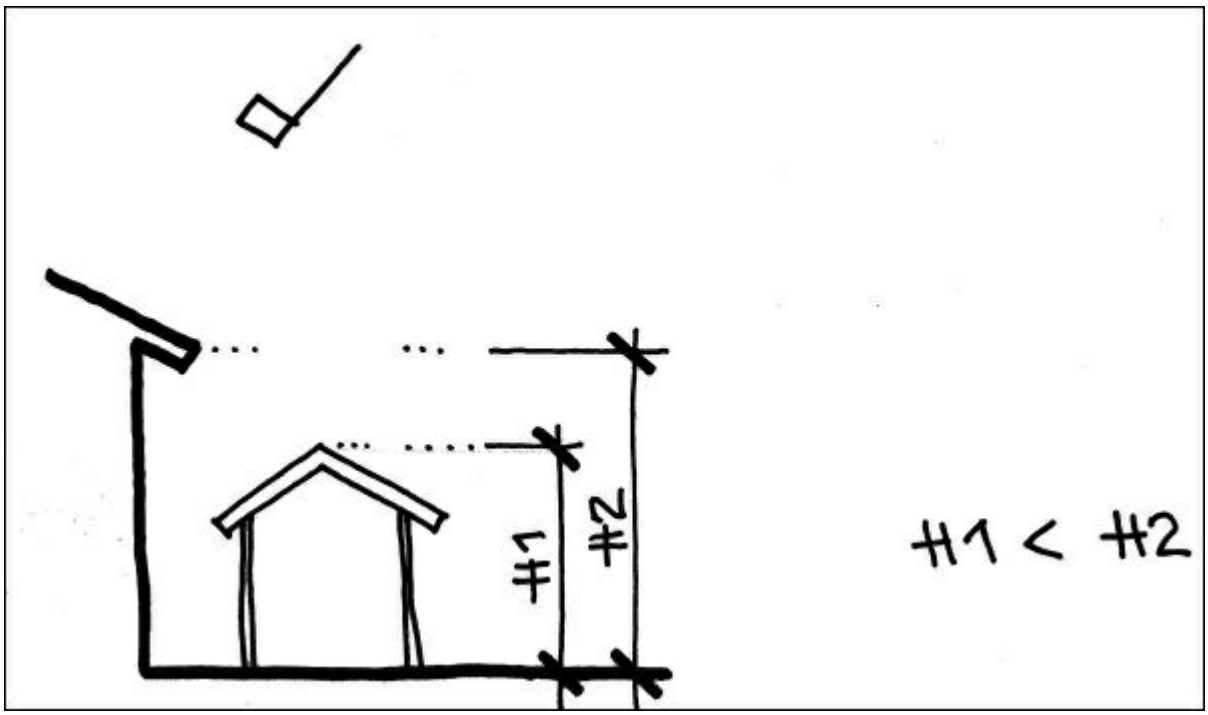

Figure 6.53 - Appropriate height relative to the main building

Figure 6.54 - Appropriate complementary building materials

Table 6.2.5.3—Accepted development subject to requirements and assessable development (Part)

Editor's note—This code contains alternative provisions for dwelling houses and dual occupancies to those set out in the Queensland Development Code (MP 1.1, MP 1.2 and MP 1.3), for the purposes of section 33 of the *Building Act 1975*.

Performance outcomes	Acceptable outcomes
For assessable development - where a non-residential use	
PO9 Non-residential uses establish only where: (a) compatible with local character and amenity; (b) limited in scale and supporting the day-to-day needs of the local community; and (c) not impacting on the role and function of the city's network of centres or more appropriately located in another zone.	No acceptable outcome is nominated. **Editor's note—**Applicants should have regard to the Economic impact assessment planning scheme policy no SC6.5 for guidance on how to demonstrate compliance with this performance outcome.
PO10 Development is of a house compatible scale.	**AO10.1** The use only involves minor building work. OR
	AO10.2 Where a new building is proposed: (a) buildings and other structures do not exceed 8.5m or 2 storeys in building height, whichever is the lesser; (b) the building does not exceed 250m² in gross floor area; (c) site cover does not exceed 60%; and (d) the maximum length of any wall is 12m.

Table 6.2.5.3—Accepted development subject to requirements and assessable development (Part)

Editor's note—This code contains alternative provisions for dwelling houses and dual occupancies to those set out in the Queensland Development Code (MP 1.1, MP 1.2 and MP 1.3), for the purposes of section 33 of the *Building Act 1975*.

Performance outcomes	Acceptable outcomes
For assessable development	
Reconfiguring a lot	
PO11 Reconfiguration of lots is consistent with the predominant subdivision pattern of the precinct.	No acceptable outcome is nominated. **Editor's note—**Applicants should have regard to the Character residential planning scheme policy no. SC6.2 for guidance on how to demonstrate compliance with this performance outcome.

Table 6.2.5.3—Accepted development subject to requirements and assessable development (Part)

Editor's note—This code contains alternative provisions for dwelling houses and dual occupancies to those set out in the Queensland Development Code (MP 1.1, MP 1.2 and MP 1.3), for the purposes of section 33 of the *Building Act 1975*.

Performance outcomes	Acceptable outcomes
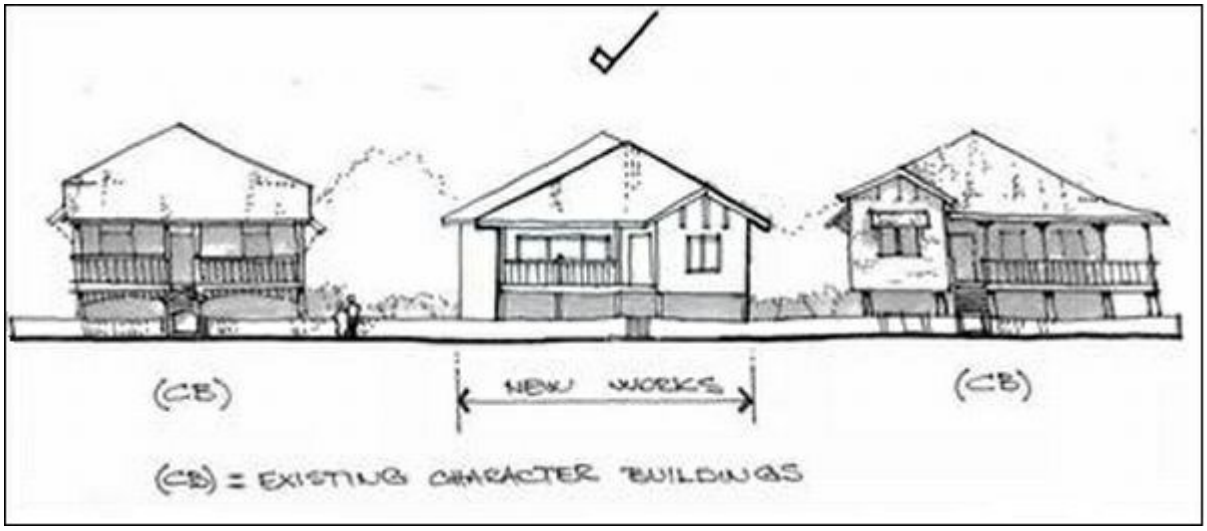
For assessable development — where a new building, relocation of a contributing character building within the site or extension or alteration to an existing contributing character building	
PO12 Building height is consistent to adjoining contributing character buildings.	**AO12.1** Development does not involve raising or lowering a dwelling by more than 1m.
	AO12.2 Unless otherwise stated for a particular precinct, buildings and structures do not exceed 8.5m or 2 storeys in building height, whichever is the lesser.
PO13 The existing setting and rhythm of the streetscape is retained and enhanced.	**AO13.1** Buildings and extensions are setback from street frontages within 10% of the average front setback of adjoining contributing character buildings. Figure 6.55 — Appropriate front setbacks illustrates.  **Figure 6.55 — Appropriate front setbacks**

	AO13.2 Unless otherwise stated for a particular precinct, the front facade width of the building is the same as the front facade width of the adjoining contributing character buildings, to a minimum depth of 3m. Figure 6. 56 — Appropriate front facade width illustrates.  **Figure 6.56 — Appropriate front facade width**
PO14 Buildings maintain the regularity of building form and street presentation. **Editor's note**—Applicants should have regard to the Character residential planning scheme policy no. SC6.2 for guidance on how to demonstrate compliance with this performance outcome. Figure 6.57 — Street presentation provides indicative guidance.	No acceptable outcome is nominated.



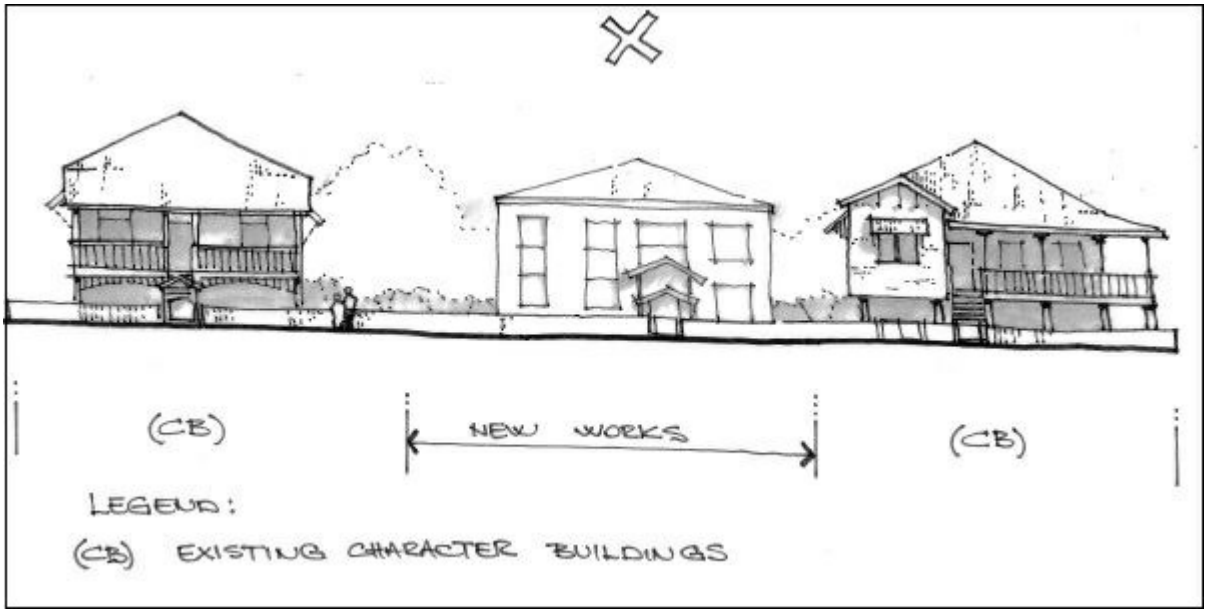


Figure 6.57 – Street presentation

PO15 Buildings use materials that have a lightweight appearance, and assist in reducing building bulk and form. **Editor's note—**Applicants should have regard to the Character planning scheme policy no. SC6.2 for guidance on how to demonstrate compliance with this performance outcome.	**AO15.1** Walls are clad with lightweight materials with an expressed surface profile.
	AO15.2 Roofs are clad with corrugated iron.
	AO15.3 Windows are timber framed or have the appearance of being timber.

Table 6.2.5.3—Accepted development subject to requirements and assessable development (Part)

Editor's note—This code contains alternative provisions for dwelling houses and dual occupancies to those set out in the Queensland Development Code (MP 1.1, MP 1.2 and MP 1.3), for the purposes of section 33 of the *Building Act 1975*.

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
1950s Post War Expansion precinct	
PO16 Buildings have a low-set appearance and scale consistent with the predominant character of the precinct.	**AO16.1** Building height does not exceed 1 storey.
	AO16.2 Dwelling houses have elevated floor levels between 600mm to 750mm above ground level.
PO17 The existing setting and rhythm of the streetscape is retained and enhanced.	**AO17** The front facade width is 8m to 11m wide, to a minimum depth of 3m. Figure 6.58 - 1950s Post War Expansion precinct (Parsons street) illustrates. **Figure 6.58 - 1950s Post War Expansion precinct (Parsons Street)**
PO18 The roof profile is consistent with the predominant roof profile of dwellings that contribute to the precinct's character. **Editor' note—**Applicants should have regard to the Character residential planning scheme policy no SC6.2 for guidance on how todemonstrate compliance with this performance outcome.	**AO18** The roof profile is: (a) hipped with a 15 degree to 22.5 degree pitch; or (b) hipped with a 15 degree to 22.5 degree pitch incorporating a hipped or gabled projection towards the street.

PO19 The roof overhang is consistent with the predominant roof overhang of contributing character buildings. **Editor' note—**Applicants should have regard to the Character residential planning scheme policy no SC6.2 for guidance on how to demonstrate compliance with this performance outcome.	**AO19** Roof overhangs are: (a) 600mm wide; and (b) gable end overhangs are 300mm to 400mm wide.
PO20 Window scale and proportions are sympathetic to the predominant character of the precinct. **Editor's note—**Applicants should have regard to the Character residential planning scheme policy no. SC6.2 for guidance on how to demonstrate compliance with this performance outcome.	**AO20** Windows are half-height with 2, 3, or 4 vertically proportioned frames, where the frame height is greater than its width by a 3:1 ratio. Figure 6.59 - Half-height vertically proportioned frames in the 1950s Post War Expansion precinct (Kent street) illustrates. **Figure 6.59 - Half-height vertically proportioned frames in the 1950s Post War Expansion precinct (Kent Street)**

Table 6.2.5.3—Accepted development subject to requirements and assessable development (Part)

Editor's note—This code contains alternative provisions for dwelling houses and dual occupancies to those set out in the Queensland Development Code (MP 1.1, MP 1.2 and MP 1.3), for the purposes of section 33 of the *Building Act 1975*.

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
1960s Defence Housing and 1960s Housing Commission precinct	
PO21 The roof profile is consistent with the predominant roof profile of the contributing character buildings. **Editor' note—**Applicants should have regard to the Character residential planning scheme policy no SC6.2 for guidance on how to demonstrate compliance with this performance outcome.	**AO21** The roof profile is simple gabled or simple hipped with a 10 degree to 15 degree roof pitch.
PO22 The roof overhang is consistent with the predominant roof overhang of the contributing character buildings. **Editor' note—**Applicants should have regard to the Character residential planning scheme policy no SC6.2 for guidance on how to demonstrate compliance with this performance outcome.	**AO22** Roof overhangs are 750mm to 900mm wide.
PO23 Window scale and proportions are sympathetic to the predominant contributing character of the precinct. **Editor's note—**Applicants should have regard to the Character residential planning scheme policy no. SC6.2 for guidance on how to demonstrate compliance with this performance outcome.	No acceptable outcome is nominated.
PO24 Enclosing the ground floor storey of a building does not have an adverse impact on the character of the building and ensures the original fabric of the building is identifiable.	**AO24** Development on any ground floor storey is: (a) semi-enclosed with timber battens from view; and (b) aligned with the upper levels walls. Figure 6.60 - Appropriate enclosure to the ground floor in the 1960s Defence Housing and 1960s Housing Commission precinct (Pixley Street) illustrates. **Figure 6.60 — Appropriate enclosure to the ground floor in the 1960s Defence Housing and 1960s Housing Commission precinct (Pixley Street)**

Table 6.2.5.3—Accepted development subject to requirements and assessable development (Part)

Editor's note—This code contains alternative provisions for dwelling houses and dual occupancies to those set out in the Queensland Development Code (MP 1.1, MP 1.2 and MP 1.3), for the purposes of section 33 of the *Building Act 1975*.

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Worker's Cottages precinct	
PO25 Building height and building floor level height are consistent to adjoining contributing character buildings.	**AO25** Dwelling houses: (a) have a floor level minimum of 700mm above ground level; or (b) are 2 storeys.
PO26 The front facade includes a verandah consistent with the predominant front facade profile of the contributing character buildings.	**AO26.1** The front facade includes an open or semi-enclosed front verandah for a minimum 60% width of the front facade; OR **AO26.2** Enclosed verandahs are articulated with openings such as windows, louvers or screens, continuously across 60% or more of the front facade of the dwelling and wrap around one or both sides of the front facade for a minimum of 2m and the enclosure is capable of being reversed. Figure 6.61 - A front verandah in the Worker's Cottages precinct (Castling Street) illustrates. **Figure 6.61 — A front verandah in the Worker's Cottages precinct (Castling Street)**

PO27 Enclosing the ground floor storey of a building does not have an adverse impact on the character of the building and ensures the original fabric of the building is identifiable.	**AO27** Development on any ground floor storey includes a valance, and: (a) is set back the full depth of all open or enclosed verandahs; or (b) is set back 1m from the upper level of an exterior wall where there is no verandah. Figure 6.62 - Appropriate enclosures to the ground floor illustrates. **Figure 6.62 — Appropriate enclosures to the ground floor**
PO28 The roof profile is consistent with the predominant roof profile of the contributing character buildings. **Editor's note—**Applicants should have regard to the Character residential planning scheme policy no. SC6.2 for guidance on how to demonstrate compliance with this performance outcome.	**AO28.1** The roof profile is simple hipped or pyramid with a 15 degree to 25 degree roof pitch.
	AO28.2 Verandahs are contained under the main roof form, or roofed separately with skillion or gently curved roofs.
PO29 Window scale and proportions, and window hoods and awnings are sympathetic to the predominant character of the precinct. **Editor' note**—Applicants should have regard to the Character residential planning scheme policy no SC6.2 for guidance on how to demonstrate compliance with this performance outcome.	**AO29.1** The windows are half-height with vertically proportioned frames, where the frame height is greater than its width by a 3:1 ratio.
	AO29.2 Where windows are not sheltered by a verandah or roof overhang (which has a minimum overhang of 600mm), window hoods are provided.

Table 6.2.5.3—Accepted development subject to requirements and assessable development (Part)

Editor's note—This code contains alternative provisions for dwelling houses and dual occupancies to those set out in the Queensland Development Code (MP 1.1, MP 1.2 and MP 1.3), for the purposes of section 33 of the *Building Act 1975*.

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
South Townsville precinct	
PO30 Building height and building floor level height are consistent to adjoining contributing character buildings. **Editor's note**—Applicants should have regard to the Character residential planning scheme policy no SC6.2 for guidance on how to demonstrate compliance with this performance outcome.	**AO30** Dwelling houses: (a) have a floor level minimum of 700mm above ground level; or (b) are 2 storeys.
PO31 The front facade is articulated with openings consistent with the predominant front facade profile of the contributing character buildings. **Editor's note—**Applicants should have regard to the Character residential planning scheme policy no. SC6.2 for guidance on how to demonstrate compliance with this performance outcome.	**AO31.1** The front façade includes an open or semi-enclosed front verandah, at a minimum 60% width of the front facade. OR **AO31.2** Enclosed verandahs are articulated with openings such as windows, louvers or screens, continuously across 60% or more of the front facade of the dwelling and wrap around one or both sides of the front facade for a minimum of 2m and the enclosure is capable of being reversed.
	AO31.3 Where the front facade exceeds 8.5m in width, the front verandah wraps around one or both sides of the dwelling house.
PO32 Enclosing the ground floor storey of a building does not have an adverse impact on the character of the building and ensures the original fabric of the building is identifiable.	**AO32** Development on any ground floor storey includes a valance, and: (a) is set back the full depth of all open or enclosed verandahs; or (b) is set back 1m from the upper level of an exterior wall where there is no verandah; Figure 6.63 - appropriate enclosures to the ground floor illustrates.  **Figure 6.63 — Appropriate enclosures to the ground floor**

PO33 The roof profile is consistent with the predominant roof profile of the contributing character buildings. **Editor's note**—Applicants should have regard to the Character residential planning scheme policy no SC6.2 for guidance on how to demonstrate compliance with this performance outcome.	**AO33.1** The roof profile is: (a) simple hipped or pyramid with a 15 degree to 25 degree roof pitch; or (b) side gabled with a 15 degree to 25 degree roof pitch.
	AO33.2 Verandahs are contained under the main roof form, or roofed separately with skillion or gently curved roofs.
PO34 Window scale and proportions and window hoods or awnings are sympathetic to the dominant character of the precinct. **Editor's note**—Applicants should have regard to the Character residential planning scheme policy no SC6.2 for guidance on how to demonstrate compliance with this performance outcome.	**AO34.1** The windows are half-height with vertically proportioned frames, where the frame height is greater than its width by a 3:1 ratio.
	AO34.2 Where windows are not sheltered by a verandah or roof overhang (which has a minimum overhang of 600mm), window hoods are provided. Figure 6.64 - vertically proportioned frames with window hoods in the South Townsville precinct (Bell Street) illustrates. **Figure 6.64 — Vertically proportioned frames with window hoods in the South Townsville precinct (Bell Street)**
PO35 Additions, alterations and adaptive reuse of existing contributing non-residential character buildings maintain the legibility of the historic use and are sympathetic to the prevailing residential character of the precinct.	No acceptable outcome is nominated. **Editor's note**—Applicants should have regard to the Character residential planning scheme policy no SC6.2 for guidance on how to demonstrate compliance with this performance outcome.

Table 6.2.5.3—Accepted development subject to requirements and assessable development (Part)

Editor's note—This code contains alternative provisions for dwelling houses and dual occupancies to those set out in the Queensland Development Code (MP 1.1, MP 1.2 and MP 1.3), for the purposes of section 33 of the *Building Act 1975*.

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Queenslanders precinct	
PO36 Building height and building floor level height are consistent to adjoining contributing character buildings.	**AO36** Dwelling houses: (a) have a floor level minimum of 700mm above ground level; or (b) are 2 storeys.
PO37 The front facade includes a verandah consistent with the predominant front facade profile of contributing character buildings. **Editor's note—**Applicants should have regard to the Character residential planning scheme policy no. SC6.2 for guidance on how to demonstrate compliance with this performance outcome.	**AO37.1** The front facade includes an open or semi-enclosed front verandah across, at a minimum 60% width of the front facade.
	AO37.2 Where the front facade exceeds 9m in width the front verandah wraps around one or both sides of the dwelling house. Figure 6.65 - A front verandah that wraps around both sides in the Queenslanders precinct (Ackers Street) illustrates. **Figure 6.65 — A front verandah that wraps around both sides in the Queenslanders precinct (Ackers Street)**

PO38 Enclosing the ground floor storey of a building does not have an adverse impact on the character of the building and ensures the original fabric of the building is identifiable.	**AO38** Development on any ground floor storey includes a valance, and: (a) is set back the full depth of all open or enclosed verandahs; or (b) is set back 1m from the upper level of an exterior wall where there is no verandah. Figure 6.66 - Appropriate enclosures to the ground floor illustrates.  **Figure 6.66 — Appropriate enclosures to the ground floor**
PO39 Reconfiguration of a lot maintains the existing layout, streetscape character and subdivision pattern of the precinct and is consistent with the established rhythm of the streetscape. **Editor's note—**This Performance outcome varies from Performance outcome 28 in Section 9.3.4 Reconfiguring a lot code and does take precedence.	**AO39** The side boundary of the new lot maintains the existing side boundary depth. Figure 6.67 - Lot design illustrates.  **Figure 6.67 - Lot design**
PO40 The roof profile is consistent with the predominant roof profile of contributing character buildings. **Editor's note**—Applicants should have regard to the Character residential planning scheme policy no SC6.2 for guidance on how to demonstrate compliance with this performance outcome.	**AO40.1** The roof profile of new building works is a simple hipped or pyramid main roof with a 17.5 degree to 27.5 degree roof pitch. **AO40.2** Verandahs are contained under the main roof form, or roofed separately with a skillion roof.

Table 6.2.5.3—Accepted development subject to requirements and assessable development (Part)

Editor's note—This code contains alternative provisions for dwelling houses and dual occupancies to those set out in the Queensland Development Code (MP 1.1, MP 1.2 and MP 1.3), for the purposes of section 33 of the *Building Act 1975*.

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Interwar Gables and Queensland Bungalows precinct	
PO41 Building height and building floor level height are consistent to adjoining contributing character buildings.	**AO41** Dwelling houses: (a) have a floor level minimum of 700mm above ground level; or (b) are 2 storeys.
PO42 The front facade is articulated with openings consistent with the predominant front facade profile of contributing character buildings. **Editor's note—**Applicants should have regard to the Character residential planning scheme policy no. SC6.2 for guidance on how to demonstrate compliance with this performance outcome.	**AO42** The front facade includes: (a) an open front verandah; or (b) an enclosed or semi-enclosed front verandah with window, louvres or screens continuous across the front facade of the dwelling. Figure 6.68 - A front verandah in the Interwar Gables and Queensland Bungalows precinct (McKillop Street) illustrates. Figure 6.69 - An enclosed front verandah with continuous windows across the front facade in the Interwar Gables and Queensland Bungalows precinct (Chapman Street) illustrates. **Figure 6.68 — A front verandah in the Interwar Gables and Queensland Bungalows precinct (McKillop Street)** **Figure 6.69 — An enclosed front verandah with continuous windows across the front facade in the Interwar Gables and Queensland Bungalows precinct (Chapman Street)**

PO43 Enclosing the ground floor storey of a building does not have an adverse impact on the character of the building and ensures the original fabric of the building is identifiable.	**AO43** Development on any ground floor storey includes a valance and: (a) is set back the full depth of all open or enclosed verandahs; or (b) is set back 1m from the upper level of an exterior wall where there is no verandah. Figure 6.70 - Appropriate enclosures to the ground floor illustrates.  **Figure 6.70 — Appropriate enclosures to the ground floor**
PO44 Reconfiguration of a lot maintains the existing layout, streetscape character and subdivision pattern of the precinct and is consistent with the established rhythm of the streetscape. **Editor's note—**This Performance outcome varies from Performance outcome 28 in Section 9.3.4 Reconfiguring a lot code and does take precedence.	**AO44** The side boundary of the new lot maintains the existing side boundary depth. Figure 6.71 - Lot design illustrates.  **Figure 6.71 - Lot design**
PO45 The roof profile is consistent with the predominant roof profile of contributing character buildings. **Editor's note**—Applicants should have regard to the Character residential planning scheme policy no SC6.2 for guidance on how to demonstrate compliance with this performance outcome.	**AO45.1** The roof profile is: (a) simple hipped or pyramid, roofed with asymmetrical gable projections with a 22.5 degree to 27.5 degree roof pitch; or (b) gable fronted with asymmetrical gable projections with a 17.5 degree to 22.5 degree roof pitch.
	AO45.2 The primary roof form extends over the entire floor plan, including any front or side verandahs.

PO46 Window scale and proportions are sympathetic to the predominant contributing character of the precinct. **Editor's note**—Applicants should have regard to the Character residential planning scheme policy no SC6.2 for guidance on how to demonstrate compliance with this performance outcome.	**AO46.1** Windows are half-height with vertically proportioned frames, where the frame height is greater than its width by a 3:1 ratio.
	AO46.2 Windows below front gabled roofs: (a) are located symmetrically under the apex gable; and (b) have a minimum of two vertically proportioned frames or have bay windows. Figure 6.72 - Half-height vertically proportioned window located symmetrically under gable in the Interwar Gables and Queensland Bungalows precinct (Lawson Street) illustrates. **Figure 6.72 — Half-height vertically proportioned window located symmetrically under gable in the Interwar Gables and Queensland Bungalows precinct (Lawson Street)**

Table 6.2.5.3—Accepted development subject to requirements and assessable development (Part)

Editor's note—This code contains alternative provisions for dwelling houses and dual occupancies to those set out in the Queensland Development Code (MP 1.1, MP 1.2 and MP 1.3), for the purposes of section 33 of the *Building Act 1975*.

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Interwar to 1950s Asymmetrical Gable precinct	
PO47 Building height and building floor level height are consistent to adjoining contributing character buildings.	**AO47** Dwelling houses: (a) have a floor level minimum of 700mm above ground level; or (b) are 2 storeys.

PO48 The front facade profile is articulated consistent with the predominant front façade profile of contributing character buildings. **Editor's note—**Applicants should have regard to the Character residential planning scheme policy no. SC6.2 for guidance on how to demonstrate compliance with this performance outcome.	**AO48** The front facade includes: (a) asymmetrical projecting building forms, or steps in plan, a minimum of 1.2m in depth; or (b) open or semi-enclosed front verandah across the full width of the building. Figure 6.73 — Asymmetrical projecting building forms for a minimum 1.2m in depth (Burton Street) illustrates. **Figure 6.73 — Asymmetrical projecting building forms for a minimum 1.2m in depth (Burton Street)**
PO49 Enclosing the ground floor storey of a building does not have an adverse impact on the character of the building and ensures the original fabric of the building is identifiable.	**AO49** Development on any ground floor storey includes a valance, and: (a) is set back the full depth of all open or enclosed verandahs; or (b) is set back 1m from the upper level of an exterior wall where there is no verandah. Figure 6.74 - Appropriate enclosures to the ground floor illustrates.  **Figure 6.74 - Appropriate enclosures to the ground floor**

PO50 Reconfiguration of a lot maintains the existing layout, streetscape character and subdivision pattern of the precinct and is consistent with the established rhythm of the streetscape. **Editor's note—**This Performance outcome varies from Performance outcome 28 in Section 9.3.4 Reconfiguring a lot code and does take precedence.	**AO50** The side boundary of the new lot maintains the existing side boundary depth. Figure 6.75 - Lot design illustrates.  **Figure 6.75 - Lot design**
PO51 The roof profile is consistent with the predominant roof profile of contributing character buildings. **Editor's note**—Applicants should have regard to the Character residential planning scheme policy no SC6.2 for guidance on how to demonstrate compliance with this performance outcome.	**AO51.1** The roof form is: (a) simple hipped or pyramid with a 22.5 degree to 30 degree roof pitch with asymmetrical gable projections; or (b) gable fronted with a 17.5 degree to 22.5 degree roof pitch with asymmetrical gable projections. **AO51.2** Where front verandahs are included, they are contained under the main roof form.
PO52 Window scale and proportions are sympathetic to the predominant contributing character of the precinct. **Editor's note**—Applicants should have regard to the Character residential planning scheme policy no SC6.2 for guidance on how to demonstrate compliance with this performance outcome.	**AO52.1** Windows have a minimum of 3 vertically proportioned frames, where the frame height is greater than its width by a 3:1 ratio. **AO52.2** Windows below front gabled roofs: (a) are located symmetrically under the apex gable; and (b) have a minimum of two vertically proportioned frames or have bay windows. Figure 6.76 - Symmetrically located bay windows under gable (Hooper Street) illustrates. **Figure 6.76 — Symmetrically located bay windows under gable (Hooper Street)**

Table 6.2.5.3—Accepted development subject to requirements and assessable development (Part)

Editor's note—This code contains alternative provisions for dwelling houses and dual occupancies to those set out in the Queensland Development Code (MP 1.1, MP 1.2 and MP 1.3), for the purposes of section 33 of the *Building Act 1975*.

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Churchill Street precinct	
PO53 Building height and building floor level height are consistent to adjoining contributing character buildings.	No acceptable outcome nominated.
PO54 The existing setting and rhythm of the streetscape is retained and enhanced.	**AO54** The front facade width is 11.5m to 13.5m wide.
PO55 Enclosing the ground floor storey of a building does not have an adverse impact on the character of the building and ensures the original fabric of the building is identifiable.	**AO55** Development on any ground floor storey includes a valance, and: (a) is set back the full depth of all open or enclosed verandahs; or (b) is set back 1m from the upper level of an exterior wall where there is no verandah. Figure 6.77 - Appropriate enclosures to the ground floor illustrates.  **Figure 6.77 — Appropriate enclosures to the ground floor**
PO56 The roof profile is consistent with the predominant roof profile of contributing character buildings. **Editor's note**—Applicants should have regard to the Character residential planning scheme policy no SC6.2 for guidance on how to demonstrate compliance with this performance outcome.	**AO56** The roof pitch is between 15 degree to 20 degree.
PO57 The roof overhang is consistent with the predominant roof overhang of contributing character buildings. **Editor's note**—Applicants should have regard to the Character residential planning scheme policy no SC6.2 for guidance on how to demonstrate compliance with this performance outcome.	**AO57** Roof overhangs are 450mm to 750mm wide.
PO58 Window scale and proportions are sympathetic to the predominant contributing character of the precinct. **Editor's note—**Applicants should have regard to the Character residential planning scheme policy no. SC6.2 for guidance on how to demonstrate compliance with this performance outcome.	**AO58** Windows are half height with a minimum of 3 vertically proportioned frames, where the frame height is greater than its width by a 3:1 ratio.

Table 6.2.5.3—Accepted development subject to requirements and assessable development (Part)

Editor's note—This code contains alternative provisions for dwelling houses and dual occupancies to those set out in the Queensland Development Code (MP 1.1, MP 1.2 and MP 1.3), for the purposes of section 33 of the *Building Act 1975*.

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Park Street precinct	
PO59 Building height and building floor level height are consistent to adjoining contributing character buildings.	**AO59** Dwelling houses: (a) have a floor level minimum of 700mm above ground level; or (b) are 2 storeys.
PO60 The front facade openings are consistent with the predominant front facade profile of contributing character buildings. **Editor's note—**Applicants should have regard to the Character residential planning scheme policy no. SC6.2 for guidance on how to demonstrate compliance with this performance outcome.	**AO60.1** The front facade includes: (a) a front verandah; or (b) a bay window.
	AO60.2 Enclosed verandahs are articulated with openings such as windows, louvers or screens, continuously across the full width of the verandah.
PO61 Enclosing the ground floor storey of a building does not have an adverse impact on the character of the building and ensures the original fabric of the building is identifiable.	**AO61** Development on any ground floor storey includes a valance, and: (a) is set back the full depth of all open or enclosed verandahs; or (b) is set back 1m from the upper level of an exterior wall where there is no verandah. Figure 6.78 - Appropriate enclosures to the ground floor illustrates.  **Figure 6.78 — Appropriate enclosures to the ground floor**
PO62 The existing setting and rhythm of the streetscape is retained and enhanced.	**AO62** The front facade width is 9m to 12.5m wide.
PO63 The roof profile is consistent with the predominant roof profile of contributing character buildings. **Editor's note**—Applicants should have regard to the Character residential planning scheme policy no SC6.2 for guidance on how to demonstrate compliance with this performance outcome.	**AO63** The roof pitch is between 15 degree to 30 degree.

PO64 The roof overhang is consistent with the dominant roof overhang of contributing character buildings. **Editor's note**—Applicants should have regard to the Character residential planning scheme policy no SC6.2 for guidance on how to demonstrate compliance with this performance outcome.	**AO64** Roof overhangs are 400mm to 600mm wide.
PO65 Window scale and proportions are sympathetic to the predominant contributing character of the precinct. **Editor's note**—Applicants should have regard to the Character residential planning scheme policy no SC6.2 for guidance on how to demonstrate compliance with this performance outcome.	**AO65** Windows are half height with a minimum of 3 vertically proportioned frames, where the window height is greater than its width by a 3:1 ratio.

Table 6.2.5.3—Accepted development subject to requirements and assessable development (Part)

Editor's note—this code contains alternative provisions for dwelling houses and dual occupancies to those set out in the Queensland Development Code (MP 1.1, MP 1.2 and MP 1.3), for the purposes of section 33 of the *Building Act 1975*.

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Grand Queenslanders precinct	
PO66 Building height and building floor level height are consistent to adjoining contributing character buildings.	**AO66** Dwelling houses: (a) have a floor level a minimum of 700mm above ground level; or (b) are 2 storeys.
PO67 The front facade profile is articulated with openings consistent with the predominant front facade profile of contributing character buildings. **Editor's note—**applicants should have regard to the Character residential planning scheme policy no. SC6.2 for guidance on how to demonstrate compliance with this performance outcome.	**AO67.1** The front facade includes an open or semi-enclosed front verandah for the full width of the building and extends around at a minimum, down 2m one or both sides. OR **AO67.2** Enclosed verandahs are articulated with openings such as windows, louvers or screens, continuously across the full width of the verandah. Figure 6.79 - An open front verandah for the full width of the front facade; including removable blinds (Alexandra Street) illustrates. **Figure 6.79 — An open front verandah for the full width of the front facade; including removable blinds (Alexandra Street)**

PO68 Enclosing the ground floor storey of a building does not have an adverse impact on the character of the building and ensures the original fabric of the building is identifiable.	**AO68** Development on any ground floor storey includes a valance, and: (a) is set back the full depth of all open or enclosed verandahs; or (b) is set back 1m from the upper level of an exterior wall where there is no verandah. Figure 6.80 - Appropriate enclosures to the ground floor illustrates.  **Figure 6.80 — Appropriate enclosures to the ground floor**
PO69 The roof profile is consistent with the predominant roof profile of contributing character buildings. **Editor's note**—Applicants should have regard to the Character residential planning scheme policy no SC6.2 for guidance on how to demonstrate compliance with this performance outcome.	**AO69.1** The roof profile is simple hipped or pyramid main roof, with a 17.5 degree to 27.5 degree roof pitch.
	AO69.2 Verandahs are contained under the main roof form, or roofed separately with a skillion roof.

Table 6.2.5.3—Accepted development subject to requirements and assessable development (Part)

Editor's note—This code contains alternative provisions for dwelling houses and dual occupancies to those set out in the Queensland Development Code (MP 1.1, MP 1.2 and MP 1.3), for the purposes of section 33 of the *Building Act 1975*.

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
French Street precinct	
PO70 Building height and building floor level height are consistent to adjoining contributing character buildings.	**AO70** Dwelling houses have a floor level minimum of 2m above ground level or is 2 storeys.
PO71 The front facade is articulated consistent with the predominant front facade of contributing character buildings. **Editor's note**—Applicants should have regard to the Character residential planning scheme policy no SC6.2 for guidance on how to demonstrate compliance with this performance outcome.	**AO71** The front facade includes asymmetrical projecting building forms or steps in plan, a minimum of 1.2m in depth.
PO72 Enclosing the ground floor storey of a building does not have an adverse impact on the character of the building and ensures the original fabric of the building is identifiable.	**AO72** Development on any ground floor storey includes a valance, and: (a) is set back the full depth of all open or enclosed verandahs; or (b) is set back 1m from the upper level of an exterior wall where there is no verandah. Figure 6.81 - Appropriate enclosures to the ground floor.  **Figure 6.81 — Appropriate enclosures to the ground floor**
PO73 The existing setting and rhythm of the streetscape is retained and enhanced.	**AO73** The front facade width is 10m to 12m wide.
PO74 The roof profile is consistent with the predominant roof profile of contributing character buildings. **Editor's note**—Applicants should have regard to the Character residential planning scheme policy no SC6.2 for guidance on how to demonstrate compliance with this performance outcome.	**AO74** Roof form is 17.5 degree in pitch and is simple hipped or pyramid and includes asymmetrical gable fronted projections.
PO75 The roof overhang is consistent with the predominant roof overhang of contributing character buildings. **Editor's note**—Applicants should have regard to the Character residential planning scheme policy no SC6.2 for guidance on how to demonstrate compliance with this performance outcome.	**AO75** Roof overhangs are: (a) a minimum of 400mm wide; and (b) with gable end overhangs a minimum of 200mm wide.

PO76 Window scale and proportions are sympathetic to the predominant contributing character of the precinct. **Editor's note—**Applicants should have regard to the Character residential planning scheme policy no. SC6.2 for guidance on how to demonstrate compliance with this performance outcome.	**AO76.1** Windows have a minimum of 3 vertically proportioned frames. Where the frame height is greater than its width by a 3:1 ratio.
	AO76.2 Windows below front gabled roofs: (a) are located symmetrically under the apex gable; and (b) have a minimum of 2 vertically proportioned frames or have bay windows. Figure 6.82 - Symmetrically located windows under gable (French Street) illustrates. **Figure 6.82 — Symmetrically located windows under gable (French Street)**

Table 6.2.5.3—Accepted development subject to requirements and assessable development (Part)

Editor's note—This code contains alternative provisions for dwelling houses and dual occupancies to those set out in the Queensland Development Code (MP 1.1, MP 1.2 and MP 1.3), for the purposes of section 33 of the *Building Act 1975*.

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Mixed 1950s precinct	
PO77 Building height and building floor level height are consistent to adjoining contributing character buildings.	**AO77** Dwelling houses: (a) have a floor level minimum of 700mm above ground level; or (b) are 2 storeys.
PO78 The front facade is articulated consistent with the predominant front facade of contributing character buildings. **Editor's note—**Applicants should have regard to the Character residential planning scheme policy no. SC6.2 for guidance on how to demonstrate compliance with this performance outcome.	**AO78** The front facade includes asymmetrical projecting building forms; or steps in plan, a minimum of 1.2m in depth. Figure 6.83 - Asymmetrical projecting building forms a minimum 1.2m in depth (Goodwin Street) illustrates. **Figure 6.83 — Asymmetrical projecting building forms a minimum 1.2m in depth (Goodwin Street)**

PO79 Enclosing the ground floor storey of a building does not have an adverse impact on the character of the building and ensures the original fabric of the building is identifiable.	**AO79** Development on any ground floor storey includes a valance, and: (a) is set back the full depth of all open or enclosed verandahs; or (b) is set back 1m from the upper level of an exterior wall where there is no verandah. Figure 6.84 - Appropriate enclosures to the ground floor illustrates.  **Figure 6.84 —Appropriate enclosures to the ground floor**
PO80 The roof profile is consistent with the predominant roof profile of contributing character buildings. **Editor's note**—Applicants should have regard to the Character residential planning scheme policy no SC6.2 for guidance on how to demonstrate compliance with this performance outcome.	**AO80** The roof profile is: (a) hipped with a 15 degree to 20 degree pitch; or (b) simple hipped or pyramid with asymmetrical gable projections with a 17.5 degree to 22.5 degree roof pitch.
PO81 The roof overhang is consistent with the predominant roof overhang of contributing character buildings. **Editor's note**—Applicants should have regard to the Character residential planning scheme policy no SC6.2 for guidance on how to demonstrate compliance with this performance outcome.	**AO81** Roof overhangs are 400mm to 600mm wide.
PO82 Window scale and proportions are sympathetic to the predominant character of the precinct. **Editor's note—**Applicants should have regard to the Character residential planning scheme policy no. SC6.2 for guidance on how to demonstrate compliance with this performance outcome.	No acceptable outcome is nominated.

6.3 Centre zones category

6.3.1 Neighbourhood centre zone code

6.3.1.1 Application

This code applies to development where the code is identified as applicable in the categories of development and assessment.

When using this code, reference should be made to section 5.3.2 and where applicable, section 5.3.3 located in Part 5.

6.3.1.2 Purpose

(1) The purpose of the Neighbourhood centre zone code is to provide for a small mix of land uses to service residential neighbourhoods.

It includes small-scale convenience shopping, professional offices, community services and other uses that directly support the immediate community.

(2) The particular purpose of the code is to provide for a network of centres that are readily accessible, integrated and well-designed, form vibrant focal points for the community, and provide a mix and range of services and facilities that are appropriate to their respective function and catchments. This promotes the efficient provision of services and contributes to the quality of life, character and identity of communities.

(3) The purpose of the zone will be achieved through the following overall outcomes:

- (a) neighbourhood centres contain a generally limited range of retail, commercial and community-related activities which are focused on meeting the basic, day-to-day convenience needs of a surrounding neighbourhood within a walkable catchment. Neighbourhood centre catchments are in the order of 1,500 households;
- (b) neighbourhood centres are located as an integral part of residential communities. Wherever possible they are co-located with other local facilities such as child care centres, parks or community uses;
- (c) centres do not compromise the intended role or successful functioning of higher order centres or each other;
- (d) residential development may occur within the centres, primarily where integrated in a mixed use development;
- (e) the built form and layout of a centre reinforces its integration with the local neighbourhood and creates a safe and pleasant community meeting place;
- (f) centres create a pedestrian-focussed frontage, activated by shop fronts, awnings and kerbside activities. Buildings are low-rise and smaller scale in nature;
- (g) the design of centres gives priority to improved accessibility by walking and cycling; and
- (h) centres are designed and operated to avoid adverse impacts on the amenity of surrounding residential neighbourhoods.

6.3.1.3 Assessment benchmarks

Table 6.3.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
PO1 Hours of operation are consistent with maintaining a reasonable level of amenity for nearby land in a residential zone.	**AO1** Hours of operation are limited to 6am to 10pm.
PO2 Where provided, outdoor lighting does not adversely affect the amenity of adjoining properties or create a traffic hazard on adjacent roads.	**AO2.1** Light emanating from any source complies with *Australian Standard AS4282 Control of the Obtrusive Effects of Outdoor Lighting*.
	AO2.2 Outdoor lighting is provided in accordance with *Australian Standard AS 1158.1.1 – Road Lighting – Vehicular Traffic (Category V) Lighting – Performance and Installation Design Requirement*.
PO3 Residential uses within the centre do not interrupt the continuity of the streetscape or the active, pedestrian focus of the street frontage.	**AO3** Any residential uses are located above or behind ground storey retail, commercial or community uses.
PO4 Residential uses within the centre are provided with a reasonable level of privacy.	**AO4.1** Windows, balconies, and terraces of a dwelling unit are screened where overlooking a habitable room or private open space of another dwelling within 9m.
	AO4.2 Screening is a solid translucent screen or perforated panels or trellises which have a maximum of 50% openings.
PO5 Residential uses within the centre are provided with a reasonable level of private outdoor living space.	**AO5** Dwellings are provided with private open space or a balcony directly accessible from a habitable room with: (a) a minimum area of 9m^2; and (b) a minimum dimension of 3m; and (c) clear of any utilities such as gas, water tanks or air conditioning units.

Table 6.3.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Built form	
PO6 Buildings are low-rise and are designed to break down the facade into finer-scaled components.	**AO6.1** All buildings and structures do not exceed 2 storeys or 8.5m in building height, whichever is the lesser.
	AO6.2 Buildings provide for tenancies fronting the street frontage which have a maximum width of 10m.
PO7 A strong sense of enclosure and definition of pedestrian space is created along street frontages, with buildings designed to provide visual interest, foster social interaction and create a safe and pleasant pedestrian-focussed environment.	**AO7.1** Buildings are built to the street frontage and provide an awning over the full width of the footpath.
	AO7.2 On-site car parking is provided to the side or the rear of buildings or below ground level, and is not located at the street frontage.
	AO7.3 Entrances to buildings face the street.
	AO7.4 Where buildings are located on a corner site, the main entrance faces the principal street or the corner.
	AO7.5 At the ground storey, a minimum of 65% of building frontage is provided as predominantly transparent windows or glazed doors and a maximum of 35% as solid facade.
	AO7.6 Clear windows are provided at ground storey and where provided, grille or translucent security screens are used rather than solid shutters, screens or roller-doors.

Table 6.3.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Community uses, community care centres, clubs	
PO8 Adequate lockable storage space is provided on-site to meet the needs of users.	**AO8** At least one (1) lockable storage space is provided of at least 4m^2 for each room or area that can be hired out or used by community organisations or the public.

Table 6.3.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Role and function	
PO9 Development is consistent with the intended role, scale and character of the neighbourhood centre and does not compromise the intended role or successful functioning of other centres.	**AO9** The combined area of all existing and proposed shops, shopping centres, offices, service industries, health care services and food and drink outlets within the centre do not exceed a total gross leasable area of 1,000m^2. For other uses, no acceptable outcome is nominated. **Editor's note—**Applicants should have regard to Economic impact assessment planning scheme policy SC6.5 for guidance on how to demonstrate compliance with this performance outcome.
PO10 Showrooms are not established in the neighbourhood centre.	No acceptable outcome is nominated.
PO11 Development facilitates opportunities for appropriate co-location of community-related activities or facilities to the extent practical.	No acceptable outcome is nominated.

Table 6.3.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Amenity	
PO12 Development minimises impacts on surrounding land and provides for an appropriate level of amenity within the centre, having regard to: (a) noise; (b) hours of operation; (c) traffic; (d) visual impact; (e) signage; (f) odour and emissions; (g) lighting; (h) access to sunlight; (i) privacy; and (j) outlook.	No acceptable outcome is nominated.
PO13 Streetscape treatments are provided to enhance amenity and to contribute positively to the city image, particularly along major roads and streets.	No acceptable outcome is nominated.

PO14 On-site landscaping is provided to: (a) enhance the appearance of the development, particularly in parking and service areas and in public spaces; (b) contribute to pedestrian comfort through shade; and (c) screen servicing components.	No acceptable outcome is nominated.
PO15 Development is designed and located so that adverse impacts on privacy and amenity on nearby land in a residential zone are minimised.	**AO15.1** Buildings are set back 2m from any boundary shared with a residential zone, or half the height of that part of the building, whichever is the greater.
	AO15.2.1 A 1.8m high solid screen fence is provided along all boundaries shared with a residential zone, and **AO15.2.2** A landscaped buffer with a minimum width of 2m and consisting of dense screen planting is provided along all boundaries shared with a residential zone.
	AO15.3 Windows that have a direct view into an adjoining residential use are provided with fixed screening that is a maximum of 50% transparent to obscure views and maintain privacy for residents.
PO16 Refuse storage areas, loading/unloading and other service or storage areas are screened from view from the street and adjoining land.	**AO16** Refuse storage areas loading/unloading and other service or storage areas are located to the rear or side of a building and are screened from view by a 1.8m high solid fence.

Table 6.3.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Crime prevention through environmental design	
PO17 Development facilitates the security of people and property having regard to: (a) opportunities for casual surveillance and sight lines; (b) exterior building design that promotes safety; (c) adequate lighting; (d) appropriate signage and wayfinding; (e) minimisation of entrapment locations; and (f) building entrances, loading and storage areas that are well lit and lockable after hours. **Editor's note—**Applicants should have regard to Crime Prevention through Environmental Design Guidelines for Queensland.	No acceptable outcome is nominated.

Table 6.3.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Accessibility	
PO18 Convenient and legible connections are provided for pedestrians and cyclists to the site, particularly having regard to linkages with existing and proposed public transport infrastructure, the open space network, centres and other community-related activities.	No acceptable outcome is nominated.

6.3.2 Local centre zone code

6.3.2.1 Application

This code applies to development where the code is identified as applicable in the categories of development and assessment for the Local centre zone.

When using this code, reference should be made to section 5.3.2 and where applicable, section 5.3.3 located in Part 5.

6.3.2.2 Purpose

(1) The purpose of the Local centre zone code is to provide for a limited range of land uses and activities to service local needs. It includes local shopping, local employment nodes, commercial, cafes and dining, entertainment, community services and residential development where it can integrate and enhance the fabric of the activity centre, but it is not the predominant use.

(2) The particular purpose of the code is to provide for a network of centres that are readily accessible, integrated and well-designed, form vibrant focal points for the community, and provide a mix and range of services and facilities that are appropriate to their respective function and catchments. This promotes efficient provision of services and contributes to the quality of life, character and identity of communities.

(3) The purpose of the zone will be achieved through the following overall outcomes:

- (a) local centres provide a range of retail, commercial and community activities that are focused on grocery shopping and local service needs of their surrounding catchments. They may include a single full-line supermarket and a small range of specialty shops, food and drink outlets, personal services and local offices;
- (b) local centres provide a significant focal point for the surrounding community. Wherever possible they are co-located with or include other local facilities such as child care centres, parks or community uses;
- (c) centres do not compromise the intended role or successful functioning of higher order centres or other local centres. Local centre catchments are in the order of 3,000 to 5,000 households;
- (d) residential development may occur within the centres, primarily where integrated in a mixed use development;
- (e) the built form and layout of a centre creates a safe and pleasant community meeting place. Centres create pedestrian-focussed public spaces and street frontages, activated by shop fronts, awnings and kerbside activities;
- (f) buildings are low-rise and create a sensitive transition in scale from the surrounding neighbourhood;
- (g) the design of centres gives priority to improved accessibility by walking and cycling;
- (h) centres are designed and operated to avoid adverse impacts on the amenity of surrounding residential neighbourhoods; and
- (i) opportunities for energy efficiency through built form are maximised.

(4) The purpose of the zone will also be achieved through the following additional overall outcomes for particular precincts:

Rising Sun local centre precinct:

(a) development facilitates the consolidation of local centre uses in the area bounded by Ross River Road, Cross Street, and Bowen Road;

(b) built form, public space and streetscape treatments in this area contribute to a distinct character for the local centre, in particular on the frontages of Ross River Road, Cross Street, and Bowen Road; and

(c) development of this precinct facilitates a consolidation of vehicular access points.

Click here to view high resolution PDF.

Figure 6.85 — Rising Sun local centre precinct

North Ward local centre precinct:

(a) development reinforces the character of this centre as a mixed use café and dining hub, with residential or tourist accommodation uses, in addition to its local service role;

(b) built form, public space and streetscape treatments in this area contribute to an integrated character for the centre, with a focus on the frontage of Gregory Street; and

(c) built form creates a higher-medium rise environment (up to 8 storeys in building height) along Gregory Street, transitioning down to medium rise (up to 5 storeys) behind.

6.3.2.3 Assessment benchmarks

Table 6.3.2.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
PO1 Hours of operation are consistent with maintaining a reasonable level of amenity for nearby land in a residential zone.	**AO1** Hours of operation are limited to 6am to 10pm.
PO2 Where provided, outdoor lighting does not adversely affect the amenity of adjoining properties or create a traffic hazard on adjacent roads.	**AO2.1** Light emanating from any source complies with *Australian Standard AS 4282 Control of the Obtrusive Effects of Outdoor Lighting*.
	AO2.2 Outdoor lighting is provided in accordance with *Australian Standard AS 1158.1.1 –Road Lighting – Vehicular Traffic (Category V) Lighting – Performance and Installation Design Requirements*.
PO3 Residential uses within the centre do not interrupt the continuity of the streetscape or the active, pedestrian focus of the street frontage.	**AO3** Any residential uses are located above or behind ground storey retail, commercial or community uses.
PO4 Residential uses within the centre are provided with a reasonable level of privacy.	**AO4.1** Windows, balconies, and terraces of a dwelling unit are screened where overlooking a habitable room or private open space of another dwelling within 9m.
	AO4.2 Screening is a solid translucent screen or perforated panels or trellises which have a maximum of 50% openings.
PO5 Residential uses within the centre are provided with a reasonable level of private outdoor living space.	**AO5** Dwellings are provided with private open space or a balcony directly accessible from a habitable room with: (a) a minimum area of 9m^2; and (b) a minimum dimension of 3m; and (c) clear of any utilities such as gas, water tanks or air conditioning units.

Table 6.3.2.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Built form	
PO6 Buildings are low-rise and are designed to break down the facade into finer scaled components, avoiding large expanses of blank walls.	**AO6.1** All buildings and structures do not exceed 2 storeys or 8.5m in building height, whichever is the lesser.
	AO6.2 Buildings provide for tenancies fronting the street frontage which have a maximum width of 10m.

PO7 A strong sense of enclosure and definition of pedestrian space is created along street frontages, with buildings designed to provide visual interest, foster social interaction and create a safe and pleasant pedestrian-focussed environment.	**AO7.1** Buildings are built to the street frontage and provide an awning over the full width of the footpath.
	AO7.2 Parking is provided to the side or the rear of buildings or below ground level, and is not located along the street frontage.
	AO7.3 Entrances to buildings face the street and any public space to which the building has frontage.
	AO7.4 Where buildings are located on a corner site, the main entrance faces the principal street or the corner.
	AO7.5 At the ground storey, a minimum of 65% of building frontage is provided as predominantly transparent windows or glazed doors and a maximum of 35% as solid facade.

Table 6.3.2.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	**Acceptable outcomes**
For assessable development	
Community uses, community care centres, clubs	
PO8 Adequate lockable storage space is provided on-site to meet the needs of users.	**AO8** At least one (1) lockable storage space of at least 4m^2 is provided for each room or area that can be hired out or used by community organisations or the public.

Table 6.3.2.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	**Acceptable outcomes**
For assessable development	
Role and function	
PO9 Development is consistent with the intended role, scale and character of the local centre and does not compromise the intended role or successful functioning of other local or higher order centres.	No acceptable outcome is nominated. **Editor's note—**Applicants should have regard to Economic impact assessment planning scheme policy SC6.5 for guidance on how to demonstrate compliance with this performance outcome.
PO10 Showrooms are not established in the local centre.	No acceptable outcome is nominated.
PO11 Development facilitates opportunities for appropriate co-location of community-related activities or facilities to the extent practical.	No acceptable outcome is nominated.

Table 6.3.2.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Centre design and built form	
PO12 The design of the centre provides for: (a) a coherent and integrated built form, public realm and circulation networks; (b) central, accessible and attractive public spaces for the people to congregate and interact; (c) continuity of streetscape and landscape characteristics; (d) pedestrian-friendly and visually interesting frontages to street and public spaces; (e) optimum energy efficiency; (f) connectivity of pedestrian and cyclist paths and spaces internal and external to the centre; and (g) sensitive transitioning to surrounding land and uses. **Editor's note–**Applicants may be requested to prepare a centre design master plan to demonstrate compliance with this performance outcome.	No acceptable outcome is nominated.
PO13 Building caps and rooftops create an attractive roofscape and screen plant and equipment.	No acceptable outcome is nominated.
PO14 Streetscape treatments are provided at the street frontage to create a visually cohesive precinct and enhance pedestrian amenity.	No acceptable outcome is nominated.

Table 6.3.2.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Crime prevention through environmental design	
PO15 Development facilitates the security of people and property having regard to: (a) opportunities for casual surveillance and sight lines; (b) exterior building design that promotes safety; (c) adequate lighting; (d) appropriate signage and wayfinding; (e) minimisation of entrapment locations; and (f) building entrances, loading and storage areas that are well lit and lockable after hours. **Editor's note—**Applicants should have regard to Crime Prevention through Environmental Design Guidelines for Queensland.	No acceptable outcome is nominated.

Table 6.3.2.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Accessibility	
PO16 Convenient and legible connections are provided for pedestrians and cyclists to the site, particularly having regard to linkages with existing and proposed public transport infrastructure, the open space network, centres and other community-related activities.	No acceptable outcome is nominated.

Table 6.3.2.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Amenity	
PO17 Development minimises impacts on surrounding land and provides for an appropriate level of amenity within the centre, having regard to: (a) noise; (b) hours of operation; (c) traffic; (d) visual impact; (e) signage; (f) odour and emissions; (g) lighting; (h) access to sunlight; (i) privacy; and (j) outlook.	No acceptable outcome is nominated.
PO18 Development is located, designed and operated so that adverse impacts on privacy and amenity on nearby land in a residential zone are minimised.	**AO18.1** Buildings are set back 3m from any boundary shared with a residential zone, or half the height of the part of the building, whichever is the greater.
	AO18.2.1 A 1.8m high solid screen fence is provided along all boundaries shared with a residential zone. AND **AO18.2.2** A landscaped buffer with a minimum width of 3m and consisting of dense screen planting is provided along all boundaries shared with a residential zone.
	AO18.3 Windows that have a direct view into an adjoining residential use are provided with fixed screening that is a maximum of 50% transparent to obscure views and maintain privacy for residents.

PO19 Refuse storage areas, loading/unloading and other service or storage areas are screened from view from the street and adjoining land.	**AO19** Refuse storage areas loading/unloading and other service or storage areas are located to the rear or side of a building and are screened from view by a 1.8m high solid fence.
PO20 On-site landscaping is provided to: (a) enhance the appearance of the development, particularly in parking and service areas and in public spaces; (b) contribute to pedestrian comfort through shade; and (c) screen servicing components.	No acceptable outcome is nominated.

Table 6.3.2.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Rising Sun local centre precinct	
PO21 Development is consistent with Figure 6.87 — Rising Sun local centre precinct concept plan, including an internal public space and parking area that is framed by buildings with an active edge.	No acceptable outcome is nominated.
PO22 Frontages shown on Figure 6.87 — Rising Sun local centre precinct concept plan as having active edges, contain: (a) primary building entrances; (b) awnings to provide shade for pedestrians; (c) significant use of glazing or transparent materials; and (d) uses which promote a high level of pedestrian movement and interaction.	No acceptable outcome is nominated.
PO23 Frontages shown on Figure 6.87 — Rising Sun local centre precinct concept plan as having built form edge are well-defined by a continuous building façade built to the street edge, awnings and significant use of glazing.	No acceptable outcome is nominated.

Figure 6.87 – Rising Sun local centre precinct concept plan

PO24 Development contributes to the boulevard treatment of Ross River Road and Bowen Road through landscaping and streetscape treatments along the road frontage in accordance with Figure 6.87 - Rising Sun local centre precinct concept plan.	No acceptable outcome is nominated.
PO25 Vehicular access to the site is constrained to one single point of entry from Ross River Road and Bowen Road in accordance with Figure 6.87 - Rising Sun local centre precinct concept plan.	No acceptable outcome is nominated.
PO26 Development at the intersection of Ross River Road and Bowen Road creates a landmark gateway to the Rising Sun Local Centre. Built form, landscape and streetscape treatment at this intersection reinforces a gateway statement in accordance with Figure 6.87 - Rising Sun local centre precinct concept plan.	No acceptable outcome is nominated.

PO27 Built form, landscape and streetscape treatment at the corner of Ross River Road and Bowen Road, creates a gateway to the Rising Sun local centre.	No acceptable outcome is nominated.

Table 6.3.2.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
North Ward local centre precinct	
PO28 Building height and scale is consistent with the character desired for the precinct and reinforces Gregory Street as the primary activity spine and gateway to The Strand.	**AO28** Building height does not exceed 8 storeys where fronting Gregory Street or 5 storeys otherwise.
PO29 Development primarily consists of retail, commercial and dining activities at ground level and residential or tourist accommodation above.	No acceptable outcome is nominated.
PO30 Development is consistent with Figure 6.88 — North Ward local centre precinct concept plan.	No acceptable outcome is nominated.
PO31 Development provides for an internal public space and parking area that is framed by buildings with an active edge within the block bounded by Gregory, Mitchell, Leichardt and Eyre Streets, in accordance with Figure 6.88 — North Ward local centre precinct concept plan.	No acceptable outcome is nominated.
PO32 Development at the intersection of Gregory Street and Eyre Street creates a landmark gateway to the North Ward local centre. Built form, landscape and streetscape treatment at this intersection reinforces a gateway statement.	No acceptable outcome is nominated.
PO33 Frontages shown on Figure 6.88 — North Ward local centre precinct concept plan as having active edges, contain: (a) primary building entrances; (b) awnings to provide shade for pedestrians; (c) significant use of glazing or transparent materials; and (d) uses which promote a high level of pedestrian movement and interaction.	No acceptable outcome is nominated.
PO34 Frontages shown on Figure 6.88 — North Ward local centre precinct concept plan as having a built form edge are well-defined by a continuous building facade built to the street edge, awnings and significant use of glazing.	No acceptable outcome is nominated.

Figure 6.88 – North Ward local centre precinct concept plan

PO35 Development contributes to the boulevard treatment of Eyre Street and the integration of the Gregory Street village environment through landscaping and streetscape treatments.	No acceptable outcome is nominated.

6.3.3 District centre zone code

6.3.3.1 Application

This code applies to development where the code is identified as applicable in the categories of development and assessment.

When using this code, reference should be made to section 5.3.2 and where applicable, section 5.3.3 located in Part 5.

6.3.3.2 Purpose

(1) The purpose of the District centre zone code is to provide for a mix of uses and activities. It includes a concentration of land uses including retail, commercial, residential, offices, administrative and health services, community, entertainment and recreational facilities capable of servicing a district.

(2) The particular purpose of the code is to provide for a network of centres that are readily accessible, integrated and well-designed, form vibrant focal points for the community, and provide a mix and range of services and facilities that are appropriate to their respective function and catchments. This promotes efficient provision of services and contributes to the quality of life, character and identity of communities.

(3) The purpose of the zone will be achieved through the following overall outcomes:

(a) district centres provide a community focus for weekly or fortnightly shopping trips and a range of services, and include Idalia, Deeragun, Rasmussen, Annandale and a future centre at Shaw. Retail functions are anchored by major supermarkets with a wide range of speciality shops; however, these centres operate as multifunctional community hubs. They contain a range of district level personal and community services such as community centres and health and fitness facilities;

Editor's note—the centre in Shaw is within the Emerging community zone. It is planned within the Greater Ascot area.

(b) centres do not compromise the intended role or successful functioning of higher order centres or other district centres. District centre catchments are in the order of 5,000 to 8,000 households. They do not contain discount department stores;

(c) the mix of uses promotes a vibrant centre which includes medium density residential development and active day and night-time uses;

(d) showrooms may occur within the district centres, but are generally located and designed so that they do not detract from the intended built form, pedestrian focus and accessibility of the district centres;

(e) district centres provide a major focal point for their catchment communities. The built form and layout of a centre creates a safe and pleasant community meeting place. Centres create pedestrian-focussed public spaces and street fronts, kerbside activities, awnings and landscape and streetscape treatments;

(f) buildings are generally low-medium rise and create a sensitive transition in scale from the surrounding neighbourhood;

(g) the design of district centres gives priority to improved accessibility to and within centres by walking, cycling and public transport;

(h) centres are designed and operated to minimise adverse impacts on the amenity of surrounding residential neighbourhoods; and

(i) opportunities for energy efficiency through built form are maximised.

(4) The purpose of the zone will also be achieved through the following additional overall outcomes for particular precincts:

Idalia district centre precinct:

(a) Idalia will develop to provide a focus for larger format showrooms for the southern parts of the city, and will complement, but not undermine the role of the Domain Central precinct on the northern side of Townsville. It will service a wider catchment than other district centres in this respect. Other retail functions of this centre do not expand substantively; and

(b) new floor space within the centre provides for a wider mix of non-retail uses including residential uses, community uses, commercial and medical offices and dining activities.

Click here to view high resolution PDF.

Figure 6.89 — Idalia district centre precinct

Annandale district centre precinct:

(a) no significant expansion of this centre for retail purposes occurs; and

(b) new floor space within the centre provides for a wider mix of non-retail uses including residential uses, community uses, commercial and medical offices and dining activities.

Click here to view high resolution PDF.

Figure 6.90 — Annandale district centre precinct

Deeragun district centre precinct:

(a) further outward expansion of the centre or the establishment of additional supermarkets does not occur;

(b) development assists in consolidating the centre, and facilitates improved integration and connectivity;

(c) showrooms servicing the district catchment may be accommodated; and

(d) new floor space within the centre provides for a wider mix of non-retail uses including residential uses, community uses, commercial and medical offices and dining activities.

Click here to view high resolution PDF.

Figure 6.91 — Deeragun district centre precinct

Rasmussen district centre precinct:

(a) further outward expansion of the centre does not occur;

(b) showrooms servicing the district catchment may be accommodated in the longer term; and

(c) new floor space within the centre provides for a wider mix of non-retail uses including residential uses, community uses, commercial and medical offices and dining activities.

6.3.3.3 Assessment benchmarks

Table 6.3.3.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
General	
PO1 Where provided, outdoor lighting does not adversely affect the amenity of adjoining properties or create a traffic hazard on adjacent roads.	**AO1.1** Light emanating from any source complies with *Australian Standard AS4282 Control of the Obtrusive Effects of Outdoor Lighting*.
	AO1.2 Outdoor lighting is provided in accordance with *Australian Standard AS 1158.1.1 – Road Lighting – Vehicular Traffic (Category V) Lighting – Performance and Installation Design Requirements*.
PO2 Residential uses within the centre do not interrupt the continuity of the streetscape or the active, pedestrian focus of the street frontage.	**AO2** Any residential uses are located above or behind ground storey retail, commercial or community uses.
PO3 Residential uses within the centre are provided with a reasonable level of privacy.	**AO3.1** Windows, balconies, and terraces of a dwelling unit are screened where overlooking a habitable room or private open space of another dwelling within 9m.
	AO3.2 Screening is a solid translucent screen or perforated panels or trellises which have a maximum of 50% openings.
PO4 Residential uses within the centre are provided with a reasonable level of private outdoor living space.	**AO4** Dwellings are provided with private open space or a balcony directly accessible from a habitable room with: (a) a minimum area of $9m^2$; (b) a minimum dimension of 3m; and (c) clear of any utilities such as gas, water tanks or air conditioning units.

For assessable development	
Role and function	
PO5 Development is consistent with the intended role, scale and character of the district centre and does not compromise the intended role or successful functioning of other district or higher order centres. The growth of floor space within centres is balanced with anticipated growth within their primary catchment and does not substantively impact on the trading of other centres for an extended period of time or unduly undermine the potential for another centre to expand into its intended role.	No acceptable outcome is nominated. **Editor's note—**Applicants should have regard to Economic impact assessment planning scheme policy no. SC6.5 for guidance on how to demonstrate compliance with this performance outcome.
PO6 Development facilitates a range of uses that contributes to the vibrancy of the centre and provides for a compatible mix of active day and night-time uses.	No acceptable outcome is nominated.
PO7 Development facilitates opportunities for appropriate co-location of residential uses and community-related activities or facilities within the centre, to the extent practical.	No acceptable outcome is nominated.

Table 6.3.3.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Centre design and built form	
PO8 The design of the centre provides for: (a) a coherent and integrated built form, public realm and circulation networks; (b) central, accessible and attractive public spaces for people to congregate and interact; (c) continuity of streetscape and landscape characteristics; (d) pedestrian-friendly and visually interesting frontages to streets and public spaces; (e) optimum energy efficiency; (f) a well-integrated mix of uses; (g) connectivity of pedestrian and cyclist paths and spaces internal and external to the centre; and (h) sensitive transitioning to surrounding land and uses. **Editor's note–**Applicants may be requested to prepare a centre design master plan to demonstrate compliance with this performance outcome.	No acceptable outcome is nominated.

PO9 Buildings are low-rise and are designed to break down the facade into finer scaled components, avoiding large expanses of blank walls.	**AO9.1** Building height does not exceed 3 storeys.
	AO9.2.1 Buildings provide for tenancies fronting the street frontage which have a maximum width of 10m. or **AO9.2.2** Where showrooms are proposed, the maximum length of any unarticulated wall is 15m, without a change in plane of at least 0.75m.
PO10 A strong sense of enclosure and definition of pedestrian space is created along street frontages, with buildings designed to provide visual interest, foster social interaction and create a safe and pleasant pedestrian-focussed environment.	**AO10.1** Buildings are built to the street frontage and provide an awning over the full width of the footpath.
	AO10.2 Parking is provided to the side or the rear of buildings or below ground level, and is not located along the street frontage.
	AO10.3 Entrances to buildings face the street and any public space to which the building has frontage.
	AO10.4 Where buildings are located on a corner site, the main entrance faces the principal street or the corner.
	AO10.5 At the ground storey, a minimum of 65% of building frontage is provided as predominantly transparent windows or glazed doors and a maximum of 35% as solid facade.
PO11 Streetscape treatments and street trees are provided along the street frontage to create a visually cohesive precinct and enhance pedestrian amenity.	No acceptable outcome is nominated.
PO12 Building caps and rooftops create an attractive roofscape and screen plant and equipment.	No acceptable outcome is nominated.
PO13 Buildings housing residential uses within the centre do not interrupt the continuity of the streetscape or the active, pedestrian focus of the street frontage.	**AO13** Any residential uses are located above or behind ground storey retail, commercial or community uses.
PO14 Built form maximises use of natural ventilation, solar heating/cooling and water conservation through building orientation and design, landscaping, building materials and on-site infrastructure.	No acceptable outcome is nominated.

Table 6.3.3.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Crime prevention through environmental design	
PO15 Development facilitates the security of people and property having regard to: (a) opportunities for casual surveillance and sight lines; (b) exterior building design that promotes safety; (c) adequate lighting; (d) appropriate signage and wayfinding; (e) minimisation of entrapment locations; and (f) building entrances, loading and storage areas that are well lit and lockable after hours. **Editor's note—**Applicants should have regard to Crime Prevention through Environmental Design Guidelines for Queensland.	No acceptable outcome is nominated.

Table 6.3.3.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Accessibility	
PO16 Convenient and legible connections are provided for pedestrians and cyclists to the site, particularly having regard to linkages with existing and proposed public transport infrastructure, the open space network, centres and other community-related activities.	No acceptable outcome is nominated.

Table 6.3.3.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Amenity	
PO17 Development minimises impacts on surrounding land and provides for an appropriate level of amenity within the centre, having regard to: (a) noise; (b) hours of operation; (c) traffic; (d) visual impact; (e) signage; (f) odour and emissions; (g) lighting; (h) access to sunlight; (i) privacy; and (j) outlook.	No acceptable outcome is nominated.
PO18 Development is located, designed and operated so that adverse impacts on privacy and amenity on nearby land in a residential zone are minimised.	**AO18.1** Buildings are set back 3m from any boundary shared with a residential zone, or half the height of the part of the building, whichever is the greater.
	AO18.2.1 A 1.8m high solid screen fence is provided along all boundaries shared with a residential zone. AND **AO18.2.2** A landscaped buffer with a minimum width of 3m and consisting of dense screen planting is provided along all boundaries shared with a residential zone.
	AO18.3 Windows that have a direct view into an adjoining residential use are provided with fixed screening that is a maximum of 50% transparent to obscure views and maintain privacy for residents.
PO19 Refuse storage areas, loading/unloading and other service or storage areas are screened from view from the street and adjoining land.	**AO19** Refuse storage areas loading/unloading and other service or storage areas are located to the rear or side of a building and are screened from view by a 1.8m high solid fence.
PO20 On-site landscaping is provided to: (a) enhance the appearance of the development, particularly in parking and service areas and in public spaces; (b) contribute to pedestrian comfort through shade; and (c) screen servicing components.	No acceptable outcome is nominated.

Table 6.3.3.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Community uses, community care centres, clubs	
PO21 Adequate lockable storage space is provided on-site to meet the needs of users.	**AO21** At least one (1) lockable storage space of at least 4m^2 is provided for each room or area that can be hired out or used by community organisations or the public.

Table 6.3.3.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Showrooms	
PO22 Showrooms are designed and located as an integrated part of the centre, having regard to the continuity of built form and streetscapes, active street frontages and pedestrian and cyclist accessibility and circulation.	No acceptable outcome is nominated.

Table 6.3.3.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note-**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Deeragun district centre precinct	
PO23 Development in the Deeragun district centre precinct contributes to the consolidation and integration of the centre.	No acceptable outcome is nominated.

6.3.4 Major centre zone code

6.3.4.1 Application

This code applies to development where the code is identified as applicable in the categories of development and assessment.

When using this code, reference should be made to section 5.3.2 and where applicable, section 5.3.3 located in Part 5.

6.3.4.2 Purpose

(1) The purpose of the Major centre zone code is to provide for a mix of uses and activities. It includes concentrations of higher order retail, commercial, offices, residential, administrative and health services, community, cultural and entertainment facilities and other uses capable of servicing a sub-region in the planning scheme area.

(2) The particular purpose of the code is to provide for a network of centres that are readily accessible, integrated and well-designed, form vibrant focal points for the community, and provide a mix and range of services and facilities that are appropriate to their respective function and catchments. This promotes efficient provision of services and contributes to the quality of life, character and identity of communities.

(3) The purpose of the zone will be achieved through the following overall outcomes:

(a) Hyde Park, Aitkenvale, Thuringowa Central and the future Julago and Burdell major centres act as the most significant centres for the Townsville community after the principal centre (CBD). They service sub-regional catchments and do not compromise the intended role or successful functioning of other major centres or the CBD;

Editor's note—The Julago and Burdell areas are included in the Emerging community zone. The future major centre at Burdell is planned within the North Shore area.

(b) these centres operate as major multifunctional community hubs. They contain the highest order of community, retail and office based functions after the principal centre (CBD), including sub-regional level services such as theatres, major libraries and community centres and health and educational facilities. However, they do not contain any additional department stores;

(c) major centres evolve as vibrant mixed use places where people live, work and play in a high density environment which is active both during the day and night-time and includes residential uses;

(d) major centres are highly accessible by walking and cycling from surrounding medium density residential areas;

(e) major centres become a hub for major public transport routes providing frequent services to other parts of the city, and development facilitates convenient access to public transport facilities as a priority;

(f) showrooms occur within the major centres, but are generally located and designed so that they do not detract from the intended built form, pedestrian focus and accessibility;

(g) centre design and built form creates a walkable and legible pedestrian-focussed environment, with a range of connected, safe and pleasant public spaces forming community focal points. Public spaces and primary pedestrian circulation streets are activated by shop fronts, awnings and kerbside activities;

(h) the height and scale of buildings reinforce the character, legibility and accessibility of the centre. Centres predominantly contain medium-rise buildings. However, a human scale and attractive, pedestrian friendly environment is created at street level;

(i) centres are designed to create a desirable interface with surrounding neighbourhoods, providing for attractive streetscapes and transitioning of building form and scale and minimising potential land use conflicts; and

(j) opportunities for energy efficiency through built form are maximised.

(4) The purpose of the zone will also be achieved through the following additional overall outcomes for particular precincts and sub-precincts:

Aitkenvale major centre precinct:

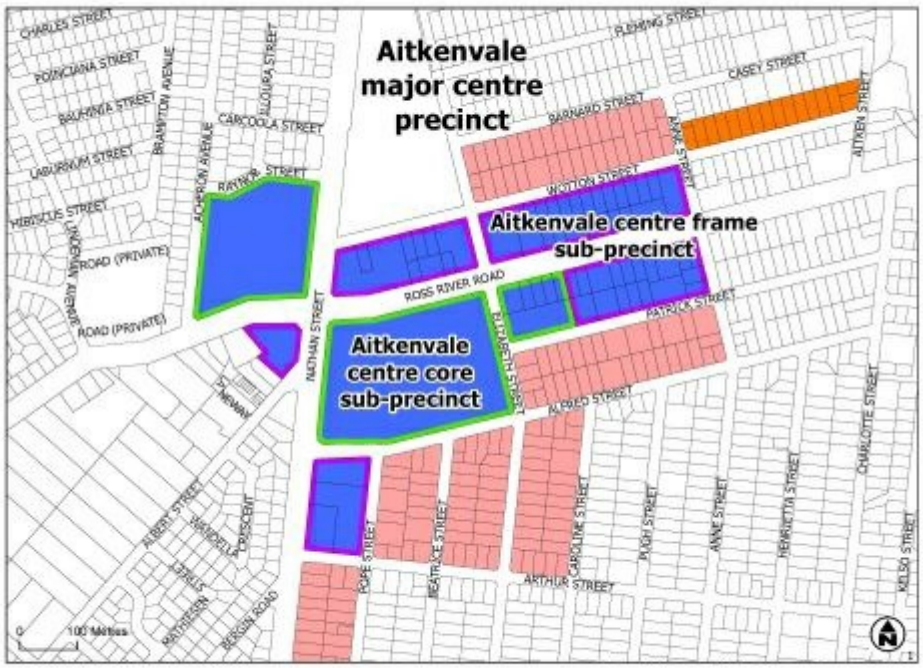
(a) The Aitkenvale major centre builds on existing uses and underutilised land to become a diverse major activity centre;

(b) Aitkenvale leverages its location on the transport corridor to the principal centre (CBD) and James Cook University and Townsville Hospital;

(c) the existing department store at Aitkenvale is not significantly expanded and no additional department store is established;

(d) housing includes student and visitor accommodation to reinforce links with the James Cook University and Townsville Hospital; and

(e) Ross River Road and Nathan Street become tropical boulevards providing a sense of arrival at the centre and strong landscape amenity. This is achieved through street tree planting, stronger definition of road edges by buildings fronting the street and screening of parking areas.



Click here to view high resolution PDF.

Figure 6.93 – Aitkenvale major centre precinct

Aitkenvale centre core sub-precinct:

(i) the Aitkenvale centre core encompasses the retail focus of the centre;

(ii) the mix of uses within this sub-precinct is diversified as part of future redevelopment to include additional uses including shopping, office, higher density residential uses, community facilities and dining and entertainment uses;

(iii) residential and office uses are accommodated in mixed use developments, with shopping or entertainment uses at the ground storey;

(iv) a new town square is accommodated within the south-east corner of the sub-precinct. This space is sleeved by medium-rise built form fronting Alfred and Elizabeth Streets;

(v) Elizabeth Street is the focus for the creation of an active main street environment;

(vi) frontages to Nathan Street and Ross River Road are treated with a responsive built form that avoids unarticulated or 'back of house' design responses;

(vii) linkages between the Aitkenvale centre core sub-precinct (north and south sides of Ross River Road), the Aitkenvale centre frame sub-precinct and the surrounding Medium density residential zone are improved through the strengthening of primary pedestrian linkages along Nathan and Elizabeth Streets; and

(viii) streetscaping along Nathan and Elizabeth Street frontages also occurs to improve the interface between the site and the street whilst also improving the pedestrian streetscape environment and experience.

Aitkenvale centre frame sub-precinct:

(i) the centre frame sub-precinct complements the retail core with a mix of uses including additional shopping, offices, community and residential uses that reinforce the centre's role as a mixed use activity centre;

(ii) residential components are accommodated in mixed use developments, with retail or commercial uses at the ground storey; and

(iii) buildings have a strong relationship with their street frontage by contributing to streetscape improvements, passive surveillance, and creation of an identifiable major centre.

Thuringowa Central major centre precinct:

(a) development in the Thuringowa Central major centre continues to grow and diversify the range of activities within the centre. However, a department store is not established within this centre;

(b) higher density housing includes student and visitor accommodation to reinforce economic links with the James Cook University and Townsville Hospital;

(c) the centre is focussed on a new main street and town square along High Range Drive, which provides a strong connector between Riverway and the Willows sub-precinct;

(d) further outward expansion of the centre does not occur, with all new development contributing to the increasing consolidation of the centre and the clear definition of its edges;

(e) new development facilitates improved permeability within the centre for pedestrians and cyclists, provides for safer and shadier pedestrian routes and promotes access to public transport facilities;

(f) a bus interchange forms a focal point within the centre that is well-connected to the Thuringowa town centre heart sub-precinct, the Willows sub-precinct and the surrounding neighbourhoods;

(g) built form is highest and most intensive in the Thuringowa town centre heart sub-precinct, decreasing to the centre edges;

(h) visual and physical connections to Pioneer Park and Riverway are maximised wherever possible; and

(i) Thuringowa Drive, Riverway Drive and Hervey Range Road become tropical boulevards providing a sense of arrival at the centre and strong landscape amenity. This is achieved through street tree planting, stronger definition of road edges by buildings fronting the street and screening of parking areas.

Click here to view high resolution PDF.

Figure 6.94 – Thuringowa Central major centre precinct

Thuringowa town centre heart sub-precinct:

(i) a new main street and town square for Thuringowa Central are created along High Range and Pioneer Drive, and provides a community heart and a strong connection between Riverway and the Willows sub-precinct;

(ii) the sub-precinct contains a concentrated mix of uses, including shopping, office, higher density residential uses, community facilities and dining and entertainment uses. Residential and office uses are accommodated in mixed use developments, with shopping or entertainment uses at the ground storey;

(iii) the sub-precinct contains the highest and most concentrated built form within Thuringowa Central, with the most intensive built form along Riverway Drive and the main street sections of High Range and Pioneer Drives;

(iv) buildings along High Range and Pioneer Drive create a strong relationship with the street frontage and facilitate a highly activated environment, accommodating day and night-time activities, shop fronts, outdoor dining and other opportunities for community interaction;

(v) development creates a strong relationship with Hervey Range Road, Riverway Drive and Blackhawk Boulevard, by sleeving the sub-precinct with buildings that are oriented to the street and screen parking areas behind;

(vi) pedestrian spaces and pathways are provided with extensive shading;

(vii) parking is consolidated wherever practicable and is screened and separated from the street by buildings;

(viii) pedestrian and cyclist linkages are improved to the residential neighbourhood to the south and to the centre sub-precincts to the west and north. Additional and safe pedestrian crossings are provided across Hervey Range Road to the Willows sub-precinct; and

(ix) development minimises impacts on the amenity of adjoining residential land to the south of the sub-precinct.

Willows sub-precinct:

(i) this sub-precinct is the primary shopping destination for Thuringowa Central but may also contain a mix of other office, higher density residential uses, community facilities and dining and entertainment uses;

(ii) an improved relationship between built form and Thuringowa Drive, Hervey Range Road and Kern Brothers Drive is created by sleeving the sub-precinct with buildings oriented to the street and screening parking areas;

(iii) built form assists in reducing the internalised orientation of the shopping centre, creating a sense of external activity and reducing the visual dominance of the parking areas;

(iv) development facilitates pedestrian connections with the Thuringowa town centre heart sub-precinct and the surrounding residential neighbourhood; and

(v) development along Kern Brothers Drive and Carthew Street provides an attractive interface and minimises impacts on the amenity of nearby residential land.

Thuringowa Drive sub-precinct:

(i) a mix of office, shops, service industries and residential uses occur within this sub-precinct;

(ii) the corner of Thuringowa Drive and Hinchinbrook Drive creates a gateway to Thuringowa Central. Built form at this corner reinforces this gateway function;

(iii) development facilitates a more continuous building line along Thuringowa Drive, by providing a strong building edge along the street front and locating parking areas to the side or rear of buildings; and

(iv) access points and parking are consolidated wherever practicable.

Thuringowa centre support sub-precinct:

(i) larger format showroom uses, service industries and some low impact industries are accommodated in this sub-precinct. The sub-precinct may also contain office uses and community facilities, but does not contain shopping uses other than those of a convenience nature;

(ii) buildings are oriented to the street frontages, and streetscape is improved through the quality of the adjoining built form and landscaping;

(iii) built form is generally lower rise and less intensive than in the rest of the Thuringowa Central major centre;

(iv) convenient pedestrian connections are created to the Thuringowa town centre heart sub-precinct; and

(v) development along the edges of this sub-precinct provides an attractive interface and minimises impacts on the amenity of nearby residential land.

Hyde Park major centre precinct:

(a) the Hyde Park major centre contains an increasing diversity of business activities and community services. However, a department store is not located within this centre, and no significant expansion of showroom based floor space is intended;

(b) residential and office uses are accommodated in mixed use developments, with shopping or entertainment uses at the ground storey;

(c) development facilitates improved integration with surrounding residential and activity areas, including the showgrounds. Wherever possible, the interface with the lake is enhanced and opportunities for recreational use improved;

(d) Virgil and Dillane Streets are established as primary linkages to new infill residential development within the Hyde Park medium density precinct. Virgil Street becomes the major east-west pedestrian thoroughfare for the locality;

(e) development provides for appropriate immunity to flooding and drainage characteristics; and

(f) development facilitates improved public transport, pedestrian and cyclist connectivity to the principal centre (CBD), particularly along Woolcock Street.

Figure 6.95 – Hyde Park major centre precinct

6.3.4.3 Assessment benchmarks

Table 6.3.4.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
PO1 Where provided, outdoor lighting does not adversely affect the amenity of adjoining properties or create a traffic hazard on adjacent roads.	**AO1.1** Light emanating from any source complies with *Australian Standard AS4282 Control of the Obtrusive Effects of Outdoor Lighting*.
	AO1.2 Outdoor lighting is provided in accordance with *Australian Standard AS 1158.1.1 –Road Lighting – Vehicular Traffic (Category V) Lighting – Performance and Installation Design Requirements*.
PO2 Residential uses within the centre do not interrupt the continuity of the streetscape or the active, pedestrian focus of the street frontage.	**AO2** Any residential uses are located above or behind ground storey retail, commercial or community uses.
PO3 Residential uses within the centre are provided with a reasonable level of privacy.	**AO3.1** Windows, balconies, and terraces of a dwelling unit are screened where overlooking a habitable room or private open space of another dwelling within 9m.
	AO3.2 Screening is a solid translucent screen or perforated panels or trellises which have a maximum of 50% openings.
PO4 Residential uses within the centre are provided with a reasonable level of private outdoor living space.	**AO4** Dwellings are provided with private open space or a balcony directly accessible from a habitable room with: (a) a minimum area of 9m^2; and (b) a minimum dimension of 3m; and (c) clear of any utilities such as gas, water tanks or air conditioning units.

Table 6.3.4.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Role and function	
PO5 Development is consistent with the intended role, scale and character of the major centre and does not compromise the intended role or successful functioning of the principal centre (CBD) or other major centres. The growth of floor space within centres is balanced with anticipated growth within their primary catchment and does not substantively impact on the trading of other centres for an extended period of time or unduly undermine the potential for another centre to expand into its intended role.	No acceptable outcome is nominated. **Editor's note—**Applicants should have regard to Economic impact assessment planning scheme policy SC6.5 for guidance on how to demonstrate compliance with this performance outcome.

PO6 Development facilitates a range of uses that contributes to the vibrancy of the centre and provides for a compatible mix of active day and night-time uses.	No acceptable outcome is nominated.
PO7 Development facilitates opportunities for appropriate co-location of residential uses and community-related activities or facilities with retail or commercial development within the centre, to the extent practical.	No acceptable outcome is nominated.

Table 6.3.4.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	**Acceptable outcomes**
For assessable development	
Centre design and built form	
PO8 The design of the centre provides for: (a) a coherent and integrated built form, public realm and circulation networks; (b) central, accessible and attractive public spaces for people to congregate and interact; (c) continuity of streetscape and landscape characteristics; (d) pedestrian friendly and visually interesting frontages to streets and public spaces; (e) optimum energy efficiency; (f) a well-integrated mix of uses; (g) connectivity of pedestrian and cyclist paths and spaces internal and external to the centre; and (h) sensitive transitioning to surrounding land and uses. **Editor's note–**Applicants may be requested to prepare a centre design master plan to demonstrate compliance with this performance outcome.	No acceptable outcome is nominated.
PO9 Buildings create a human scale at street level.	No acceptable outcome is nominated.
PO10 A strong sense of enclosure and definition of pedestrian space is created along street frontages, with buildings designed to provide visual interest, foster social interaction and create a safe and pleasant pedestrian-focussed environment.	No acceptable outcome is nominated.
PO11 Streetscape treatments and street trees are provided along the street frontage to create a visually cohesive precinct and enhance pedestrian amenity.	No acceptable outcome is nominated.
PO12 Parking areas are not located along the street frontage.	No acceptable outcome is nominated.
PO13 Building caps and rooftops create an attractive roofscape and screen plant and equipment.	No acceptable outcome is nominated.

PO14 Built form maximises use of natural ventilation, solar heating/cooling and water conservation through building orientation and design, landscaping, building materials and on-site infrastructure.	No acceptable outcome is nominated.

Table 6.3.4.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Crime prevention through environmental design	
PO15 Development facilitates the security of people and property having regard to: (a) opportunities for casual surveillance and sight lines; (b) exterior building design that promotes safety; (c) adequate lighting; (d) appropriate signage and wayfinding; (e) minimisation of entrapment locations; and (f) building entrances, loading and storage areas that are well lit and lockable after hours. **Editor's note—**Applicants should have regard to Crime Prevention through Environmental Design Guidelines for Queensland.	No acceptable outcome is nominated.

Table 6.3.4.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Accessibility	
PO16 Convenient and legible connections are provided for pedestrians and cyclists to the site, particularly having regard to linkages with existing and proposed public transport infrastructure, the open space network, centres and other community-related activities.	No acceptable outcome is nominated.

Table 6.3.4.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Amenity	
PO17 Development minimises impacts on surrounding land and provides for an appropriate level of amenity within the centre, having regard to: (a) noise; (b) hours of operation; (c) traffic; (d) visual impact; (e) signage; (f) odour and emissions; (g) lighting; (h) access to sunlight; (i) privacy; and (j) outlook.	No acceptable outcome is nominated.
PO18 Refuse storage areas, loading/unloading and other service or storage areas are screened from view from the street and adjoining land.	**AO18** Refuse storage areas loading/unloading or other service or storage areas are located to the rear or side of a building and are screened from view by a 1.8m high solid fence.
PO19 Development is located, designed and operated so that adverse impacts on privacy and amenity on nearby land in a residential zone are minimised.	**AO19.1** Buildings are set back 4m from any boundary shared with a residential zone.
	AO19.2.1 A 1.8m high solid screen fence is provided along all boundaries shared with a residential zone. AND **AO19.2.2** A landscaped buffer with a minimum width of 3m and consisting of dense screen planting is provided along all boundaries shared with a residential zone.
	AO19.3 Windows that have a direct view into an adjoining residential use are provided with fixed screening that is a maximum of 50% transparent to obscure views and maintain privacy for residents.
PO20 On-site landscaping is provided to: (a) enhance the appearance of the development, particularly in parking and service areas and in public spaces; (b) contribute to pedestrian comfort through shade; and (c) screen servicing components.	No acceptable outcome is nominated.

Table 6.3.4.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Community uses, community care centres, clubs	
PO21 Adequate lockable storage space is provided on-site to meet the needs of users.	**AO21** At least one (1) lockable storage space of at least 4m^2 is provided for each room or area that can be hired out or used by community organisations or the public.

Table 6.3.4.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Showrooms	
PO22 Showrooms are designed and located as an integrated part of the centre, having regard to the continuity of built form and streetscapes, active street frontages and pedestrian and cyclist accessibility and circulation.	No acceptable outcome is nominated.

Table 6.3.4.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in Aitkenvale major centre sub-precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Aitkenvale centre core sub-precinct	
PO23 Development facilitates a town square sleeved by medium-rise mixed use built form at the corner of Elizabeth and Alfred Streets, in accordance with Figure 6.96 — Aitkenvale major centre precinct concept plan.	No acceptable outcome is nominated.
PO24 Development assists in creating a main street environment along Elizabeth Street by facilitating an active edge incorporating externally oriented shops, dining and entertainment uses at the ground storey. Buildings contribute to the creation of this active edge by incorporating features such as: (a) primary building entrances; (b) awnings to provide shade for pedestrians; and (c) significant use of glazing or transparent materials.	No acceptable outcome is nominated.

PO25 On frontages shown on Figure 6.96 — Aitkenvale major centre precinct concept plan as having a strong built form edge, buildings contribute to the creation of a strong and pedestrian-oriented edge to the street, by: (a) being built to the street frontage at the ground storey; (b) creating a generally continuous building alignment; (c) providing awnings over the full width of footpaths; and (d) having facades which contain windows, doors, materials and features which generate visual interest at the street level.	No acceptable outcome is nominated.
PO26 The visual dominance of the parking areas is reduced by buildings sleeving road frontages and by landscape screening.	No acceptable outcome is nominated.
PO27 Pedestrian connections between the centre core north and centre core south are improved wherever possible.	No acceptable outcome is nominated.
PO28 Development provides for pedestrian and cyclist connections to the Rossiter Park precinct and to surrounding areas.	No acceptable outcome is nominated.
PO29 Pedestrian routes are defined by buildings streetscape improvements that provide shade and improve pedestrian comfort.	No acceptable outcome is nominated.
PO30 Building height assists in identifying the centre core as the primary focus of activity within the centre and as a mixed use environment.	**AO30** Building height does not exceed: (a) 8 storeys where as part of a mixed use development and located in accordance with Figure 6.96 - Aitkenvale major centre precinct concept plan; and (b) 5 storeys otherwise.

Figure 6.96 – Aitkenvale major centre precinct concept plan

PO31 Development contributes to the boulevard treatment of Nathan Street and Ross River Road through streetscape and landscape treatments.	No acceptable outcome is nominated.
PO32 Development provides sufficient land and infrastructure to support a new bus interchange along Elizabeth Street.	No acceptable outcome is nominated.

Table 6.3.4.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	**Acceptable outcomes**
Additional benchmarks for assessable development in Aitkenvale major centre sub-precincts **Note—**where acceptable outcomes in this section vary from those provided earlier in this code, the precinct- based acceptable outcomes take precedence.	
Aitkenvale centre frame sub-precinct	
PO33 On frontages shown on Figure 6.96 — Aitkenvale major centre precinct concept plan as having a strong built form edge, buildings contribute to the creation of a strong and pedestrian-oriented edge to the street, by: (a) being built to the street frontage at the ground storey; (b) creating a generally continuous building alignment; (c) providing awnings over the full width of footpaths; and (d) having facades which contain windows, doors, materials and features which generate visual interest at the street level.	No acceptable outcome is nominated.

Figure 6.96 – Aitkenvale major centre precinct concept plan

PO34 Development provides for pedestrian and cyclist connections to surrounding areas wherever practicable.	No acceptable outcome is nominated.
PO35 Development contributes to the boulevard treatment of Nathan Street and Ross River Road through streetscape and landscape treatments.	No acceptable outcome is nominated.
PO36 Parking is provided in consolidated areas wherever practicable.	No acceptable outcome is nominated.
PO37 Parking areas are sleeved by buildings which screen them from street frontages.	No acceptable outcome is nominated.
PO38 Building height creates a medium-rise environment and assists in identifying the centre core as the primary focus of activity within the centre and as a mixed use environment.	**AO38** Building height does not exceed 5 storeys.

Table 6.3.4.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	**Acceptable outcomes**
Additional benchmarks for assessable development in Thuringowa Central major centre sub-precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Thuringowa town centre heart sub-precinct	
PO39 Development facilitates or supports a mix of uses and day and night-time activity throughout the sub-precinct.	No acceptable outcome is nominated.
PO40 Shops, dining and entertainment uses are predominant at the ground storey along the main street section of High Range Drive and Pioneer Drive, identified on Figure 6.97 — Thuringowa town centre heart sub-precinct concept plan.	No acceptable outcome is nominated.
PO41 Residential and office uses are accommodated but do not interrupt ground storey activation by shopping and dining uses along the main street section of High Range Drive and Pioneer Drive, identified on Figure 6.97 — Thuringowa town centre heart sub-precinct concept plan.	No acceptable outcome is nominated.
PO42 Development facilitates a town square at the corner of High Range and Pioneer Drive.	No acceptable outcome is nominated.

PO43 On frontages shown on Figure 6.97 — Thuringowa town centre heart sub-precinct concept plan as having a strong built form edge, buildings contribute to the creation of a strong and pedestrian oriented edge to the street, by: (a) being built to the street frontage at the ground storey; (b) creating a generally continuous building alignment; (c) providing awnings over the footpaths; and (d) having facades which contain windows, doors, materials and features which generate visual interest at the street level.	No acceptable outcome is nominated.
PO44 Building height reinforces the sub-precinct's role as the heart of Thuringowa Central, and is generally medium-rise. The tallest buildings in the sub-precinct occur along Riverway Drive and the main street section of High Range and Pioneer Drives.	**AO44** Building height does not exceed: (a) 8 storeys fronting Riverway Drive and the main street section of High Range and Pioneer Drives, consistent with Figure 6.97 — Thuringowa town centre heart sub-precinct concept plan; and (b) 5 storeys otherwise.
PO45 Parking is provided in consolidated areas wherever practicable.	No acceptable outcome is nominated.
PO46 Parking areas are sleeved by buildings which screen them from street frontages.	No acceptable outcome is nominated.
PO47 Development provides for pedestrian and cyclist connections from Riverway and Pioneer Park to the Willows sub-precinct and to surrounding areas in accordance with Figure 6.97 — Thuringowa town centre heart sub-precinct concept plan.	No acceptable outcome is nominated.

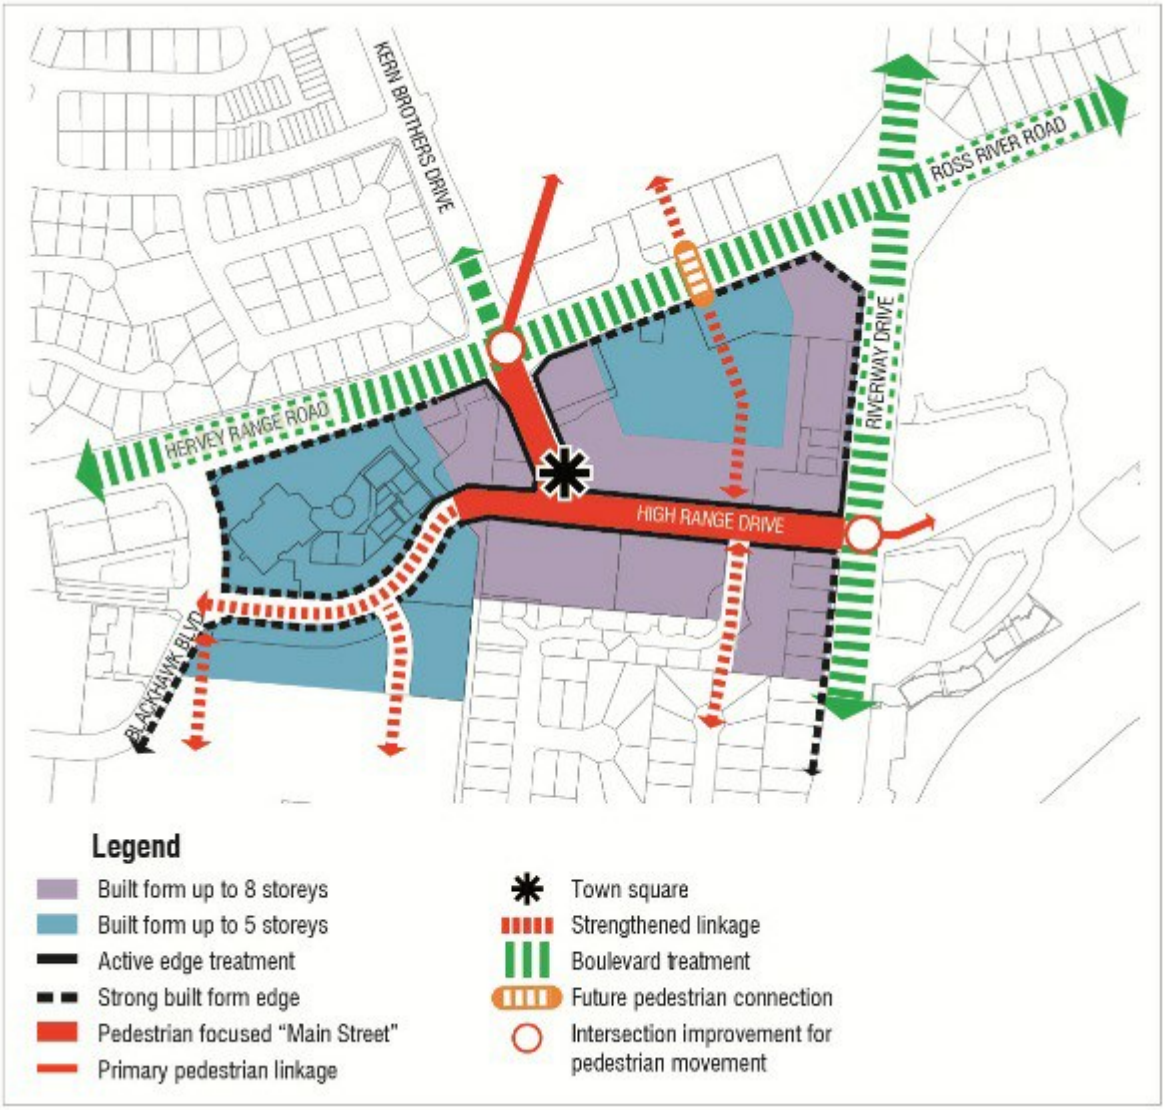

Figure 6.97 – Thuringowa town centre heart sub-precinct concept plan

PO48 Development contributes to the boulevard treatment of Riverway Drive and Hervey Range Road through streetscape and landscape treatments as identified on Figure 6.97 — Thuringowa town centre heart sub-precinct concept plan.	No acceptable outcome is nominated.

Table 6.3.4.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in Thuringowa Central major centre sub-precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Willows sub-precinct	
PO49 Development assists in creating strong edges at the street by buildings that are oriented to the street frontages, identified on Figure 6.98 — Willows sub-precinct concept plan.	No acceptable outcome is nominated.

PO50 Development assists in reducing the internalised orientation of the shopping centre by facilitating externally oriented uses.	No acceptable outcome is nominated.
PO51 The visual dominance of the parking areas are reduced by buildings sleeving road frontages and by landscape screening.	No acceptable outcome is nominated.
PO52 Built form generates visual interest at the street level, having regard to the proportion of openings, windows, materials and features. Large expanses of blank walls are avoided.	No acceptable outcome is nominated.
PO53 Parking is provided in consolidated areas wherever practicable.	No acceptable outcome is nominated.
PO54 Visual connections to Pioneer Park and Riverway are maximised wherever possible.	No acceptable outcome is nominated.
PO55 Development provides for pedestrian and cyclist connections to the Town centre heart sub-precinct, Riverway and Pioneer Park and to surrounding areas in accordance with Figure 6.98 — Willows sub-precinct concept plan.	No acceptable outcome is nominated.

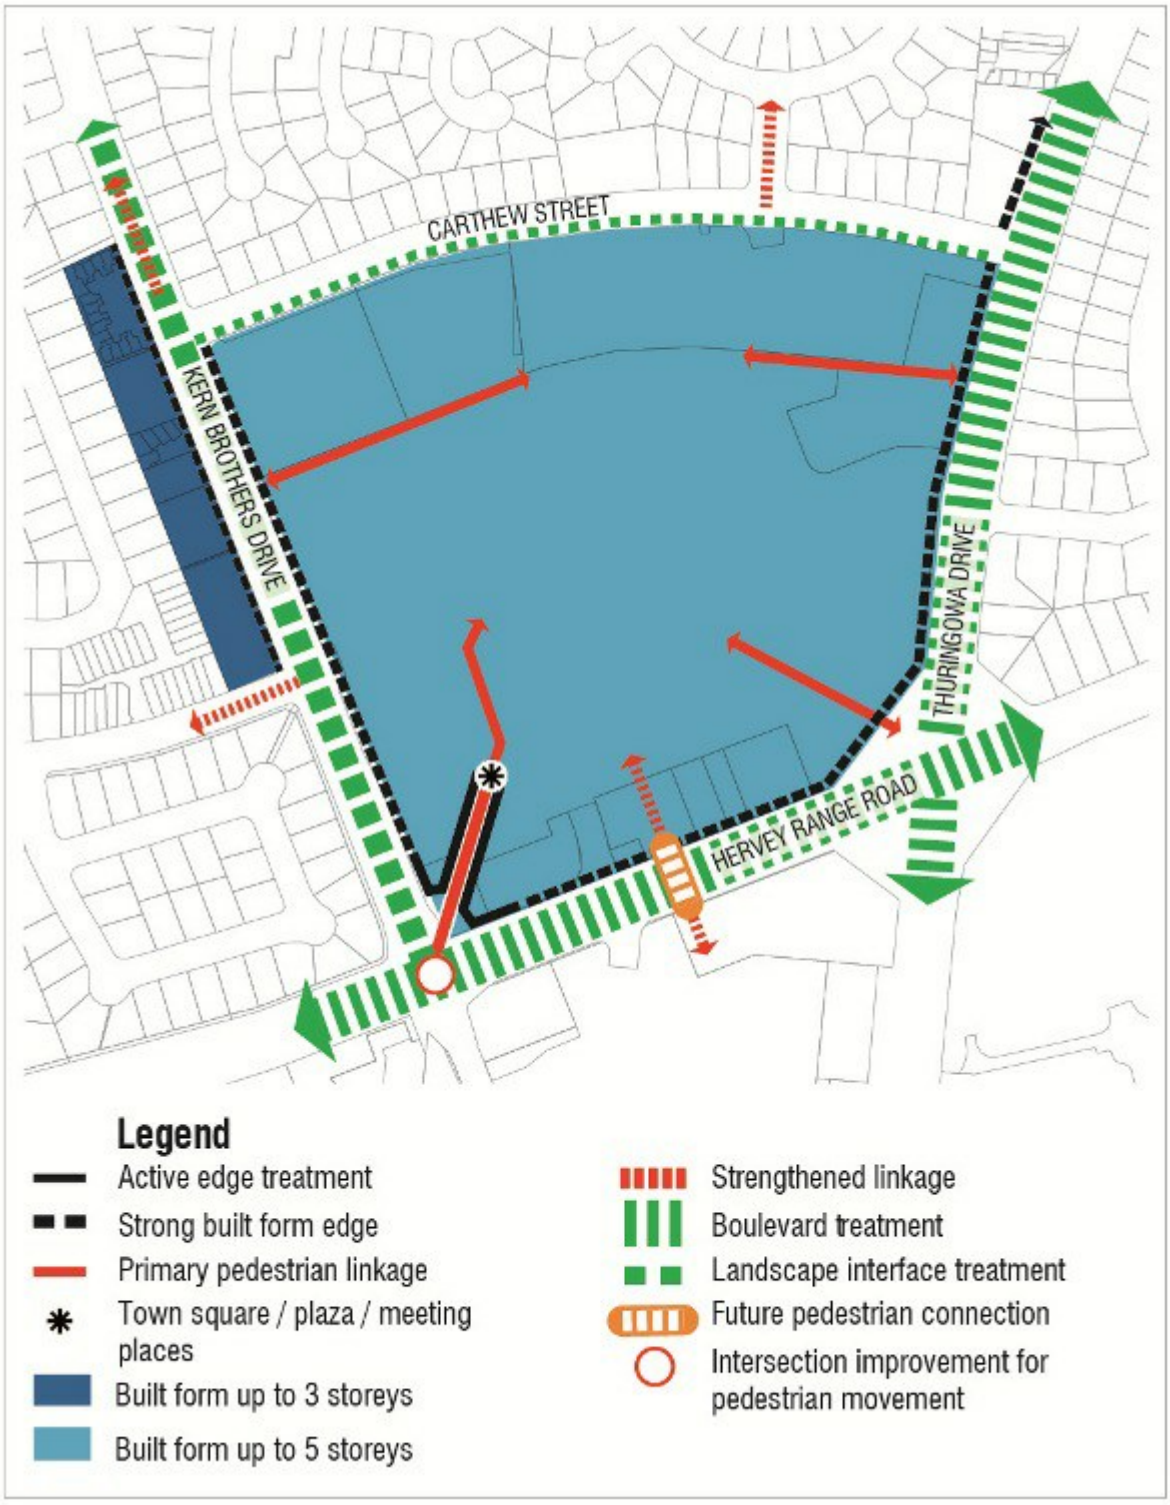

Figure 6.98 – Willows sub-precinct concept plan

PO56 The main pedestrian route connecting to the Town centre heart sub-precinct is defined by buildings and uses creating an active edge.	No acceptable outcome is nominated.
PO57 Building height is generally medium rise, but provides for a transition in building heights to the surrounding neighbourhood.	**AO57** Building height does not exceed 5 storeys within the block bounded by Thuringowa Drive, Hervey Range Road Kern Brothers Drive and Carthew Street, and 3 storeys otherwise, as identified on Figure 6.98 – Willows sub-precinct concept plan.
PO58 Landscaping and streetscape treatments are provided along Kern Brothers Drive and Carthew Street to enhance the outlook from the surrounding neighbourhood.	No acceptable outcome is nominated.
PO59 Development contributes to the boulevard treatment of Riverway Drive and Hervey Range Road through streetscape and landscape treatments.	No acceptable outcome is nominated.

Table 6.3.4.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	**Acceptable outcomes**
Additional benchmarks for assessable development in Thuringowa Central major centre sub-precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Thuringowa Drive sub-precinct	
PO60 Strong edges at the street are created by buildings that are oriented to the street frontages and forming a continuous building line, as identified on Figure 6.99 – Thuringowa sub-precinct concept plan.	No acceptable outcome is nominated.
PO61 Built form generates visual interest at the street level, having regard to the proportion of openings windows, materials and features. Large expanses of blank walls are avoided.	No acceptable outcome is nominated.
PO62 Parking is provided in consolidated areas wherever practicable.	No acceptable outcome is nominated.
PO63 Building height is generally low-rise.	**AO63** Building height does not exceed 3 storeys.
PO64 As identified on Figure 6.99 –Thuringowa sub-precinct concept plan, the corner of Thuringowa Drive and Hinchinbrook Drive creates a gateway to Thuringowa Central. Built form, landscape and streetscape treatment at this corner reinforces a gateway statement, and landscape treatment along Hinchinbrook Drive assists in connecting and unifying the sub-precinct.	No acceptable outcome is nominated.

PO65 Development contributes to the boulevard treatment of Thuringowa Drive through streetscape and landscape treatments.	No acceptable outcome is nominated.

Figure 6.99 – Thuringowa Drive sub-precinct concept plan

Table 6.3.4.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in Thuringowa Central major centre sub-precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Thuringowa centre support sub-precinct	
PO66 Supermarket and discount department store retail uses do not occur in this sub-precinct.	No acceptable outcome is nominated.
PO67 Buildings are oriented to the street frontages along Hervey Range Road and Blackhawk Boulevard, and the streetscape is improved through the quality of the adjoining built form and landscaping, as identified on Figure 6.100 — Thuringowa centre support sub-precinct concept plan.	No acceptable outcome is nominated.
PO68 All building frontages to Hervey Range Road and Blackhawk Boulevard, are provided with large windows and clearly identifiable building entrances.	No acceptable outcome is nominated.
PO69 A pedestrian connection is provided between Blackhawk Boulevard and High Range Drive, in accordance with Figure 6.100 — Thuringowa centre support sub-precinct concept plan.	No acceptable outcome is nominated.
PO70 Development facilitates new road linkages between Blackhawk Boulevard and the residential neighbourhood to the south in accordance with Figure 6.100 — Thuringowa centre support sub-precinct concept plan.	No acceptable outcome is nominated.

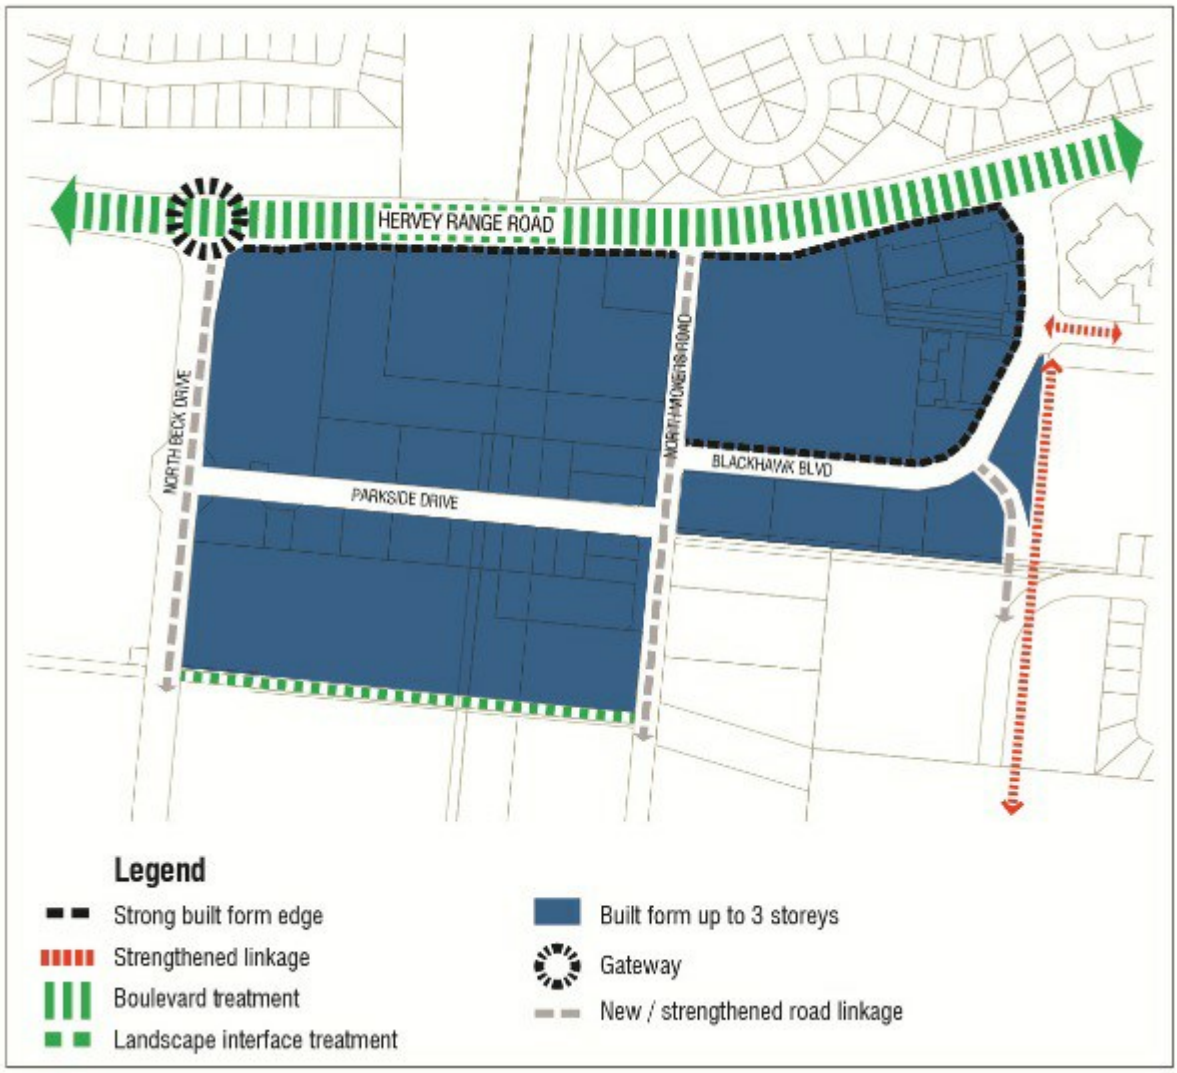

Figure 6.100 – Thuringowa centre support sub-precinct concept plan

PO71 Building height is generally low-rise.	**AO71** Building height does not exceed 3 storeys.
PO72 Landscaping and streetscape treatments are provided along North Beck Drive and Vickers Road North to enhance the outlook from the surrounding neighbourhood.	No acceptable outcome is nominated.
PO73 The appearance of development along the southern edge of this sub-precinct is enhanced through landscape treatment, as identified on Figure 6.100 — Thuringowa centre support sub-precinct concept plan.	No acceptable outcome is nominated.
PO74 As identified on Figure 6.100 — Thuringowa centre support sub-precinct concept plan, the corner of North Beck Drive and Hervey Range Road creates a gateway to Thuringowa Central. Built form, landscape and streetscape treatment at this corner reinforces a gateway statement.	No acceptable outcome is nominated.

PO75 Development contributes to the boulevard treatment of Hervey Range Road through streetscape and landscape treatments.	No acceptable outcome is nominated.

Table 6.3.4.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in Hyde Park major centre precinct **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Hyde Park major centre precinct	
PO76 Strong edges at the street are created by buildings that are oriented to the street frontages and forming a continuous building line, in accordance with Figure 6.101 — Hyde Park major centre precinct concept plan.	No acceptable outcome is nominated.
PO77 Built form generates visual interest at the street level, having regard to the proportion of openings, windows, materials and features. Large expanses of blank walls are avoided.	No acceptable outcome is nominated.
PO78 Parking is provided in consolidated areas wherever practicable.	No acceptable outcome is nominated.
PO79 Building height is generally medium rise.	**AO79** Building height does not exceed 5 storeys.
PO80 Development facilitates the establishment of a new road linkage connecting Woolcock Street to Dillane Street, in accordance with Figure 6.101 — Hyde Park major centre precinct concept plan. This new road assists in creating an active and attractive interface between the major centre and the Hyde Park medium density precinct.	No acceptable outcome is nominated.
PO81 Development facilitates the establishment of Virgil Street as the major east-west pedestrian thoroughfare connecting across Kings Road and east into the Hyde Park medium density precinct and the nearby open space corridor, in accordance with Figure 6.101 — Hyde Park major centre precinct concept plan.	No acceptable outcome is nominated.

Figure 6.101 – Hyde Park major centre precinct concept plan

Table 6.3.4.3 - Accepted development subject to requirements and assessable development (Part)

PO82 Development assists in creating a primary pedestrian and cycle pathway and improving the quality of pedestrian environment along Woolcock Street and Kings Road.	No acceptable outcome is nominated.
PO83 Landscape treatment along Virgil Street, Dillane Street and the parkland assists in connecting and unifying the precinct.	No acceptable outcome is nominated.

6.3.5 Principal centre (CBD) zone code

6.3.5.1 Application

This code applies to development where the code is identified as applicable in the categories of development and assessment.

When using this code, reference should be made to section 5.3.2 and where applicable, section 5.3.3 located in Part 5.

6.3.5.2 Purpose

(1) The purpose of the Principal centre (CBD) zone code is to provide for the largest and most diverse mix of uses and activities in Townsville.

It includes key concentrations of high-order retail, commercial, employment, residential, health services, administrative, community, cultural, recreational and entertainment activities and other uses, capable of servicing the planning scheme area.

(2) The particular purpose of the code is to:

(a) re-enforce the Townsville central business district (CBD) as the economic heart of the region, and the primary location for business, government and administration uses;

(b) promote the principal centre (CBD) as the location for the highest order activities and facilities of the city including retail, commercial, cultural, civic, sporting, and recreational uses;

(c) consolidate Townsville as Queensland's second capital and be an exemplar city in tropical urban sustainability; and

(d) ensure the principal centre (CBD) contributes to the identity, character and life of the city.

(3) The purpose of the zone will be achieved through the following overall outcomes:

(a) the principal centre (CBD) is a vibrant mixed use place where people live, work and play in a high density environment which is active both during the day and night-time;

(b) the principal centre is the highest order centre in Townsville and services a regional catchment, supported by a network of centres;

(c) the principal centre is the focus for the highest intensity of retail, commercial, administrative, government and employment uses in the city and is the primary location for major office and commercial buildings;

(d) the principal centre offers a more distinctive and higher order retailing than the major centres in an outdoor, main street environment that is characterised by arcades, laneways and footpath dining. The preferred location for any new department store in Townsville is in the Flinders Street retail precinct;

(e) high density residential development, tourist and short-term accommodation are located within the principal centre (CBD);

(f) new, larger scale strategic facilities, such as sports arenas, stadiums, convention centres and entertainment centres are located in other zones outside the CBD. These facilities are intended to be located close to the fringe of and well-connected to the CBD. Shops and commercial uses associated with these facilities do not compromise the CBD;

(g) the scale and density of development creates a critical mass of people living and working in the principal centre, to support the provision of the highest order of public and active transport facilities and promotes sustainable transport choices including public transport, walking and cycling;

(h) the principal centre (CBD) is a major hub for most public transport routes providing a single interchange to access frequent services to other parts of the city. An on-street transport interchange for bus routes to and through the CBD is to be located immediately adjacent to the Flinders Street retail precinct;

(i) Flinders Street, Ogden Street and Hanran Street are slow-speed vehicle environments and provide the main pedestrian and cycle spines through the principal centre. Through traffic is diverted to the fringes, including Walker Street, Blackwood Street, Denham Street and Stanley Street;

(j) pedestrian and cycle access is complemented by a network of shared paths along the banks of Ross Creek and new pedestrian and cycle creek crossings;

(k) Stokes Street is intended to be the primary east-west pedestrian spine linking the Civic and administration precinct, public transport interchange, commercial office, retail heart, Flinders Street, Victoria Bridge and Palmer Street;

(l) public realm provides a platform for public life and is characterised by high quality streetscapes, landscape elements, planting and hardscape materials reflective of the climate and character of Townsville;

(m) a variety of public open space areas at different scales and forms are provided for event and gathering spaces throughout the city, including public plazas, parks and gardens. These are appropriate to the required use and include:

(i) Flinders Square forming the primary civic event and gathering space;

(ii) a new 'front door' to Castle Hill at 'The Cutting', incorporating an information and interpretive centre, viewing platform over the CBD and providing walking track access to Castle Hill;

(iii) Flinders Street East park and plaza, which create a waterfront park for passive recreation, taking advantage of views and amenity; and

(iv) Flinders Street spine, which forms a linear plaza street from Stanley Street to Wickham Street with wider footpaths and slow vehicle speeds.

(n) natural features are retained, enhanced and buffered from the impacts of adjacent uses. Impacts are minimised through location, design, operation and management requirements;

(o) public spaces and streets are activated by shop fronts and kerbside activities at the ground storey whilst awnings over the full width of the footpaths provide protection from the elements;

(p) development is designed to incorporate exemplar sustainable practices including new technologies in maximising energy efficiency, water conservation and climate-responsive design principles;

(q) the height and scale of buildings reinforce the principal role of the centre and contribute to character, legibility and accessibility of the centre. The principal centre predominantly contains high-rise buildings. However, a human scale and attractive, pedestrian friendly environment is created at street level; and

(r) buildings located to the north of Sturt Street do not extend above the maximum height of buildings to the south of Sturt Street.

(4) The purpose of the zone will also be achieved through the following additional overall outcomes for particular precincts:

Civic and administration precinct:

(a) the Civic and administration precinct anchors the top of the principal centre (CBD) and is focused around government, administration and civic functions, such as the library and courthouse, local and state government departments;

(b) high quality public and semi-public spaces are incorporated into development to support the community function of these buildings, particularly at the intersection of Stokes and Walker Streets;

(c) lower building forms are contained in this precinct in response to the local topography and the need to provide an appropriate interface with adjoining residential land uses to the north of Wills Street;

(d) building heights in the precinct do not exceed 8 storeys; and

(e) building forms reflect a 'building in plaza' form incorporating a tower design with side and rear setbacks. Recesses in the ground level accommodate plaza spaces which are particularly focussed on presentation to Walker Street.

Click here to view high resolution PDF.

Figure 6.102 – Civic and administration precinct

Flinders Street retail precinct:

(a) the Flinders Street retail precinct is the core focus for future retail activity and the provision of a new department store in this precinct is highly desired and actively encouraged;

(b) department stores, arcades and internal retail developments connect directly into Flinders Street, supporting the retail spine and do not detract from the attractiveness and activity on the street;

(c) highly attractive and permeable pedestrian-based built form is created with a highly active ground floor and cross block links available during operating hours;

(d) this precinct includes a large concentration of historic buildings. New buildings reflect and integrate with this built form with a low podium height and continuous frontages;

(e) taller building elements are set back from the street frontage to allow for light and air into the street and maintain the outdoor quality and human scale of the street;

(f) shop fronts, café and or restaurant premises are continuous along both sides of the street. Retail is the predominant use; and

(g) parking is not situated at the street frontage at the ground floor, and does not detract from the street activity or create blank walls. Parking structures are screened with green walls, planting, vines, creepers or public art. There are no blank facades along Flinders Street.

Click here to view high resolution PDF.

Figure 6.103 – Flinders Street retail precinct

Flinders Street East precinct:

(a) the Flinders Street East precinct frames the eastern end of the principal centre (CBD). The precinct will continue to emerge as a vibrant entertainment and boutique shopping location, integrated with the principal centre (CBD) but with its own unique identity as a destination;

(b) the precinct will continue to develop at a lower scale than the rest of the principal centre (CBD);

(c) re-use of existing heritage buildings is actively encouraged, and new buildings are designed to respect the heritage attributes of the precinct;

(d) building height fronting Flinders Street East and Melton Terrace is low-rise and consistent with the scale of nearby character and heritage buildings;

(e) retail uses do not compete with the rest of the principal centre (CBD), and will generally be of a boutique shopping and convenience nature;

(f) active uses such as restaurants and pubs are located to the Flinders Street frontage, with new development to Melton Terrace to predominantly consist of residential uses; and

(g) new development contributes to a consistent pallet of local streetscape elements and designs, resulting in the continuing development of a local streetscape character for the precinct.

Figure 6.104 – Flinders Street East precinct

6.3.5.3 Assessment benchmarks

Table 6.3.5.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
PO1 Where provided, outdoor lighting does not adversely affect the amenity of adjoining properties or create a traffic hazard on adjacent roads.	**AO1.1** Light emanating from any source complies with *Australian Standard AS4282 Control of the Obtrusive Effects of Outdoor Lighting*.
	AO1.2 Outdoor lighting is provided in accordance with *Australian Standard AS 1158.1.1 –Road Lighting – Vehicular Traffic (Category V) Lighting – Performance and Installation Design Requirements*.
PO2 Residential uses within the centre do not interrupt the continuity of the streetscape or the active, pedestrian focus of the street frontage.	**AO2** Any residential uses are located above or behind ground storey retail, commercial or community uses.
PO3 Residential uses within the centre are provided with a reasonable level of privacy.	**AO3.1** Windows, balconies, and terraces of a dwelling unit are screened where overlooking a habitable room or private open space of another dwelling within 9m.
	AO3.2 Screening is a solid translucent screen or perforated panels or trellises which have a maximum of 50% openings.
PO4 Residential uses within the centre are provided with a reasonable level of private outdoor living space.	**AO4** Dwellings are provided with private open space or a balcony directly accessible from a habitable room with: (a) a minimum of 9m^2; (b) a minimum dimension of 3m; and (c) clear of any utilities, water tanks and air conditioning units.

Table 6.3.5.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Role and function	
PO5 Development is consistent with the intended role, scale and character of the principal centre. The growth of retail and office floor space and residential uses within this centre allow for it to expand into its intended role as the economic and administrative heart of the region.	No acceptable outcome is nominated.
PO6 Development is generally in accordance with the Figure 6.105 – Principal centre concept plan.	No acceptable outcome is nominated.

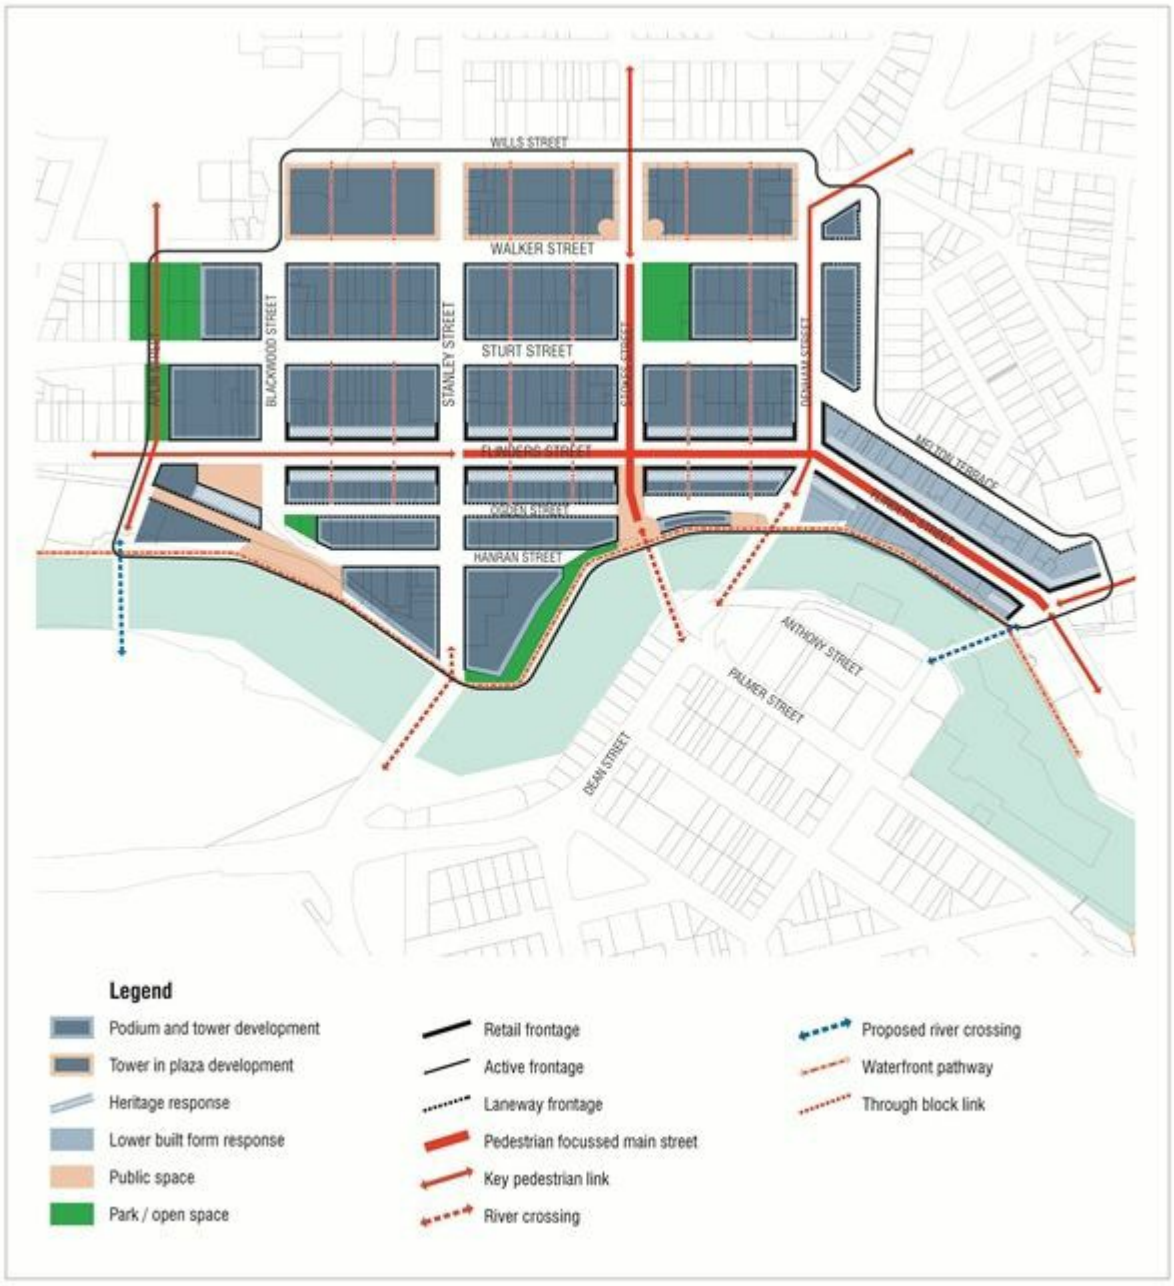

Figure 6.105 – Principal centre concept plan

PO7 Ground floor and podium level development is occupied with uses that contribute to: (a) the core economic, entertainment and cultural functions of the principal centre (CBD); (b) the vitality and vibrancy of the city's public domain; and (c) a compatible mix of active day and night-time uses.	**AO7.1** Podium level development accommodates non-residential uses.
	AO7.2 Uses at ground storey are active and include: (a) retail; or (b) cafes and restaurants incorporating outdoor dining; or (c) services and commercial offices which generate a high level of pedestrian traffic; or (d) recreational and entertainment; or (e) community and cultural uses; or (f) entrance foyers to commercial and residential uses above.

	AO7.3 Car parking is located in basements unless servicing significant citywide infrastructure or unresolvable geotechnical issues means basement parking is inappropriate or unachievable. In this case, parking is located above ground floor.
PO8 Tower development forms are occupied by uses that contribute to the accommodation of a critical mass of people (a resident or working population) within the principal centre (CBD).	**AO8** Uses within tower elements are predominantly: (a) residential accommodation either short or long-term; or (b) commercial offices; or (c) a combination of these.

Table 6.3.5.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Built form	
PO9 Building heights, site cover and setbacks contribute to the legibility, distinctiveness and place making of the city centre by creating an attractive skyline, and reinforcing the sense of primacy of the principal centre (CBD) core through built form outcomes.	**AO9.1** Unless otherwise stated for a particular precinct: (a) buildings greater than 8 storeys have a podium for a minimum of 2 storeys up to a maximum of 4 storeys, and a tower above, in accordance with Figure 6.106 – Tower and podium form; or (b) buildings of 8 storeys or less have a single tower form in accordance with Figure 6.107 – Single tower form.
	AO9.2 Unless otherwise stated for a particular precinct, setbacks and site cover are: (a) for buildings greater than 8 storeys incorporating tower and podium, in accordance with Figure 6.106 – Tower and podium form, and the following: Design Provisions - Zone & Precinct Codes Acceptable Outcome Building Form: > 8 Storey's: Tower & Podium Podium: Height: up to 4 storeys; Site Cover: 100%; SETBACKS Front: 0m; Side: 0m; Rear: 0m Tower: Height: 20 storeys + (including podium); Site Cover: 60%; SETBACKS Front: 4m; Side: 3m; Rear: 10m

	(b) for buildings 8 storeys or less and in a single tower form, in accordance with Figure 6.107 – Single tower form, and the following: **Design Provisions - Zone & Precinct Codes** **Acceptable Outcome** **Building Form**: Tower **Height**: Up to 8 storeys **Site Cover**: 70% **SETBACKS** – **Front:** 0m; **Side:** 3m; **Rear:** 6m
PO10 Building heights and massing: (a) contribute to the intended role, scale and character of the principal centre by: (i) accommodating sufficient floor space to provide critical mass and intensity of use to activate the city; (ii) concentrate major development in the CBD core and transition building height at the fringes to ensure appropriate interface with lower scale adjoining developments; and (iii) maximising active uses at lower levels to activate, interact with and overlook street frontages. (b) is appropriate to the character and climate of Townsville and: (i) retains the openness of street vistas, including to the sky, along major elements of the city grid; (ii) provides privacy, natural light penetration and air circulation; (iii) provide transition to and design compatibility with lower scale heritage places and precincts; and (iv) retains an appropriate relationship with established streetscapes. (c) contributes to safe, active streets and public domain, by: (i) defining the street space with human scale elements; (ii) retains the continuity of facades along the street; and (iii) addressing all streets and public spaces with active uses, windows, doors, openings and balconies.	No acceptable outcome is nominated.

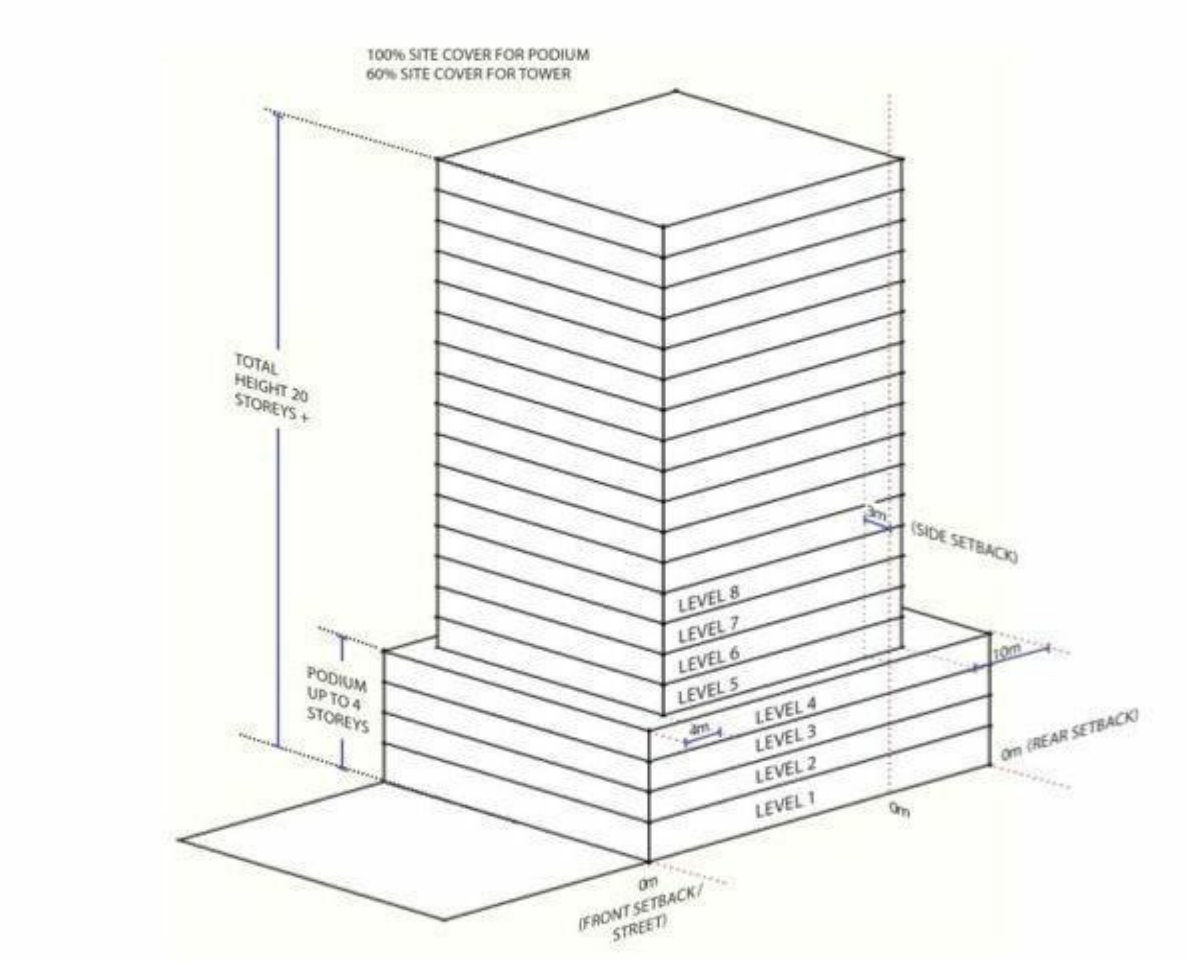

Figure 6.106 – Tower and podium form

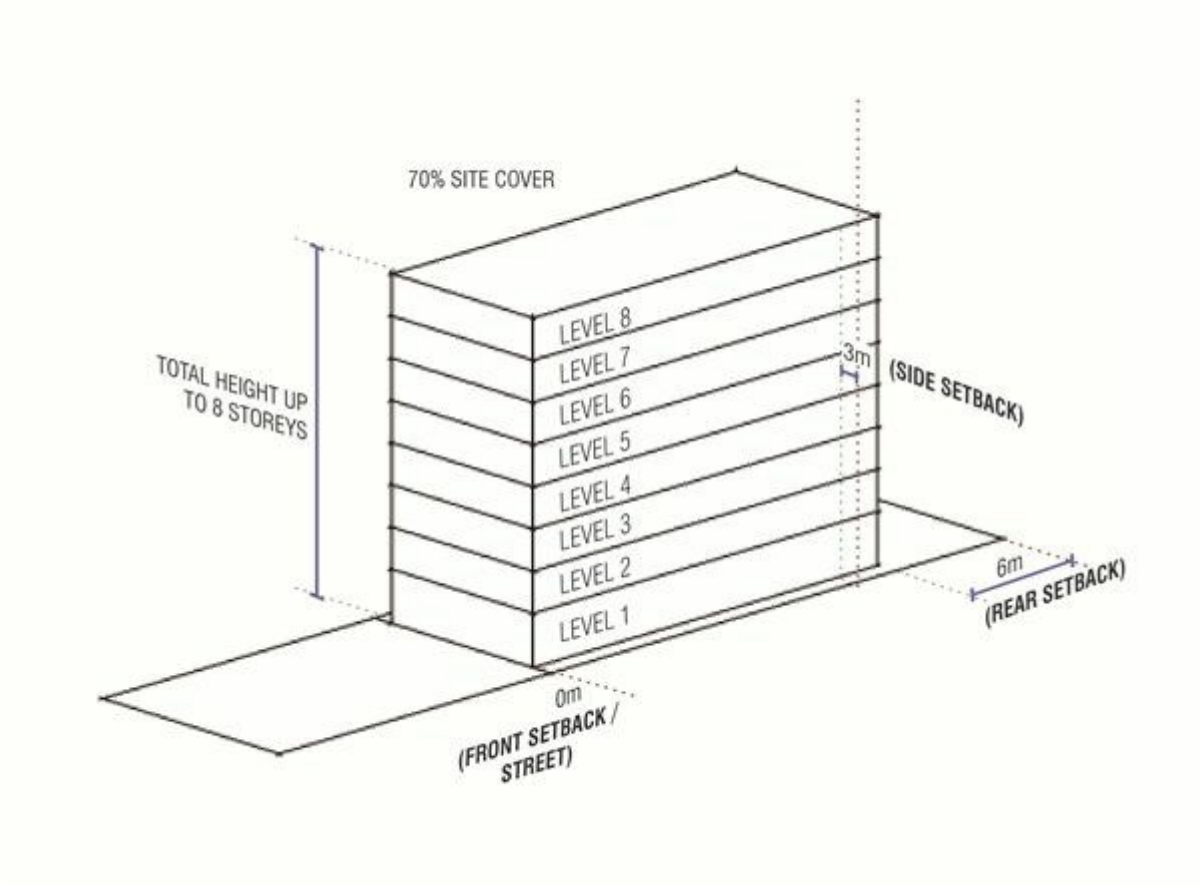

Figure 6.107 – Single tower form

PO11 Tower forms are clearly defined slender building elements with adequate spacing between them to provide for privacy, natural light penetration and air circulation.	**AO11.1** Maximum horizontal dimension for a tower on any side is 40m or 75% of the width of the site, whichever is the lesser.
	AO11.2 On a site greater than 3,000m^2, more than 1 tower is provided.
PO12 Ground floor and podium forms relate positively to streets and public spaces, and activate the public domain by incorporating: (a) operable elements within the building facade such as large window openings, sliding doors, window seating; (b) strong visual and physical connections between internal and external spaces; (c) usable outdoor/semi-outdoor spaces that support outdoor lifestyles and engage with the public realm; and (d) a gradual transition between the public domain and private outdoor or building spaces.	No acceptable outcome is nominated.
PO13 Through block connections are provided in accordance with Figure 6.105 – Principal centre concept plan which are publicly accessible during normal working/operating hours.	No acceptable outcome is nominated.

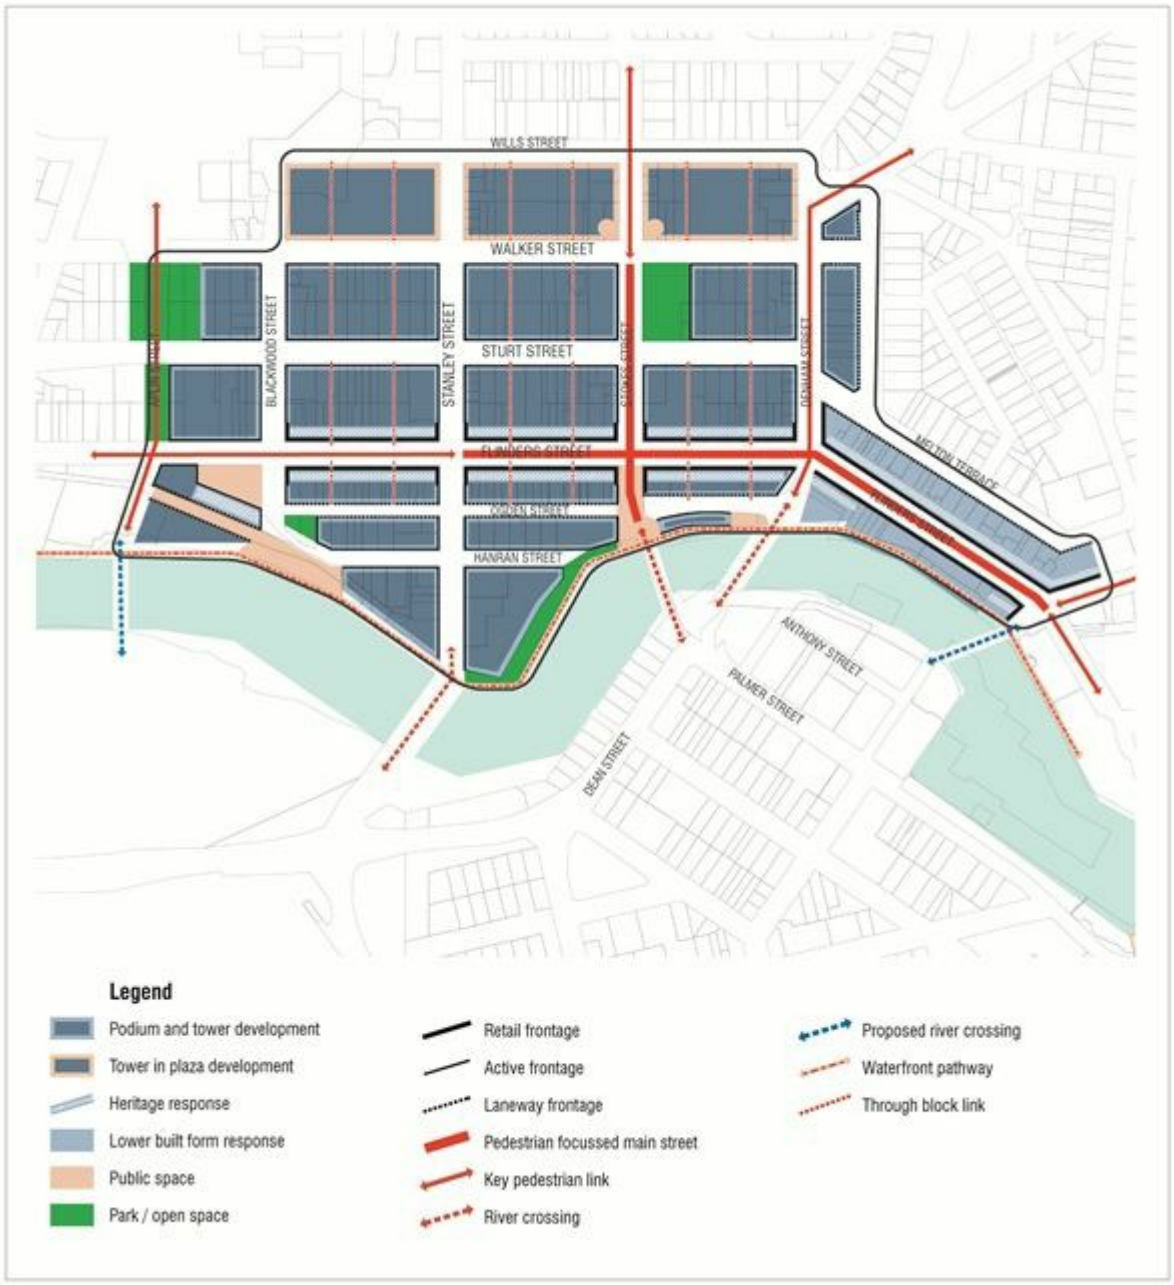

Figure 6.105 – Principal centre concept plan

PO14 Development provides continuity of building facades with adjoining buildings or provides appropriate transitions where a difference necessarily exists.	No acceptable outcome is nominated.
PO15 Ground floor and podium forms exhibit a human scale through: (a) the incorporation of detailed building elements; (b) articulation and definition of windows and openings including framing; (c) creation of a finer grain building rhythm, through design articulation such as variations in horizontal and vertical profiles, and variation in occupancy layouts within the overall building; and (d) where development sites are amalgamated, design of ground floor premises and facade to reflect the original lot widths.	No acceptable outcome is nominated.
PO16 Buildings or towers make a positive contribution to the skyline by: (a) exhibiting exceptional architectural design and quality; (b) utilising high quality materials that contribute to the tropical/Townsville character, are easily maintained and do not readily stain, discolour or deteriorate; and (c) articulating the building silhouette.	No acceptable outcome is nominated. **Editor's note–**where new buildings are proposed within the Principal centre (CBD) zone a design statement/response document is to be submitted with any development application demonstrating achievement of the relevant performance outcomes.
PO17 Roofscapes make a positive contribution to the attractiveness and function of the city through: (a) integrating them with the architectural design of the building; (b) service structures, lift motor rooms, externally mounted air conditioning units and mechanical plant designed as an architectural feature or with attractive screening; (c) creation of a coherent skyline for the city centre; and (d) creation of attractive and usable visual, open space, recreational or ecological spaces, including at podium level.	No acceptable outcome is nominated.
PO18 Buildings do not incorporate any type of glass or other surface that is likely to reflect solar rays that could create undue nuisance, discomfort or hazard to any part of the surrounding locality.	**AO18** Any reflective glass material has: (a) a level of light reflectivity of not greater than 20%; and (b) a level of heat transmission of not less than 20%.

PO19 Fenestration and sun control elements are used to: (a) minimise solar heat gain on building walls and windows; (b) reduce glare; (c) enrich the tropical character; and (d) provide texture to the building facades.	No acceptable outcome is nominated.

Table 6.3.5.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Crime prevention through environmental design	
PO20 Development facilitates the safety and security of people and property having regard to: (a) maximising opportunities for casual surveillance and sight lines; (b) exterior building design that promotes safety; (c) provision of adequate lighting; (d) appropriate signage and wayfinding mechanisms; (e) minimisation of entrapment locations; (f) building entrances, loading and storage areas that are well lit and lockable after hours; and (g) provision of direct movements along desire lines with clear unobscured sight lines. **Editor's note—**Applicants should have regard to Crime Prevention through Environmental Design Guidelines for Queensland.	No acceptable outcome is nominated.

Table 6.3.5.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Accessibility	
PO21 Ground storey pedestrian footpaths and access ways are the same level as, and connect without any lip or step to, the footpath and abutting pedestrian areas on neighbouring sites. Where the footpath is sloping, entries to the building are at the same level as the footpath.	No acceptable outcome is nominated.

Table 6.3.5.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Amenity	
PO22 Development minimises impacts on surrounding land and provides for an appropriate level of amenity within the centre, having regard to: (a) noise; (b) hours of operation; (c) traffic; (d) visual impact; (e) signage; (f) odour and emissions; (g) lighting; (h) access to sunlight; (i) privacy; and (j) outlook.	No acceptable outcome is nominated.
PO23 Development provides private open space that is: (a) well-proportioned, appealing, functional and easily accessible, and promotes outdoor living as an extension of the dwelling; (b) provides a high level of privacy for residents and neighbours; and (c) has sufficient size and shape to meet the needs of a diversity of potential residents.	**AO23.1** Private open space is provided as a balcony with: (a) a minimum area of 9m^2 for a 1 bedroom unit or 16m^2 for a 2 or more bedroom unit; and (b) a minimum dimension of 3m, clear of any utilities such as gas, water tanks or air-conditioning units.
	AO23.2 Where clothes drying areas are provided on private balconies they are screened from public view.
	AO23.3 Private open space is located or screened so it does not directly overlook main living areas or private open space of adjoining dwellings.
PO24 Sufficient communal open space is provided to create flexible spaces suitable for a range of activities.	No acceptable outcome is nominated.
PO25 Communal open space provides facilities including seating, shade, flexible spaces suitable for a range of activities. Treatments such as green roofs, green walls or community gardens contribute to the attractiveness of these spaces.	No acceptable outcome is nominated.

PO26 On-site landscaping is provided to: (a) enhance the appearance of the development, particularly in parking and service areas and public spaces; (b) contribute to pedestrian comfort through shade; (c) create green rooves, walls or other sustainable building elements; and (d) screen unsightly components.	No acceptable outcome is nominated.

Table 6.3.5.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Loading and servicing	
PO27 The design and location of parking areas, refuse storage areas, loading/unloading and servicing areas, plant and building control on-site: (a) minimise disruption or breaks in building frontages; and (b) are screened from view from the street and adjoining uses.	**AO27.1** Non-active frontage (vehicle access, fire egress, control room, plant, building services etc.) occupies a maximum 8m or 25% of the primary frontage, whichever is the lesser.
	AO27.2 Refuse storage areas, loading and services bays are: (a) contained within the ground floor or podium built form; and (b) screened from the street by active uses/occupied building space.

Table 6.3.5.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Public domain	
PO28 Footpaths and pathways provide all weather protection within a safe, unobstructed and attractive environment. Awnings are: (a) continuous and compatible with existing awnings; (b) allow for street trees and landscaping; (c) visually safe and amenable; (d) located along key pedestrian routes and connects key destinations; (e) contributes to legibility and wayfinding; (f) do not impede the normal flow of pedestrians; and (g) constructed of materials that reflect the tropical climate and character of Townsville.	**AO28.1** Awnings are provided in accordance with Figure 6.108 – Awning location.
	AO28.2 Awnings: (a) are located above ground floor and is a minimum of 3.2m and generally not more than 4.2m above pavement height; (b) extend from the face of the building and is set back from the inside of the kerb line: 1.5m; (c) are continuous across all street frontages of the site; (d) are contiguous with adjoining buildings and awnings; (e) are cantilevered from the building and does not include posts within the footpath (except within the Flinders Street East precinct); (f) are provided with under awning lighting; and (g) are constructed of lightweight materials.
	AO28.3 Additional pedestrian shelter is provided as free-standing shade structures (such as umbrellas) which: (a) are constructed of lightweight materials; (b) have a minimum number of posts; (c) are a minimum 2.5m above pavement height; and (d) maintain the normal flow of pedestrians.

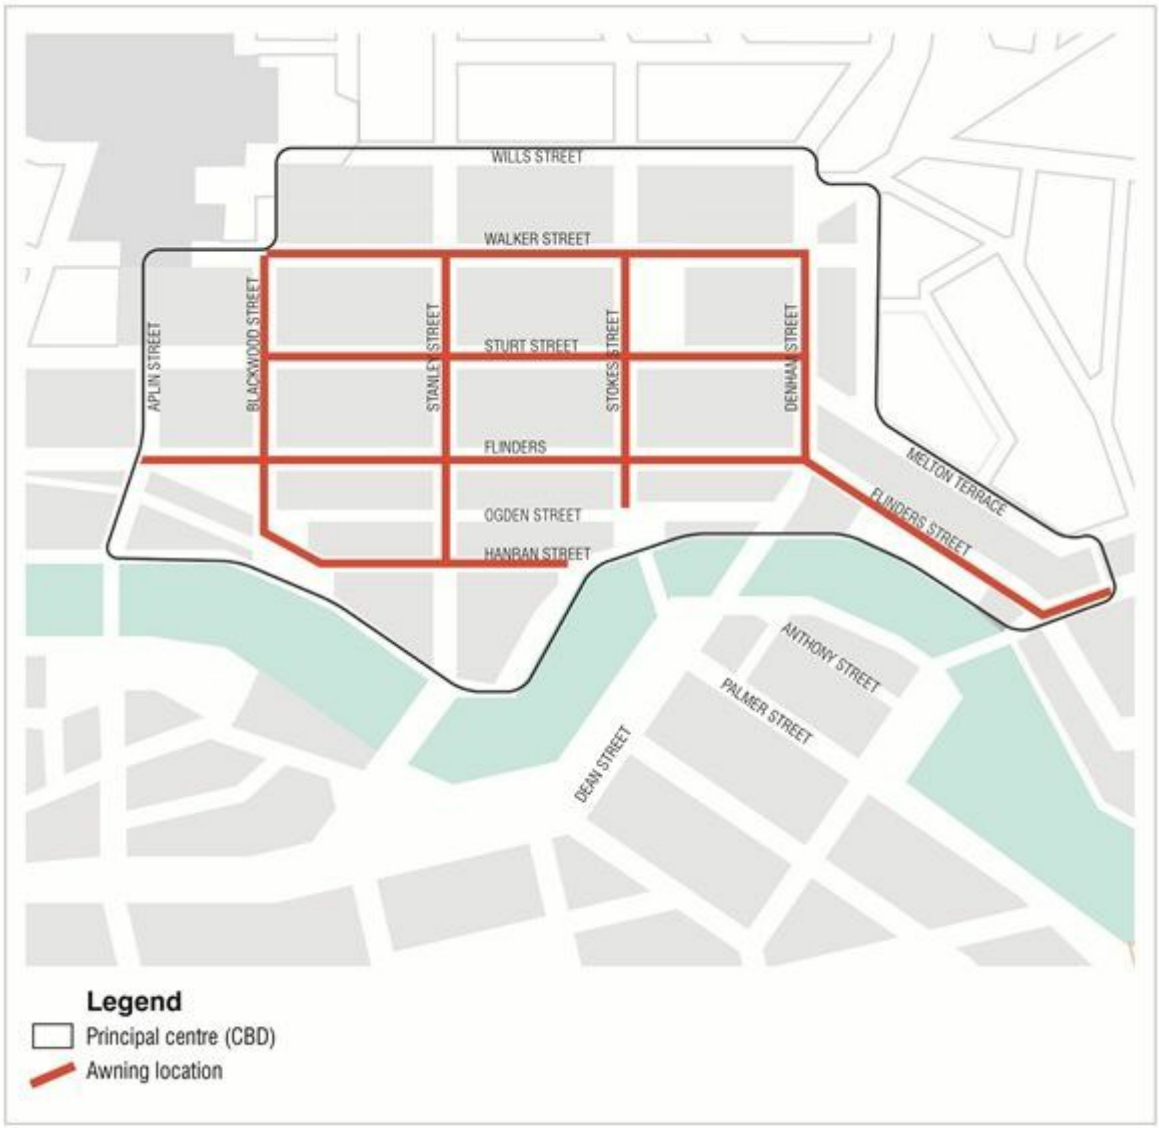

Figure 6.108 – Awning location

PO29 Where the ground floor is setback and upper podium levels overhang, or awnings are provided, these are cantilevered to avoid columns, ensuring no visual or physical obstruction occurs between the footpath and ground floor premises.	No acceptable outcome is nominated.
PO30 The location and placement of steps, escalators, ramps, lifts, automatic teller machines and other facilities which require queuing, standing areas or waiting such as bus stops and taxi ranks: (a) do not impede the normal flow of pedestrians; (b) maintain visibility and good sight lines; and (c) provide adequate space for queuing, standing areas.	**AO30** Any steps, escalators, ramps, lifts and automatic teller machines are set back 1.5m from the building facade at ground floor to allow for adequate waiting space in a manner that does not create concealment spots.
PO31 Pedestrian movement is continuous, convenient, safe and comfortable. Development: (a) provides pathways at street level and not provided via overhead bridges; (b) provides additional through block connections; (c) provides direct connections between key destinations; and (d) priorities pedestrian movement throughout the CBD.	No acceptable outcome is nominated.
PO32 Footpath and public realm design delivers pedestrian spaces that: (a) accommodate the requirements of the adjacent land use and the likely pedestrian traffic; (b) provide all weather protection; (c) provide vegetation that contributes to the city's tropical character; and (d) are constructed and maintained to a consistent standard.	No acceptable outcome is nominated.

Table 6.3.5.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Provision of public spaces	
PO33 A variety of public spaces are provided throughout the principal centre (CBD) and include: (a) small-scale spaces; (b) laneways; (c) public promenades; (d) public squares; (e) urban boulevards; (f) parks and gardens; (g) performance spaces; and (h) arcades and through block links.	**AO33** New public spaces, corridors, pathways and through block connections are provided in accordance with Figure 6.105 – Principal centre concept plan.
PO34 Development adjoining Ross Creek contributes to the provision of a continuous riverside bikeway/walkway linking Reid Park to The Strand and extending out to the Breakwater precinct. The pathway system: (a) provides a shared path for pedestrians and cyclists; (b) is safe and attractive providing opportunities for pausing and weather protection along the route; and (c) provides direct connections between the pathway and the adjoining street network.	**AO34** Any development on premises adjoining Ross Creek provides: (a) a fully publicly accessible riverside walkway/bikeway that is dedicated to council and has a minimum unobstructed pavement width of 4.5m and a minimum overall width of 6m; (b) tree planting, lighting, balustrading, and pavement treatment are provided along the full length and within the pathway; and (c) furniture, including seating, awnings and public art for weather protection are provided at the intersection of the pathway and key streets.

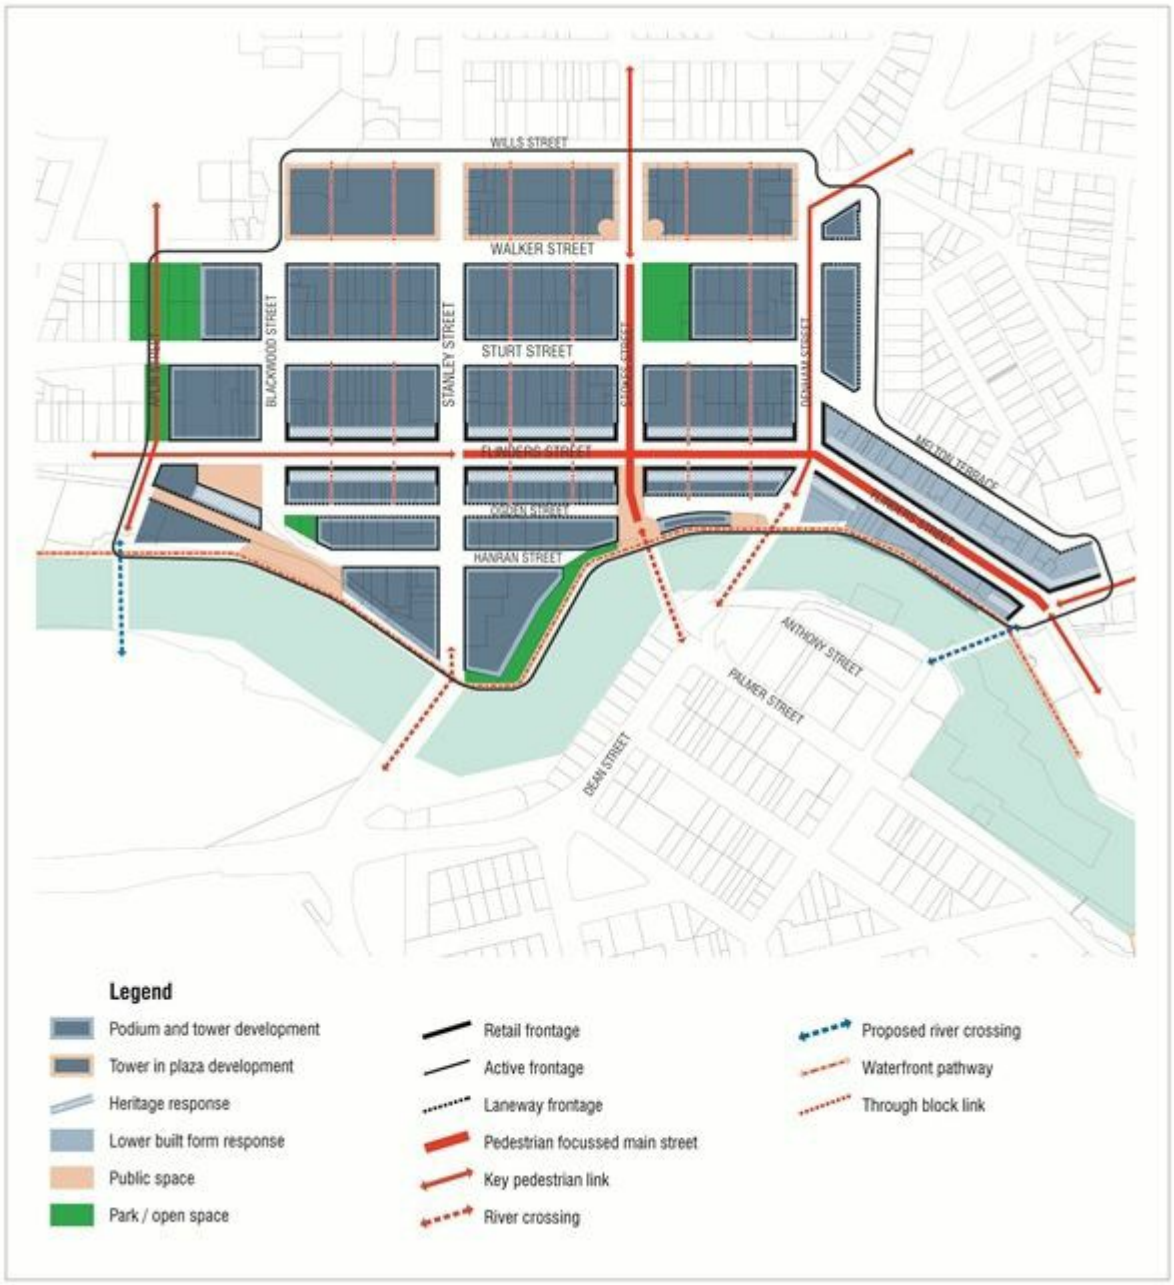

Figure 6.105 – Principal centre concept plan

Table 6.3.5.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Civic and administration precinct	
PO35 Development facilitates or supports a mix of uses and day and night-time activity throughout the precinct including: (a) civic, administration, government, education and commercial office buildings are the predominant uses; and (b) shops, dining, café and restaurant uses may occur at the ground storey along street frontages and adjoining public entrances and forecourts.	No acceptable outcome is nominated.
PO36 Building form and massing reflect a distinctive 'building in plaza' setting to contribute to the civic character and identity of the precinct including: (a) substantial areas of the ground plane given over to public access; (b) a high quality public realm including both hard and soft-scape materials; (c) creation of stand-alone pavilions; and (d) consistent single, uniform building elements.	**AO36.1** Buildings: (a) do not have a site cover exceeding 60% of the site; and (b) incorporate a significant space as an entrance plaza/waiting or meeting area. Figure 6.109 — Civic and administration precinct built form illustrates the desired outcome. **AO36.2** Building setbacks are: (a) a minimum of 5m from street and side boundaries; (b) a minimum of 6m from the rear boundary; and (c) are generally consistent for the full height of the building on a single side, with only minor (less than 1m) indents or projections in the facade. Figure 6.109 — Civic and administration precinct built form illustrates the desired outcome.

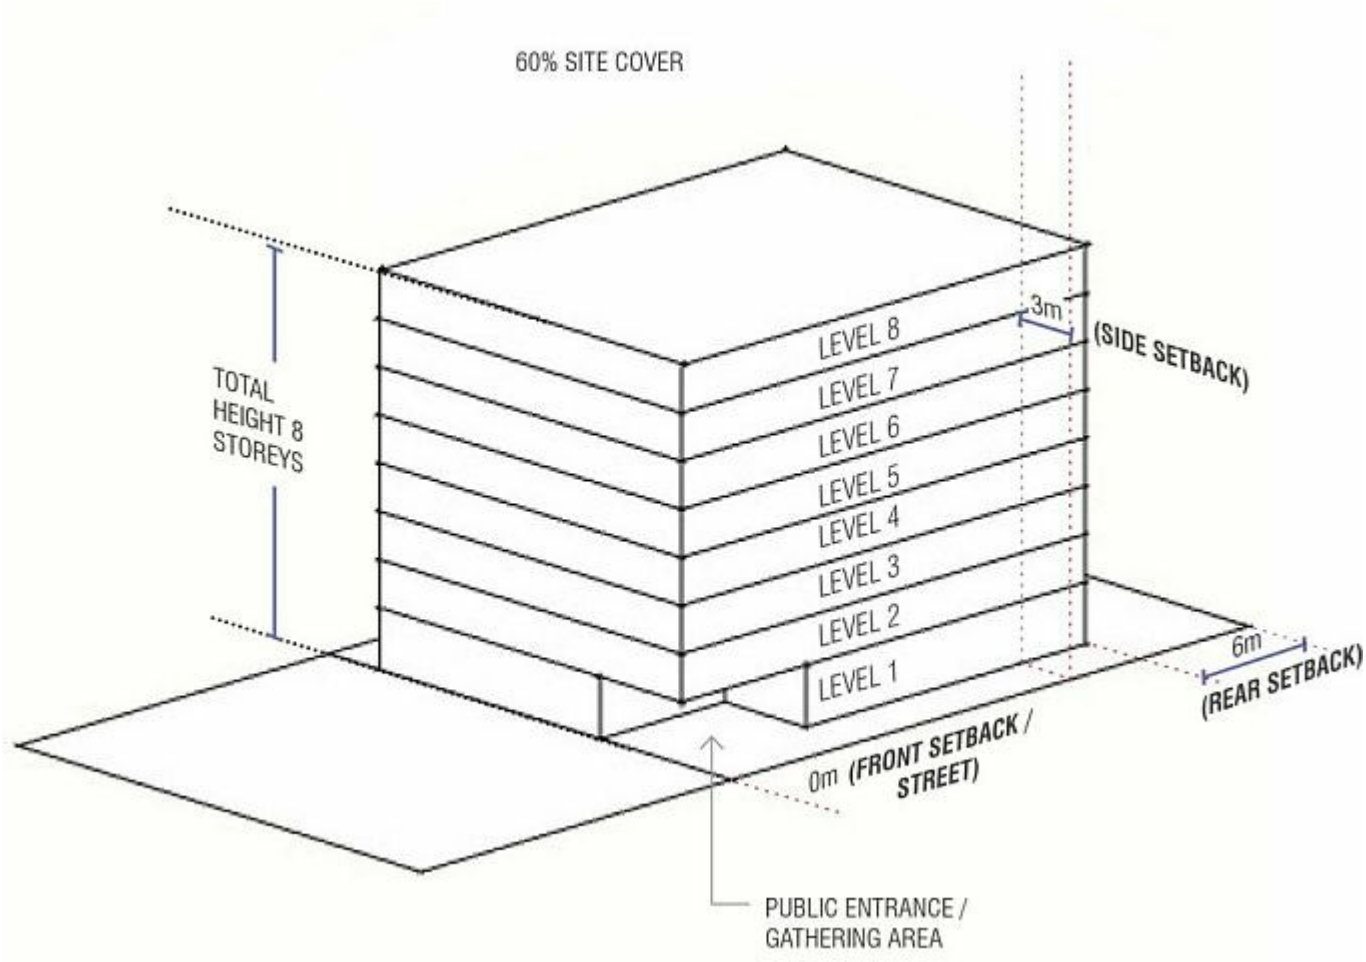

Figure 6.109 – Civic and administration precinct built form

PO37 Building heights and setbacks contribute to the legibility, distinctiveness and place making of the city centre by contributing to an attractive skyline, and reinforce the sense of primacy of the principal centre (CBD) core through built form outcomes. Buildings in the Civic and administration precinct provide a transition from the built form intensity and scale to the central parts of the CBD to adjoining residential development generally at a lower scale.	**AO37** Building height does not exceed 8 storeys.
PO38 Overall building siting and location on the site: (a) provides glimpses of Castle Hill between buildings as a constant reference point, wherever possible; and (b) creates spaces in and around the building which are proportionate to the overall dimensions of the building.	No acceptable outcome is nominated.
PO39 At the ground floor, design is to incorporate innovative responses to public realm interface, including the use of additional corner setbacks integrated with public entrances and gathering areas.	No acceptable outcome is nominated.

Table 6.3.5.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Flinders Street retail precinct	
Role and function	
PO40 Ground floors of buildings on Flinders Street frontage are occupied by uses that have a visible presence on and interaction with the street and public domain. Predominant uses reflect the role of this precinct as the focus for retail uses within the principal centre (CBD) and the highest order retailing in the city by: (a) retail and other active uses at ground floor along Flinders Street and Odgen Street in this precinct; (b) accommodating specialist retailing; and (c) accommodating a department store.	**AO40** New development provides at least the same amount of retail floor space as existed prior to that development, ensuring there is no net loss.
PO41 Active uses including retail, shops, banks, active commercial tenancies and café uses are located: (a) at ground floor along Flinders Street and Odgen Street; (b) along the ground floor of any through block links, arcades or indoor retail developments; and (c) at upper levels where indoor retail developments.	No acceptable outcome is nominated.
PO42 Any department or discount department store has a frontage to Flinders Street and is incorporated into larger retail and entertainment development where possible.	No acceptable outcome is nominated.

Table 6.3.5.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Flinders Street retail precinct	
Building form and massing	
PO43 Building heights and massing: (a) reflect and respond to the scale of adjoining historic building forms; (b) facilitate a high degree of pedestrian amenity by: (i) minimising overshadowing and adverse wind effects; (ii) providing for good light penetration and air circulation with visibility to the sky; and (c) ensure the scale and character of the heritage buildings is the prevailing built form.	**AO43.1** Along the Flinders Street frontage and Sturt Street frontage: (a) podium height is a maximum of 4 storeys; (b) where adjoining a heritage or character building, podium height is a maximum of 2 storeys, or is within 20% of the height of the adjoining building height; (c) podium development is built to boundary on all site boundaries; (d) towers are set back from Flinders Street a minimum of 10m; (e) towers are set back from Sturt Street a minimum of 4m; and (f) unless otherwise stated building form, setbacks, heights, and site cover are as illustrated in Figure 6.110 – Flinders Street retail precinct building massing, and the following: Design Provisions - Zone & Precinct Codes Acceptable Outcome Building Form: Heritage Frontage and Tower set back from street Podium / Tower Height: 2-3 storey's Flinders Street; 4 storeys Sturt St & Ogden St / 20 storeys + (including podium) Site Cover: 100% / 60% SETBACKS Front/ Street: 0m / 20m Flinders St, 4m Sturt & Ogden St SETBACKS Side: 0m / 3m SETBACKS Rear: 0m / 10m or between tower elements

AO43.2

Along the Ogden Street frontage:

(a) podium height is maximum of 4 storeys;

(b) podium development is built to boundary on all site boundaries;

(c) the tower are setback a minimum of 5m from the street frontage; and

(d) unless otherwise stated building form, setbacks, heights, and site cover are as illustrated in Figure 6.106 – Tower and podium form, and the following:

Design Provisions - Zone & Precinct Codes

Acceptable Outcome

Building Form		> 8 Storey's:	Tower & Podium
		Podium	**Tower**
Height		up to 4 storeys	20 storeys + (including podium)
Site Cover		100%	60%
SETBACKS	**Front:**	0m	4m
	Side:	0m	3m
	Rear:	0m	10m

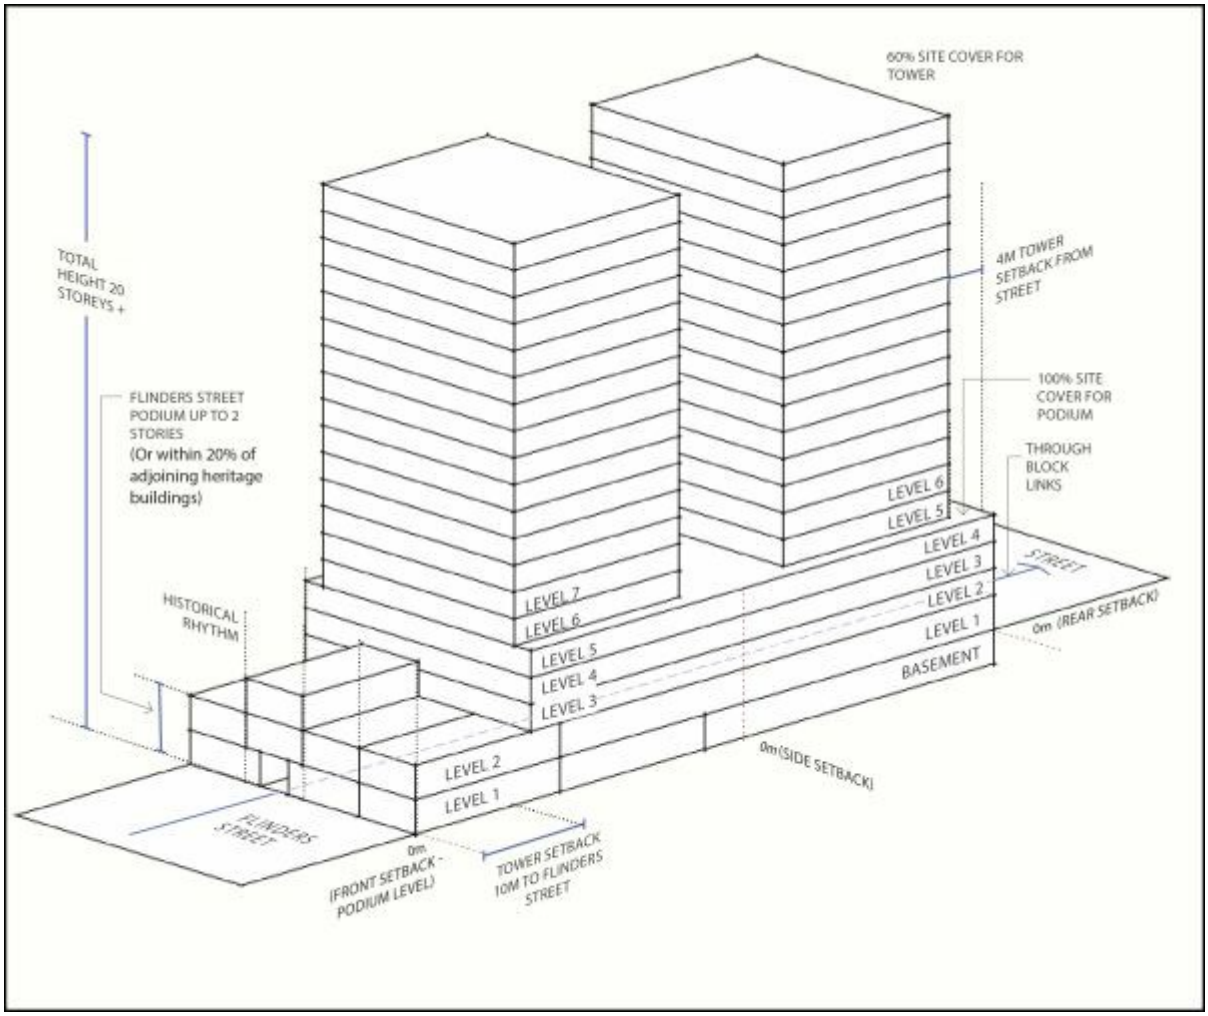

Figure 6.110 – Flinders Street retail precinct building massing

Table 6.3.5.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Flinders Street East precinct	
Role and function	
PO44 Development is consistent with the role of this precinct as the focus for entertainment and late night-time economy.	No acceptable outcome is nominated.
PO45 Development contributes to a mix of day and night-time activity on Flinders Street (East) which enhances the safety of the precinct, including some retail uses and nightclub entertainment facilities with extended operating hours for daytime dining.	No acceptable outcome is nominated.
PO46 Retail uses are not established to a level that would undermine the Flinders Street retail precinct as the primary shopping area in the principal centre (CBD).	**AO46** Where retail uses are provided these are located at ground floor and do not contribute to the overall retail frontage on the street exceeding 40% of the entire length of the street frontage at ground floor.
PO47 Where short-term accommodation is located within this precinct it is accommodated above ground floor.	No acceptable outcome is nominated.

Table 6.3.5.3—Accepted development subject to requirements and assessable development (Part)

Flinders Street East precinct	
Roof form and awnings	
PO49 Roof form is contemporary and contributes to tropical design character, complementing but not mimicking heritage building elements.	No acceptable outcome is nominated.

6.3.6 Specialised centre zone code

6.3.6.1 Application

This code applies to development where the code is identified as applicable in the categories of development and assessment.

When using this code, reference should be made to section 5.3.2 and where applicable, section 5.3.3 located in Part 5.

6.3.6.2 Purpose

(1) The purpose of the Specialised centre zone code is to provide for one or more specialised uses.

(2) The particular purpose of the code is to:

(a) recognise the role and function of each of the specialised centres and guide development within each centre; and

(b) protect each centre from encroachment by development which may impact on that role and function.

(3) The purpose of the zone will be achieved through the following overall outcomes:

(a) the zone accommodates large public, commercial or institutional facilities which are significant to the economic and social well-being of Townsville but are not appropriately included in other zones. These centres include Domain Central, the James Cook University-Townsville Hospital precinct, Lavarack Barracks, Townsville Airport, Port of Townsville and major medical precincts;

Editor's note—While the planning scheme does not regulate land within some of these sites, this code is intended to give direction to development within or in the vicinity of these sites, to the extent possible.

(b) the centres perform a specific function for the Townsville and wider North Queensland community, and are major nodes of business activity, services or employment;

(c) these centres generally have strong relationships with the other multifunctional activity centres in Townsville, but do not incorporate the breadth and depth of activities of these other centres and do not compete with or undermine the retail and commercial functions of these other centres;

(d) development supports and is compatible with the primary focus for the centre. The specialised centre retains its dominant function and new development does not prejudice its ongoing operation or significantly impact on the amenity of nearby sensitive uses;

(e) shops and shopping centres within these centres are limited to convenience retail, food and drink outlets servicing on-site businesses, workers and, where they exist, residents. Offices are limited to those directly related to the primary focus of the centre;

(f) specialised centres grow in a consolidated way that makes efficient use of the zoned area. Development near the boundaries of specialised centres is located and designed to minimise impacts on sensitive land uses in other zones;

(g) development surrounding a specialised centre does not impact on the continued functioning and expansion of the centre for its intended primary purpose;

(h) design of built form and public spaces facilitates safe and secure environments and discourages antisocial behaviour; and

(i) opportunities for energy efficiency through built form are maximised.

(4) The purpose of the zone will also be achieved through the following additional overall outcomes for particular precincts and sub-precincts:

Townsville Airport precinct:

(a) the long-term operation and expansion of the Townsville Airport is supported for both Department of Defence purposes, and to satisfy the primary air transport needs of the Townsville and North Queensland regions;

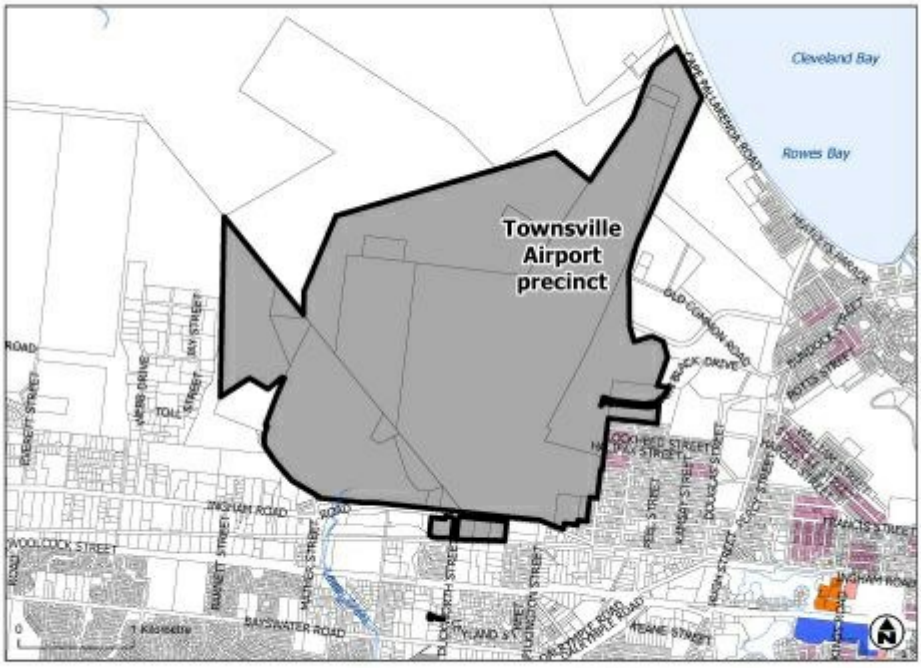
(b) the timely and cost-effective provision of aeronautical infrastructure is facilitated;

(c) aviation-related related businesses, research and technology industries and low impact industries are accommodated;

(d) development is not of a type or scale that undermines the successful operation of the principal centre (CBD) or major centres in Townsville; and

(e) residential development is limited to short-term accommodation.

Editor's note—The Townsville Airport does not fall within the regulatory jurisdiction of the Townsville City Plan. However, council recognises its important joint defence and civil functions through this zoning and acknowledges the intentions of Townsville Airport's master planning document.



Click here to view PDF high resolution map.

Figure 6.112 – Townville Airport precinct

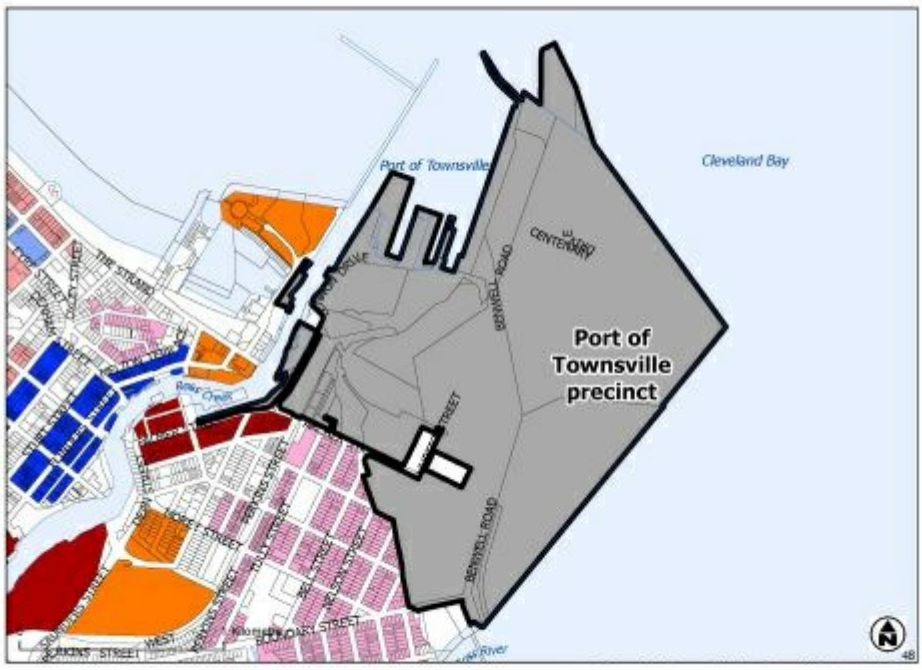
Port of Townsville precinct:

(a) the long-term operation of the Port of Townsville is protected for the benefit of the local and regional economy;

(b) the operations of the port are protected from incompatible land uses and activities on nearby land; and

(c) waterfront development within the port is integrated with the Palmer Street and The Strand areas where possible, to maximise community access to and use of waterfront areas.

Editor's note—The Port of Townsville does not fall within the regulatory jurisdiction of the Townsville City Plan. However, council recognises its important function through this zoning and the acknowledges the intentions of Port of Townsville's master planning documents.



Click here to view PDF high resolution map.

Figure 6.113 – Port of Townsville precinct

Lavarack Barracks precinct:

(a) the ongoing use and development of the barracks area for Department of Defence-related purposes, including aviation, communications, logistics, administration, training, and accommodation and recreation facilities for defence personnel is protected; and

(b) to the extent practicable, development is encouraged to create an attractive frontage to University Road.

Editor's note—Lavarack Barracks does not fall within the regulatory jurisdiction of the Townsville City Plan. However, council recognises its important function through this zoning.

Click here to view high resolution PDF.

Figure 6.114 – Lavarack Barracks precinct

Domain Central precinct:

(a) this centre accommodates showrooms primarily servicing the northern Townsville community;

(b) apart from small-scale food and drink outlets, Domain Central is not substantially expanded to include further shops or shopping centres; and

(c) the integration of this centre is strengthened through built form and layout, and pedestrian-based accessibility is improved.

Click here to view high resolution PDF.

Figure 6.115 – Domain Central precinct

Fulham Road medical precinct:

(a) the precinct continues to be the focus for private acute medical services in the Townsville region;

(b) the continued efficient and effective operation of the hospital is protected;

(c) the precinct accommodates medical centres, medical offices and health care services, research and technology industries, accommodation and other activities that support or are otherwise allied to the hospital activities;

(d) the hospital has the highest scale and intensity of any use within the precinct; and

(e) development facilitates an active pedestrian environment along Fulham Road which promotes connectivity to adjoining areas including Anderson Park.

Click here to view high resolution PDF.

Figure 6.116 – Fulham Road medical precinct

Bayswater Road medical precinct:

(a) the continued efficient and effective operation of the hospital is protected;

(b) the hospital has the highest scale and intensity of any use within the precinct;

(c) the precinct accommodates medical centres, medical offices and health care services, research and technology industries, accommodation and other activities that support or are otherwise related to the hospital activities;

(d) the primary hospital entry and pedestrian activity within the precinct is focused around the Oxford Street and Regent Street intersection;

(e) Oxford and Regent Street are active pedestrian environments and direct pedestrian connections are provided through the hospital site; and

(f) parking associated with the hospital and other allied health uses is provided in consolidated areas.

Click here to view high resolution PDF.

Figure 6.117 – Bayswater Road medical precinct

James Cook University-Townsville Hospital precinct:

(a) the James Cook University-Townsville hospital precinct is evolving into a 'world-class knowledge community' with a focus on the tropics and on sustainability. Prominent land uses include health and education services and a range of research and technology industries;

(b) the land use mix and scale of development reflects the role of the precinct in the city and the tropics. Land uses which benefit and enhance the knowledge community are accommodated. Development not related to the focus of the precinct, and that would adversely affect other centres, is not established;

(c) the precinct changes from a collection of single use campuses into a mixed use urban centre. The precinct integrates existing institutions and is integrated into the wider city including strong links to the CBD and the Aitkenvale and Thuringowa Central major centres;

(d) the James Cook University-Townsville Hospital precinct takes on a specific role in leadership in sustainability. Development provides exemplar and culture changing projects in areas like public transport, housing, public spaces and community development as well in its traditional academic and healthcare focus;

(e) the James Cook University-Townsville Hospital precinct exhibits increased self-containment compared to normal practice, with people living and working within the centre. Development minimises the use of finite resources like land, energy, water and wastewater. An overall test for all development at the centre, including residential development, is that it exemplifies sustainable development in all its realms;

(f) an emerging and sustainable resident community is well-connected to the wider city by active and public transport;

(g) car dominance within the precinct is redressed, with walking and cycling given priority in all development components;

(h) development does not extend into areas of landslip or bushfire risk, high scenic amenity or local, regional or state ecological significance; and

(i) development is well-designed at the centre, precinct, street, public space and building scales.

Editor's note—Development of James Cook University (Douglas Campus), which is undertaken in terms of a Ministerial Designation, does not fall within the regulatory jurisdiction of the Townsville City Plan.

Click here to view high resolution PDF.

Figure 6.118 – James Cook University-Townsville Hospital precinct

Discovery Central sub-precinct:

(i) at the heart of the precinct, development at Discovery Central exhibits the most intensive mix of uses and is busy with people throughout the day, week and year;

(ii) Discovery Central provides a strong focus for the hospital and university communities. Significant uses include research institutions and teaching facilities. Student and short-term accommodation is also present;

(iii) at street level, shops, cafes and bars are part of the mix;

(iv) Discovery Central is focussed on the 'ideas market', a significant public space located on the axis between the hospital and university library, and Mt Stuart Street, a new urban street connecting east-west through the centre. Pocket parks and small-scale spaces punctuate the area;

(v) buildings are 4 to 6 storeys and frame the street with no setbacks. Many buildings are mixed use;

(vi) footpaths and public spaces are well shaded. Walking is the best way to get around Discovery Central;

(vii) retail, including a supermarket, and other business uses support the daily needs of the knowledge community and are only established when need is demonstrated. Comparison shopping is not found here; and

(viii) buildings, streets and spaces are well-designed. The image and identity speaks strongly of Townsville's climate and place in the 21st century.

Discovery village sub-precinct:

(i) dwelling density within the precinct achieves a minimum net residential density of 30 dwellings per hectare through a mix of housing types including a range of townhouses, apartments and small lot homes. A focus on traditional dwelling houses does not occur;

(ii) buildings and neighbourhood design exhibit exemplar sustainable and social principles;

(iii) development does not alter the natural topography and maximises the retention of vegetation through street and housing design;

(iv) housing areas are well-connected to the central parts of the campus via pedestrian paths;

(v) a high quality public realm is created with passive recreation areas overlooked by verandahs and other living spaces in residences, shaded footpaths along all streets and a high level of permeability for pedestrians and bicycles; and

(vi) housing design provides exemplar responses to the Dry Tropics climate having regard to building massing and depth, solar orientation and shading and use of cooling and water sensitive landscape elements.

Editor's note—Sub-precincts are shown in Figure 6.123 — James Cook University-Townsville Hospital centre strategy plan.

6.3.6.3 Assessment benchmarks

Table 6.3.6.3—Assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Role and function	
PO1 Development does not prejudice or detract from the primary function of the specialised centre.	No acceptable outcome is nominated.
PO2 Other uses occur on a site where they: (a) directly support or are directly allied with the primary function of the particular centre; and (b) are subordinate to that primary function.	No acceptable outcome is nominated.
PO3 Development is consistent with the intended role, scale and character of the centre and does not compromise the intended role or successful functioning of the other specialised centres, the Principal centre (CBD) or major centres.	No acceptable outcome is nominated. **Editor's note—**Applicants should have regard to Economic impact assessment planning scheme policy no. SC6.5 for guidance on how to demonstrate compliance with this performance outcome.
PO4 Shops and shopping centres accommodate convenience retail, food and drink outlets, service industries and other services providing for the day-to-day needs of on-site businesses, workers, visitors or residents.	No acceptable outcome is nominated.

Table 6.3.6.3—Assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Design and built form	
PO5 The design of the precinct provides for: (a) efficient use of the available land; (b) a coherent and integrated built form, public realm and circulation networks; (c) central, accessible and attractive public spaces for people to congregate and interact; (d) continuity and complementarity of streetscape and landscape characteristics; (e) pedestrian friendly and visually interesting frontages to streets and public spaces; (f) optimum energy efficiency; (g) a compatible mix of uses; (h) connectivity of pedestrian and cyclist paths and spaces internal and external to the centre; and (i) sensitive transitioning of built form and uses to surrounding land. **Editor's note—**Applicants may be requested to prepare centre design master plans to demonstrate compliance with this performance outcome.	No acceptable outcome is nominated.
PO6 Building setbacks and orientation provide for an attractive streetscape that is sympathetic to existing characteristics of the local area.	No acceptable outcome is nominated.
PO7 Development is sympathetic to the scale of surrounding buildings, avoids expanses of blank walls and includes features that contribute to an attractive streetscape.	**AO7.1** The maximum length of any unarticulated wall is 15m, without a change in plane of at least 0.75m.
	AO7.2 Landscaping is provided along the street frontage, including substantive planting along at least 50% of the length of the frontage.
PO8 Streetscape treatments and street trees are provided along the street frontage to create a visually cohesive precinct and enhance pedestrian amenity.	No acceptable outcome is nominated.
PO9 Building caps and rooftops create an attractive roofscape and screen plant and equipment.	No acceptable outcome is nominated.
PO10 Built form maximises use of natural ventilation, solar heating/cooling and water conservation through building orientation and design, landscaping, building materials and on-site infrastructure.	No acceptable outcome is nominated.

Table 6.3.6.3—Assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Crime prevention through environmental design	
PO11 Development facilitates the security of people and property having regard to: (a) opportunities for casual surveillance and sight lines; (b) exterior building design that promotes safety; (c) adequate lighting; (d) appropriate signage and wayfinding; (e) minimisation of entrapment locations; and (f) building entrances, loading and storage areas that are well lit and lockable after hours. **Editor's note—**Applicants should have regard to Crime Prevention through Environmental Design Guidelines for Queensland.	No acceptable outcome is nominated.

Table 6.3.6.3—Assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Accessibility	
PO12 Convenient and legible connections are provided for pedestrians and cyclists to the site, particularly having regard to linkages with existing and proposed public transport infrastructure, the open space network, centres and other community-related activities.	No acceptable outcome is nominated.

Table 6.3.6.3—Assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Amenity	
PO13 Development minimises impacts on surrounding land and provides for an appropriate level of amenity within the centre, having regard to: (a) noise; (b) hours of operation; (c) traffic; (d) visual impact; (e) signage; (f) odour and emissions; (g) lighting; (h) access to sunlight; (i) privacy; and (j) outlook.	No acceptable outcome is nominated.
PO14 Where provided, outdoor lighting does not adversely affect the amenity of adjoining properties or create a traffic hazard on adjacent roads.	**AO14.1** Light emanating from any source complies with *Australian Standard AS 4282 Control of the Obtrusive Effects of Outdoor Lighting*.
	AO14.2 Outdoor lighting is provided in accordance with *Australian Standard AS 1158.1.1 – Road Lighting – Vehicular Traffic (Category V) Lighting – Performance and Installation Design Requirements*.
PO15 Refuse storage areas and storage of goods or materials in open areas is presented in a manner that does not detract from the visual amenity of the local area.	**AO15** The open area used for the storage of refuse, vehicles, machinery, goods and materials used on the site is: (a) located no closer than 3m from any boundary; and (b) are screened from view by a 1.8m high solid screen fence.
PO16 On-site landscaping is provided to: (a) enhance the appearance of the development, particularly in parking and service areas and in public spaces; (b) to contribute to pedestrian comfort through shade; and (c) to screen servicing components.	No acceptable outcome is nominated.

Table 6.3.6.3—Assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Protection of natural values	
PO17 The site layout, size and design responds sensitively to on-site and surrounding topography, drainage patterns and ecological values by: (a) minimising earthworks; (b) maximising retention of natural drainage patterns; (c) ensuring existing drainage capacity is not reduced; (d) maximising the retention of existing vegetation; and (e) providing buffers to protect the ecological functions of waterways; and protects environmental values and water quality objectives of receiving waters. **Editor's note—**The environmental values and water quality objectives are established under the Environmental Protection (Water) Policy (2009). For Townsville, they are specified in the Ross River Basin Environmental Values and Water Quality Objectives 2012 and Black River Basin Environmental Values and Water Quality Objectives (2012).	No acceptable outcome is nominated.

Table 6.3.6.3—Assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Domain Central precinct	
PO18 Domain Central is not substantially expanded to include further shops or shopping centres.	No acceptable outcome is nominated.
PO19 Development is consistent with the height of existing buildings in the area.	**AO19** Building height does not exceed 3 storeys.
PO20 Buildings create an attractive, safe and pleasant pedestrian-focussed environment along street frontages.	No acceptable outcome is nominated.

Table 6.3.6.3—Assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Fulham Road medical precinct	
PO21 Development creates a medium-rise environment with the highest built form, scale and intensity centred on the hospital, and built form stepping down to a low-rise environment at the eastern and western edges of the precinct.	**AO21** Development occurs in accordance with building heights shown on Figure 6.119 — Fulham Road medical precinct concept plan.
PO22 Development has a direct nexus with the hospital or other medical uses within the precinct. The type and scale of retail and other commercial development does not compromise the intended role or successful functioning of the CBD, district or major centres.	No acceptable outcome is nominated.
PO23 Development provides an active interface at the street level.	**AO23.1** Buildings are oriented to all street frontages and have points of entry visible to each street frontage.
	AO23.2 Non-residential uses occur at the street level where shown as a primary or secondary active frontage on Figure 6.119 — Fulham Road medical precinct concept plan.
	AO23.3 Development provides outdoor seating and dining along the primary active frontage.
	AO23.4 Development involving the expansion of the Mater Hospital provides a formal entrance along Park Street.
PO24 Building setbacks: (a) assist in defining key activity areas; (b) create a well-defined edge to the street; and (c) provide a soft edge to the adjoining parkland.	**AO24.1** Buildings setbacks at ground level are in accordance with Figure 6.119 — Fulham Road medical precinct concept plan.
	AO24.2 Buildings built to 6 storeys are setback 20m from any property boundary.
PO25 Development provides protection from the weather for pedestrians along the frontage of the site.	**AO25** Development provides a 3m wide awning along the frontage of the site where identified on Figure 6.119 — Fulham Road medical precinct concept plan as having either a primary or secondary active frontage.
PO26 Private open space is located and oriented to allow passive surveillance of the street.	**AO26** Residential uses above the street level incorporate balconies and are setback 3m to the building wall. Figure 6.120 — Residential uses above street level illustrates.

Figure 6.119 – Fulham Road medical precinct concept plan

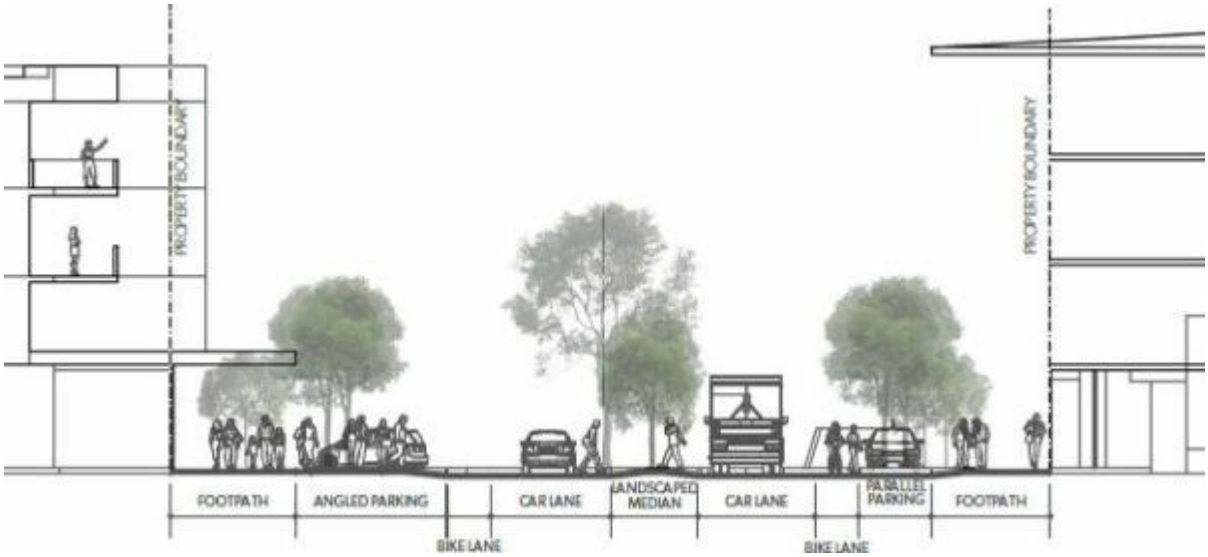

Figure 6.120 – Residential uses above street level

PO27 Development facilitates clear and safe pedestrian links between Anderson Park and Fulham Road.	No acceptable outcome is nominated.
PO28 Parking and access are consolidated and do not dominate the street frontage.	**AO28.1** Parking is provided within or behind buildings and is screened so that it is not visible from the street.
	AO28.2 Development does not obtain access to Fulham Road between Diprose Street and Thomas Street.
PO29 Where possible, development provides shared access and parking with adjoining uses.	No acceptable outcome is nominated.
PO30 Where development has a common boundary with Anderson Park, opportunities for overlooking and casual surveillance to the Park are created through the orientation of buildings and private open space.	No acceptable outcome is nominated.

Table 6.3.6.3—Assessable development (Part)

Performance outcomes	**Acceptable outcomes**
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
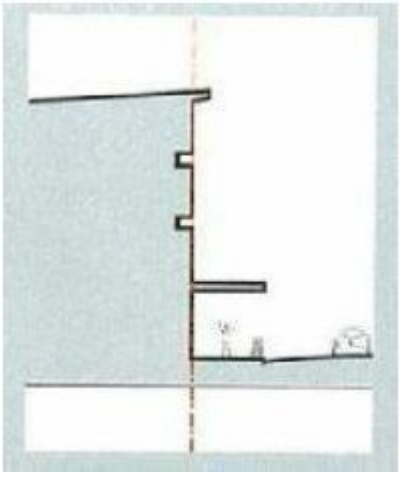
Bayswater Road medical precinct	
PO31 Development creates a medium-rise environment with the highest built form, scale and intensity centred on the hospital.	**AO31** The maximum building height is in accordance with Figure 6.121 — Bayswater Road medical precinct concept plan.
PO32 Development has a direct nexus with the hospital or other medical uses within the precinct. The type and scale of retail and other commercial development does not compromise the intended role or successful functioning of the CBD, district or major centres.	No acceptable outcome is nominated.
PO33 Buildings are oriented to the street frontages and have points of entry visible to each street frontage.	No acceptable outcome is nominated.
PO34 Development provides an active and pedestrian-friendly interface at the street level.	**AO34.1** Non-residential uses occur at the street level.
	AO34.2 Where development has an active frontage identified in Figure 6.121 — Bayswater Road medical precinct concept plan: (a) buildings are built to the street boundary; and (b) development provides a 3m wide awning over the footpath. Figure 6.122 — Buildings built to the frontage illustrates.

Figure 6.121 – Bayswater Road medical precinct concept plan



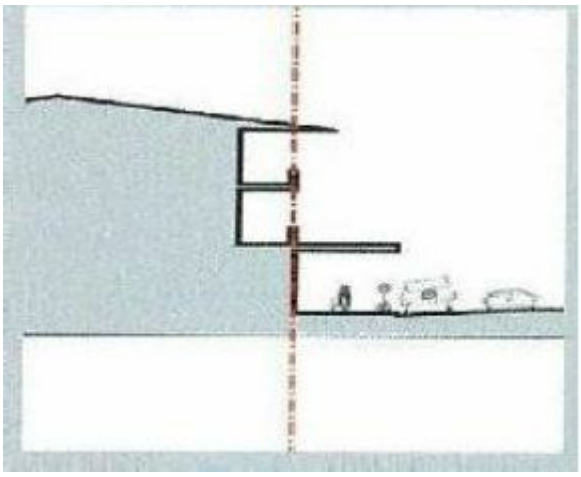


Figure 6.122 – Buildings built to the frontage

PO35 The primary pedestrian entrance to the Mater hospital is oriented to Oxford Street and the Oxford Street/Regent Street intersection.	No acceptable outcome is nominated.
PO36 Development facilitates a direct pedestrian connection from Bayswater Road through the Mater hospital site to the Oxford and Regent Street intersection.	No acceptable outcome is nominated.
PO37 Development on the hospital site facilitates the consolidation of parking within a centralised parking facility.	No acceptable outcome is nominated.

Table 6.3.6.3—Assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
James Cook University-Townsville Hospital precinct	
PO38 Development is generally in accordance with the land use allocations shown in Figure 6.123 — James Cook University- Townsville Hospital centre strategy plan and is consistent with the following intentions: (a) Townsville Hospital sub-precinct — development facilitates the efficient operation of Townsville's major hospital and ensures integration of the hospital and university campuses into a seamless urban centre; (b) Discovery Central sub-precinct — development creates a vibrant community heart containing the most intensive mix of uses; (c) Enterprise Village sub-precinct— development facilitates the establishment of knowledge businesses and industries; (d) Academic Core sub-precinct — development facilitates continued operation and expansion of educational purposes; (e) University Village sub-precinct and College sub-precinct — development facilitates student accommodation; (f) Discovery School sub-precinct — development facilitates the establishment of a new high school; (g) Discovery Village sub-precinct — development creates a mixed density residential community which has strong links to the university and hospital; and (h) Green Space sub-precinct — accommodates natural areas within the centre including watercourses, environmental areas and corridors, parks and sport and recreation area.	No acceptable outcome is nominated. **Editor's note—**The first stage of Discovery Village may develop as a pioneer project to demonstrate the sustainability principles sought.
PO39 The land use mix and scale of development have a direct nexus with, and enhance, the knowledge community focus.	No acceptable outcome is nominated.
PO40 The community is well-connected internally and to the wider city by active and public transport.	No acceptable outcome is nominated. **Editor's note -** Future growth of the precinct will increase transport demand. In order to support development in this precinct, and the preferred pattern of development in Townsville as a whole, improved public transport to this precinct will be necessary. Planning has identified the need to preserve a potential route for a rapid bus transit corridor and identify potential sites for Townsville Hospital and James Cook University Bus Stations.

PO41 Development exemplifies leadership in economic, social and environmental sustainability.	No acceptable outcome is nominated. **Editor's note—**For guidance, refer to Discovery Rise Design Guidelines adopted by the place making panel established for James Cook University (JCU).
PO42 Development is well-designed at the precinct, street, public space and building scales.	No acceptable outcome is nominated. **Editor's note—**For guidance, refer to Discovery Rise Design Guidelines adopted by the place making panel established for James Cook University (JCU).
PO43 Development is well planned and orderly, and within the capacity of available infrastructure.	No acceptable outcome is nominated. **Editor's note—**Council will request that an area/precinct scale structure plan — comprising land use, infrastructure, staging, urban design and implementation - is prepared and agreed to by the place making panel established for JCU before development takes place.
PO44 Development does not extend in to areas of landslip or bushfire risk, high scenic amenity or local, regional or state ecological significance.	No acceptable outcome is nominated.

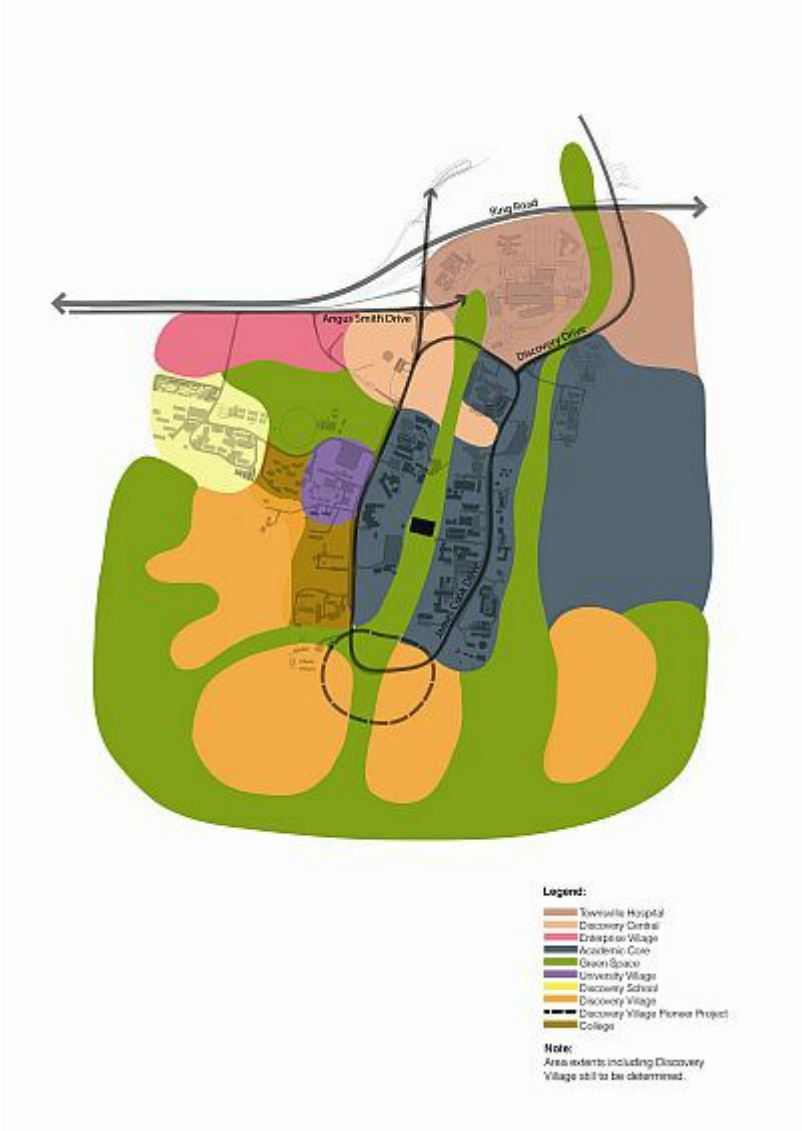

Figure 6.123 – James Cook University-Townsville Hospital centre strategy plan

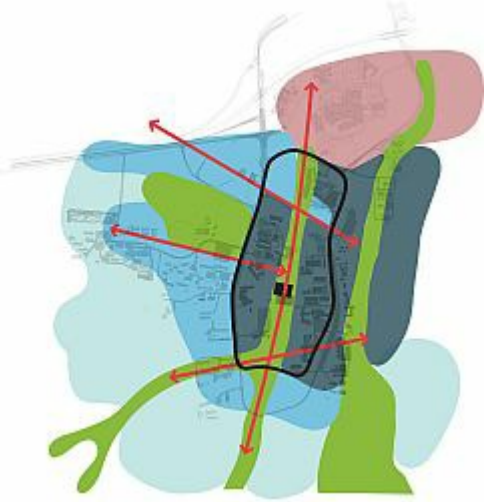
PO45 Development complies with and advances the design concepts set out in Figure 6.124 – James Cook University-Townsville Hospital precinct development concepts.	No acceptable outcome is nominated.

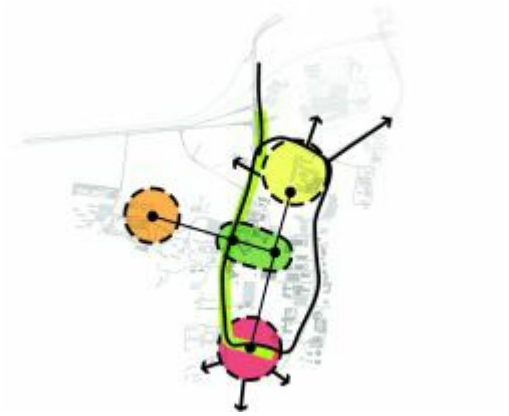
1. **Axes**
Original axes/view lines from Birell's 1964 Master Plan.

2. **Academic Core**
This needs to be retained as the heart of Discovery Rise.

3. **Connect Academic Core to New Uses:**
Existing campus axes from 'key connectors' linking new development around academic core into the heart of the campus.
Denser development closer to the academic core.

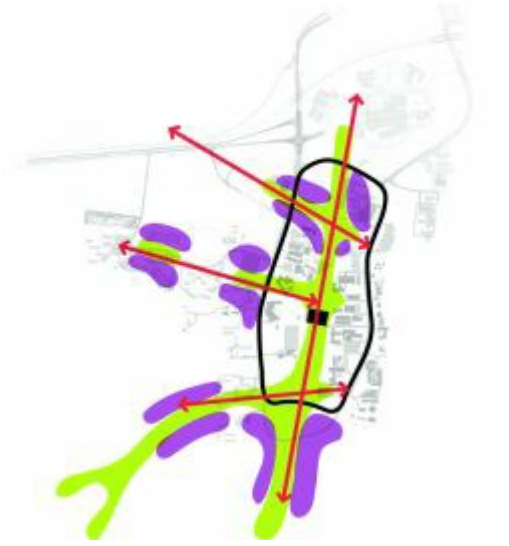


4. **Hubs Interconnected**
Create 'hubs' of mixed academic and new uses.



5. **Public Spaces**
Public spaces are located along 'key connectors', in the centre of significant hubs.

6. **Density**
Create greatest density along 'key connectors' streets, pedestrian pathways and public spaces.



7. **Pedestrian and Cycle Paths**
Create an interconnected network of paths and bike routes emphasising linkages into the campus heart and academic core. These paths are cool, shaded and green.

8. **Road Network**
James Cook Drive as primary circulating street, slower speed, shady street environments for east-west connecting streets. New street to link to existing neighbouring suburban development to the west.

9. **Public Transport**
Existing bus and taxi set down areas on Mt Stuart Street, at Discovery Village and at Discovery School. Approximately 10-20m wide corridor to be reserved for a future rapid bus transit corridor and associated Townsville Hospital and James Cook University Bus Stations, to be determined through collaborative planning between Townsville Hospital, James Cook University, Department of Transport and Main Roads and Townsville City Council.

Figure 6.124 - James Cook University-Townsville Hospital precinct development concepts

Table 6.3.6.3—Assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
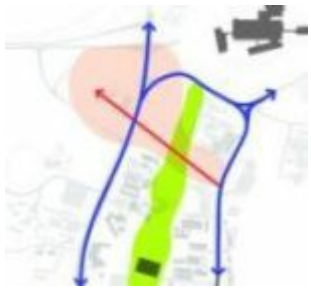
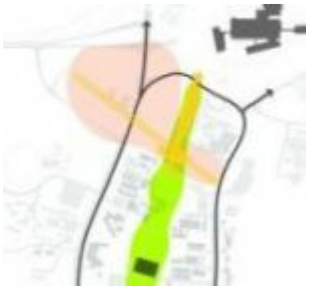
Discovery Central sub-precinct	
PO46 Development accommodates the primary structural elements shown in Figure 6.125 — Discovery Central primary elements.	No acceptable outcome is nominated.

1. Pedestrian Paths



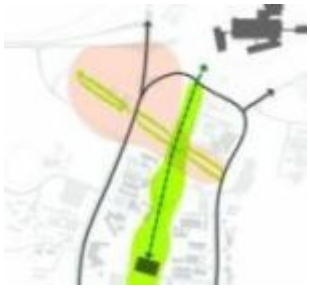
2. Road Linkages



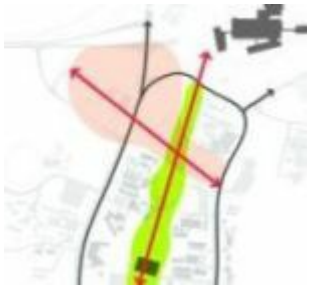
3. Public Spaces

4. Frontage Treatment

5. Shading



6. Greenspace Corridors



7. View and Connection Axes

Figure 6.125 – Discovery Central primary elements

Table 6.3.6.3—Assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
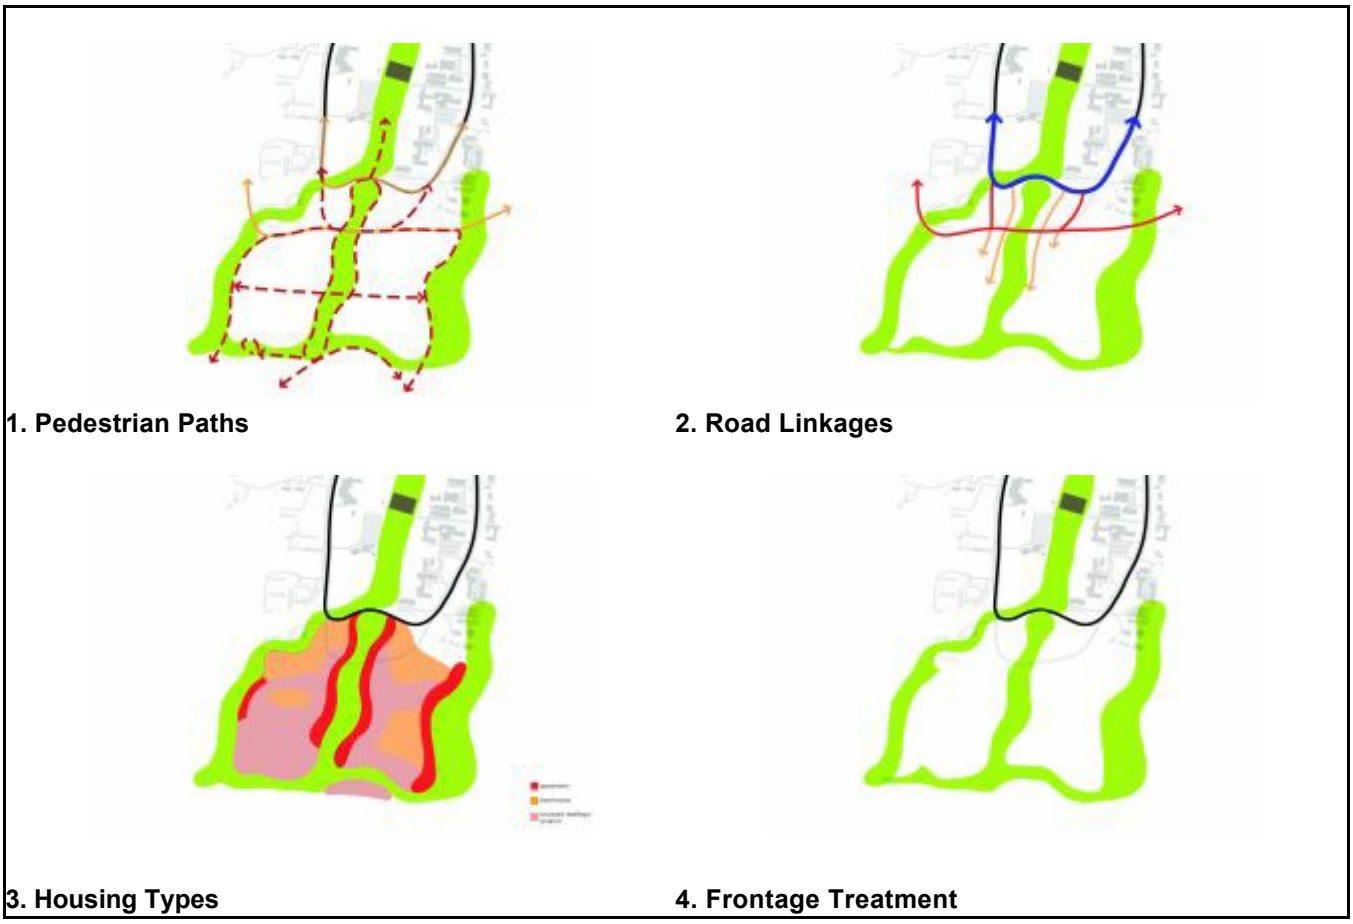
Discovery Village sub-precinct	
PO47 Development accommodates the primary structural elements shown in Figure 6.126 — Discovery Village primary elements.	No acceptable outcome is nominated.



1. Pedestrian Paths

2. Road Linkages

3. Housing Types

4. Frontage Treatment

Figure 6.126 – Discovery Village primary elements

PO48 Development occurs at medium densities that optimise public transport and walkability, and sustainable living.	**AO48** Dwelling density within the precinct achieves a minimum net residential density of 30 dwellings per hectare.

6.3.7 Mixed use zone code

6.3.7.1 Application

This code applies to assessing a development where the code is identified as applicable in the categories of development and assessment.

When using this code, reference should be made to section 5.3.2 and where applicable, section 5.3.3 located in Part 5.

6.3.7.2 Purpose

(1) The purpose of the Mixed use zone code is to provide for a mixture of development that may include service industry, business, retail, residential, tourist accommodation and associated services and low impact industrial uses.

(2) The particular purpose of the code is to guide a range of activities which create an attractive mixed business and living environment and which do not compromise the principal centre (CBD), district or major centres.

(3) The purpose of the zone will be achieved through the following overall outcomes:

- (a) this zone accommodates small to medium-sized pockets and corridors of mixed use development throughout Townsville, which are generally close to centres, significant entry points, and providing interface between residential, commercial, retail or industrial uses;
- (b) mixed use areas do not compromise the intended role or successful functioning of other centres. They do not contain full line supermarkets, discount department stores or department stores;
- (c) unless otherwise stated for a particular precinct, the areas in this zone evolve to contain a wider mix of medium density residential uses as well as dining, convenience shops and specialty retailing, small-scale office uses, professional services, and service and low impact industries;
- (d) uses such as showrooms and outdoor sales may occur in the zone, other than within the Breakwater precinct. Where they occur, showrooms are located and designed so that they contribute to the attractiveness, pedestrian focus and continuity of the streetscape;
- (e) built form and landscaping create an attractive, pedestrian oriented streetscape, and visual amenity along major roads is improved;
- (f) mixed use areas identified along major roads are designed to encourage a consolidation of built form and activities, access points and signage. Commercial strip development does not extend beyond the zoned mixed use land along major roads;
- (g) where they occur, residential uses are designed to minimise adverse impacts on occupants as a result of noise and other characteristics of the local environment;
- (h) development facilitates improved accessibility by walking, cycling and public transport. Along major roads, access is managed to avoid conflict points and to give priority to pedestrian and cyclist movements;
- (i) design of built form and public spaces facilitates safe and secure environments and discourages antisocial behaviour;
- (j) development is designed and operated to minimise adverse impacts on the amenity of surrounding residential neighbourhoods; and
- (k) opportunities for energy efficiency through built form are maximised.

Editor's note—To remove any doubt, each development site does not need to contain a mixed use development.

(4) The purpose of the zone will also be achieved through the following additional overall outcomes for particular precincts.

Magnetic Island villages precinct:

(a) development within this precinct supports the consolidation of retail, business, and service industry activities in dedicated activity nodes for residents and visitors to the various townships around Magnetic Island; and

(b) new buildings and streetscape treatments are in a design style that builds local character by articulation of buildings, incorporating extensive planting and the use of a variety of materials and finishes.

Click here to view high resolution PDF.

Figure 6.127 – Magnetic Island villages precinct

Nelly Bay sub-precinct:

(i) a range of tourist and residential uses is provided, including:

  (A) the continuation of small-scale retail and other uses which support tourism; and

  (B) island-style low-rise medium density residential and short-term accommodation close to tourist uses.

(ii) buildings within the precinct are low-rise (up to 2 storeys in building height) and the scale and massing of buildings limits the impact on the natural character of Magnetic Island.

Click here to view high resolution PDF.

Figure 6.128 – Nelly Bay sub-precinct

Picnic Bay sub-precinct:

(i) development supports tourism activities and contributes to the revitalisation of existing retail and food related uses including:

(A) cafes and restaurants; and

(B) the consolidation of new tourist and retail uses, in the vicinity of the hotel and the jetty/promenade.

(ii) buildings within the precinct are low-rise (up to 3 storeys in building height) and the scale and massing of buildings limits the impact on the natural character of Magnetic Island.

Click here to view high resolution PDF.

Figure 6.129 – Picnic Bay sub-precinct

Horseshoe Bay sub-precinct:

(i) development supports the ongoing tourism focus in this location, facilitating the consolidation of retail, office and tourist activity. Short-term accommodation occurs in a ‘shop-top’ format; and

(ii) buildings within the precinct are low-rise (up to 2 storeys in building height) and the scale and massing of buildings limits the impact on the natural character of Magnetic Island.

Click here to view high resolution PDF.

Figure 6.130 – Horseshoe Bay sub-precinct

Nelly Bay gateway precinct:

(a) development supports the creation of a gateway within proximity to the primary entrance point to Magnetic Island, at the Nelly Bay ferry terminal;

(b) local tourism-related and other retail and commercial uses and services are encouraged to establish in this precinct;

(c) development creates a strong relationship with Sooning Street and Mandalay Avenue, by sleeving the roads with buildings that are oriented to the street and screening parking areas behind;

(d) buildings within the precinct are low-rise (up to 3 storeys in building height) and the scale and massing of buildings limits the impact on the natural character of Magnetic Island; and

(e) new buildings and streetscape treatments are in a design style that builds local character by articulation of buildings, incorporating extensive planting and the use of a variety of materials and finishes.

Click here to view high resolution PDF.

Figure 6.131 – Nelly Bay gateway precinct

Arcadia Central precinct:

(a) development facilitates the transformation of the precinct as a defined local centre of activity for Arcadia including uses such as shops, small offices, medium density residential and tourist accommodation;

(b) development creates a strong relationship with Marine Parade and Armand Way, by sleeving the precinct with buildings that are oriented to the street and screening parking areas behind;

(c) development incorporates central community space with road frontage, located opposite the beach. Pedestrian connections are provided to surrounding uses such as the restaurants and cafes;

(d) buildings within the precinct are low-medium rise (up to 4 storeys in building height) and the scale and massing of buildings limits the impact on the natural character of Magnetic Island; and

(e) new buildings and streetscape treatments are in a design style that builds local character by articulation of buildings, incorporating extensive planting and use of a variety of materials and finishes.

Click here to view high resolution PDF.

Figure 6.132 – Arcadia Central precinct

Kirwan Traders precinct:

(a) small-scale commercial buildings are established, to provide space to incubate small, locally-based businesses;

(b) built form and streetscape treatments in this area contribute to a distinct character as a business hub, in particular on the frontages of Tavern Street, Carlton Street, Castlemaine Street and Burnda Street; and

(c) buildings within the precinct are generally low-medium rise and create a sensitive transition in scale from the surrounding neighbourhood.

Click here to view high resolution PDF.

Figure 6.133 – Kirwan Traders precinct

Charters Towers Road business precinct:

(a) built form and streetscape treatments in this area combine to create a distinct character as a business hub, in particular on the frontages of Woolcock Street, Charters Towers Road and Somer Street;

(b) development at the intersection of Charters Towers Road and Woolcock Street is appropriately treated and designed to serve as a significant gateway feature;

(c) new development located along the frontage of Charters Towers Road supports a transition to new and well-designed commercial activities, including small-scale offices and local service businesses;

(d) residential uses occur in this precinct where they do not restrict or impact on the intended industrial and commercial activities; and

(e) buildings within the precinct are generally low-medium rise and create a sensitive transition in scale from the surrounding neighbourhood.

Click here to view high resolution PDF.

Figure 6.134 – Charters Towers Road business precinct

CBD gateway precinct:

(a) this precinct provides for an emerging employment and business area in proximity to, and supporting the development of the principal centre (CBD). Uses in the precinct are intended to include service and low impact industrial uses, convenience shopping and showroom activities;

(b) offices occur where ancillary to industrial uses on the site;

(c) residential uses occur within this precinct where they do not restrict or impact on the intended industrial and commercial activities;

(d) Flinders Street (West) is reinforced as a significant gateway to the principal centre (CBD);

(e) the location of convenience shopping assist in reinforcing key intersections along Flinders Street (West); and

(f) improved pedestrian linkages to the principal centre (CBD) and Ross Creek are created.

Click here to view high resolution PDF.

Figure 6.135 – CBD gateway precinct

South Townsville Railyards and Dean Park precinct:

(a) the South Townsville Railyards and Dean Park present a significant opportunity for the delivery of future strategic infrastructure and 'city making' facilities for the whole of Townsville;

(b) the current use of the South Townsville Railyards site is protected until such time as these uses are relocated or become redundant. At that time, redevelopment of this area facilitates:

  (i) the provision of a city centre based sports stadium within an urban setting that relies on a nexus with public transport access;

  (ii) the redevelopment of Dean Park to create a usable parkland of approximately half its current size;

  (iii) the provision of an entertainment and convention centre on the other half of the Dean Park site; and

  (iv) the provision of a bus layover and driver facilities;

(c) interim uses do not compromise the future development of the land;

(d) new development is located and designed to be well-connected to the principal centre (CBD) and nearby high density residential areas;

(e) servicing and loading facilities in new development are considered within the overall design minimising impacts on surrounding residential uses and public spaces;

(f) the intended major facilities may be supported by a mix of complementary uses including service and low impact industry, office, retail and showroom activities, and residential uses, in a low to medium-rise built form; and

(g) Development of a commercial nature is not of a type or size that detracts from the function of the principal centre (CBD), district centres or major centres.

Click here to view high resolution PDF.

Figure 6.136 – South Townsville Railyards and Dean Park precinct

Wotton Street precinct:

(a) the precinct provides for a transition between service and low impact industries to the north and the mixed use area to the south adjoining Ross River Road;

(b) residential uses occur in this precinct where they do not restrict or impact on the intended industrial and commercial activities and where they are located above ground storey non-residential uses; and

(c) buildings within the precinct are generally low-medium rise and create a sensitive transition in scale from the surrounding neighbourhood.

Click here to view high resolution PDF.

Figure 6.137 – Wotton Street precinct

Breakwater precinct:

(a) the Breakwater precinct accommodates ongoing use and further development of residential, tourism and entertainment uses;

(b) the precinct will grow to establish a landmark high quality accommodation and entertainment destination for Townsville's tourists and residents;

(c) development includes the establishment of a new marina and waterfront pathway on the seaward side of the point, dining, boat club, local convenience facilities and tourist activities, as well as short and long-term accommodation. The precinct does not contain low impact industries other than where there is a nexus with a future marina or boat club;

(d) pedestrian access is focussed on a waterfront pathway, and includes integrated pedestrian pathways providing a high level of permeability throughout the precinct;

(e) development facilitates the consolidation of the casino and allied uses as a highly significant destination for Townsville. Should the Townsville Entertainment Centre re-locate, redevelopment of this site occurs which:

  (i) facilitates a range of activities including short-term accommodation, markets and a new boat club;

  (ii) integrates private and public transport options;

  (iii) enables reuse of existing surface parking areas; and

(f) short-term or permanent high density residential accommodation, is predominant in the central and western part of the precinct. Where adjoining the future marina, uses at the ground floor include local dining and shops.

Click here to view high resolution PDF.

Figure 6.138 – Breakwater precinct

King Street quarter precinct:

(a) the precinct provides for a revitalised tourism and education based destination in proximity to the principal centre (CBD), and functions as a focus point of activity between the CBD and the Breakwater precinct;

(b) development facilitates the establishment of allied educational uses such as a centre of excellence for marine studies;

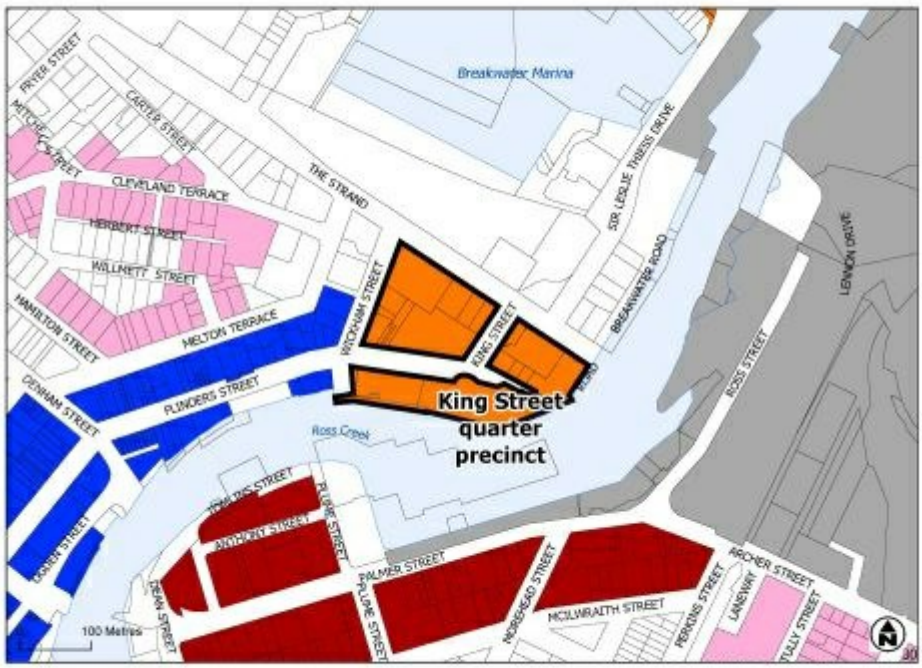
(c) the precinct also includes high quality accommodation, dining and entertainment facilities. Residential uses are focused in the pocket of land bounded by Wickham and King Streets;

(d) development protects and respects the values of heritage buildings in the precinct, including the Queens Hotel;

(e) pedestrian permeability is improved through the provision of linkages through and between development sites, and through the continuation of a waterfront pathway along Ross Creek;

(f) improved vehicle circulation and visual links between the CBD, the King Street quarter precinct and the Breakwater precinct are created; and

(g) new parkland is established at the southern end of Anzac Park, and a new pedestrian and visual link across Ross Creek is created in line with the southern end of The Strand.



Click here to view online PDF.

Figure 6.139 – King Street quarter precinct

Kings Road precinct:

(a) redevelopment facilitates a change in focus for the area to include medium density residential uses and a range of smaller scale retail, dining and entertainment activities that contribute to the area's day and night-time vibrancy;

(b) the precinct plays a support role to the Hyde Park major centre in accommodating non-residential uses;

(c) development creates a medium-rise built form, with variation in built form to create visual interest across the precinct;

(d) the interface with the lake is enhanced through building frontages which orientate towards the lake and contain active uses at street level; and

(e) impacts on residential amenity from the rail corridor and showgrounds are minimised.

Click here to view high resolution PDF.

Figure 6.140 – Kings Road precinct

6.3.7.3 Assessment benchmarks

Table 6.3.7.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
PO1 Where provided, outdoor lighting does not adversely affect the amenity of adjoining properties or create a traffic hazard on adjacent roads.	**AO1.1** Light emanating from any source complies with *Australian Standard AS 4282 Control of the Obtrusive Effects of Outdoor Lighting*.
	AO1.2 Outdoor lighting is provided in accordance with *Australian Standard AS 1158.1.1 –Road Lighting – Vehicular Traffic (Category V)* *Lighting – Performance and Installation Design Requirements*.
PO2 Residential uses within the centre do not interrupt the continuity of the streetscape or the active, pedestrian focus of the street frontage.	**AO2** Any residential uses are located above or behind ground storey retail, commercial or community uses.
PO3 Residential uses within the centre are provided with a reasonable level of privacy.	**AO3.1** Windows, balconies, and terraces of a dwelling unit are screened where overlooking a habitable room or private open space of another dwelling within 9m.
	AO3.2 Screening is a solid translucent screen or perforated panels or trellises which have a maximum of 50% openings.
PO4 Residential uses within the centre are provided with a reasonable level of private outdoor living space.	**AO4** Dwellings are provided with private open space or a balcony directly accessible from a habitable room with: (a) a minimum area of 9m^2; (b) a minimum dimension of 3m; and (c) clear of any utilities such as gas, water tanks and air conditioning units.

Table 6.3.7.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Role and function	
PO5 The type and scale of retail and other commercial development does not compromise the intended role or successful functioning of other centres.	No acceptable outcome is nominated. **Editor's note—**Applicants should have regard to Economic impact assessment planning scheme policy SC6.5 for guidance on how to demonstrate compliance with this performance outcome.

Table 6.3.7.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Built form	
PO6 Built form is generally low to medium rise.	**AO6** All buildings and structures do not exceed 3 storeys in building height, except where stated otherwise for a particular precinct.
PO7 Built form provides for a sensitive transitioning in height and scale from surrounding land uses.	No acceptable outcome is nominated.
PO8 Development contributes to an attractive, coherent and integrated streetscape, by: (a) ensuring buildings assist in defining and enclosing the street frontage; (b) improving the continuity of built form; and (c) using complementary landscaping and streetscape treatments.	No acceptable outcome is nominated.
PO9 Built form is designed to: (a) create a pedestrian rather than car oriented street frontage; (b) break down the facade into finer scaled components; and (c) avoid large expanses of blank walls oriented to the street.	**AO9.1** Buildings are built to the street frontage and provide an awning over the full width of the footpath, except where stated otherwise for a particular precinct.
	AO9.2 Parking is provided to the side or the rear of buildings or below ground level, and is not located along the street frontage.
	AO9.3 Entrances to buildings face the street and any public space to which the building has frontage.
	AO9.4 The maximum length of any unarticulated wall is 15m, without a change in plane of at least 0.75m.
	AO9.5 At the ground storey, a minimum of 65% of building frontage is provided as predominantly transparent windows or glazed doors and a maximum of 35% as solid facade.
PO10 Building caps and rooftops create an attractive roofscape and screen plant and equipment.	No acceptable outcome is nominated.
PO11 Built form maximises use of natural ventilation, solar heating and cooling and water conservation through building orientation and design, landscaping, building materials and on-site infrastructure.	No acceptable outcome is nominated.

Table 6.3.7.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Crime prevention through environmental design	
PO12 Development facilitates the security of people and property having regard to: (a) opportunities for casual surveillance and sight lines; (b) exterior building design that promotes safety; (c) adequate lighting; (d) appropriate signage and way finding; (e) minimisation of entrapment locations; and (f) building entrances, loading and storage areas that are well lit and lockable after hours. **Editor's note—**Applicants should have regard to Crime Prevention through Environmental Design Guidelines for Queensland.	No acceptable outcome is nominated.

Table 6.3.7.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Accessibility	
PO13 Wherever practicable, vehicular access is provided from rear or side streets or facilitates the amalgamation of access points.	No acceptable outcome is nominated.
PO14 Convenient and legible connections are provided for pedestrians and cyclists to the site, particularly having regard to linkages with existing and proposed public transport infrastructure, the open space network, centres and other community-related activities.	No acceptable outcome is nominated.
PO15 New development provides for safe vehicular and pedestrian access and efficient operation of surrounding roads.	**AO15** Either: (a) development provides no net increase in driveway crossovers; or (b) lots are consolidated to gain access from a minor or lower-order road, except where stated otherwise for a particular precinct.

Table 6.3.7.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Amenity	
PO16 Development minimises impacts on surrounding land and provides for an appropriate level of amenity within the site, having regard to: (a) noise; (b) hours of operation; (c) traffic; (d) visual impact; (e) signage; (f) odour and emissions; (g) lighting; (h) access to sunlight; (i) privacy; and (j) outlook.	No acceptable outcome is nominated.
PO17 Development is located, designed and operated so that adverse impacts on privacy and amenity on nearby land in a residential zone are minimised.	**AO17.1** Buildings are set back 3m from any boundary shared with a residential zone, or half the height of the part of the building, whichever is the greater.
	AO17.2.1 A 1.8m high solid screen fence is provided along all boundaries shared with a residential zone. AND **AO17.2.2** A landscaped buffer with a minimum width of 3m and consisting of dense screen planting is provided along all boundaries shared with a residential zone.
	AO17.3 Windows that have a direct view into an adjoining residential use are provided with fixed screening that is a maximum of 50% transparent to obscure views and maintain privacy for residents.
PO18 Refuse storage areas, loading/unloading and other service or storage areas are screened from view from the street and adjoining land.	**AO18** Refuse storage areas loading/unloading and other service or storage areas are located to the rear or side of a building and are screened from view by a 1.8m high solid fence.
PO19 On-site landscaping is provided to: (a) enhance the appearance of the development, particularly in parking and service areas and in public spaces; (b) contribute to pedestrian comfort through shade; and (c) screen servicing components.	No acceptable outcome is nominated.

PO20 Streetscape treatments are provided to enhance amenity to contribute positively to the city image, particularly along major roads and streets.	No acceptable outcome is nominated.

Table 6.3.7.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Magnetic Island villages precinct	
PO21 Convenient and legible connections are provided for pedestrians and cyclists to the precinct, particularly having regard to linkages to the bay foreshore, residential areas in the community and the open space network.	No acceptable outcome is nominated.
PO22 Building design and massing is consistent with the low-density scale of the Magnetic Island character and articulates individual buildings.	**AO22** Building height does not exceed 2 storeys, or when in the Picnic Bay sub-precinct 3 storeys.
PO23 Design and articulation of buildings contribute to the creation of the local Magnetic Island character through: (a) climate-responsive design; (b) natural setting of buildings within the landscape; and (c) maximising views to the bay.	No acceptable outcome is nominated.
PO24 The design of buildings in this precinct provides for pedestrian-friendly and visually interesting frontages.	No acceptable outcome is nominated.
PO25 Suitable vegetation screening and treatments are provided within the building setback, to minimise the visual impact of the buildings.	No acceptable outcome is nominated.

Table 6.3.7.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Arcadia Central precinct	
PO26 Development supports the creation of a new community node for Arcadia in accordance with Figure 6.141 — Arcadia Central precinct concept plan.	No acceptable outcome is nominated.

PO27 Frontages shown on Figure 6.141 — Arcadia Central precinct concept plan as having active edges, contain: (a) primary building entrances; (b) awnings to provide shade for pedestrians; (c) significant use of glazing or transparent materials; and (d) uses which promote a high level of pedestrian movement and interaction.	No acceptable outcome is nominated.
PO28 Development on the corner of Marine Parade and Armand Way creates a gateway to Arcadia. Built form, landscape and streetscape treatment at this corner reinforces a gateway statement.	No acceptable outcome is nominated.
PO29 Building height is of a low to medium-rise scale and building massing is consistent with the low density character of Magnetic Island.	**AO29** Building height does not exceed 4 storeys.
PO30 Design and articulation of buildings contribute to the creation of the local Magnetic Island character through: (a) climate-responsive design; (b) natural setting of buildings within the landscape; and (c) maximising views to the bay.	No acceptable outcome is nominated.
PO31 Convenient and legible connections are provided for pedestrians and cyclists to the site, particularly having regard to linkages to the foreshore and the open space network.	No acceptable outcome is nominated.
PO32 Access points are minimised along Marine Parade.	No acceptable outcome is nominated.
PO33 New pedestrian connnections consistent with Figure 6.141 — Arcadia Central precinct concept plan are provided.	No acceptable outcome is nominated.
PO34 Increased public open space and improvements to the public domain are provided throughout the precinct.	No acceptable outcome is nominated.

Figure 6.141 – Arcadia Central precinct concept plan

Table 6.3.7.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Nelly Bay gateway precinct	
PO35 Development in this precinct supports the creation of a high quality activity hub for Nelly Bay and Magnetic Island, in accordance with Figure 6.142 — Nelly Bay gateway precinct concept plan.	No acceptable outcome is nominated.
PO36 Development creates a gateway to Nelly Bay and Magnetic Island. Built form, landscape and streetscape treatment reinforces a key entry point to the village.	No acceptable outcome is nominated.
PO37 Frontages shown on Figure 6.142 — Nelly Bay gateway precinct concept plan as having active edges, contain: (a) primary building entrances; (b) awnings to provide shade for pedestrians; (c) significant use of glazing or transparent materials; and (d) uses which promote a high level of pedestrian movement and interaction.	No acceptable outcome is nominated.
PO38 Streetscaping and landscaping provides increased shade and amenity for pedestrians along roads indicated as having local streetscape treatment on Figure 6.142 — Nelly Bay gateway precinct concept plan.	No acceptable outcome is nominated.
PO39 Building design and massing is consistent with the low density scale and character of Magnetic Island.	**AO39** Building height does not exceed 3 storeys.
PO40 Design and articulation of buildings contribute to the creation of the local Magnetic Island character through: (a) climate-responsive design; (b) natural setting of buildings within the landscape; and (c) maximising views to the bay.	No acceptable outcome is nominated.
PO41 Access arrangements are appropriate for the volume, frequency and type of vehicle usage.	**AO41** Access points are limited to Sooning Street, Mandalay Avenue and The Cove with minimal crossovers.
PO42 Convenient and legible connections are provided for pedestrians and cyclists to the site, particularly having regard to linkages to the ferry terminal, foreshore and the open space network.	No acceptable outcome is nominated.

PO43 Mixed use development contributes to the creation of a waterfront promenade. Figure 6.142 — Nelly Bay gateway precinct concept plan.	No acceptable outcome is nominated.

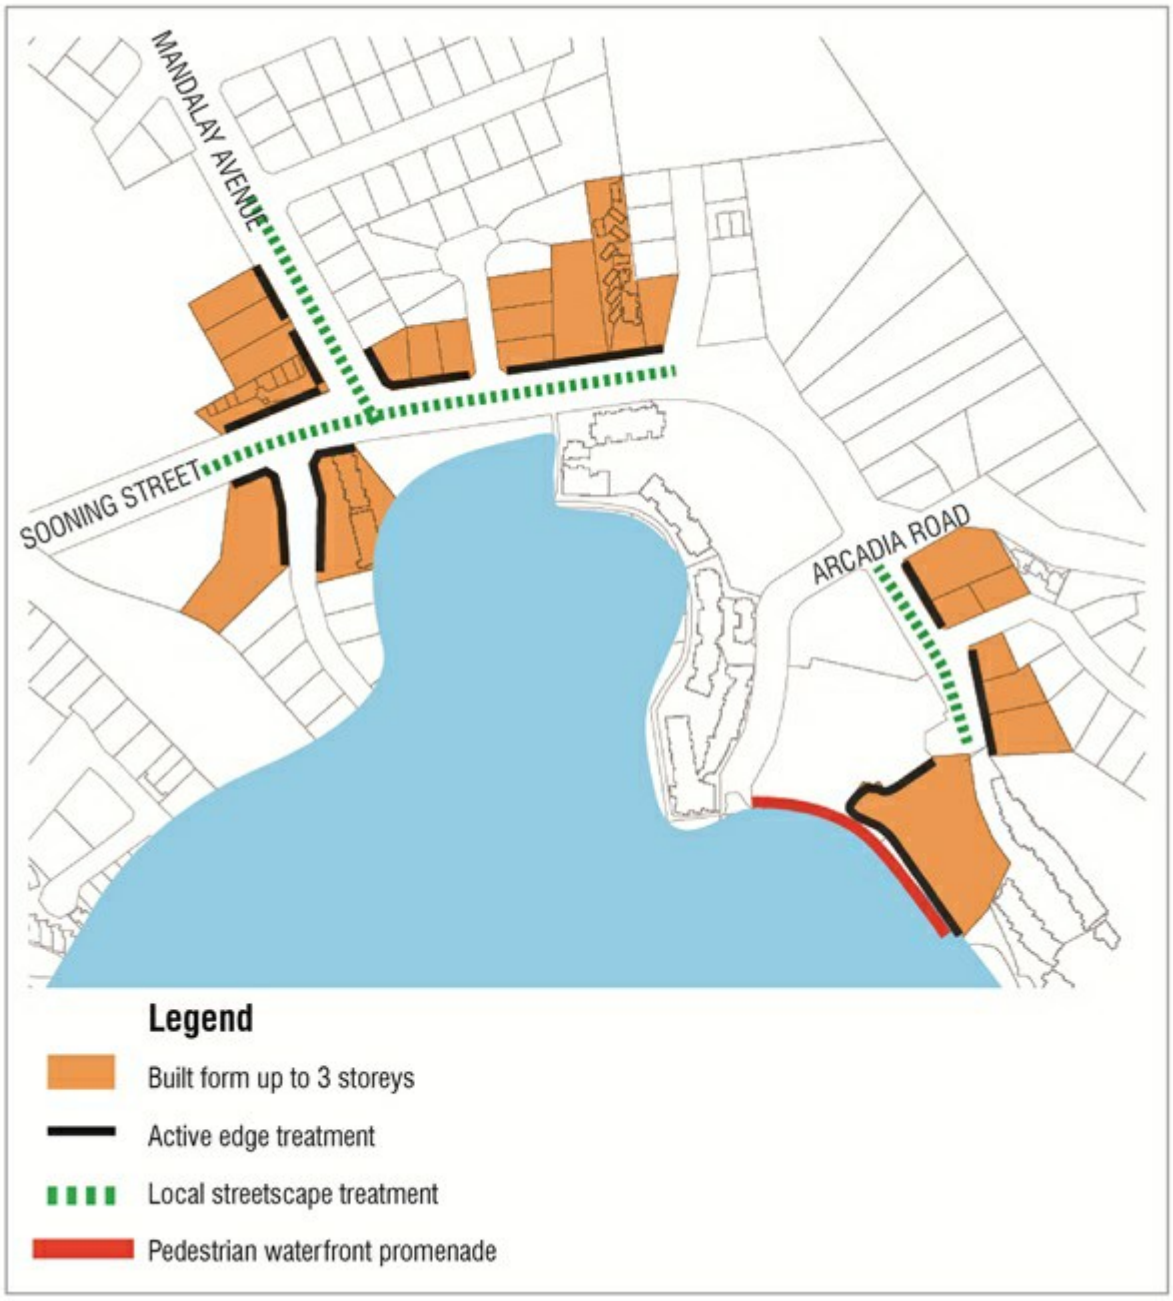

Figure 6.142 – Nelly Bay gateway precinct concept plan

Table 6.3.7.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Kirwan Traders precinct	
PO44 Built form, landscape and streetscape treatment along Thuringowa Drive reinforces the precinct identity as a place for business.	No acceptable outcome is nominated.
PO45 Landscape and streetscape treatments are provided along Tavern Street, Carlton Street, and Laguna Avenue which reflect the intended character of the precinct.	No acceptable outcome is nominated.
PO46 Building size and bulk are consistent with the scale and character of the Kirwan Traders precinct, and retain an appropriate relationship with the established streetscape.	**AO46** Development involves reuse of existing buildings that contribute to the built form character and context of the immediate area.
PO47 Wherever practicable, vehicular access is provided from rear or side streets or facilitates the amalgamation of access points.	**AO47** Access to on-site parking is provided through the rear access lanes connecting to Toohey Street.
PO48 Development on the corner of Thuringowa Road and Burnda Street, and Burnda Street and Toohey Street, creates a gateway to Kirwan Traders precinct. Built form, landscape and streetscape treatment at these corners reinforces a gateway statement.	No acceptable outcome is nominated.
PO49 Development provides mid-block linkages and increased open space for the public on private land, particularly on larger sites and those sites with two street frontages.	No acceptable outcome is nominated.

Table 6.3.7.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note**—Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Charters Towers Road business precinct	
PO50 Development in this precinct supports the transition of the precinct from a predominantly low impact industry area to a mixed business focus.	No acceptable outcome is nominated.
PO51 Development along Woolcock Street contributes positively to the city image.	**AO51** Buildings are setback 4m from Woolcock Street, and incorporate a landscaped buffer along that road frontage.
PO52 Wherever practicable, vehicular access is provided from rear or side streets or facilitates the amalgamation of access points.	**AO52** Access to on-site parking is provided through the rear access lanes connecting to Yeatman Street.
PO53 Development on the corner of Woolcock Street and Charters Towers Road, creates a gateway to Charters Towers Road business area. Built form, landscape and streetscape treatment at these corners reinforces a gateway statement. Figure 6.143 – Charters Towers Road business precinct concept plan	No acceptable outcome is nominated.
PO54 Development provides mid-block linkages and increased open space for the public on private land, particularly on larger sites and those sites with two street frontages.	No acceptable outcome is nominated.
PO55 Development contributes to the boulevard treatment of Ross River Road and Woolcock Street through landscaping and streetscape treatments along the road frontages.	No acceptable outcome is nominated.

Figure 6.143 – Charters Towers Road business precinct concept plan

Table 6.3.7.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
CBD gateway precinct	
PO56 Along Flinders Street (West), development responds to the role of the street as a key entrance to the principal centre (CBD), and presents high quality built form, landscape and streetscape treatment.	No acceptable outcome is nominated.
PO57 Shops primarily service workers within the precinct and are located only at key nodes formed by the intersections of Flinders Street (West) and Knapp and Fletcher Streets.	**AO57** Shops are located at the nominated intersections and include only convenience stores, newsagents and café/takeaway food premises limited to less than 250m^2 gross floor area per tenancy.

PO58 Buildings are generally low to medium rise and ensure the protection of the visual primacy of the principal centre (CBD).	**AO58** Building height does not exceed 6 storeys on the frontage of Flinders Street (West), and transition to 4 storeys where situated to the north of Sturt Street. In accordance with Figure 6.144 — CBD gateway precinct concept plan.
PO59 Development contributes to an attractive, coherent and integrated streetscape, by: (a) ensuring buildings assist in defining and enhancing the Flinders Street (West) frontage; (b) improving the quality and continuity of built form; and (c) using complementary landscaping and streetscape treatments.	No acceptable outcome is nominated.
PO60 Pedestrian links are provided and reinforced in accordance with Figure 6.144 — CBD gateway precinct concept plan.	No acceptable outcome is nominated.

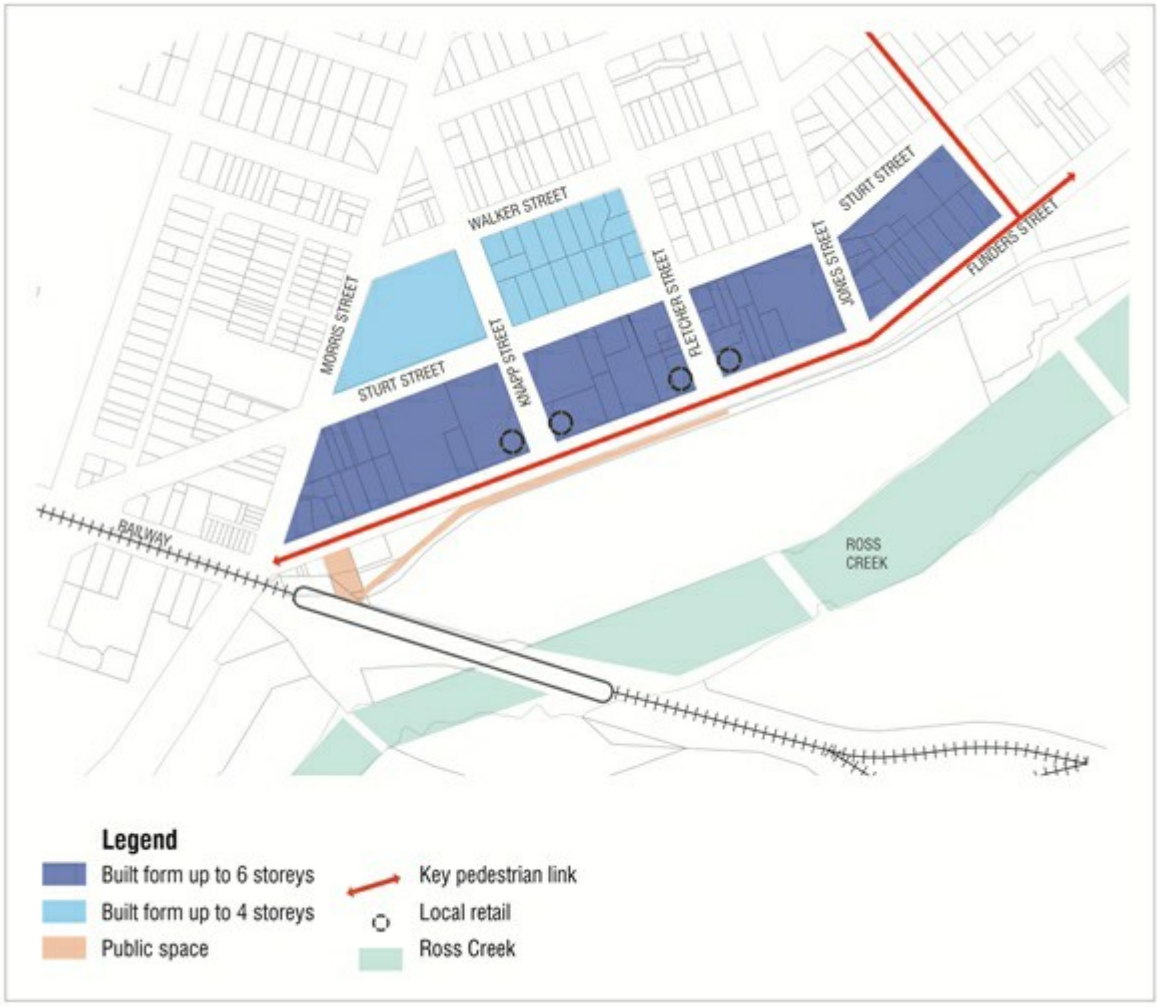

Figure 6.144 – CBD gateway precinct concept plan

Table 6.3.7.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
South Townsville Railyards and Dean Park precinct	
PO61 Development is generally in accordance with Figure 6.145 — South Townsville Railyards and Dean Park precinct concept plan.	No acceptable outcome is nominated.
PO62 Development in the precinct: (a) integrates all aspects of the land use elements through good built form and public realm treatments; and (b) appropriately stages development and particularly the sequencing of supporting infrastructure including transport and access, parking and services.	No acceptable outcome is nominated.
PO63 A new entertainment centre and a range of allied uses are established on the Dean Park site, in accordance with Figure 6.145 — South Townsville Railyards and Dean Park precinct concept plan. The development: (a) incorporates leading tropical design; (b) is oriented to both the Saunders Street and Rooney Street frontages; (c) establishes uses which promote a high level of pedestrian movement and interaction along Saunders Street and Rooney Street, creating an active edge; (d) provides a new public plaza at the Saunders and Rooney Street corner, integrating with the future plaza area for the stadium opposite; and (e) has its primary vehicular and public transport access via a new road alignment extending from Barlow Street. A new bus terminus and driver facilities are provided in this location.	No acceptable outcome is nominated.

PO64 A stadium is established on the northern corner of the existing railyards land, in accordance with Figure 6.145 — South Townsville Railyards and Dean Park precinct concept plan. The development: (a) is capable of being used for multiple events; (b) incorporates leading tropical design; (c) provides extensive public space surrounding the stadium structure; (d) is oriented to both the Saunders Street and Rooney Street frontages; (e) establishes uses which promote a high level of pedestrian movement and interaction along Saunders Street and Rooney Street, creating an active edge; (f) provides a new public plaza at the Saunders and Rooney Street corner, integrating with the future plaza area for the stadium opposite; and (g) facilitates vehicle access by construction of a new public road around the stadium.	No acceptable outcome is nominated.
PO65 Land to the south of the stadium site and backing onto the rail line predominantly consists of service and low impact industry and commercial uses.	No acceptable outcome is nominated.
PO66 Access to and permeability within the precinct are facilitated including: (a) the extension of Barlow Street to provide a new road extension from South Townsville to Saunders Street; (b) an upgrade of the Saunders Street and Rooney Street intersection, with a focus on ensuring pedestrian access and amenity and sense of arrival to the precinct; and (c) improved pedestrian priority and accessibility in street profile and streetscaping for all streets surrounding the stadium site, including Saunders, Rooney, and Morehead Streets and Perkins Street West.	No acceptable outcome is nominated.
PO67 Parking for the entertainment centre and stadium is established sequentially as key components of the precinct occur, and may include a staged program of parking solutions at grade and in various areas of the precinct over time. Ultimately, parking for both facilities is to be incorporated within the built form.	No acceptable outcome is nominated.

Figure 6.145 – South Townsville Railyards and Dean Park precinct concept plan

Table 6.3.7.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Wotton Street precinct	
PO68 The ongoing activities of the low impact industrial area to the north are not compromised.	**AO68** Development provides the following along the common boundary with adjacent industrial uses: (a) a minimum 3m wide landscaped buffer; and (b) a solid 1.8m fence along the full length of the boundary.

Table 6.3.7.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Breakwater precinct	
PO69 Development is generally in accordance with Figure 6.146 — Breakwater precinct concept plan.	No acceptable outcome is nominated.
PO70 A new marina is established on the seaward side of the precinct, and includes a new boat launch facility as shown on Figure 6.146 — Breakwater precinct concept plan.	No acceptable outcome is nominated.
PO71 An open space and pedestrian network is provided as identified on Figure 6.146 — Breakwater precinct concept plan, and includes the provision of a boardwalk adjoining the future marina, pedestrian links along all waterfront areas, and a new park at the north eastern point of the precinct.	No acceptable outcome is nominated.
PO72 Where shown as an 'active frontage' on Figure 6.146 — Breakwater precinct concept plan, new buildings contribute to the creation of an attractive and activated edge to the waterfront by having facades which contain windows, doors, materials and features which generate visual interest and engagement with the water frontage.	No acceptable outcome is nominated.
PO73 Dining, entertainment and tourist-oriented uses occur at the ground storey.	No acceptable outcome is nominated.
PO74 Development within the Breakwater entertainment area shown on Figure 6.146 — Breakwater precinct concept plan supports the consolidation of the casino and allied uses, including short-term accommodation, boat club and market.	No acceptable outcome is nominated.

PO75 Development within the Breakwater living area shown on Figure 6.146 — Breakwater precinct concept plan primarily facilitates high density short or long-term accommodation uses, with local dining and shops at the ground floor where adjoining the future marina.	No acceptable outcome is nominated.
PO76 Building heights ensure the protection of the visual primacy of the principal centre (CBD), the retention of key views to Castle Hill and Melton Hill, and to the sea and Magnetic Island.	**AO76** Building heights are in accordance with Figure 6.146 — Breakwater precinct concept plan.

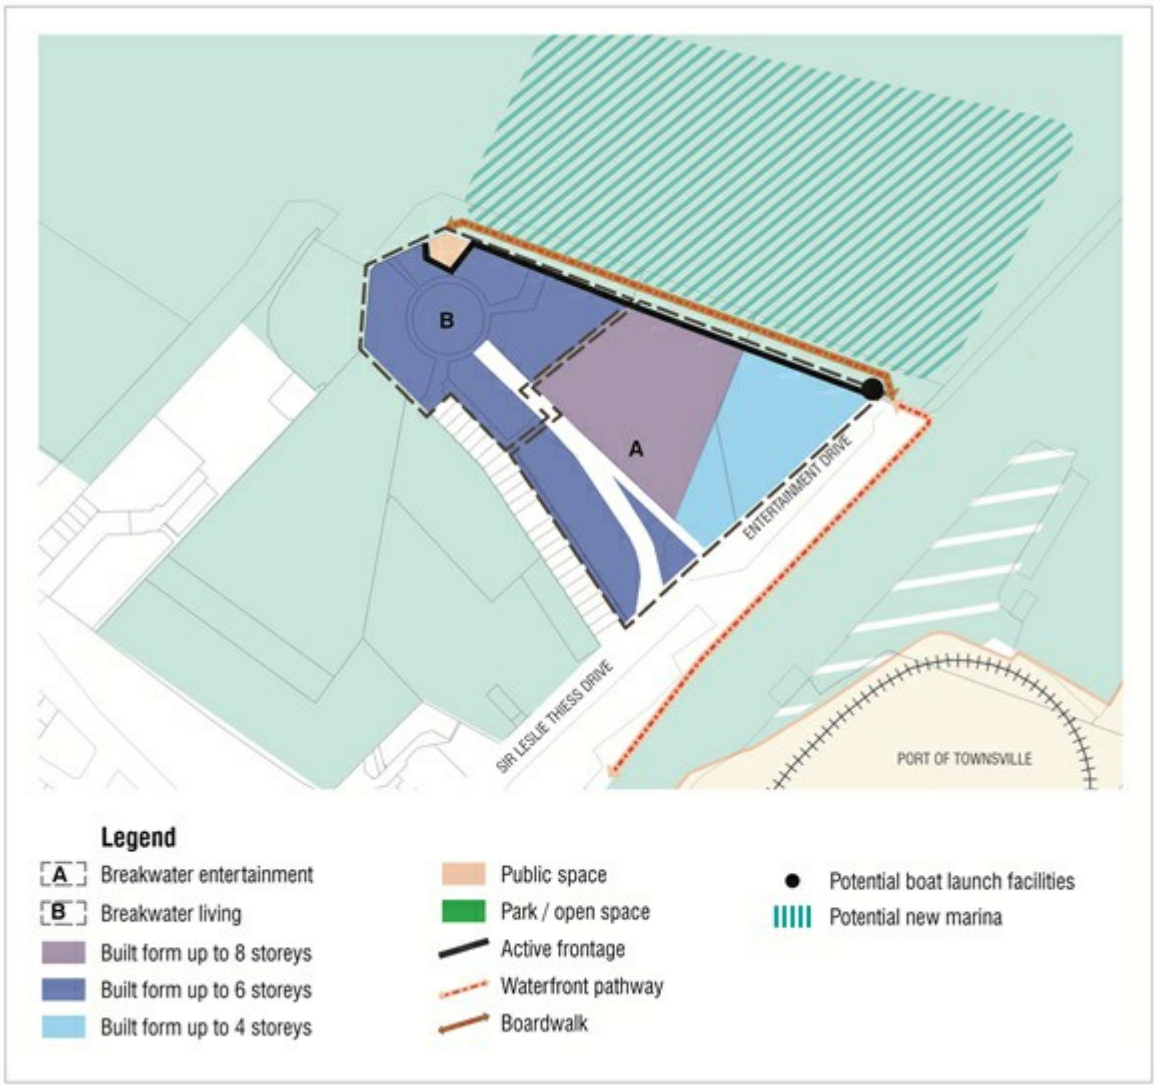

Figure 6.146 – Breakwater precinct concept plan

Table 6.3.7.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
King Street quarter precinct	
PO77 Development is generally in accordance with Figure 6.147 — King Street quarter precinct concept plan.	No acceptable outcome is nominated.
PO78 Development supports a mix of uses, including day and night-time activity.	No acceptable outcome is nominated.
PO79 Café and restaurant uses establish predominantly at the ground floor along the street frontages to Wickham Street, King Street and Flinders Street, and also to Ross Creek frontages.	No acceptable outcome is nominated.
PO80 Residential uses including long and short-term accommodation are predominantly located in the area bounded by Flinders Street, King Street and Wickham Street and The Strand.	No acceptable outcome is nominated.
PO81 Building height is medium rise, and ensures the protection of the visual primacy of the principal centre (CBD). The tallest buildings occur in the centre of the Wickham Street/King Street/Flinders Street/The Strand block.	**AO81** Building heights are in accordance with Figure 6.147 — King Street quarter precinct concept plan.
PO82 An open space and pedestrian network is provided as identified on Figure 6.147 — King Street quarter precinct concept plan, and includes: (a) the provision of, pedestrian links along all waterfront areas; (b) an extension to Anzac Park (following realignment of Sir Leslie Thiess Drive and King Street); (c) a new open space and pedestrian link to the southern end of The Strand linking to a future pedestrian creek crossing; and (d) pedestrian through block links.	No acceptable outcome is nominated.

PO83 Where shown as 'active frontage' on Figure 6.147 — King Street quarter precinct concept plan, new buildings contribute to the creation of an attractive and activated edge to the street frontage by; (a) being built to the street frontage; (b) having facades which contain windows, doors, materials and features which generate visual interest and engagement with the street frontage; (c) providing awnings to all street frontages; and (d) providing a continuous building alignment.	No acceptable outcome is nominated.

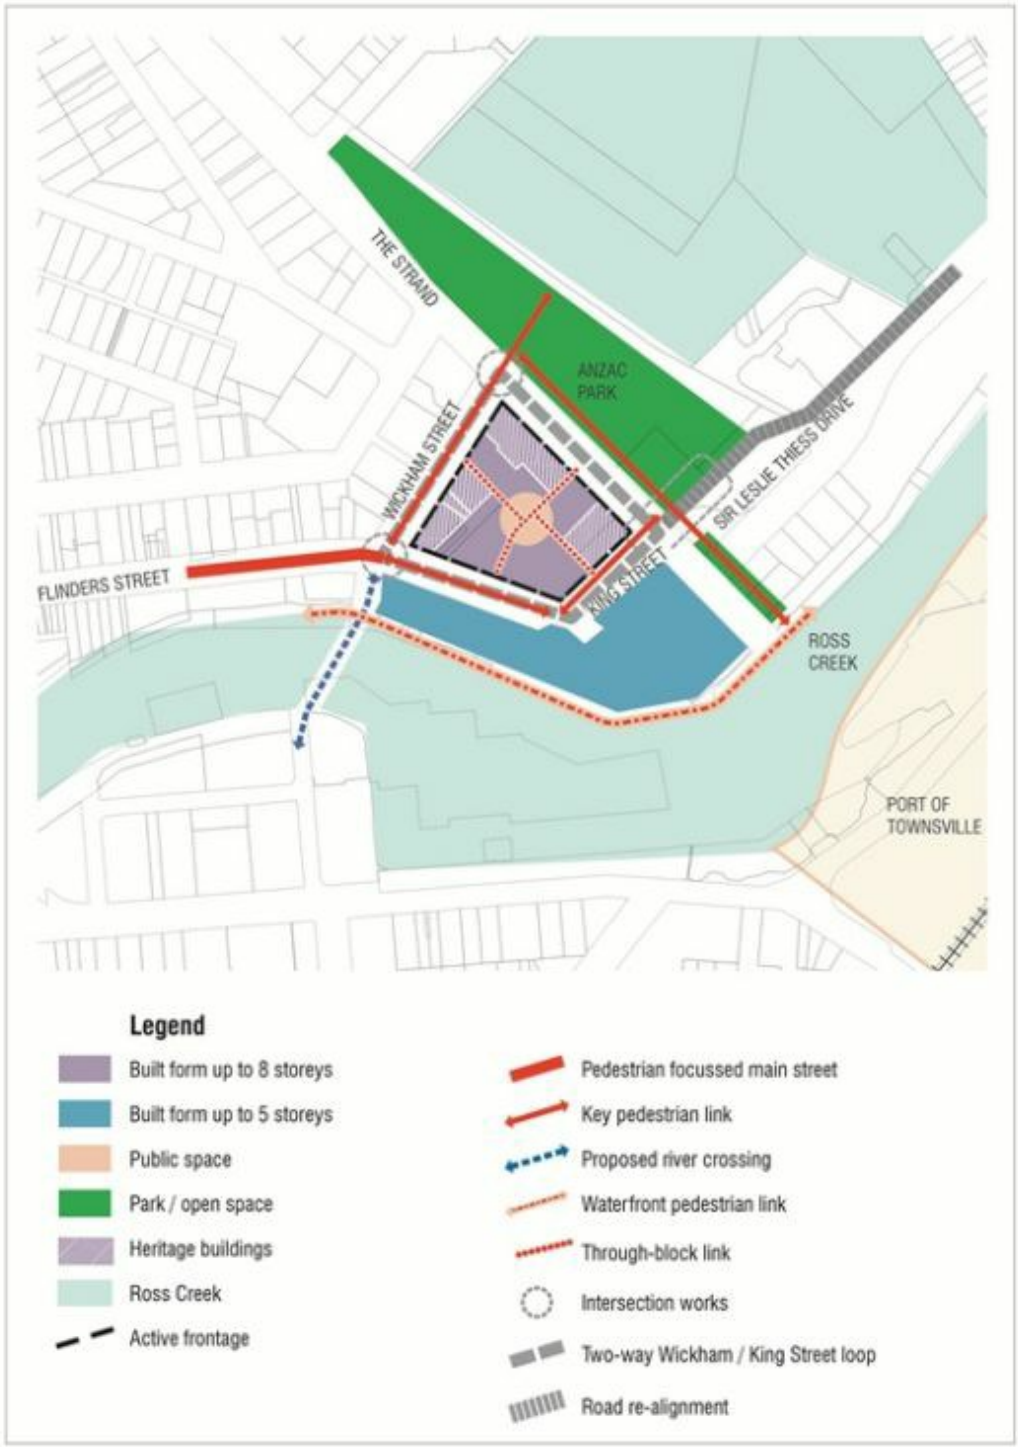

Figure 6.147 – King Street quarter precinct concept plan

Table 6.3.7.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Kings Road precinct	
PO84 Building height creates a medium-rise environment.	**AO84** Building height does not exceed 5 storeys.
PO85 Development provides for enhanced public realm and pedestrian connectivity, in accordance with Figure 6.148 — Kings Road precinct concept plan, including: (a) enhanced north south and east west links through the precinct; (b) a civic node on the lake frontage; (c) enhanced pedestrian access to and along the lake; and (d) a primary pedestrian and cycle pathway along Kings Road.	No acceptable outcome is nominated.
PO86 The civic node at the lake frontage is sleeved by active street level uses.	No acceptable outcome is nominated.
PO87 Residential uses are appropriately buffered from the railway corridor.	No acceptable outcome is nominated.

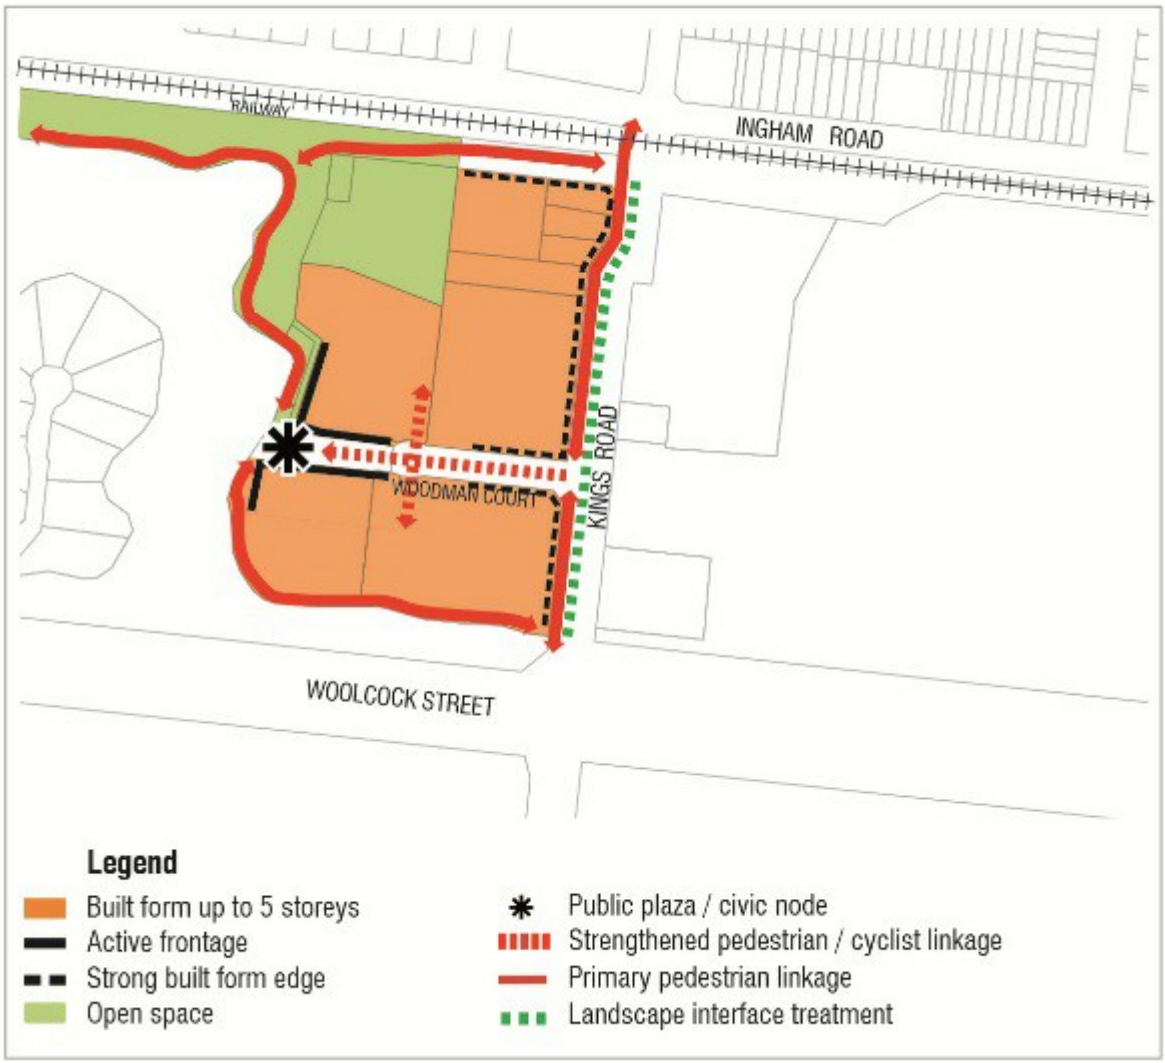

Figure 6.148 – Kings Road precinct concept plan

6.4 Community facilities and open space zone category

6.4.1 Sport and recreation zone code

6.4.1.1 Application

This code applies to development where the code is identified as applicable in the categories of development and assessment.

When using this code, reference should be made to section 5.3.2 and where applicable, section 5.3.3 located in Part 5.

6.4.1.2 Purpose

(1) The purpose of the Sport and recreation zone code is to provide for a range of organised activities that include sport, cultural and educational activities where the uses require a level of built infrastructure.

It includes built structures, such as clubhouses, gymnasiums, public swimming pools and tennis courts, and infrastructure to support the activities, safe access and essential management, where required to meet community needs.

(2) The particular purpose of the code is to ensure:

- (a) residents have convenient access to sport and recreation activities which are safe, attractive and appropriate for the community's needs; and
- (b) development minimises impacts on surrounding land.

(3) The purpose of the zone will be achieved through the following overall outcomes:

- (a) local, district, regional and specialised sports parks provide for a variety of formal sporting activities and a range of training and competition infrastructure;
- (b) development directly supports the primary recreational function of the site or provides for the co-location of a complementary and compatible community-related activity;
- (c) development does not restrict public access and does not detract from the primary function of the site for sport and recreation activities;
- (d) development provides for safe and convenient internal pedestrian and cyclist pathways and external connections to existing and proposed public transport infrastructure and surrounding activities wherever possible;
- (e) design of built form and public spaces facilitates safe and secure environments and discourages antisocial behaviour;
- (f) facilities are sited, designed and operated to minimise adverse impacts on surrounding land; and
- (g) adverse impacts on any ecological values are avoided where land includes or adjoin natural habitats such as bushland, wetlands or waterways, or act as a buffer between natural and developed areas.

(4) The purpose of the zone will also be achieved by the following additional outcomes for particular precincts:

Balgal Beach golf course precinct:

(a) development of the precinct maintains the golf course and other outdoor recreational facilities and provides an integrated mix of residential and small-scale tourist accommodation;

(b) reconfiguration facilitates a range of lot sizes to accommodate dwelling houses typically on lots with an average size of 600m^2;

(c) the ultimate development of the entire precinct does not result in more than 590 residential lots for dwelling house purposes;

(d) tourist-oriented development may also occur in the form of small-scale, low-rise accommodation and support facilities;

(e) building scale and massing limits the impact on the natural character of Balgal Beach; and

(f) development of the precinct does not compromise the efficient and orderly provision of infrastructure.

Click here to view high resolution PDF.

Figure 6.149 – Balgal Beach golf course precinct

Cluden precinct:

(a) Development facilitates the ongoing operation of the Cluden racecourse and is directly associated with or ancillary to horse racing.

Click here to view high resolution PDF.

Figure 6.150 – Cluden precinct

6.4.1.3 Assessment benchmarks

Table 6.4.1.3 - Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
Built form	
PO1 Development does not substantially exceed the height of existing buildings in the area or is designed to sympathetically transition from lower rise neighbouring buildings.	**AO1** Building height does not exceed 3 storeys.
PO2 Building setbacks and orientation provide for an attractive streetscape that is compatible with existing characteristics of the local area.	**AO2** Buildings are set back from street and road frontages: (a) within 20% of the average front setback of adjoining buildings; or (b) where there are no adjoining buildings, 6m.
PO3 Development minimises the bulk of buildings to assist integration with surrounding development.	**AO3** Walls are articulated so that they do not exceed a length of 15m without a change in plane of at least 0.75m depth.

Table 6.4.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
Amenity	
PO4 Development provides adequate separation, buffering and screening from residential uses and land within a residential zone so that adverse impacts on privacy and amenity are minimised.	**AO4.1** Buildings and structures are set back 6m or half of the building height, whichever is greater from any boundary shared with a residential use or land within a residential zone.
	AO4.2 Site access and parking, servicing or outdoor storage areas are setback 6m from any boundary shared with a residential use or land within a residential zone.
	AO4.3 Where buildings, parking, servicing or outdoor storage areas are located within 15m of any boundary shared with an residential use or land within a residential zone, the following is provided: (a) a minimum 1.8m high solid screen fence; or (b) a landscaped buffer area consisting of dense screen planting of a minimum 3m width. **Editor's note—**Landscaping is to be provided to a standard specified in the Landscape code.
	AO4.4 Windows that have a direct view into an adjoining residential use are provided with fixed screening that is a maximum of 50% transparent to obscure views and maintain privacy for residents.
PO5 Refuse storage areas and storage of goods or materials in open areas is presented in a manner that does not detract from the visual amenity of the local area.	**AO5** The open area used for the storage of refuse, vehicles, machinery, goods and materials on the site is: (a) located no closer than 3m from any boundary; and (b) are screened from view by a 1.8m high solid screen fence.

Table 6.4.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
Caretaker's accommodation	
PO6 Development does not compromise the effective operation of the primary use.	**AO6** No more than one (1) caretaker's accommodation unit is provided on the site.

Table 6.4.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
Community use and club	
PO7 Adequate lockable storage space is provided on-site to meet the needs of users.	**AO7** At least one (1) lockable storage space of a minimum of 4m^2 is provided for each room or area that can be hired out or used by community organisations or the public.

Table 6.4.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Uses	
PO8 The site predominantly accommodates sport and recreational activities and facilitates optimum use of the land for the intended sport or recreational purpose.	No acceptable outcome is nominated.
PO9 Non-recreation uses occur only where they: (a) directly support the primary function of the site; or (b) are a compatible community-related activity.	No acceptable outcome is nominated.
PO10 Development does not impede public access to and use of facilities.	No acceptable outcome is nominated.
PO11 Buildings, structures and use areas are designed to ensure efficient use of buildings and facilities, and provide for multiple or shared use of facilities where practicable.	No acceptable outcome is nominated.

Table 6.4.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Amenity	
PO12 Development maintains a high level of general amenity within the site and for surrounding areas, having regard to: (a) noise; (b) hours of operation; (c) traffic; (d) visual impact; (e) signage; (f) odour and emissions; (g) lighting; (h) access to sunlight; (i) privacy; and (j) outlook. **Editor's note—**Applicants may be required to engage specialists to provide detailed investigations into the above matters in order to demonstrate compliance with this performance criterion.	No acceptable outcome is nominated.
PO13 Landscaping is provided to enhance the appearance of the development, screen unsightly components, create an attractive on-site environment and provide shading.	No acceptable outcome is nominated.

Table 6.4.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Crime prevention through environmental design	
PO14 Development facilitates the security of people and property having regard to: (a) opportunities for casual surveillance and sight lines; (b) exterior building design that promotes safety; (c) adequate lighting; (d) appropriate signage and wayfinding; (e) minimisation of entrapment locations; and (f) building entrances, loading and storage areas that are well lit and lockable after hours. **Editor's note—**Applicants should have regard to Crime Prevention through Environmental Design Guidelines for Queensland.	No acceptable outcome is nominated.

Table 6.4.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Accessibility	
PO15 Convenient and legible connections are provided for pedestrians and cyclists to and from the site, particularly having regard to linkages with existing and proposed public transport infrastructure, the open space network, centres and other community-related activities.	No acceptable outcome is nominated.
PO16 Safe and convenient pedestrian and cyclist circulation is provided for as an integrated component of the site layout.	No acceptable outcome is nominated.

Table 6.4.2.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Protection of natural values	
PO17 The site layout and design responds sensitively to on-site and surrounding topography, drainage patterns, ecological values by: (a) minimising earthworks; (b) maximising retention of natural drainage patterns; (c) ensuring existing drainage capacity is not reduced; (d) maximising the retention or enhancement of existing vegetation and ecological corridors; and (e) providing buffers to protect the ecological functions of waterways.	No acceptable outcome is nominated.

Table 6.4.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note-**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Balgal Beach golf course precinct	
PO18 Development does not reduce the area dedicated to the golf course and other outdoor recreational uses or reduce its amenity or functionality.	No acceptable outcome is nominated.
PO19 Reconfiguration of a lot does not result in more than 590 lots or detached dwelling house purposes across the entire precinct.	No acceptable outcome is nominated.
PO20 Reconfiguration creates lots that have sufficient area and dimension to facilitate residential development.	**AO20** Lots have an average size of 600m^2.
PO21 Tourist-oriented development is small-scale and low rise.	**AO21** Building height does not exceed 2 storeys.
PO22 Design and articulation for tourism-oriented development contributes to the natural character of the locality through tropical architectural design elements and the natural setting of buildings within the landscape.	No acceptable outcome is nominated.
PO23 Development is within the capacity of available infrastructure and is supported by adequate infrastructure, including: (a) connection to reticulated water and sewage networks; (b) connection to stormwater drainage system; and (c) constructed roads.	No acceptable outcome is nominated. **Editor's note-**Council will request an overall area/precinct-scale structure plan - comprising land use, infrastructure, staging, urban design for the entire precinct before development takes place.

6.4.2 Open Space zone code

6.4.2.1 Application

This code applies to development where the code is identified as applicable in the categories of development and assessment.

When using this code, reference should be made to section 5.3.2 and where applicable, section 5.3.3 located in Part 5.

6.4.2.2 Purpose

(1) The purpose of the Open space zone code provides for informal recreation where the built form is not essential to the enjoyment of the space.

It may provide for local, district and regional scale parks which serve the recreational needs of a wide range of residents and visitors.

Where required to meet community needs, development may include shelters, amenity facilities, picnic tables, and playgrounds and infrastructure to support safe access and essential management.

(2) The particular purpose of the code is to ensure:

- (a) residents have convenient access to parks and opportunities for informal outdoor recreation that are safe, attractive and appropriate for the community's needs; and
- (b) places that contribute to the visual amenity and character of the city are protected; and
- (c) the environmental and drainage functions of open space are protected.

(3) The purpose of the zone will be achieved through the following overall outcomes:

- (a) open space is accessible to the general public for a range of informal outdoor recreation activities at local, district and regional levels;
- (b) development directly supports the primary recreational function of the site or provides for the co-location of a complementary and compatible community-related activity;
- (c) development does not restrict public access and does not detract from the site's primary open space function, visual quality or cultural values;
- (d) land within the zone is generally free from buildings other than ancillary structures which enhance the utility and enjoyment of the open space and buildings required for small-scale clubs and community facilities;
- (e) development provides for safe and convenient internal pedestrian and cyclist pathways and external connections to existing and proposed public transport infrastructure and surrounding activities wherever possible;
- (f) facilities are sited, designed and operated to minimise adverse impacts on surrounding land;
- (g) design of built form and public spaces facilitates safe and secure environments and discourages antisocial behaviour;
- (h) the drainage functions of open space are protected and development is compatible with these functions; and
- (i) adverse impacts on any ecological values are avoided where land includes or adjoin natural habitats such as bushland, wetlands or waterways, or act as a buffer between natural and developed areas;

(4) The purpose of the zone will also be achieved through the following additional overall outcomes for particular precincts:

Riverway precinct:

(a) development in Pioneer Park and Riverway is subordinate to, and does not compromise, its primary role and function as a pedestrian-focussed recreational and open space area; and

(b) connections between Pioneer Park and Riverway and Thuringowa central major centre are reinforced, including the creation of an active entry precinct along Village Boulevard.

Click here to view high resolution PDF.

Figure 6.151 – Riverway precinct

6.4.2.3 Assessment benchmarks

Table 6.4.2.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
Built form	
PO1 Built form: (a) is limited in scale and extent; (b) is visually unobtrusive and maintains the open, parkland character; and (c) does not restrict access to utility or enjoyment of the open space.	**AO1.1** Building height does not exceed 1 storey.
	AO1.2 Buildings do not exceed a site cover of 5%.
	AO1.3 Buildings are set back 10m from any site boundary.

Table 6.4.2.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
Community use and club	
PO2 Adequate lockable storage space is provided on-site to meet the needs of users.	**AO2** At least one (1) lockable storage space of a minimum of 4m^2 is provided for each room or area that can be hired out or used by community organisations or the public.

Table 6.4.2.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Uses	
PO3 Land predominantly accommodates parks and any development facilitates optimum enjoyment and use of the land for informal recreation purposes.	No acceptable outcome is nominated.
PO4 Other than at Riverway precinct, non-recreational uses occur only where: (a) they directly support the primary function of the site or are a compatible community-related activity; and (b) have a built form that is limited in scale and extent.	No acceptable outcome is nominated.
PO5 Development does not impede public access to and use of facilities.	No acceptable outcome is nominated.
PO6 Development does not detract from the site's visual quality or cultural values.	No acceptable outcome is nominated.
PO7 Development is compatible with any drainage function of the land and does not interfere with that function.	No acceptable outcome is nominated.

Table 6.4.2.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Amenity	
PO8 Development maintains a high level of amenity within the site and for surrounding areas, having regard to: (a) noise; (b) hours of operation; (c) traffic; (d) visual impact; (e) signage; (f) odour and emissions; (g) lighting; (h) access to sunlight; (i) privacy; and (j) outlook. **Editor's note—**Applicants may be required to engage specialists to provide detailed investigations into the above matters in order to demonstrate compliance with this performance criterion.	No acceptable outcome is nominated.
PO9 Landscaping is provided to enhance the appearance of the development and assist in its integration with the open space setting.	No acceptable outcome is nominated.

Table 6.4.2.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Crime prevention through environmental design	
PO10 Development facilitates the security of people and property having regard to: (a) opportunities for casual surveillance and sight lines; (b) exterior building design that promotes safety; (c) adequate lighting; (d) appropriate signage and wayfinding; (e) minimisation of entrapment locations; and (f) building entrances, loading and storage areas that are well lit and lockable after hours. **Editor's note—**Applicants should have regard to Crime Prevention through Environmental Design Guidelines for Queensland.	No acceptable outcome is nominated.

Table 6.4.2.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Accessibility	
PO11 Convenient and legible connections are provided for pedestrians and cyclists to and from the site, particularly having regard to linkages with existing and proposed public transport infrastructure, other parts of the open space network, sport and recreational activities, centres and community-related activities.	No acceptable outcome is nominated.

Table 6.4.2.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Protection of natural values	
PO12 The site layout and design responds sensitively to on-site and surrounding topography, drainage patterns and ecological values by: (a) minimising earthworks; (b) maximising retention of natural drainage patterns; (c) ensuring existing drainage capacity is not reduced; (d) maximising the retention or enhancement of existing vegetation and ecological corridors; and (e) providing buffers to protect the ecological functions of waterways.	No acceptable outcome is nominated.

Table 6.4.2.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Riverway precinct	
PO13 Leisure focussed shops and dining uses are established along Village Boulevard opposite High Range Drive, creating an active link to the town centre heart precinct and a gateway feature for Riverway. This gateway area may incorporate a residential component in the form of shop top housing.	No acceptable outcome is nominated.

6.4.3 Community facilities zone code

6.4.3.1 Application

This code applies to development where the code is identified as applicable in the categories of development and assessment.

When using this code, reference should be made to section 5.3.2 and where applicable, section 5.3.3 located in Part 5.

6.4.3.2 Purpose

(1) The purpose of the Community facilities zone code is to provide for community-related activities and facilities whether under public or private ownership.

These may include the provision of municipal services, public utilities, government installations, hospitals and schools, transport and telecommunication networks and community infrastructure of an artistic, social or cultural nature.

(2) The particular purpose of the code is to ensure:

(a) the effective location, design and operation of a wide variety of community-related activities and facilities so that these facilities adequately meet the needs of current and future users; and

(b) community-related activities and facilities are provided in a safe, accessible and attractive environment, and minimise impacts on surrounding land uses.

(3) The purpose of the zone will be achieved through the following overall outcomes:

(a) the zone primarily accommodates a variety of community-related activities and facilities such as community uses, educational establishments, emergency services, places of worship and utility installations in a manner that best meets community needs;

(b) other complementary uses may occur within the zone, where community-related activities and facilities remain the dominant use and continue to effectively meet community needs;

(c) development does not prejudice the ongoing operation and expansion of community activities and facilities;

(d) where appropriate, development enables the co-location of community-related activities and facilities;

(e) development facilitates improved accessibility by walking, cycling and public transport, and facilitates easy access by all members of the community, including older and less mobile people and people with disabilities;

(f) unless separation is required due to safety and operational requirements of the use, integration with surrounding areas is strengthened through built form and site layout;

(g) buildings provide for an attractive, pedestrian friendly environment at street level;

(h) design of built form and public spaces facilitates safe and secure environments and discourages antisocial behaviour; and

(i) development is sited, designed and operated to minimise adverse impacts on surrounding land.

(4) The purpose of the zone will also be achieved through the following additional overall outcomes for particular precincts:

Picnic Bay community facilities precinct:

(a) the intersection of Birt Street and Nelly Bay Road creates a gateway to Picnic Bay. Built form and streetscape treatments at this intersection reinforces this gateway function;

(b) development of this precinct supports a transition from the existing landfill uses to form a more community-focussed hub including uses such as education, open space, recreation and other community facilities; and

(c) design of built form and public spaces is of high quality and is consistent with the low density Magnetic Island character.

6.4.3.3 Assessment benchmarks

Table 6.4.3.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development – where involving a new building or expansion to an existing building	
Built form	
PO1 Development does not substantially exceed the height of existing buildings in the area.	**AO1** Building height does not exceed 3 storeys.
PO2 Building setbacks and orientation provide for an attractive streetscape that is compatible with existing characteristics of the local area.	**AO2** Buildings have their main face to the street and are set back from that frontage: (a) within 20% of the average front setback of adjoining buildings; or (b) where there are no adjoining buildings, 6m.
PO3 Development minimises the bulk of buildings to assist integration with surrounding development.	**AO3** Walls are articulated so that they do not exceed in length of 15m without a change in plane of at least 0.75m depth.

Table 6.4.3.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development — where involving a new building or expansion to an existing building	
Amenity	
PO4 Development provides adequate separation, buffering and screening from residential uses and land within a residential zone so that adverse impacts on privacy and amenity are minimised.	**AO4.1** Buildings are set back 6m or half the height of that part of the building, whichever is the greater, from any boundary shared with a residential use or land within a residential zone.
	AO4.2.1 A 1.8m high solid screen fence is provided along all boundaries shared with a residential use or land within a residential zone. OR **AO4.2.2** A landscaped buffer with a minimum width of 3m and consisting of dense screen planting is provided along all boundaries shared with a residential use or land within a residential zone. **Editor's note–**landscaping is to be provided to a standard specified in Section 9.3.3 Landscape code.
	AO4.3 Windows that have a direct view into an adjoining residential use are provided with fixed screening that is a maximum of 50% transparent to obscure views and maintain privacy for residents.

Table 6.4.3.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
General	
PO5 Where provided, outdoor lighting does not adversely affect the amenity of adjoining properties or create a traffic hazard on adjacent roads.	**AO5.1** Light emanating from any source complies with *Australian Standard AS 4282 Control of the Obtrusive Effects of Outdoor Lighting.*
	AO5.2 Outdoor lighting is provided in accordance with *Australian Standard AS1158.1.1 – Road Lighting – Vehicular Traffic (Category V) Lighting – Performance and Installation Design Requirements*.
PO6 Refuse storage areas and storage of goods or materials in open areas is presented in a manner that does not detract from the visual amenity of the local area.	**AO6** The open area used for the storage of refuse, vehicles, machinery, goods and materials used on the site is: (a) located no closer than 3m from any boundary; and (b) are screened from view by a 1.8m high solid screen fence.

Table 6.4.3.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
Caretaker's accommodation	
PO7 Development does not compromise the effective operation of the primary use.	**AO7** No more than one (1) caretaker's accommodation unit is provided on the site.

Table 6.4.3.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
Community uses and clubs	
PO8 Adequate lockable storage space is provided on-site to meet the needs of users.	**AO8** At least one (1) lockable storage space of a minimum of $4m^2$ is provided for each room or area that can be hired out or used by community organisations or the public.

Table 6.4.3.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Uses	
PO9 The site accommodates community-related activities or facilities in a manner that safely and efficiently meet community needs.	No acceptable outcome is nominated.
PO10 Other uses occur on a site where they: (a) support or are otherwise complementary to the community-related activities or facilities on the site; and (b) are subordinate to those activities or facilities.	No acceptable outcome is nominated.
PO11 Development does not prejudice the ongoing operation and expansion of existing uses on the site.	No acceptable outcome is nominated.
PO12 Development facilitates opportunities for appropriate co-location of community-related activities or facilities.	No acceptable outcome is nominated.

Table 6.4.3.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Amenity	
PO13 Development maintains a level of amenity appropriate to the use and minimises impacts on surrounding land, having regard to: (a) noise; (b) hours of operation; (c) traffic; (d) visual impact; (e) signage; (f) odour and emissions; (g) lighting; (h) access to sunlight; (i) privacy; and (j) outlook. **Editor's note—**Applicants may be required to engage specialists to provide detailed investigations into the above matters in order to demonstrate compliance with this performance outcome.	No acceptable outcome is nominated.
PO14 Landscaping is provided to enhance the appearance of the development, screen unsightly components, create an attractive on-site environment and provide shading.	No acceptable outcome is nominated.

Table 6.4.3.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Crime prevention through environmental design	
PO15 Development facilitates the security of people and property having regard to: (a) opportunities for casual surveillance and sight lines; (b) exterior building design that promotes safety; (c) adequate lighting; (d) appropriate signage and wayfinding; (e) minimisation of entrapment locations; and (f) building entrances, loading and storage areas that are well lit and lockable after hours. **Editor's note—**Applicants should have regard to Crime Prevention through Environmental Design Guidelines for Queensland.	No acceptable outcome is nominated.

Table 6.4.3.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Accessibility	
PO16 Convenient and legible connections are provided for pedestrians and cyclists to and from the site, particularly having regard to linkages with existing and proposed public transport infrastructure, the open space network, centres and other community-related activities.	No acceptable outcome is nominated.

Table 6.4.3.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Protection of natural values	
PO17 The site layout and design responds sensitively to on-site and surrounding topography, drainage patterns, ecological values by: (a) minimising earthworks; (b) maximising retention of natural drainage patterns; (c) ensuring existing drainage capacity is not reduced; (d) maximising the retention or enhancement of existing vegetation and ecological corridors; and (e) providing buffers to protect the ecological functions of waterways.	No acceptable outcome is nominated.

Table 6.4.3.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Picnic Bay community facilities precinct	
PO18 Development in this precinct supports a transition from the existing use as a waste facility to uses which present as a gateway feature and key community node for Picnic Bay.	No acceptable outcome is nominated.
PO19 The existing land fill site is rehabilitated to a standard that is suitable to accommodate a range of community activities.	No acceptable outcome is nominated.
PO20 Building height and massing is consistent with the low density scale of the Magnetic Island character and articulates individual buildings.	**AO20** Building height does not exceed 2 storeys.
PO21 Design of buildings contribute to the creation of the local Magnetic Island character through: (a) climate-responsive design; (b) the natural setting of buildings within the landscape; and-Accepted development subject to requirements (c) maximising views to the bay.	No acceptable outcome is nominated.
PO22 Built form, landscape and streetscape treatment at the intersection of Birt Street and Nelly Bay Road reinforces a gateway statement.	No acceptable outcome is nominated.
PO23 Vehicle access points along Birt Street are minimised.	**AO23** Access points are limited to only one either side of Birt Street within this precinct.

6.4.4 Environmental management and conservation zone code

6.4.4.1 Application

This code applies to development where the code is identified as applicable in the categories of development and assessment.

When using this code, reference should be made to section 5.3.2 and where applicable, section 5.3.3 located in Part 5.

6.4.4.2 Purpose

(1) The purpose of the Environmental management and conservation zone code is to provide for the protection, restoration and maintenance of areas identified as supporting significant biological diversity and ecological integrity.

(2) The particular purpose of the code is to ensure that areas of conservation value, including land in the protected estate (including council owned or controlled land held for conservation) and some privately owned land are maintained and protected from the impacts of development.

(3) The purpose of the zone will be achieved through the following overall outcomes:

- (a) the conservation values of the land are maintained or enhanced;
- (b) these areas remain undeveloped apart from small-scale facilities that support conservation, low impact nature-based recreational activities on the land and essential infrastructure; and
- (c) adverse impacts on ecological features and processes are avoided.

6.4.4.3 Assessment benchmarks

Table 6.4.4.3—Assessable development

Performance outcomes	Acceptable outcomes
For assessable development only	
PO1 Development is limited to: (a) development that facilitates conservation activities on the land; or (b) development that provides information or education of visitors directly connected to the values of the land; or (c) development that is ancillary to and directly supports visitation to the land for conservation or recreation purposes consistent with (a) or (b), for example through the provision of light refreshments; or (d) the establishment of infrastructure that cannot practicably be located elsewhere; or (e) the establishment of a single dwelling house or caretaker's accommodation unit.	No acceptable outcome is nominated.
PO2 Tourist accommodation is not established.	**AO2** No acceptable outcome is nominated.
PO3 The footprint of any development is minimal and built form is of a low key, low-rise scale.	**AO3.1** Development occurs within existing buildings.
	AO3.2 Development does not involve any clearing of vegetation.

PO4 The land is not further subdivided.	**AO4** No new lots are created.
PO5 Environmental values on the site are maintained or enhanced.	No acceptable outcome is nominated.

6.5 Industry zones category

6.5.1 Low impact industry zone code

6.5.1.1 Application

This code applies to development where the code is identified as applicable in the categories of development and assessment.

When using this code, reference should be made to section 5.3.2 and where applicable, section 5.3.3 located in Part 5.

6.5.1.2 Purpose

(1) The purpose of the Low impact industry zone code is to provide for service industry and low impact industry uses.

It may include non-industrial and business uses that support the industrial activities where they do not compromise the long-term use of the land for industrial purposes.

Activities considered appropriate in this zone are defined as Low impact industry or Service industry in the schedule of definitions.

(2) The particular purpose of the code is to:

- (a) facilitate the safe, efficient and attractive use of land for smaller scale and lower impacting industries; and
- (b) ensure development does not detract from the function and viability of centres, and minimises impacts on the amenity of nearby sensitive uses.

(3) The purpose of the code will be achieved through the following overall outcomes:

- (a) the zone primarily accommodates a range of generally smaller scale industrial uses which have low levels of potential impacts on surrounding areas and often provide services to the general public;
- (b) the zone also accommodates storage, wholesale and trade supplies, uses requiring significant outdoor sales areas and indoor sport and recreation uses which are difficult to locate elsewhere, where these have low levels of potential impacts on the surrounding area;
- (c) other non-industrial uses occur where they are ancillary to or directly support the industrial functions of the area, and are limited in extent;
- (d) the zone does not accommodate uses which are primarily oriented to retail sales and which are more appropriately located in centres, such as shops, shopping centres, showrooms or retail based hardware supplies;
- (e) the intrusion of incompatible uses, or uses which are more appropriately accommodated in other zones, is avoided to protect the availability of land for industrial purposes and the viability and efficient operation of existing and future industry uses;
- (f) any interface between industrial uses and sensitive land uses is designed and managed to minimise adverse impacts;
- (g) development makes a positive contribution to the public domain, particularly along major roads and near centres; and
- (h) development avoids significant adverse effects on water quality and the natural environment.

(4) The purpose of the zone will also be achieved through the following additional overall outcomes for particular precincts:

Nelly Bay low impact industry precinct:

(a) design of built form is of high quality and consistent with the low density Magnetic Island character.

Click here to view high resolution PDF.

Figure 6.153 – Nelly Bay low impact industry precinct

6.5.1.3 Assessment benchmarks

Table 6.5.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development — where involving a new building or expansion to an existing building **Note—**The following acceptable outcomes will not apply where the development is a change of use in an existing building that does not involve any expansion of that building.	
Built form	
PO1 Development is consistent with the height and scale of surrounding buildings and includes features that contribute to an attractive streetscape.	**AO1.1** Site cover does not exceed 80%.
	AO1.2 Walls that have frontage to a street or road are articulated so that they do not exceed a length of 15m without a change in plane of at least 0.75m depth.
	AO1.3 New building and structure height does not exceed 12m.
	AO1.4 Buildings are set back from street and road frontages: (a) within 20% of the average front set back of adjoining buildings; or (b) where there are no adjoining buildings, 4m.
	AO1.5 Vehicle manoeuvring and loading and unloading areas are located to the side or behind of the building, and are not located in front of the building.
PO2 Building entrances are legible and safe.	**AO2.1** Pedestrian entries to buildings are visible from the street and visitor parking areas, and are separate to vehicle access points.
	AO2.2 Doorway recesses in building facades are not of a size or configuration that would conceal a person, unless lighting, mirrors, transparent materials or angled approaches are included to offset the potential for impacts on safety.
	AO2.3 Each building or tenancy is provided with a highly visible street and unit number respectively.
	AO2.4 Premises are provided with external lighting sufficient to provide safe ingress and egress for site users.

Table 6.5.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development — where involving a new building or expansion to an existing building **Note—**The following acceptable outcomes will not apply where the development is a change of use in an existing building that does not involve any expansion of that building.	
Amenity	
PO3 Where adjoining a residential zone, development provides adequate buffering and screening so that adverse impacts on privacy and amenity are minimised.	**AO3.1** New buildings, plant and equipment, active outdoor use areas, site access and parking, servicing or outdoor storage areas are set back a minimum of 5m from any boundary adjoining a residential zone.
	AO3.2 Within the setback area adjoining a residential zone, the following are provided: (a) a minimum 1.8m high solid boundary fence; or (b) a densely planted landscape strip, having a minimum depth of 2m and the balance setback area turfed.
	AO3.3 Windows or openings that have direct views into adjoining residential buildings are provided with fixed screening that is a maximum of 50% transparent to obscure views into the adjoining residential building and maintain privacy for those residents.
PO4 Utility elements (including refuse areas, outdoor storage, plant and equipment, loading and unloading areas) are screened from view from the street and land within other zones.	**AO4** Utility elements are: (a) located within or behind the building; or (b) screened by a 1.8m high solid wall or fence; or (c) behind landscaping having the same screening effect as a 1.8m screen fence. **Editor's note—**Screening can be provided by any combination of the above treatments to meet the acceptable outcome.
PO5 Landscaping is provided to create streetscapes which contribute positively to the city image, particularly along major roads and streets.	**AO5** Landscaping is provided along all road frontages of the site for a minimum depth of: (a) 4m along an arterial or sub-arterial road; or (b) 2m along any other road or street frontage.

Table 6.5.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
General	
PO6 Development minimises impacts on surrounding land having regard to noise, vibration, odour, dust, light or other emissions. Adverse impacts on the health, safety or amenity of nearby residential zoned land or other sensitive land uses are minimised. **Editor's note—**Applicants should have regard to relevant legislative, industry and licensing requirements.	**AO6.1** Development achieves the noise generation levels set out in the Environmental Protection (Noise) Policy 2008.
	AO6.2 Development achieves the air quality objectives set out in the Environmental Protection (Air) Policy 2008.
	AO6.3 Materials that are capable of generating air contaminants are wholly enclosed in storage bins.
	AO6.4 All external areas are sealed, turfed or landscaped.
	AO6.5 Light emanating from any source complies with *Australian Standard AS4282 Control of the Obtrusive Effects of Outdoor Lighting*.
	AO6.6 Outdoor lighting is provided in accordance with *Australian Standard AS 1158.1.1 — Road Lighting — Vehicular Traffic (Category V) Lighting — Performance and Installation Design Requirements*.
PO7 Development provides for the collection, treatment and disposal of liquid wastes or sources of contamination such that off-site releases of contaminants do not occur. **Editor's note—**Applicants should also have regard to Section 9.3.7 Works code, Section 9.3.2 Healthy waters code and other relevant legislative, industry and licensing requirements.	**AO7.1** Areas where potentially contaminating substances are stored or used, are roofed and sealed with concrete, asphalt or similar impervious substance and bunded.
	AO7.2 Roof water is piped away from areas of potential contamination.
PO8 The site layout and design: (a) minimises earthworks; (b) maximises retention of natural drainage patterns; and (c) ensures existing drainage capacity is not reduced.	**AO8** Development does not involve earthworks involving more than $100m^3$.

Table 6.5.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
Caretaker's accommodation	
PO9 Development does not compromise the viability of the primary use of the site.	**AO9** No more than one (1) caretaker's accommodation dwelling is established on the site.

Table 6.5.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
Ancillary office uses	
PO10 Offices are accommodated within the zone where they are ancillary to the primary use.	**AO10** The area used for an office use does not exceed 250m^2 or 10% of the gross floor area, whichever is the lesser.

Table 6.5.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Uses	
PO11 Development within the zone is of a low impact nature and is either: (a) an industrial activity; or (b) trade related; or (c) difficult to locate in other zones due to land area or operational requirements (such as outdoor sales areas and indoor sport and recreation uses); or (d) small in scale and ancillary to or directly support the industrial functions of the area.	No acceptable outcome is nominated.
PO12 Development is not primarily oriented to retail sales, other than where involving an outdoor sales activity.	No acceptable outcome is nominated.
PO13 Development does not compromise the use of land for industrial purposes.	No acceptable outcome is nominated.
PO14 The zone does not accommodate uses that attract high volumes of heavy vehicle movement or generally involve 24-hour operation.	No acceptable outcome is nominated.

Table 6.5.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Crime prevention through environmental design	
PO15 Site layout facilitates the security of people and property having regard to: (a) opportunities for casual surveillance and sight lines; (b) exterior building designs which promote safety and deter graffiti; (c) adequate definition of uses and ownership; (d) adequate lighting; (e) appropriate signage and wayfinding; (f) minimisation of entrapment locations; and (g) building entrances, loading and storage areas being well lit and lockable after hours. **Editor's note—**Applicants should have regard to Crime Prevention through Environmental Design Guidelines for Queensland.	No acceptable outcome is nominated.

Table 6.5.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Community and environmental risk	
PO16 Development is designed and managed so that it provides appropriate protection for community health and safety, and avoids unacceptable risk to life and property.	No acceptable outcome is nominated.
PO17 The site layout and design responds sensitively to on-site and surrounding drainage patterns and ecological values by: (a) maximising retention of natural drainage patterns; (b) ensuring existing drainage capacity is not reduced; (c) maximising the retention or enhancement of existing vegetation and ecological corridors; and (d) providing buffers to protect the ecological functions of waterways.	No acceptable outcome is nominated.

Table 6.5.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Nelly Bay low impact industry precinct	
PO18 Building design and massing is consistent with the low density scale of the Magnetic Island character and articulates individual buildings.	No acceptable outcome is nominated.
PO19 Design and articulation of buildings contribute to the creation of the local Magnetic Island character through: (a) climate-responsive design; and (b) natural setting of buildings within the landscape.	No acceptable outcome is nominated.
PO20 Streetscape and landscape treatments contribute to the creation of the local Magnetic Island character.	No acceptable outcome is nominated.

6.5.2 Medium impact industry zone code

6.5.2.1 Application

This code applies to development where the code is identified as applicable in the categories of development and assessment.

When using this code, reference should be made to section 5.3.2 and where applicable, section 5.3.3 located in Part 5.

6.5.2.2 Purpose

(1) The purpose of the Medium impact industry zone code is to provide for medium impact industry uses.

It may include non-industrial and business uses that support the industrial activities where they do not compromise the long-term use of the land for industrial purposes.
Activities considered appropriate in this zone are defined as Medium impact industry in the schedule of definitions.

(2) The particular purpose of the code is to:

(a) facilitate the safe and efficient use of land for a range of industrial activities; and

(b) ensure development does not detract from the function and viability of centres, and minimises impacts on the amenity of nearby sensitive uses.

(3) The purpose of the code will be achieved through the following overall outcomes:

(a) the zone accommodates a wide range of industrial uses that are likely to have some potential for off-site impacts, including manufacturing, transport, storage, outdoor sales and other uses which require larger sites in locations separated from sensitive land uses;

(b) other non-industrial uses are those which are ancillary to or directly support the industrial functions of the area, and are limited in extent;

(c) the zone does not accommodate uses which are primarily oriented to retail sales and which are more appropriately located in centres, such as shops, shopping centres, showrooms, or retail based hardware supplies;

(d) the intrusion of incompatible uses, or uses which may be more appropriately accommodated in other zones, is avoided to protect the availability of land for industrial purposes and the viability and efficient operation of existing and future industry uses;

(e) the impacts of development are managed to ensure public health and safety and achieve acceptable levels of amenity for nearby sensitive land uses;

(f) development avoids significant adverse effects on water quality and the natural environment;

(g) development does not adversely affect the safe and efficient operation of nearby Department of Defence landholdings;

(h) development is safe and legible, and designed to establish safe and efficient movement systems;

(i) lot sizes provide for a range of large format industrial uses and discourage take up of land for smaller scale activities better suited to the Low impact industry zone; and

(j) development makes a positive contribution to the public domain, particularly along major roads.

(4) The purpose of the zone will also be achieved through the following additional overall outcomes for particular precincts:

Roseneath medium impact industry precinct:

(a) medium impact industries, including those with a transport and logistics focus, occurs in the precinct;

(b) development provides adequate new infrastructure to support new uses, including roads, stormwater, water and sewer infrastructure;

Editor's note—Conditions of approval or infrastructure agreements will be used (as appropriate) to ensure that infrastructure is provided.

(c) development minimises impacts on surrounding land uses, including existing residential uses as far as practicable; and

(d) development protects the hydraulic capacity and environmental qualities of waterways, including Stuart and Stoney Creeks, and unnamed tributaries.

Click here to view high resolution PDF.

Figure 6.154 – Roseneath medium impact industry precinct

6.5.2.3 Assessment benchmarks

Table 6.5.2.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development — where involving a new building or expansion to an existing building **Note—**The following acceptable outcomes will not apply where the development is a change of use in an existing building that does not involve any expansion of that building.	
Built form	
PO1 Development is consistent with the scale of surrounding buildings.	**AO1.1** Site cover does not exceed 80%.
	AO1.2 Buildings are set back from street and road frontages: (a) within 20% of the average front setback of adjoining buildings; or (b) where there are no adjoining buildings, 6m.
PO2 Building entrances are legible and safe.	**AO2.1** Pedestrian entries are visible from the primary street frontage and visitor car parking areas, and are separate to vehicle access points.
	AO2.2 Doorway recesses in building facades are not of a size or configuration that would conceal a person, unless lighting, mirrors, transparent materials or angled approaches are included to offset the potential for impacts on safety.
	AO2.3 Each building or tenancy is provided with a highly visible street and unit number respectively.
	AO2.4 Premises are provided with external lighting sufficient to provide safe ingress and egress for site users.

Table 6.5.2.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development — where involving a new building or expansion to an existing building **Note—**The following acceptable outcomes will not apply where the development is a change of use in an existing building that does not involve any expansion of that building.	
Amenity	
PO3 Utility elements (including refuse areas, outdoor storage, plant and equipment, loading and unloading areas) are screened from view from the street and sensitive land uses.	**AO3** Utility elements are: (a) located within or behind the building; or (b) screened by a 1.8m high solid wall or fence; or (c) behind landscaping having the same screening effect as a 1.8m screen fence. **Editor's note—**Screening can be provided by any combination of the above treatments to meet the acceptable outcome.
PO4 Landscaping is provided to create streetscapes which contribute positively to the city image, particularly along major roads and streets.	**AO4** Landscaping is provided for a minimum depth of: (a) 4m along an arterial or sub-arterial road; or (b) 2m along any other road or street frontage.

Table 6.5.2.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
General	
PO5 Development minimises impacts on sensitive land uses having regard to noise, vibration, odour, dust, light or other emissions. Adverse impacts on the health, safety or amenity of nearby residential zoned land or other sensitive land uses are minimised. **Editor's note—**Applicants should have regard to relevant legislative, industry and licensing requirements.	**AO5.1** Development achieves the noise generation levels set out in the Environmental Protection (Noise) Policy 2008.
	AO5.2 Development achieves the air quality objectives set out in the Environmental Protection (Air) Policy 2008.
	AO5.3 Materials that are capable of generating air contaminants are wholly enclosed in storage bins.
	AO5.4 All external areas are sealed, turfed or landscaped.
	AO5.5 Light emanating from any source complies with A*ustralian Standard AS4282 Control of the Obtrusive Effects of Outdoor Lighting*.
	AO5.6 Outdoor lighting is provided in accordance with *Australian Standard AS 1158.1.1 — Road Lighting — Vehicular Traffic (Category V) Lighting — Performance and Installation Design Requirements*.

PO6 Development provides for the collection, treatment and disposal of liquid wastes or sources of contamination such that off-site releases of contaminants do not occur. **Editor's note—**Applicants should also have regard to Section 9.3.7 Works code, Section 9.3.2 Healthy waters code and other relevant legislative, industry and licensing requirements.	**AO6.1** Areas where potentially contaminating substances are stored or used, are roofed and sealed with concrete, asphalt or similar impervious substance and bunded.
	AO6.2 Roof water is piped away from areas of potential contamination.
PO7 The site layout and design: (a) minimises earthworks; (b) maximises retention of natural drainage patterns; and (c) ensures existing drainage capacity is not reduced.	**AO7** Development does not involve earthworks involving more than 100m^3.

Table 6.5.2.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
Defence land	
PO8 Development does not adversely affect the safe and efficient operation of nearby Department of Defence land.	**AO8** All buildings and operational components of a use are setback not less than 100m from the closest boundary of land in the control of or used by the Department of Defence.

Table 6.5.2.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
Caretaker's accommodation	
PO9 Development does not compromise the viability of the primary use of the site.	**AO9** No more than one (1) caretaker's accommodation dwelling is established on the site.

Table 6.5.2.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
Ancillary office uses	
PO10 Offices are accommodated where they are ancillary to the primary industrial use on the site.	**AO10** The area used for an office use does not exceed 250m^2 or 10% of the gross floor area, whichever is the lesser.

Table 6.5.2.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Uses	
PO11 Development within the zone facilitates: (a) industrial activities whose impacts on sensitive land uses and the natural environment can be appropriately managed; or (b) uses which require larger sites in locations that are separated from sensitive land uses, and are not more appropriately accommodated in other zones; or (c) non-industrial uses which are small in scale and ancillary to or directly support the industrial functions of the area.	No acceptable outcome is nominated.
PO12 Development is not primarily oriented to retail sales, other than where involving an outdoor sales activity.	No acceptable outcome is nominated.
PO13 Development does not significantly detract from the availability or utility of land for industry purposes.	No acceptable outcome is nominated.

Table 6.5.2.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Crime prevention through environmental design	
PO14 Site layout facilitates the security of people and property having regard to: (a) opportunities for casual surveillance and sight lines; (b) exterior building designs which promote safety and deter graffiti; (c) adequate definition of uses and ownership; (d) adequate lighting; (e) appropriate signage and wayfinding; (f) minimisation of entrapment locations; and (g) building entrances, loading and storage areas being well lit and lockable after hours. **Editor's note—**Applicants should have regard to Crime Prevention through Environmental Design Guidelines for Queensland.	No acceptable outcome is nominated.

Table 6.5.2.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Community and environmental risk	
PO15 Development is designed and managed so that it provides appropriate protection for community health and safety, and avoids unacceptable risk to life and property.	No acceptable outcome is nominated.
PO16 The site layout and design responds sensitively to on-site and surrounding drainage patterns and ecological values by: (a) maximising retention of natural drainage patterns; (b) ensuring existing drainage capacity is not reduced; (c) maximising the retention or enhancement of existing vegetation and ecological corridors; and (d) providing buffers to protect the ecological functions of waterways.	No acceptable outcome is nominated.

Table 6.5.2.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts	
Roseneath medium impact industry precinct	
PO17 Development is supported by adequate infrastructure, including: (a) connection to reticulated water and sewage networks; (b) connection to a stormwater drainage system; and (c) constructed roads.	No acceptable outcome is nominated. **Editor's note—**In accordance with the Act, council may seek to secure the necessary infrastructure through conditions of approval or infrastructure agreements.
PO18 Development protects the environmental quality, existing riparian vegetation and hydraulic capacity of waterways including Stuart and Stoney Creeks.	No acceptable outcome is nominated.
PO19 Development does not compromise the safe use of the nearby magazine reserve.	**AO19** The development does not compromise the protective works safety distance from explosive storage stipulated in *AS2187-1 Explosives — Storage, transport and use* and is otherwise consistent with that standard. **Editor's note—**The magazine reserve is located on the following property descriptions, Lot 103 Plan EP2187 and Lot 220 Plan SP138418.
PO20 Impacts on nearby residential uses are minimised as far as practicable. **Editor's note—**Applicants should have regard to relevant legislative, industry and licensing requirements.	No acceptable outcome is nominated.

6.5.3 High impact industry zone code

6.5.3.1 Application

This code applies to development where the code is identified as applicable in the categories of development and assessment.

When using this code, reference should be made to section 5.3.2 and where applicable, section 5.3.3 located in Part 5.

6.5.3.2 Purpose

(1) The purpose of the High impact industry zone code is to provide for high impact industry uses.

It may include non-industrial and business uses that support the industrial activities where they do not compromise the long-term use of the land for industrial purposes.

Activities considered appropriate in this zone are defined as High impact industry in the schedule of definitions.

(2) The particular purpose of the code is to:

(a) facilitate the safe and efficient use of land for a range of higher impacting industrial activities; and

(b) ensure development does not detract from the function and viability of centres, and minimises impacts on the amenity of nearby sensitive uses.

(3) The purpose of the code will be achieved through the following overall outcomes:

(a) the zone accommodates industrial uses that are likely to have a higher potential for off-site impacts and other uses that are of a similar nature or scale and are compatible with the impacts and risks associated with the zone;

(b) the zone does not accommodate uses which attract visitation by members of the public.

(c) the intrusion of incompatible uses, or uses which may be more appropriately accommodated in other zones, is avoided to protect the availability of land for industrial purposes and the viability and efficient operation of existing and future industry uses;

(d) the impacts of development are managed to ensure public health and safety;

(e) development avoids significant adverse effects on water quality and the natural environment;

(f) development does not adversely affect the safe and efficient operation of Department of Defence landholdings;

(g) development is safe and legible and designed to facilitate large format industrial uses.

(h) development makes a positive contribution to the public domain, particularly along major roads.

6.5.3.3 Assessment benchmarks

Table 6.5.3.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development — where involving a new building or expansion of an existing building **Note—**The following acceptable outcomes will not apply where the development is a change of use in an existing building that does not involve any expansion of that building.	
Built form	
PO1 Development is consistent with the scale of surrounding buildings.	**AO1.1** Site cover does not exceed 80%.
	AO1.2 Buildings are set back from street frontages: (a) within 20% of the average front setback of adjoining buildings; or (b) where there are no adjoining buildings, 6m.
PO2 Building entrances are legible and safe.	**AO2.1** Pedestrian entries are visible from the primary street frontage and visitor parking areas, and are separate to vehicle access points.
	AO2.2 Doorway recesses in building facades are not of a size or configuration that would conceal a person, unless lighting, mirrors, transparent materials or angled approaches are included to offset the potential for impacts on safety.
	AO2.3 Each building or tenancy is provided with a highly visible street and unit number respectively.
	AO2.4 Premises are provided with external lighting sufficient to provide safe ingress and egress for site users.

Table 6.5.3.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development — where involving a new building or expansion of an existing building **Note—**The following acceptable outcomes will not apply where the development is a change of use in an existing building that does not involve any expansion of that building.	
Amenity	
PO3 Utility elements (including refuse areas, outdoor storage, plant and equipment, loading and unloading areas) are screened from view from major roads.	**AO3** Utility elements are: (a) located within or behind the building; or (b) screened by a 1.8m high solid wall or fence; or (c) behind landscaping having the same screening effect as a 1.8m screen fence. **Editor's note—**Screening can be provided by any combination of the above treatments to meet the acceptable outcome.

PO4 Landscaping is provided to create streetscapes which contribute positively to the city image, particularly along major roads and streets.	**AO4** Landscaping is provided along all road frontages of the site for a minimum depth of: (a) 4m along an arterial or sub-arterial road; or (b) 2m along any other road or street frontage.

Table 6.5.3.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
General	
PO5 Development minimises impacts on sensitive land uses having regard to noise, vibration, odour, dust, light or other emissions. Adverse impacts on the health, safety or amenity of nearby residential zoned land or other sensitive land uses are minimised. **Editor's note—**Applicants should have regard to relevant legislative, industry and licensing requirements.	**AO5.1** Development achieves the noise generation levels set out in the Environmental Protection (Noise) Policy 2008.
	AO5.2 Development achieves the air quality objectives set out in the Environmental Protection (Air) Policy 2008.
	AO5.3 Materials that are capable of generating air contaminants are wholly enclosed in storage bins.
	AO5.4 All external areas are sealed, turfed or landscaped.
	AO5.5 Light emanating from any source complies with *Australian Standard AS 4282 Control of the Obtrusive Effects of Outdoor Lighting*.
	AO5.6 Outdoor lighting is provided in accordance with Australian Standard *AS 1158.1.1 — Road Lighting — Vehicular Traffic (Category V) Lighting — Performance and Installation Design Requirements*.
PO6 Development provides for the collection, treatment and disposal of liquid wastes or sources of contamination such that off- site releases of contaminants do not occur. **Editor's note—**Applicants should also have regard to Section 9.3.7 Works Code, Section 9.3.2 Healthy waters code and other relevant legislative, industry and licensing requirements.	**AO6.1** Areas where potentially contaminating substances are stored or used, are roofed and sealed with concrete, asphalt or similar impervious substance and bunded.
	AO6.2 Roof water is piped away from areas of potential contamination.
PO7 The site layout and design: (a) minimises earthworks; (b) maximises retention of natural drainage patterns; and (c) ensures existing drainage capacity is not reduced.	**AO7** Development does not involve earthworks involving more than $100m^3$.

Table 6.5.3.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
Defence land	
PO8 Development does not adversely affect the safe and efficient operation of Department of Defence land.	**AO8** All buildings and operational components of a use are setback not less than 100m from the closest boundary of land in the control of or used by the Department of Defence.

Table 6.5.3.3 - Self-assessable and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
Caretaker's accommodation	
PO9 Development does not compromise the viability of the primary use of the site.	**AO9** No more than one caretaker's accommodation dwelling is established on the site.

Table 6.5.3.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Uses	
PO10 The zone predominantly accommodates industrial uses with potential for higher impacts.	No acceptable outcome is nominated.
PO11 Other uses are accommodated where they: (a) are uses which: (i) require larger sites in locations that are separated from sensitive land uses; (ii) are not more appropriately accommodated in other zones; and (iii) are compatible with the impacts and risks associated with the zone; or (b) are small in scale and ancillary to or directly support the industrial functions of the area.	No acceptable outcome is nominated.
PO12 The zone does not accommodate uses that attract members of the public who are not employed in the zone.	No acceptable outcome is nominated.
PO13 Development does not significantly detract from the availability or utility of land for industrial purposes.	No acceptable outcome is nominated.

Table 6.5.3.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Crime prevention through environmental design	
PO14 Site layout facilitates the security of people and property having regard to: (a) opportunities for casual surveillance and sight lines; (b) exterior building designs which promote safety and deter graffiti; (c) adequate definition of uses and ownership; (d) adequate lighting; (e) appropriate wayfinding mechanisms; (f) minimisation of entrapment locations; and (g) building entrances, loading and storage areas being well lit and lockable after hours. **Editor's note—**Applicants should have regard to Crime Prevention through Environmental Design Guidelines for Queensland.	No acceptable outcome is nominated.

Table 6.5.3.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Community and environmental risk	
PO15 Development is designed and managed so that it provides appropriate protection for community health and safety, and avoids unacceptable risk to life and property.	No acceptable outcome is nominated.
PO16 The site layout and design minimises impacts of on-site and surrounding drainage patterns and ecological values by: (a) maximising retention of natural drainage patterns; (b) ensuring existing drainage capacity is not reduced; (c) maximising the retention or enhancement of existing vegetation and ecological corridors; and (d) providing buffers to protect the ecological functions of waterways.	No acceptable outcome is nominated.

6.6 Rural zones category

6.6.1 Rural zone code

6.6.1.1 Application

This code applies to development where the code is identified as applicable in the categories of development and assessment.

When using this code, reference should be made to section 5.3.2 and where applicable, section 5.3.3 located in Part 5.

6.6.1.2 Purpose

(1) The purpose of the Rural zone code is to:

(a) provide for a wide range of rural uses including cropping, intensive horticulture, intensive animal industries, animal husbandry, animal keeping and other primary production activities;

(b) provide opportunities for non-rural uses that are compatible with agriculture, the environment, and the landscape character of the rural area where they do not compromise the long-term use of the land for rural purposes; and

(c) protect or manage significant natural features, resources, and processes, including the capacity for primary production.

(2) The particular purpose of the code is to ensure:

(a) the productive capacity of all rural land and opportunities to diversify and add value to rural production are maximised, within the ecological constraints of the land;

(b) the character and landscape values of non-urban land are maintained; and

(c) urban or rural residential development does not expand into rural zoned land.

(3) The purpose of the code will be achieved through the following overall outcomes:

(a) the zone primarily accommodates cropping or animal husbandry and ancillary detached houses;

(b) all rural land is protected from further fragmentation. A lack of viability for existing farm units and small holdings does not justify their further subdivision or use for non-rural purposes;

(c) housing in the rural zone only occurs to the extent that it supports the productive use of the land. Urban and rural residential development is contained within designated growth areas and does not expand into the rural zone;

(d) other new enterprises, including rural industries and tourism activities, are accommodated where:

(i) they are directly associated with rural production, a natural resource or the natural environment or need to be remote from urban uses as a result of their impacts;

(ii) the productive capacity of the land is not diminished and conflicts with existing and intended activities in the surrounding area are avoided;

(iii) the existing landscape and natural resource values of the land are maintained; and

(iv) the development is not more appropriately located in another zone;

(e) extractive resources and existing extractive operations on rural land are protected from encroachment by incompatible uses;

(f) the environmental, character and landscape values of all rural land are maintained; and

(g) adequate separation and buffering is provided by new development in nearby urban or rural residential zoned land to ensure the encroachment by more intensive residential and other sensitive uses is avoided.

(4) The purpose of the zone will also be achieved through the following additional overall outcomes for particular precincts:

Horticulture precinct:

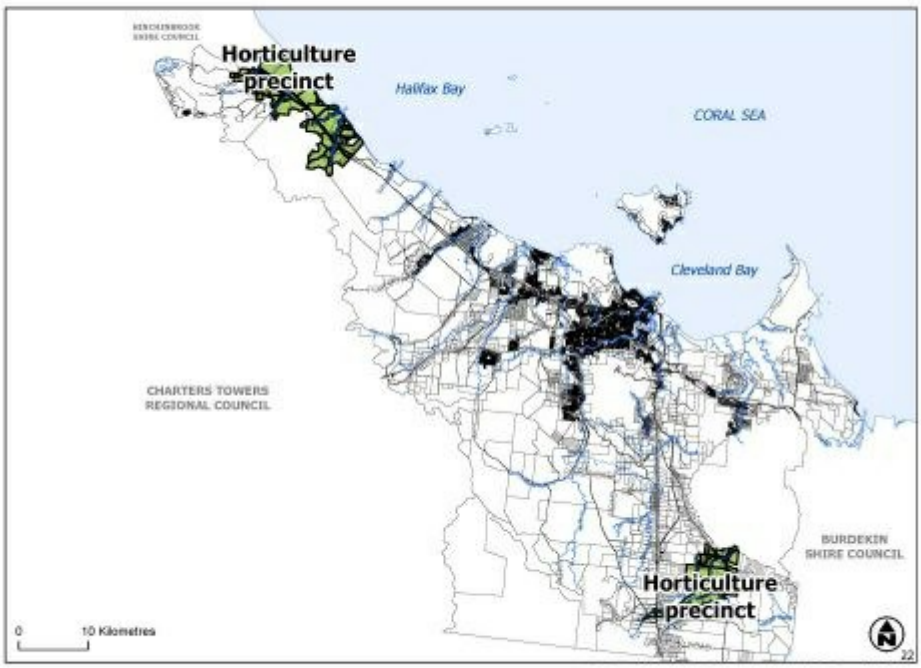
(a) this precinct contains the most productive areas in the Townsville region, in which cropping is the predominant land use. The productive capacity of this land is maximised;

(b) rural industries which have a direct nexus with the rural production in the immediate locality and only small-scale farm stay or bed and breakfast accommodation are established in this precinct;

(c) forestry does not adversely affect horticultural production, natural or scenic values on nearby land;

(d) permanent plantations, animal keeping (being kennels and catteries), intensive animal industries and aquaculture are not established in this precinct; and

(e) subdivision of lots below 40ha generally does not occur.



Click here to view online PDF.

Figure 6.155 – Horticulture precinct

Mixed farming precinct:

(a) this precinct contains low intensity animal husbandry with some potential for cropping.

(b) animal keeping (being kennels and catteries), intensive animal industries, aquaculture and rural industries establish where they:

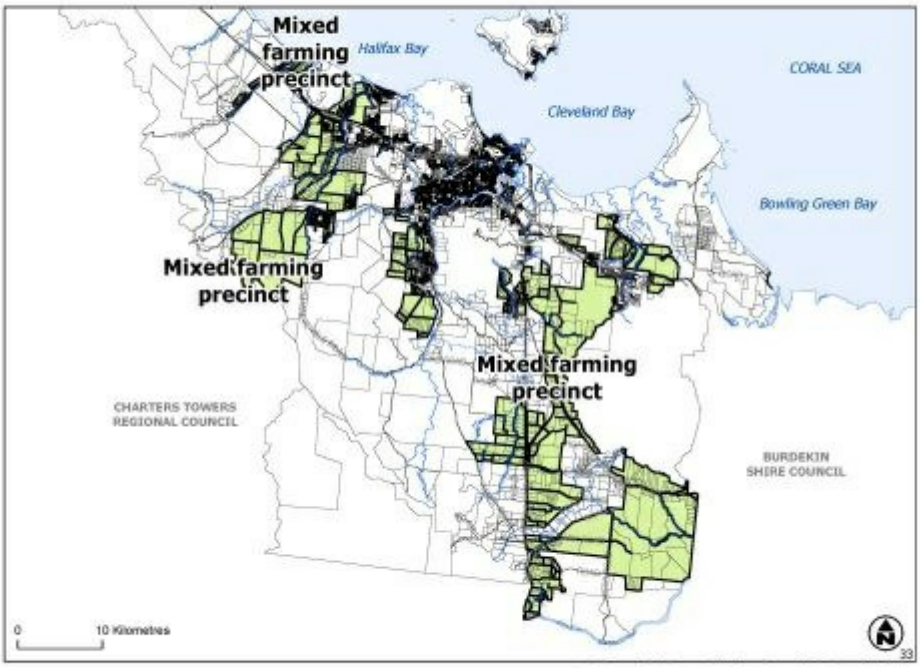
  (i) are able to be located on less productive land within the precinct;

  (ii) are adequately separated from rural dwellings and other sensitive land uses;

  (iii) do not diminish the productive capacity of other land nearby; and

  (iv) do not diminish water quality, natural, scenic or environmental values, including remnant vegetation;

(c) subdivision of lots below 400ha in the Ross River Dam catchment and 40ha elsewhere generally does not occur.



Click here to view online PDF.

Figure 6.156 – Mixed farming precinct

Grazing precinct:

(a) this precinct predominantly contains broad hectare grazing;

(b) the landscape character of elevated areas with high landscape significance is protected;

(c) animal keeping (being kennels and catteries), intensive animal industries, aquaculture and rural industries establish where they:

  (i) are able to be located on less productive land within the precinct;

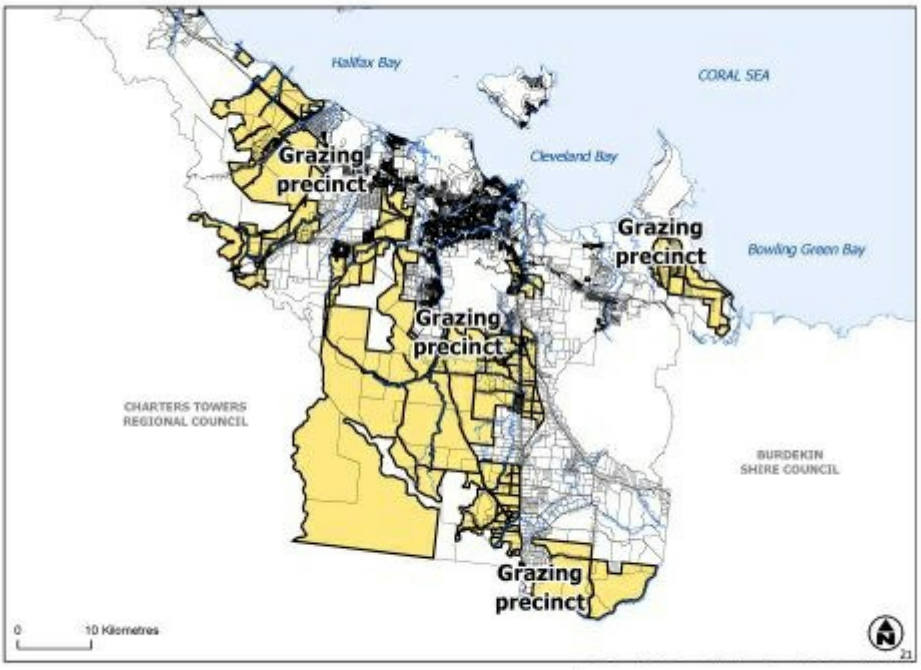
  (ii) are adequately separated from rural dwellings and other sensitive land uses;

  (iii) do not diminish the productive capacity of other land nearby; and

  (iv) do not diminish water quality, natural, scenic or environmental values, including remnant vegetation;

(d) development does not prejudice the long-term potential of the Woodstock area for accommodating high impact, noxious or hazardous industries; and

(e) subdivision of lots below 400ha generally does not occur.



Click here to view online PDF.

Figure 6.157 – Grazing precinct

Cungulla precinct:

(a) rural land in the Cungulla precinct includes smaller lots used for primarily residential purposes. Agricultural uses are of lesser importance at Cungulla;

(b) houses are established on rural zoned land at Cungulla, providing that appropriate residential amenity and safety can be maintained, with particular regard to nearby extractive industry activities;

(c) houses are provided with adequate water supply and sewage treatment and disposal can be provided; and

(d) subdivision of lots below 10ha generally does not occur.

Click here to view high resolution PDF.

Figure 6.158 – Cungulla precinct

Jensen precinct:

(a) this precinct contains smaller rural living lots with some potential for cropping;

(b) houses are provided with reticulated water supply, and on-site sewerage treatment and disposal; and

(c) subdivision of lots below 10ha generally does not occur.

Click here to view high resolution PDF.

Figure 6.159 – Jensen precinct

6.6.1.3 Assessment benchmarks

Table 6.6.1.3-Accepted development subject to requirements and assessable development (Part)

Editor's note—Dwelling houses may also be accepted development subject to requirements against the Water resources catchment overlay code.

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
Caretaker's accommodation, community residence or dwelling house	
PO1 Development does not detract from the effective operation of the primary use or the rural landscape character and amenity of site.	**AO1.1** Dwellings are not established on lots less than 1ha in size, other than in the Cungulla precinct.
	AO1.2.1 Where on a lot less than 1ha (in accordance with AO1.1), no more than 1 dwelling is established. OR **AO1.2.2** On lots greater than 1ha, no more than 2 dwellings are established.
PO2 Dwellings have adequate access to basic services to ensure the safety and wellbeing of residents and the protection of water quality and other environmental values.	**AO2** A dwelling: (a) has a legal access to a constructed road; (b) has a legal connection to either: (i) reticulated water supply; or (ii) a water tank with a minimum capacity of 45,000 liters; and (c) if in the Cungulla precinct, does not rely on bore water.
PO3 Dwellings are sufficiently separated from existing lawful activities in the locality in order to protect the safety and amenity of residents and to ensure the ongoing operation of those activities is not prejudiced.	**AO3.1** Dwellings are separated from: (a) an existing or approved intensive animal industry use by at least 1km; (b) an existing or approved extractive industry operation or a resource/processing area shown on overlay map OM-05 by: (i) 500m from a hard rock extractive industry; (ii) 200m from a sand and gravel extractive industry; and (iii) 100m from a haul route used by any existing operation.
	AO3.2 Dwellings are set back from all site boundaries by 20m, other than in the Cungulla precinct where dwellings and ancillary structures are set back a minimum of 6m from front boundaries, 3m from side boundaries where adjoining a road or 1.5m otherwise for side and rear boundaries.

Table 6.6.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
Home based business	
PO4 Development does not detract from the effective operation of the primary use or the rural landscape character and amenity of site. **Editor's note—**A heavy vehicle is a vehicle with more than 4.5 tonnes GVM (gross vehicle mass), GCM (gross combination mass) or more than 2 tonnes ATM (aggregate trailer mass).	**AO4.1** The home based business does not: (a) require more than the owner and 2 employees on-site at any one time; (b) does not generate more than 14 visitor trips per day, where one trip includes arriving and departing the site. These trips are additional to normal trips associated with the dwelling or rural use; (c) include an area exceeding 20m^2 used for the sale of the goods made on the site; (d) involve hiring out of materials, goods, appliances or vehicles; and (e) involve the repair or maintenance of vehicles, other than minor maintenance of vehicles used in conjunction of the home business or rural use on the site.
	AO4.2 Bed and breakfast or farm stay accommodation does not exceed three bedrooms or three cabins.
PO5 Heavy vehicle parking: (a) has a direct nexus with a home based business or rural use carried out on the site; and (b) does not adversely affect the amenity of neighbouring properties.	**AO5.1** Not more than two heavy vehicles are parked on the site.
	AO5.2 While on-site, vehicles: (a) are not operated between the hours of 10pm and 6am; (b) are not left idling for more than 5 minutes at any one time; and (c) do not have a refrigeration unit running.

Table 6.6.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
Roadside stall	
PO6 Roadside stalls are small in scale and do not impact negatively upon the amenity, character or safety of rural areas and the safety and efficiency of roads.	**AO6.1** Any structure used for the sale of goods or produce is limited to 20m^2 gross floor area.
	AO6.2 Access to the structure is via the primary property access point.
	AO6.3 Produce or goods sold is grown, made or produced on the land on which the road side stall is erected.

Table 6.6.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
Rural industry, community use, wholesale nursery	
PO7 Development does not impact negatively upon the amenity, character or safety of surrounding areas.	**AO7.1** Non-residential buildings, animal enclosures storage facilities and waste disposal areas are set back: (a) 100m from the boundary of any land included in residential zone or the rural residential zone; or (b) 50m from other site boundaries.
	AO7.2 Buildings are set back 20m from any road frontage.
	AO7.3 Building height does not exceed 2 storeys.

Table 6.6.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
General benchmarks	
PO8 Development: (a) is located on the least productive parts of a site; (b) does not restrict the ongoing safe and efficient use of nearby rural uses; and (c) is adequately separated or buffered where it is likely to be sensitive to the operational characteristics associated with rural uses, rural industries, extractive industries or other lawful use.	No acceptable outcome is nominated.
PO9 Tourism-related uses are established only where they are directly associated and compatible with rural production, natural resources or landscape amenity in the immediate vicinity.	No acceptable outcome is nominated.

PO10 Uses that require isolation from urban areas are accommodated only where: (a) they cannot be more appropriately located in an industrial or other relevant zone; (b) they can be adequately separated from sensitive uses (whether or not in the rural zone); (c) they can be adequately separated from land in the Horticulture precinct; and (d) potential impacts can be appropriately managed. **Editor's note—**Applicants seeking approval for intensive animal industries should refer to the *'National Guidelines for Beef Cattle Feedlots in Australia, National Beef Cattle Feedlot Environmental Code of Practice'*, 'Queensland Dairy Farming Environmental Code of Practice', *'National Environmental Guidelines for Piggeries'* and *'Queensland Guidelines Meat Chicken Farms* and that applicants consult with the relevant State government department prior to the lodgement of a development application. For other uses council may require a study that, amongst other matters, identifies how the development is in accordance with Environmental Protection (Air) Policy 1997 or Environmental Protection (Noise) Policy 1997.	No acceptable outcome is nominated.
PO11 Development is designed and managed so that it provides appropriate protection for community health and safety, and avoids unacceptable risk to life and property.	No acceptable outcome is nominated.
PO12 Development does not adversely impact on the character, amenity or scenic values of the locality, having regard to: (a) the scale, siting and design of buildings; (b) the visibility of buildings, structures and infrastructure; (c) likely emissions including water-borne contaminants, noise, dust, lighting and odour; and (d) the nature or volume of traffic generated.	No acceptable outcome is nominated.
PO13 Ecological values, habitat corridors and soil and water quality are protected, having regard to: (a) maximisation of vegetation retention and protection of vegetation from the impacts of development; (b) avoidance of potential for erosion and minimisation of earthworks; (c) retention and protection of natural drainage lines and hydrological regimes; and (d) avoidance of leeching by nutrients, pesticides or other contaminants, or potential for salinity.	No acceptable outcome is nominated.

Table 6.6.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Horticulture precinct	
PO14 Productive land within this precinct is maintained.	No acceptable outcome is nominated.
PO15 Rural industries are established only where associated with rural production in the immediate vicinity.	No acceptable outcome is nominated.
PO16 Tourist related uses are limited to small-scale bed and breakfast and farm stay which do not detract from the ongoing productive use of the site.	No acceptable outcome is nominated.
PO17 Reconfiguration is limited to protect the ongoing viability of existing and potential horticulture.	**AO17** The minimum lot size in the precinct is 40ha.

Table 6.6.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Mixed farming precinct	
PO18 Reconfiguration is limited to protect the ongoing viability of existing and potential horticulture uses, water quality and ecological and landscape values.	**AO18** The minimum lot size in the precinct is 40ha, except in the Ross River Dam Catchment area where the minimum lot size is 400ha. **Editor's note—**The Ross River Dam catchment area is depicted on the Water resource catchment overlay map OM-09.

Table 6.6.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Grazing precinct	
PO19 Development in the vicinity of the Woodstock industry investigation area does not prejudice its future potential for industry.	No acceptable outcome is nominated.
PO20 Reconfiguration is limited to reflect the suitability of the land for primarily grazing purposes and to protect water quality and ecological and landscape values.	**AO20** The minimum lot size in the precinct is 400ha.

Table 6.6.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Cungulla precinct	
PO21 Development is compatible with the residential amenity of the locality and avoids adverse impacts on surrounding dwellings.	No acceptable outcome is nominated.

6.7 Other zones category

6.7.1 Emerging community zone code

6.7.1.1 Application

This code applies to development where the code is identified as applicable in the categories of development and assessment.

When using this code, reference should be made to section 5.3.2 and where applicable, section 5.3.3 located in Part 5.

6.7.1.2 Purpose

(1) The purpose of the Emerging community zone code is to:

- (a) identify land that is suitable for urban purposes and conserve land that may be suitable for urban development in the future;
- (b) manage the timely conversion of non-urban land to urban purposes; and
- (c) prevent or discourage development that is likely to compromise appropriate longer term land use.

(2) The particular purpose of the code is:

- (a) to ensure that future development:
  - (i) creates an integrated and compact urban form;
  - (ii) establishes safe, attractive and walkable communities;
  - (iii) provides for a wide choice of housing, employment and accessible community services; and
  - (iv) avoids areas within the Emerging community zone that are unsuited to urban development because of their natural, scenic or cultural values; and
- (b) to ensure that any development which occurs prior to urbanisation of an area maintains the suitability and capacity for future urban development.

(3) The purpose of the zone will be achieved through the following overall outcomes:

- (a) structure planning of areas within the zone is undertaken in advance of development of the land for urban purposes;
- (b) land is developed in a logical pattern that facilitates the efficient provision of infrastructure;
- (c) a high level of integration with existing and future urban development is achieved having regard to movement networks, open space and recreational facilities, centres and community infrastructure;
- (d) development facilitates the establishment of new residential communities together with an appropriate level of supporting land uses such as centres, industry and community activities;
- (e) residential development provides for a range of housing types and achieves a minimum dwelling yield of 15 dwellings per hectare net;
- (f) movement networks are established to promote active transport (walking and cycling) and public transport;
- (g) development retains and protects significant environmental, topographic, scenic and cultural features and values;
- (h) development provides for sufficient buffering to existing or intended non-urban or incompatible uses in surrounding areas; and
- (i) development which is, or has the potential to become, incompatible with future urban development of the area does not occur.

(4) The purpose of the zone will also be achieved through the following additional overall outcomes for particular precincts.

Burdell precinct:

- (a) creates an identifiable community, which is developed through detailed subdivision design, focused land use provision and clear building requirements;
- (b) provides housing diversity to meet the evolving needs of various household types and lifestyles;

(c) development is integrated and respects the site's character and provides access to open space and community facilities;

(d) provides a defined open space system that protects wetland and riparian environmental values and provides various recreational opportunities;

(e) development facilitates safe and functional access within the precinct and to external connections;

(f) is designed to achieve tropical urban design outcomes;

(g) is developed for community and commercial facilities to:

(A) service the residents of the precinct, residents of the region, and the travelling public; and

(B) ensure that residential amenity is not detrimentally affected;

(h) provides for an integrated linear open space system along the major drainage paths with linkages to the Bohle River; and

(i) provides for innovative development over the life of the development of the precinct area, to account for technological development and changing patterns in the community.

Click here to view high resolution PDF.

Figure 6.160 - Burdell precinct

6.7.1.3 Assessment benchmarks

Table 6.7.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
Home based business	
PO1 The use does not adversely impact on the amenity of the surrounding residential land uses and local character.	**AO1.1** The home based business: (a) is carried out in an existing building or structure; (b) does not use more than 60m² of the gross floor area of the building or structure; (c) involves at least one or more residents of the dwelling house; (d) involves not more than one non-resident employee; (e) where bed and breakfast or farm stay accommodation does not exceed three bedrooms or cabins; (f) does not generate more than 1 heavy vehicle trip per week; **Editor's note—**A heavy vehicle is a vehicle with more than 4.5 tonnes gross vehicle mass. (g) does not generate more than 14 vehicle trips per day by other vehicles, where one trip includes arriving and departing the site. These trips are additional to normal domestic trips associated with the dwelling; (h) contains visitor parking within the site; (i) does not involve hiring out of materials, goods, appliances or vehicles; and (j) does not involve the repair or maintenance of vehicles, other than minor maintenance of vehicles used in conjunction of the home business on the site. **Editor's note—**home based business operators should also refer to signage requirements under Table 5.8.2 -Operational work being placing an advertising device on a premises and Section 9.3.1-Advertising devices code.
	AO1.2 Functional aspects of the use such as service areas, material storage or use activities are not visible from the street.
	AO1.3 Other than where a bed and breakfast, farm stay or home based childcare, the business use does not operate outside the hours of 8am to 5pm Monday to Friday, 8am to 2pm Saturday and does not operate on Sunday.
	AO1.4 Noise levels do not exceed acoustic quality objectives under the Environmental Protection (Noise) Policy 2008.

Table 6.7.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
Sales office	
PO2 The use does not adversely impact on the amenity of the surrounding land uses and local character.	**AO2** Development of the sales office is in place for no more than five years.

Table 6.7.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Interim land uses	
PO3 Development does not reduce or preclude the long-term use of the site or nearby land for urban purposes, having regard to the scale and nature of the activity and its likely impacts, and would not compromise the implementation of a future structure plan over the site.	No acceptable outcome is nominated.

Table 6.7.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Creating new communities	
PO4 New development of an urban nature: (a) contributes to a logical pattern and sequence of development; (b) facilitates efficient use of land and infrastructure; (c) facilitates integration with existing and future urban development, having regard to movement networks, open space networks and accessibility to community infrastructure; (d) provides accessibility for all modes of transport including pedestrian, cyclist, public transport and private car; (e) creates clear, direct pedestrian and cycle access to centres, local parks and public transport stops; (f) achieves an average net residential density of at least 15 dwellings per hectare; (g) locates higher density residential development in and around centres, along connector streets and close to transit nodes; (h) locates community facilities requiring high levels of accessibility within or adjoining centres; (i) responds to constraints and natural values on the site and avoids or minimises any impacts on areas of environmental significance; (j) facilitates integrated water cycle management; (k) orients major streets and vistas to landmarks; (l) provides a road network with a capacity adequate for current and future demand; (m) does not increase hazard or risk to existing or future residents; and (n) provides an open space network suitable for current and future needs.	No acceptable outcome is nominated. **Editor's note—**Emerging community planning scheme policy no. SC6.6 provides guidance to applicants on expected structure planning processes to facilitate development that complies with this code and Section 9.3.4 Reconfiguring a lot code.
PO5 Emerging communities are provided with the range of supporting services and uses, including those that provide local employment opportunities, that: (a) are commensurate to the size of the relevant emerging community; (b) do not detract from planning scheme intentions for other parts of the city; and (c) are planned as an integrated and compatible component of the emerging community they serve.	No acceptable outcome is nominated. **Editor's note—**Emerging community planning scheme policy no. SC6.6 provides guidance to applicants on expected structure planning processes to facilitate development that complies with this code and Section 9.3.4 Reconfiguring a lot code.

PO6 New centres are designed to create: (a) a coherent and integrated built form, public realm and circulation networks; (b) central, accessible and attractive public spaces for people to congregate and interact; (c) continuity of streetscape and landscape characteristics; (d) pedestrian friendly and visually interesting frontages to streets and public spaces; (e) active primary frontages with parking areas sleeved by buildings; (f) optimum energy efficiency; (g) a well-integrated mix of uses; (h) connectivity of pedestrian and cyclist paths and spaces internal and external to the centre; (i) connectivity to public transport services; and (j) sensitive transitioning to surrounding land and uses.	No acceptable outcome is nominated. **Editor's note—** Emerging community planning scheme policy no. SC6.6 provides guidance to applicants on expected structure planning processes to facilitate development that complies with this code and Section 9.3.4 Reconfiguring a lot code.
PO7 Where centre development is proposed, development is consistent with the centres hierarchy and does not compromise the intended role or successful functioning of other centres in the network. The growth of floor space within centres is balanced with anticipated growth within their primary catchment and does not substantively impact on the trading of other centres for an extended period of time or unduly undermine the potential for another centre to expand into its intended role.	No acceptable outcome is nominated. **Editor's note—**Emerging community planning scheme policy no. SC6.6 provides guidance to applicants on expected structure planning processes to facilitate development that complies with this code and Section 9.3.4 Reconfiguring a lot code. **Editor's note—** Applicants should have regard to Economic impact assessment planning scheme policy SC6.5 for guidance on how to demonstrate compliance with this performance outcome.

Table 6.7.1.3 - Accepted development subject to requirements and assessable development (Part)

Performance outcomes	**Acceptable outcomes**
For assessable development	
Crime prevention through environmental design	
PO8 Development facilitates the security of people and property having regard to: (a) opportunities for casual surveillance and sight lines; (b) exterior building design that promotes safety; (c) adequate lighting; (d) appropriate signage and wayfinding; (e) minimisation of entrapment locations; and (f) building entrances, loading and storage areas that are well lit and lockable after hours. **Editor's note—**Applicants should have regard to Crime Prevention through Environmental Design Guidelines for Queensland.	No acceptable outcome is nominated.

Table 6.7.1.3 - Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Burdell precinct	
PO9 A site is to be suitable in size and configuration for the intended use.	**AO9** A variety of lot sizes and configurations are provided to facilitate a well-connected master planned community.

6.7.2 Special purpose zone code

6.7.2.1 Application

This code applies to development where the code is identified as applicable in the categories of development and assessment.

When using this code, reference should be made to section 5.3.2 and where applicable, section 5.3.3 located in Part 5.

6.7.2.2 Purpose

(1) The purpose of the Special purpose zone code is to facilitate industrial development that is of regional, state and national significance.

(2) The particular purpose of the code is to:

- (a) recognise and facilitate reconfiguration of land in the Townsville State Development Area;
- (b) protect the area's suitability for industrial development and the expansion of existing industrial uses;
- (c) facilitate and maintain linkages to the Port of Townsville and major freight routes;
- (d) protect environmental values in the Townsville State Development Area; and
- (e) ensure development minimises impacts on the amenity of nearby sensitive land uses.

Editor's note—Material change of use applications in the Townsville State Development Area are administered by the Coordinator-General through the Development Scheme for the Townsville State Development Area. In this area, only development applications for reconfiguration of a lot and operational works will be assessed by Townsville City Council.

(3) The purpose of the code will be achieved through the following overall outcomes:

- (a) the Townsville State Development Area accommodates a wide range of large-scale industry uses, particularly those which support or have a nexus with the Port of Townsville and minerals processing;
- (b) other non-industrial uses are those which are ancillary to or directly support the industrial functions of the area, and are limited in extent;
- (c) the intrusion of incompatible uses, or uses which may be more appropriately accommodated in other zones, is avoided to protect the availability of land for industrial purposes and the viability and efficient operation of existing and future industry uses;
- (d) the impacts of development are managed to ensure public health and safety;
- (e) development avoids significant adverse effects on water quality and the natural environment;
- (f) development does not adversely affect the safe and efficient operation of Department of Defence landholdings;
- (g) development is safe and legible, and designed to establish safe and efficient movement systems;
- (h) lot sizes provide for a range of large format industrial uses and discourage take up of land for smaller scale activities better suited to other zones;
- (i) development makes a positive contribution to the public domain, particularly along major roads;
- (j) opportunities for energy efficiency through groupings and relationships between industries are accommodated where possible; and
- (k) development is adequately serviced by infrastructure and maximises the efficient use of existing and planned infrastructure.

6.7.2.3 Assessment benchmarks

Table 6.7.2.3 - Assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
General	
PO1 The site layout and design: (a) minimises earthworks; (b) maximises retention of natural drainage patterns; and (c) ensures existing drainage capacity is not reduced.	**AO1** Development does not involve: (a) earthworks involving more than 100m^3; and (b) any changes to existing drainage lines and wetlands.

Table 6.7.2.3 - Assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Defence land	
PO2 Development does not adversely affect the safe and efficient operation of nearby Department of Defence land.	**AO2** All buildings and operational components of a use are setback not less than 100m from the closest boundary of land in the control of or used by the Department of Defence.

Table 6.7.2.3 - Assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Uses	
PO3 Development does not significantly detract from the availability or utility of land for industrial purposes.	No acceptable outcome is nominated.

Table 6.7.2.3 - Assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Community and environmental risk	
PO4 Development is designed and managed so that it provides protection for community health and safety, and avoids unacceptable risk to life and property.	No acceptable outcome is nominated.
PO5 The site layout and design minimises impacts of on-site and surrounding drainage patterns and ecological values by: (a) maximising retention of natural drainage patterns; (b) ensuring existing drainage capacity is not reduced; (c) maximising the retention or enhancement of existing vegetation and ecological corridors; and (d) providing buffers to protect the ecological functions of waterways.	No acceptable outcome is nominated.

Part 6 Zones

6.1 Preliminary

(1) Zones organise the planning scheme area in a way that facilitates the location of preferred or acceptable land uses.

(2) Zones are mapped and included in Schedule 2.

(3) The categories of development and assessment for development in a zone are in Part 5.

(4) Assessment benchmarks for zones are contained in a zone code.

(5) A precinct may be identified for part of a zone.

(6) Precinct provisions are contained in the zone code.

(7) Each zone code identifies the following:

- (a) the purpose of the code;
- (b) the overall outcomes that achieve the purpose of the code;
- (c) the performance outcomes that achieve the overall outcomes and the purpose of the code;
- (d) the acceptable outcomes that achieve the performance and overall outcomes and the purpose of the code; and
- (e) the performance and acceptable outcomes for the precinct.

(8) The following are the zone codes for the planning scheme:

- (a) Residential zones category:
  - (i) Low density residential zone code;
  - (ii) Medium density residential zone code;
  - (iii) High density residential zone code;
  - (iv) Rural residential zone code;
  - (v) Character residential zone code;
- (b) Centres zones category:
  - (i) Neighbourhood centre zone code;
  - (ii) Local centre zone code;
  - (iii) District centre zone code;
  - (iv) Major centre zone code;
  - (v) Principal centre (CBD) zone code;
  - (vi) Specialised centre zone code;
  - (vii) Mixed use zone code;
- (c) Community facilities and open space zones category:
  - (i) Sport and recreation zone code;
  - (ii) Open space zone code;
  - (iii) Community facilities zone code;
  - (iv) Environmental management and conservation zone code;
- (d) Industry zones category:
  - (i) Low impact industry zone code;
  - (ii) Medium impact industry zone code;
  - (iii) High impact industry zone code;
- (e) Rural zones category:
  - (i) Rural zone code;
- (f) Other zones category:

(i) Emerging community zone code;

(ii) Special purpose zone code.

6.2 Residential zones category

6.2.1 Low density residential zone code

6.2.1.1 Application

This code applies to development where the code is identified as applicable in the categories of development and assessment.

When using this code, reference should be made to section 5.3.2 and where applicable, section 5.3.3 located in Part 5.

6.2.1.2 Purpose

(1) The purpose of the Low density residential zone code is to provide for predominately dwelling houses.

(2) The particular purpose of the code is to:

- (a) primarily accommodate dwelling houses and dual occupancy dwellings;
- (b) provide for housing choice and affordability by allowing for a range of lot sizes;
- (c) maintain the low-rise and lower density character of Townsville's suburbs;
- (d) maintain a high level of residential amenity; and
- (e) achieve accessible, well-serviced and well-designed communities.

(3) The purpose of the zone will be achieved through the following overall outcomes:

- (a) built form is of a house compatible scale and consistent with the local streetscape character;
- (b) reconfiguration facilitates a range of lot sizes to accommodate dwelling houses and dual occupancy dwellings, typically on lots 400m^2 or greater (unless otherwise intended in a precinct);
- (c) development maintains a high level of residential amenity on the site and in the neighbourhood;
- (d) residential development is protected from the impacts of any nearby industrial activities, transport corridors, infrastructure, installations and major facilities such as the port, airport and Department of Defence landholdings;
- (e) the design of development promotes accessibility by walking, cycling and public transport;
- (f) the design of development is responsive to the city's climate and promotes sustainable practices including energy efficiency and water conservation;
- (g) low-rise multiple dwellings, residential care or retirement facilities may be acceptable within this zone where provided in locations that are within a convenient walkable distance to centres, public transport and community activities, and where of a scale that is consistent with the local character;
- (h) non-residential uses only occur within the zone where they primarily support the day-to-day needs of the immediate residential community, do not unreasonably detract from the residential amenity of the area and are not better located in nearby centre zones;
- (i) development minimises impacts on remaining areas of ecological significance within the zone; and
- (j) the natural bushland setting and village character of the northern beaches and Magnetic Island townships are maintained. Tourism accommodation in these communities is of a house compatible scale.

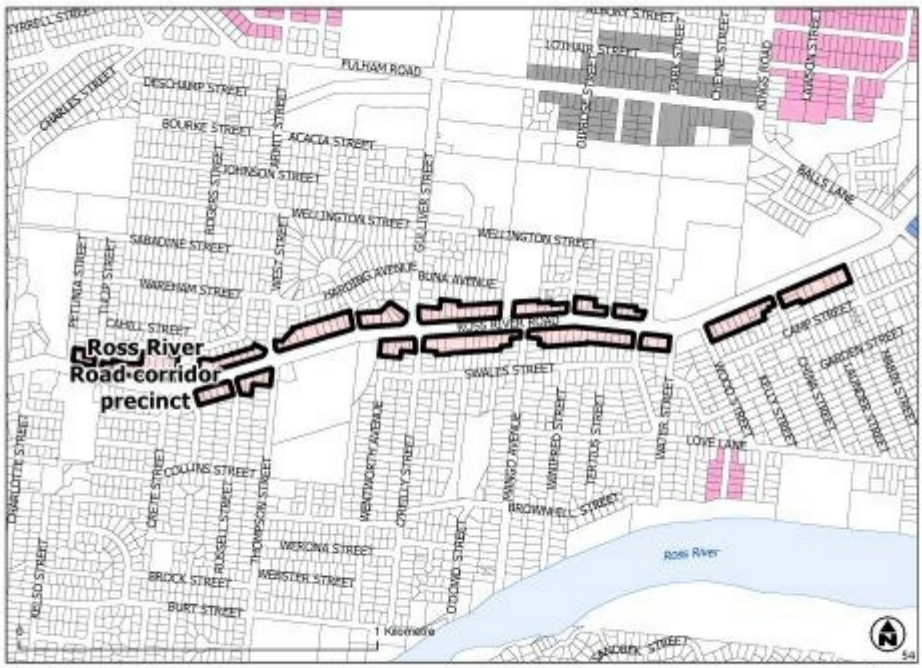
(4) The purpose of the zone will also be achieved through the following additional overall outcomes for particular precincts:

Ross River Road corridor precinct:

(a) existing non-residential uses continue operation without significantly expanding;

(b) no additional non-residential development is established within the precinct to avoid the continuation of strip commercial development; and

(c) redevelopment of sites within this precinct may occur for the purposes of low-rise multiple dwellings, residential care or retirement facilities.



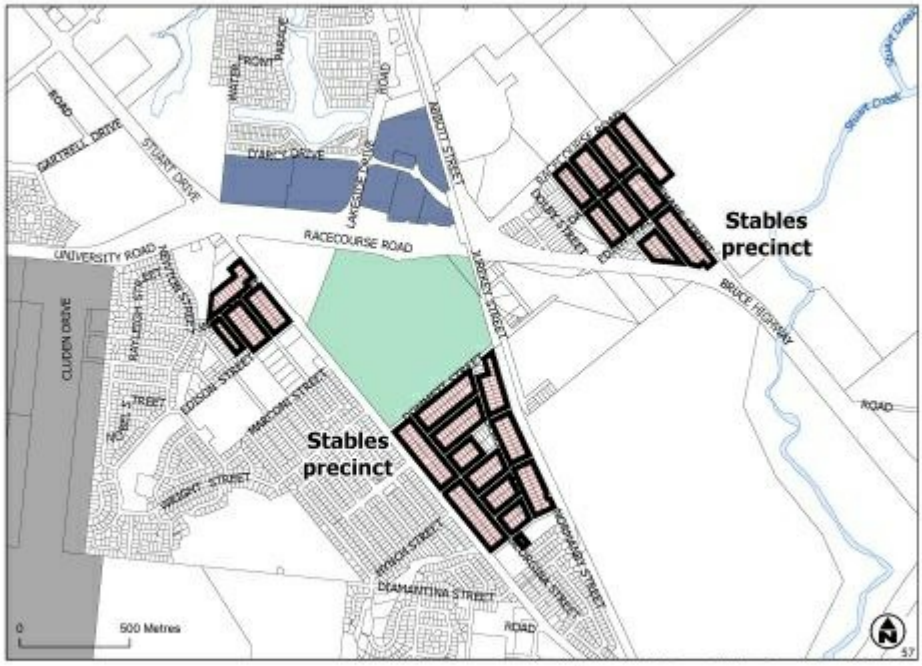
Click here to view high resolution image.

Figure 6.1 Ross River Road corridor precinct

Stables precinct:

(a) stables are established in a manner that minimises impacts on residential amenity; and

(b) residential uses in the precinct do not intensify.



Click here to view high resolution image.

Figure 6.2 Stables precinct

Marlow Street precinct:

(a) residential development occurs primarily in the form of dwelling houses on large lots with a limited site cover;

(b) lots are not smaller than 750m^2 and the minimum average lot size across the whole of the precinct is not less than 1,700m^2;

(c) development facilities viable wildlife corridors through the precinct; and

(d) built form and infrastructure is sub-ordinate to the vegetation and the natural landform.

Click here to view high resolution PDF.

Figure 6.3 — Marlow Street precinct

6.2.1.3 Assessment benchmarks

Table 6.2.1.3 Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
Home based business	
PO1 The use does not adversely impact on the amenity of the surrounding residential land uses and local character.	**AO1.1** The home based business: (a) is carried out in an existing building or structure; (b) does not use more than 60m² of the gross floor area of the building or structure; (c) involves at least one or more residents of the dwelling house; (d) involves not more than one non-resident employee; (e) where bed and breakfast accommodation, does not exceed three bedrooms; (f) does not generate more than 1 heavy vehicle trip per week; **Editor's note—**a heavy vehicle is a vehicle with more than 4.5 tonnes gross vehicle mass. (g) does not generate more than 14 vehicle trips per day by other vehicles, where one trip includes arriving and departing the site. These trips are additional to normal domestic trips associated with the dwelling; (h) contains visitor parking within the site; (i) does not involve hiring out of materials, goods, appliances or vehicles; and (j) does not involve the repair or maintenance of vehicles, other than minor maintenance of vehicles used in conjunction of the home based business on the site. **Editor's note—**home based business operators should also refer to signage requirements under Table 5.8.2 -Operational work being placing an advertising device on a premises and Section 9.3.1-Advertising devices code.
	AO1.2 Functional aspects of the use such as service areas, material storage or use activities are not visible from the street.
	AO1.3 Other than where a bed and breakfast or home based childcare, the business use does not operate outside the hours of 8am to 5pm Monday to Friday, 8am to 2pm Saturday and does not operate on Sunday.
	AO1.4 Noise levels do not exceed acoustic quality objectives under the Environmental Protection (Noise) Policy 2008.

PO2 Commercial vehicle parking: (a) has a direct nexus with a home based business carried out on the site; and (b) does not adversely affect the amenity of neighbouring properties.	**AO2.1** Not more than one commercial vehicle is parked on the site.
	AO2.2 While on-site, vehicles: (a) are not left idling for more than 5 minutes at any one time; and (b) do not have a refrigeration unit running.
	AO2.3 Any commercial vehicle does not exceed 4.5 tonnes gross vehicle mass and is housed behind the building line.

Table 6.2.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	**Acceptable outcomes**
For accepted development subject to requirements and assessable development	
Sales office	
PO3 The use does not adversely impact on the amenity of the surrounding land uses and local character.	**AO3** Development of the sales office is in place for no more than two years.

Table 6.2.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	**Acceptable outcomes**
Additional benchmarks for accepted development subject to requirements and assessable development in precincts **Note—**Townsville City Council has an animal keeping local law that also sets out requirements for stables. These must also be complied with.	
For accepted development subject to requirements and assessable development	
Stables precinct	
PO4 Only dwelling houses or caretaker's accommodation are established in the precinct.	**AO4** The development does not involve a dual occupancy, rooming accommodation, multiple dwelling, retirement facility, residential care facility, short-term accommodation or tourist park.
PO5 Reconfiguration does not result in additional lots being created.	**AO5** Lot size is no less than 1,000m^2.
PO6 The site is of a size to accommodate stables and associated service areas and allows for setback of stables from adjacent houses.	**AO6** Where stables are proposed, the site has a minimum area of 1,000m^2.
PO7 Stables are established where provision is made for a manager living on-site.	**AO7** Stables are established on the same site as a dwelling house or caretaker's accommodation.
PO8 Residential uses in the precinct do not intensify.	**AO8** Not more than one dwelling house or caretaker's accommodation unit is established on each lot.

Table 6.2.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Amenity	
PO9 Development minimises impacts on surrounding land and provides for an appropriate level of amenity within the site, having regard to: (a) noise; (b) hours of operation; (c) traffic; (d) visual impact; (e) odour and emissions; (f) lighting; (g) access to sunlight; (h) privacy; and (i) outlook.	No acceptable outcome is nominated.
PO10 Landscaping is provided to enhance the appearance of the development, screen unsightly components, create an attractive on-site environment and provide shading.	No acceptable outcome is nominated.
PO11 Development for the purposes of a sensitive use within 500m of land included in the High impact industry zone or Special purpose zone, or within 250m of land in the Medium impact industry zone: (a) achieves indoor noise levels consistent with the objectives set out in the Environmental Protection (Noise) Policy 2008; (b) achieves air quality levels consistent with the objectives set out in the Environmental Protection (Air) Policy 2008 and the relevant national standard; and (c) does not experience offensive odours.	No acceptable outcome is nominated.

Table 6.2.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Crime prevention through environmental design	
PO12 Development facilitates the security of people and property having regard to: (a) opportunities for casual surveillance and sight lines; (b) exterior building design that promotes safety; (c) adequate lighting; (d) appropriate signage and wayfinding; (e) minimisation of entrapment locations; and (f) building entrances, loading and storage areas that are well lit and lockable after hours. **Editor's note—**Applicants should have regard to Crime Prevention through Environmental Design Guidelines for Queensland.	No acceptable outcome is nominated.

Table 6.2.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
General	
PO13 Development minimises impacts on remaining areas of ecological significance within the zone.	No acceptable outcome is nominated.
PO14 On elevated or steeply sloping sites: (a) development is sympathetic to the natural landform through the use of terraced or split level building forms; (b) the understoreys of buildings are screened to maintain the quality of views from public vantage points below; and (c) buildings avoid highly reflective finishes.	No acceptable outcome is nominated.

Table 6.2.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Parking and servicing	
PO15 Parking facilities are located to be concealed from public view to ensure an attractive streetscape.	**AO15** Vehicle parking structures are located: (a) behind the building setback; or (b) behind the building; or (c) at basement level. Figure 6.4 – Concealment of parking structure illustrates.

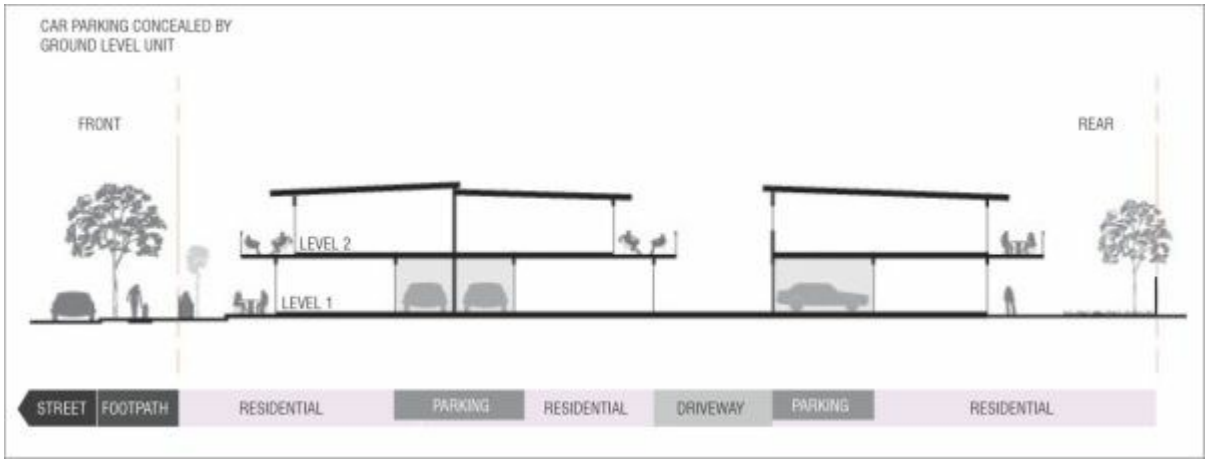

Figure 6.4 Concealment of parking structure

PO16 Waste disposal and servicing areas are screened from public view and do not have adverse amenity impacts on adjoining properties.	No acceptable outcome is nominated.

Table 6.2.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	**Acceptable outcomes**
For assessable development — where a non-residential or tourist accommodation use	
PO17 Non-residential uses are established only where: (a) compatible with local character and amenity; (b) limited in scale and supporting the day-to-day needs of the local community; and (c) not impacting on the role and function of the city's network of centres or more appropriately located in another zone.	No acceptable outcome is nominated. **Editor's note—**Applicants should have regard to Economic impact assessment planning scheme policy no. SC6.5 for guidance on how to demonstrate compliance with this performance outcome.
PO18 Tourist accommodation occurs only within the townships of Paluma, Balgal Beach, Toomulla, Toolakea and Saunders Beach and the Magnetic Island townships, and is compatible with the village character of these communities.	No acceptable outcome is nominated.
PO19 Development is of a house compatible scale.	**AO19.1** The use does not involve any building work or only minor building work. OR
	AO19.2 Where a new building is proposed: (a) buildings and other structures do not exceed 8.5m or 2 storeys, whichever is the lesser; (b) the building does not exceed 250m^2 in gross floor area; (c) site cover does not exceed 60%; and (d) the maximum length of any wall is 12m.

Table 6.2.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development – where a multiple dwelling, residential care facility or retirement facility development	
Location	
PO20 Multiple dwelling, residential care facility or retirement facility development occur only in locations where: (a) they can be designed to be compatible with local character and low density scale of development; (b) having convenient walkable access to the city's network of centres; (c) having convenient walkable access to public transport; and (d) having convenient walkable access to recreational facilities.	**AO20** The premises: (a) is located within 400m of a centre zone or public transport stop on a major road; (b) has a minimum site area of 1,000m² and 20m frontage where for a multiple dwelling; (c) has a minimum site area of 3,000m² and 20m frontage where for a residential care facility or retirement facility; and (d) is located within 400m of a park.
PO21 Buildings are low-rise and of a house compatible scale.	**AO21** Building design achieves: (a) a site cover that does not exceed 65% of site area; (b) a building height that does not exceed 2 storeys and 8.5m if it is within 10m of a site boundary, and 3 storeys if it is 10m or more from a site boundary; and (c) the maximum length of any wall is 12m.
PO22 Building setbacks and landscaping: (a) create an attractive, consistent and cohesive streetscape; (b) maintain appropriate levels of light and solar penetration, air circulation, privacy and amenity for existing and future buildings; and (c) do not prejudice the development or amenity of adjoining sites.	**AO22.1** Buildings are set back from street frontages: (a) within 20% of the average front setback of adjoining buildings; or (b) where there are no adjoining buildings, 3m. Figure 6.5 – Appropriate front setbacks illustrates.
	AO22.2 A landscape area with a minimum dimension of 1m is provided along the full frontage of any road frontage (excluding crossover and pedestrian access only). Figure 6.6 – Appropriate front and rear setbacks illustrates.
	AO22.3 The side boundary setback is a minimum of: (a) 1.5m for a wall up to 4.5m high; (b) 2m for a wall up to 7.5m high; and (c) 2.5m for any part of a wall over 7.5m high. **Editor's note—**Development should also comply with the requirements of AO21 (b), such that any part of the building that is 3 storeys is 10m or more from a site boundary.
	AO22.4 The rear boundary setback is a minimum of 6m. Figure 6.6 - Appropriate front and rear setbacks illustrates.

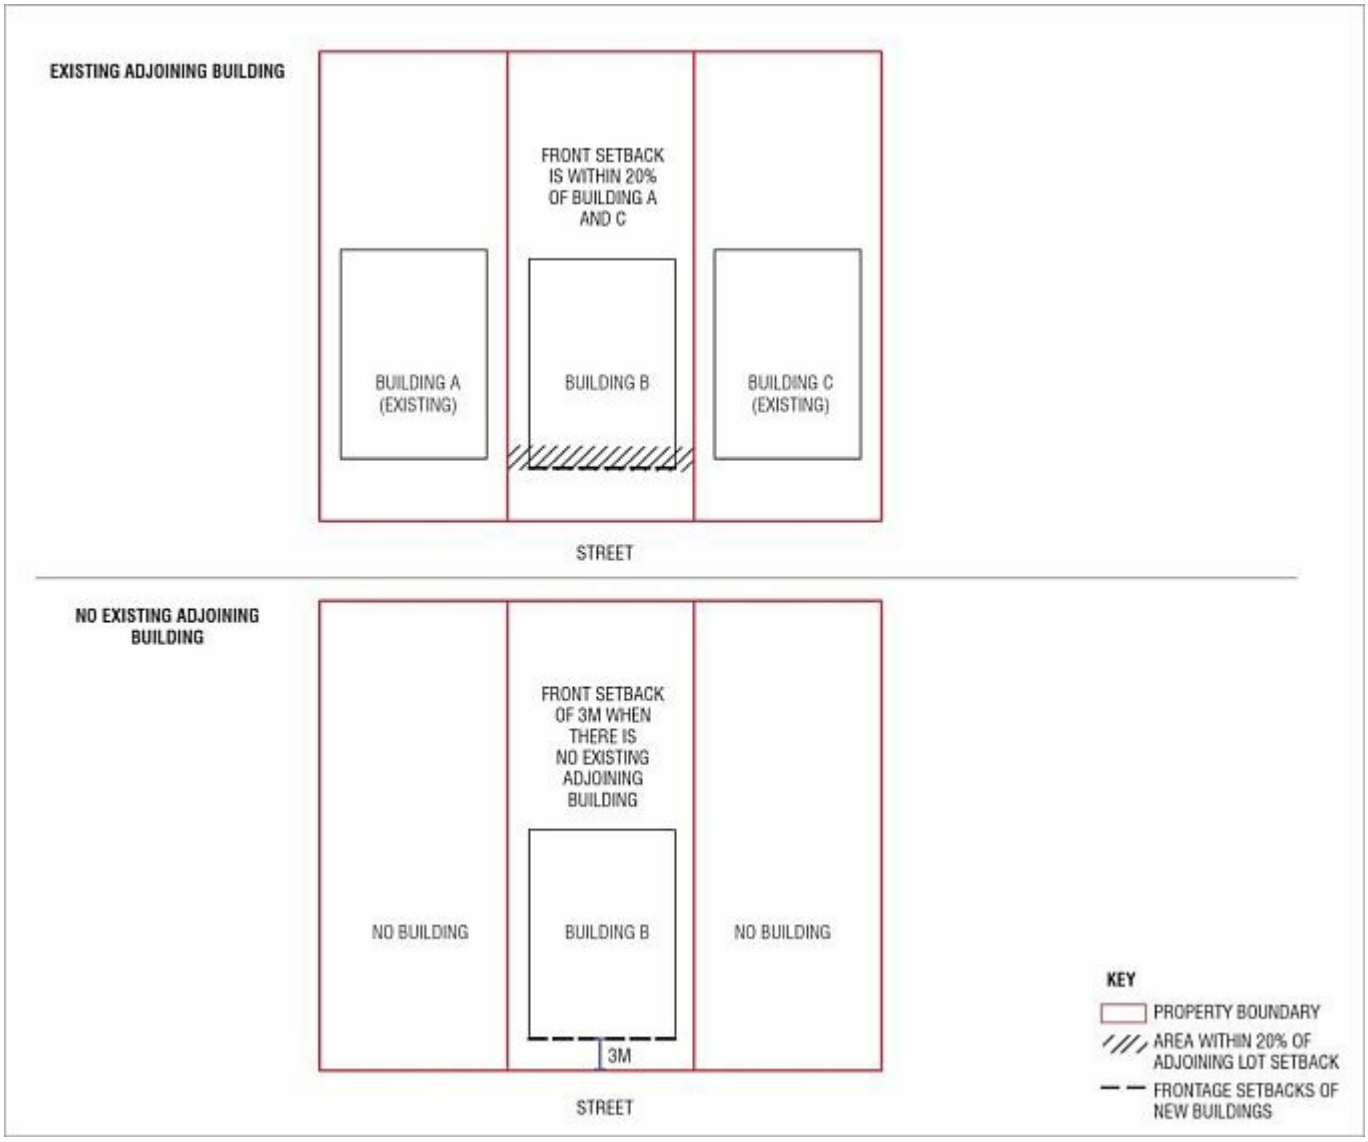

Figure 6.5 Appropriate front setbacks

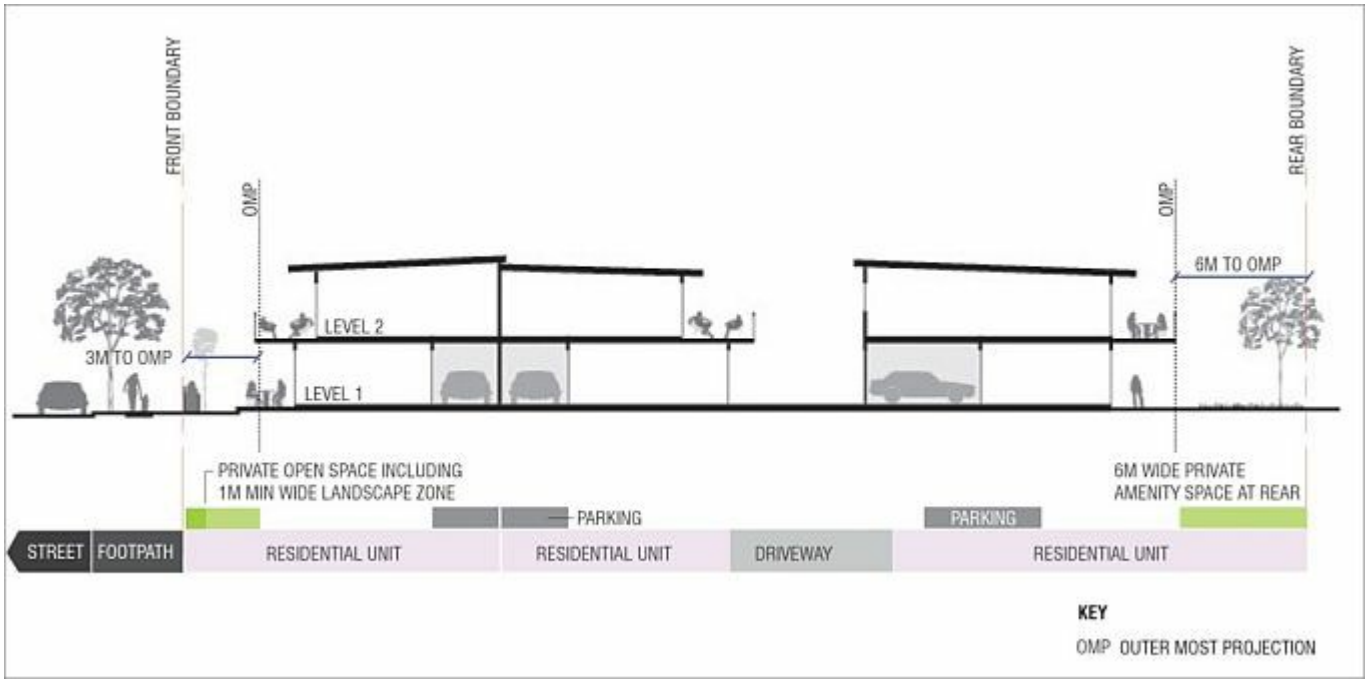

Figure 6.6 Appropriate front and rear setbacks

PO23 Built to boundary walls do not impact on the amenity or privacy of adjoining premises.	**AO23** Built to boundary walls: (a) are for non-habitable rooms or spaces only; (b) are not located within the front or rear setback; (c) are not located within 1.5m of a habitable room or house on an adjoining lot; (d) have a maximum height of 3m; and (e) have a maximum length of 9m.
PO24 Buildings are designed to achieve good solar access by: (a) minimising the extent of shadows on usable private open space or public spaces; and (b) providing adequate sunlight to habitable rooms.	No acceptable outcome is nominated.
PO25 Design elements contribute to an interesting and attractive streetscape and building through: (a) the provision of projections and recesses in the façade which reflect changes in internal functions of buildings, including circulation; (b) variations in material and building form; (c) modulation in the façade, horizontally or vertically; (d) articulation of building entrances and openings; (e) corner treatments to address both street frontages; (f) elements which assist in wayfinding and legibility; and (g) elements which relate to the context including surrounding buildings, parks, streets and open spaces. Figure 6.7 – Building design elements provides indicative guidance.	No acceptable outcome is nominated.
PO26 Roof form assists in reducing the appearance of building bulk by: (a) articulating individual dwellings; and (b) incorporating variety in design through use of roof pitch, height, gables and skillions. Figure 6.7 – Building design elements provides indicative guidance.	No acceptable outcome is nominated.

Figure 6.7 Building design elements

PO27 Development promotes the safety of residents and visitors, particularly through casual surveillance of the street and public spaces.	**AO27.1** Buildings are designed to have balconies, windows and building openings overlooking streets and other public spaces. Figure 6.8 – Design for casual surveillance illustrates.
	AO27.2 Fences or walls along a street frontage have a maximum height of 1.2m where solid, or 1.8m where that portion of the fence above 1.2m high is at least 50% transparent.

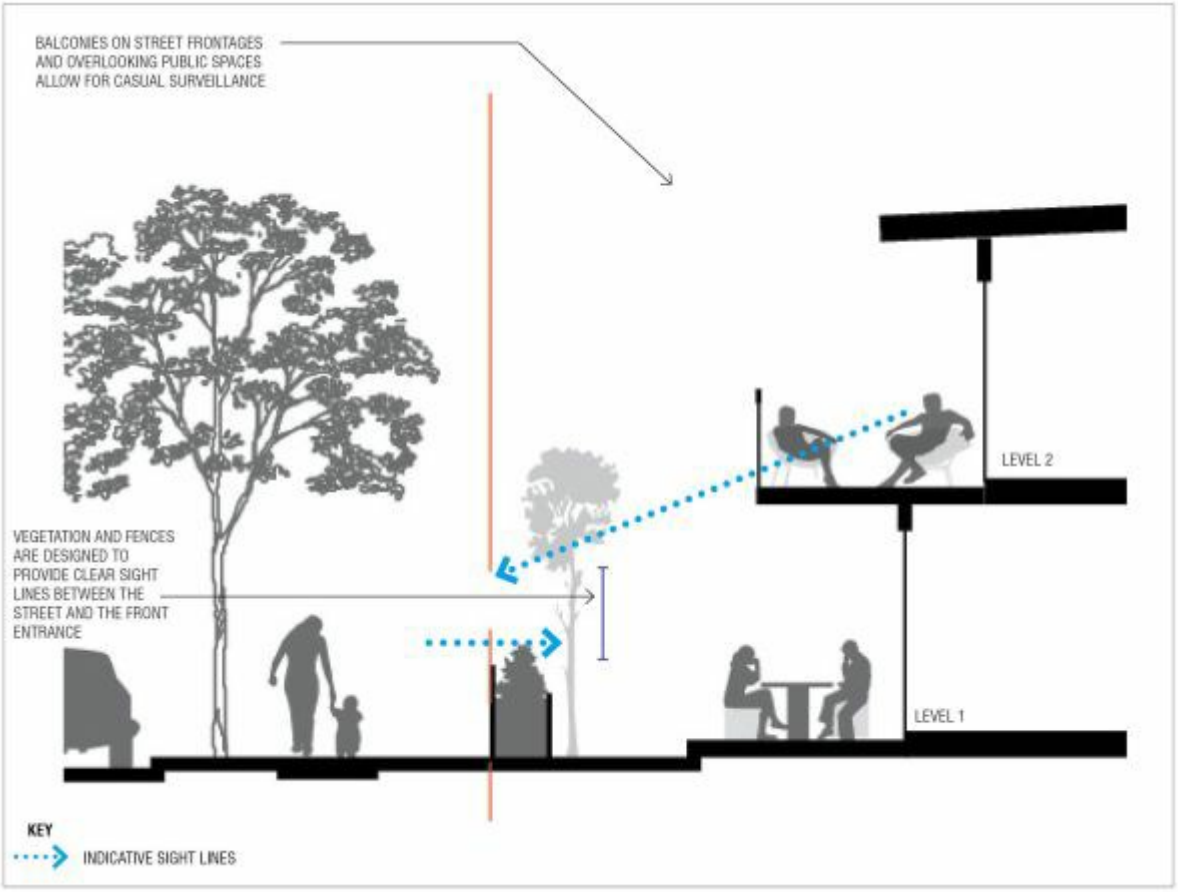

Figure 6.8 Design for casual surveillance

PO28 Development provides private open space that is: (a) well-proportioned, appealing, functional and easily accessible, and promotes outdoor living as an extension of the dwelling; (b) provides a high level of privacy for residents and neighbours; and (c) has sufficient size and shape to meet the needs of a diversity of potential residents.	**AO28.1** For a ground floor dwelling (where a multiple dwelling), ground floor private open space is provided with: (a) a minimum area of 35m²; (b) a minimum dimension of 3m; and (c) clear of any utilities such as gas, water tanks or air-conditioning units.
	AO28.2 For a dwelling above ground storey, private open space is provided as a balcony with: (a) a minimum area of 9m² for a 1 bedroom unit or 16m² for a 2 or more bedroom unit; (b) a minimum dimension of 3m; and (c) clear of any utilities such as air conditioning units or drying space.
	AO28.3 Where clothes drying areas are provided on private balconies they are screened from public view and do not take up more than 10% of the balcony area.
	AO28.4 Private open space is located or screened so it does not directly overlook main living areas or private open space of adjoining dwellings. Where screening is used, it is at least 50% translucent.
PO29 Sufficient communal open space is provided to create flexible spaces suitable for a range of activities.	No acceptable outcome is nominated.
PO30 Communal open space provides facilities including seating, landscaping and shade. Treatments such as green roofs, green walls or community gardens contribute to the attractiveness of these spaces.	No acceptable outcome is nominated.
PO31 Air conditioning units are insulated so that adjoining properties are not affected by the noise source, and are not significantly visible from the street.	No acceptable outcome is nominated.

Table 6.2.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	**Acceptable outcomes**
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Ross River Road corridor precinct	
PO32 No new non-residential development is established within the precinct.	No acceptable outcome is nominated.
PO33 Expansion of existing non-residential development is minor in nature and does not significantly increase the intensity of non-residential activity.	**AO33** New gross floor area is only added through internal building work to an existing building.

Table 6.2.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Marlow Street precinct	
PO34 Reconfiguration creates large residential lots which support the protection of environmental values.	**AO34** Lots are not smaller than 750m^2 and the minimum average lot size across the whole of the precinct is not less than 1,700m^2.
PO35 Residential development occurs primarily in the form of dwelling houses on large lots with a limited site cover.	No acceptable outcome is nominated.
PO36 Built form and infrastructure is subordinate to vegetation and the natural landform.	No acceptable outcome is nominated.

6.2.2 Medium density residential zone code

6.2.2.1 Application

This code applies to development where the code is identified as applicable in the categories of development and assessment.

When using this code, reference should be made to section 5.3.2 and where applicable, section 5.3.3 located in Part 5.

6.2.2.2 Purpose

(1) The purpose of the Medium density residential zone code is to provide for a range and mix of dwelling types including dwelling houses and multiple dwellings.

(2) The particular purpose of the code is to:

- (a) provide opportunities for medium density living close to centres and other community nodes in a generally low to medium-rise built form;
- (b) maintain a high level of residential amenity; and
- (c) achieve accessible, well-serviced and well-designed communities.

(3) The purpose of the zone will be achieved through the following overall outcomes:

- (a) residential development consists primarily of low-rise (up to 3 storeys in building height) apartments or town house style dwellings, together with a mix of lot sizes or duplex housing types. Taller, more intensive built form will generally be limited to key infill locations near the city's major centres, as specifically intended in particular precincts;
- (b) built form creates an attractive and pedestrian oriented streetscape which integrates with nearby centres, public transport and community activities;
- (c) reconfiguration creates lots which facilitate the location of dwellings which address the street and allow for climate-responsive building orientation;
- (d) residential uses may also include residential care facilities, retirement facilities, rooming accommodation and short-term accommodation;
- (e) development maintains a high level of residential amenity on the site and in the neighbourhood;
- (f) residential development is protected from the impacts of nearby centres, industrial activities, transport corridors and infrastructure installations and major facilities such as the port, airport and Department of Defence landholdings;
- (g) the design of development promotes accessibility by walking, cycling and public transport;
- (h) the design of development is responsive to the city's climate by taking into account prevailing breezes, slope and solar orientation, provision of awnings and promotes sustainable practices including energy efficiency and water conservation; and
- (i) non-residential uses only occur where they are specifically intended in particular precincts or where they primarily support the day-to-day needs of the immediate residential community, do not unreasonably detract from the residential amenity of the area and are not better located in nearby centres.

(4) The purpose of the zone will also be achieved through the following additional overall outcomes for particular precincts:

Thuringowa South precinct:

(a) medium density housing reinforces the role and vibrancy of Thuringowa Central major centre, and includes student and visitor accommodation to reinforce economic links with James Cook University and Townsville Hospital;

(b) development facilitates improved accessibility to the major centre for pedestrians and cyclists and promotes access to public transport facilities;

(c) a new east-west road link is created through the precinct providing an alternative route to High Range Drive;

(d) built form creates a medium-rise environment (up to 5 storeys in building height) along Riverway Drive;

(e) otherwise, built form within the precinct is generally low-rise (up to 3 storeys in building height); and

(f) Riverway Drive becomes a tropical boulevard providing a sense of arrival at the centre and strong landscape amenity. This is achieved through street tree planting, stronger definition of road edges by buildings fronting the street and screening of parking areas.

Click here to view high resolution PDF.

Figure 6.9 Thuringowa South precinct

Thuringowa East precinct:

(a) medium density housing reinforces the role and vibrancy of Thuringowa Central major centre, and includes student and visitor accommodation to reinforce economic links with James Cook University and Townsville Hospital;

(b) built form creates a medium-rise environment (up to 5 storeys in building height) along Thuringowa Drive and Ross River Road and transitions down to surrounding low-rise residential areas;

(c) development facilitates improved accessibility to the major centre for pedestrians and cyclists, provides for safer and shadier pedestrian routes and road crossings and promotes access to public transport facilities;

(d) Thuringowa Drive, Riverway Drive and Ross River Road become tropical boulevards providing a sense of arrival at the centre and strong landscape amenity. This is achieved through street tree planting, stronger definition of road edges by buildings fronting the street and reduction in vehicular access points and screening of parking areas; and

(e) existing non-residential uses do not significantly expand and no additional non-residential development is established within the precinct.

Click here to view high resolution PDF.

Figure 6.10 Thuringowa East precinct

Rossiter Park precinct:

(a) the precinct redevelops into a medium density residential community, through amalgamation of existing lots into larger sites that provide the opportunity for better designed medium density residential development;

(b) built form creates a medium-rise environment (up to 6 storeys in building height) fronting Rossiter Park and transitions down (up to 3 storeys in building height) to surrounding low-rise residential areas;

(c) development creates a strong orientation to the street and to Rossiter Park; and

(d) the redevelopment of this precinct aligns new streets with the existing street grid alignment to the north to integrate the emerging precinct into the surrounding Aitkenvale locality and re-establishes direct travel connections between the Aitkenvale major centre and Ross River and its parkland via Elizabeth Street.

Click here to view high resolution image.

Figure 6.11 Rossiter Park precinct

Aitkenvale medium density precinct:

(a) medium density housing reinforces the role and vibrancy of the Aitkenvale major centre, and includes student and visitor accommodation to reinforce economic links with James Cook University and Townsville Hospital;

(b) built form creates a medium-rise environment (up to 5 storeys in building height) throughout the precinct; and

(c) new development facilitates improved accessibility for pedestrians and cyclists, provides for safer and shadier pedestrian routes and road crossings and promotes access to public transport facilities.

Click here to view high resolution PDF.

Figure 6.12 Aitkenvale medium density precinct

Aitkenvale village precinct:

(a) non-residential uses occur in this precinct but are limited to small-scale retail, dining and entertainment activities accommodated on the ground floor of a residential development, and having direct frontage to Patrick Street or Elizabeth Street;

(b) built form creates a medium-rise environment (up to 5 storeys in building height);

(c) Patrick Street and Elizabeth Street are activated by small-scale shop fronts and kerbside activities at the ground storey with awnings providing protection from the elements;

(d) non-residential activities within the precinct do not impact on the role and function of the Aitkenvale major centre;

(e) large format retail and showroom uses do not establish within this precinct;

(f) development creates a safe environment, balancing vibrant street activity and the protection of visual amenity;

(g) linkages between the Aitkenvale centre and centre core sub-precinct, the Aitkenvale centre frame precinct and the Aitkenvale medium density precinct are improved through the strengthening of primary pedestrian linkages along Elizabeth Street and Patrick Street;

(h) streetscaping along Elizabeth Street and Patrick Street frontages occurs to improve the interface between the site and the street whilst also improving the pedestrian environment and experience; and

(i) Elizabeth Street is the focus for the creation of an active main street environment.

Click here to view high resolution PDF.

Figure 6.13 Aitkenvale village precinct

Hyde Park medium density precinct:

(a) land adjoining the open space corridor through Hyde Park provides for the emergence of a new residential community which complements the Hyde Park major centre;

(b) development provides for the improvement of access to the adjoining open space corridor for recreational use, whilst preserving its drainage function;

(c) a mix of housing types is provided within the precinct in generally low to medium-rise built form (up to 5 storeys in building height) which is oriented to the open space and assists in activating this interface;

(d) provision of a new road off Woolcock Street defines the precinct from adjoining commercial activities and connects it to the existing local street network via Dillane Street;

(e) the precinct connects with Virgil Street and development facilitates this becoming the major east-west pedestrian thoroughfare through the locality;

(f) non-residential uses may be established in the precinct where fronting Woolcock Street. Non-residential uses are generally small-scale and accommodated on the ground storey of a residential development; and

(g) non-residential activities within the precinct do not impact on the role and function of the Hyde Park major centre.

Click here to view high resolution PDF

Figure 6.14 Hyde Park medium density precinct

Kings Road medium density precinct:

(a) development creates a medium-rise built form (up to 5 storeys in building height), with variation in built form to create visual interest across the precinct;

(b) the interface with the showgrounds is enhanced; and

(c) impacts on residential amenity from the rail corridor are minimised.

Click here to view high resolution PDF.

Figure 6.15 Kings Road medium density precinct

The Strand precinct:

(a) this precinct enhances its role as Townsville's pre-eminent residential and tourist destination built on the amenity offered by The Strand parklands;

(b) The Strand forms the central focus of activity and concentration of medium density accommodation for tourists and residents;

(c) development creates a safe environment balancing vibrant street activity and the protection of residential amenity;

(d) The Strand plays a secondary role to nearby centres in accommodating non-residential uses. Non-residential uses are generally limited to small-scale cafes and restaurants accommodated on the ground storey of a residential development, to activate the street frontage and parkland;

(e) non-residential activities within the precinct do not impact on the role and function of the North Ward local centre;

(f) buildings within this precinct are designed to address The Strand parklands; and

(g) built form creates a medium-rise environment (up to 5 storeys in building height).

Click here to view high resolution PDF.

Figure 6.16 The Strand precinct

North Ward gateway precinct:

(a) the precinct provides a key connectivity route between The Strand and Warburton Street by creating a distinctive built form along Landsborough Street;

(b) development reinforces the gateway role of the routes, creating a view corridor to The Strand and contributing to a sense of arrival and assisting in wayfinding to The Strand;

(c) built form creates a higher-medium rise environment (up to 8 storeys in building height); and

(d) an attractive tropical streetscape is created.

Click here to view high resolution PDF.

Figure 6.17 North Ward gateway precinct

North Ward villages precinct:

(a) the North Ward villages are envisaged to contain the highest levels of activity and residential density in North Ward;

(b) the precinct plays a secondary role to nearby centres in accommodating non-residential uses. Non-residential uses are generally limited to small-scale cafes and restaurants accommodated on the ground floor of a residential development;

(c) Gregory Street village will expand its existing role and function as a destination for street dining and entertainment;

(d) non-residential activities within the precinct do not impact on the primacy of the principal centre or the role and function of the North Ward local centre;

(e) Landsborough Street village will develop into a secondary lifestyle focus of activity in North Ward. The role of Landsborough Street village will be to complement (not compete) with Gregory Street; and

(f) built form creates a higher-medium rise environment (up to 8 storeys in building height) along Gregory and Landsborough Streets.

Click here to view high resolution PDF.

Figure 6.18 North Ward villages precinct

North Ward medium density precinct:

(a) medium density housing reinforces the role and vibrancy of North Ward;

(b) built form creates a medium-rise environment (up to 5 storeys in building height) throughout the precinct;

(c) development of the former hospital site facilitates reuse of the hospital building for residential purposes and provides for improved accessibility for pedestrians and cyclists; and

(d) development creates a strong orientation to the street and to The Strand wherever possible.

Click here to view high resolution PDF.

Figure 6.19 North Ward medium density precinct

Magnetic Island medium density precinct:

(a) the precinct allows for the growth of short-term accommodation which minimises visual impact on the local natural setting, whilst providing opportunity for new investment in tourism;

(b) buildings within the precinct are low-rise (up to 2 storeys in building height) and are located to capitalise on views and beachfront settings;

(c) building scale and massing limits the impact on the natural character of Magnetic Island when viewed from the ocean and foreshore; and

(d) new buildings are in a design style that builds local character by articulation of individual units, incorporating extensive planting and climatically responsive design elements.

Click here to view high resolution PDF.

Figure 6.20 Magnetic Island medium density precinct

Picnic Bay precinct:

(a) family oriented short-term accommodation is the predominant use established within the precinct with some non-residential uses on the ground floor;

(b) built form within the precinct consists of detached dwellings and multiple dwellings up to 2 storeys in building height; and

(c) new buildings are in a design style that builds local character by articulation of individual units, incorporating extensive planting and climatically responsive design elements.

Click here to view high resolution PDF.

Figure 6.21 Picnic Bay precinct

Nelly Bay tourist precinct:

(a) the role of this precinct is to provide an attractive arrival place for the entire island, whilst also providing an accessible and convenient tourist hub, including accommodation and supporting tourist information and service facilities;

(b) built form accommodates the highest density short-term tourist accommodation on the island, with building heights up to 4 storeys;

(c) the ground floor of buildings within this precinct is activated by small scale café and restaurant uses where addressing the bay to create a waterfront promenade;

(d) tourist based businesses and services are located along Harbour Drive to support tourist needs for the island; and

(e) new buildings and streetscape improvements are in a design style that builds local character by articulation of buildings, incorporating extensive planting, use of a variety of materials and finishes and climatically responsive design elements.

Click here to view high resolution PDF.

Figure 6.22 Nelly Bay tourist precinct

Wills Street precinct:

(a) built form creates a medium-rise environment (up to 4 storeys in building height) throughout the precinct and provides for a sensitive transition in scale to nearby Character residential zoned land.

6.2.2.3 Assessment benchmarks

Table 6.2.2.3(a)-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
Home based business	
PO1 The use does not adversely impact on the amenity of the surrounding residential land uses and local character.	**AO1.1** The home based business: (a) is carried out in an existing building or structure; (b) does not use more than 60m² of the gross floor area of the building or structure; (c) involves at least one or more residents of the dwelling house; (d) involves not more than one non-resident employee; (e) where bed and breakfast accommodation does not exceed three bedrooms; (f) does not generate more than 1 heavy vehicle trip per week; **Editor's note—**A heavy vehicle is a vehicle with more than 4.5 tonnes gross vehicle mass. (g) does not generate more than 14 vehicle trips per day by other vehicles, where one trip includes arriving and departing the site. These trips are additional to normal domestic trips associated with the dwelling; (h) contains visitor parking within the site; (i) does not involve hiring out of materials, goods, appliances or vehicles; and (j) does not involve the repair or maintenance of vehicles, other than minor maintenance of vehicles used in conjunction of the home business on the site. **Editor's note—**Home based business operators should also refer to signage requirements under Table 5.8.2 -Operational work being placing an advertising device on a premises and Section 9.3.1-Advertising devices code.
	AO1.2 Functional aspects of the use such as service areas, material storage or use activities are not visible from the street.
	AO1.3 Other than where a bed and breakfast or home based childcare the business use does not operate outside the hours of 8am to 5pm Monday to Friday, 8am to 2pm Saturday and does not operate on Sunday.
	AO1.4 Noise levels do not exceed acoustic quality objectives under the Environmental Protection (Noise) Policy 2008.

Table 6.2.2.3(a)-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
Sales office	
PO2 The use does not adversely impact on the amenity of the surrounding land uses and local character.	**AO2** Development of the sales office is in place for no more than two years.

Table 6.2.2.3(a)-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Amenity	
PO3 Development minimises impacts on surrounding land and provides for an appropriate level of amenity within the site, having regard to: (a) noise; (b) hours of operation; (c) traffic; (d) visual impact; (e) odour and emissions; (f) lighting; (g) access to sunlight; (h) privacy; and (i) outlook.	No acceptable outcome is nominated.
PO4 Landscaping is provided to enhance the appearance of the development, screen unsightly components, create an attractive on-site environment and provide shading.	No acceptable outcome is nominated.

Table 6.2.2.3(a)-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Crime prevention through environmental design	
PO5 Development facilitates the security of people and property having regard to: (a) opportunities for casual surveillance and sight lines; (b) exterior building design that promotes safety; (c) adequate lighting; (d) appropriate signage and wayfinding; (e) minimisation of entrapment locations; and (f) building entrances, loading and storage areas that are well lit and lockable after hours. **Editor's note–**Applicants should have regard to Crime Prevention through Environmental Design Guidelines for Queensland.	No acceptable outcome is nominated.
PO6 Development promotes the safety of residents and visitors, particularly through casual surveillance of the street and public spaces.	**AO6.1** Buildings are designed to have balconies, windows and building openings overlooking streets and other areas which are accessible to the public. Figure 6.24 – Design for casual surveillance illustrates.
	AO6.2 Fences or walls along a street frontage have a maximum height of 1.2m where solid, or 1.8m where that portion of the fence above 1.2m high at least 50% transparent.

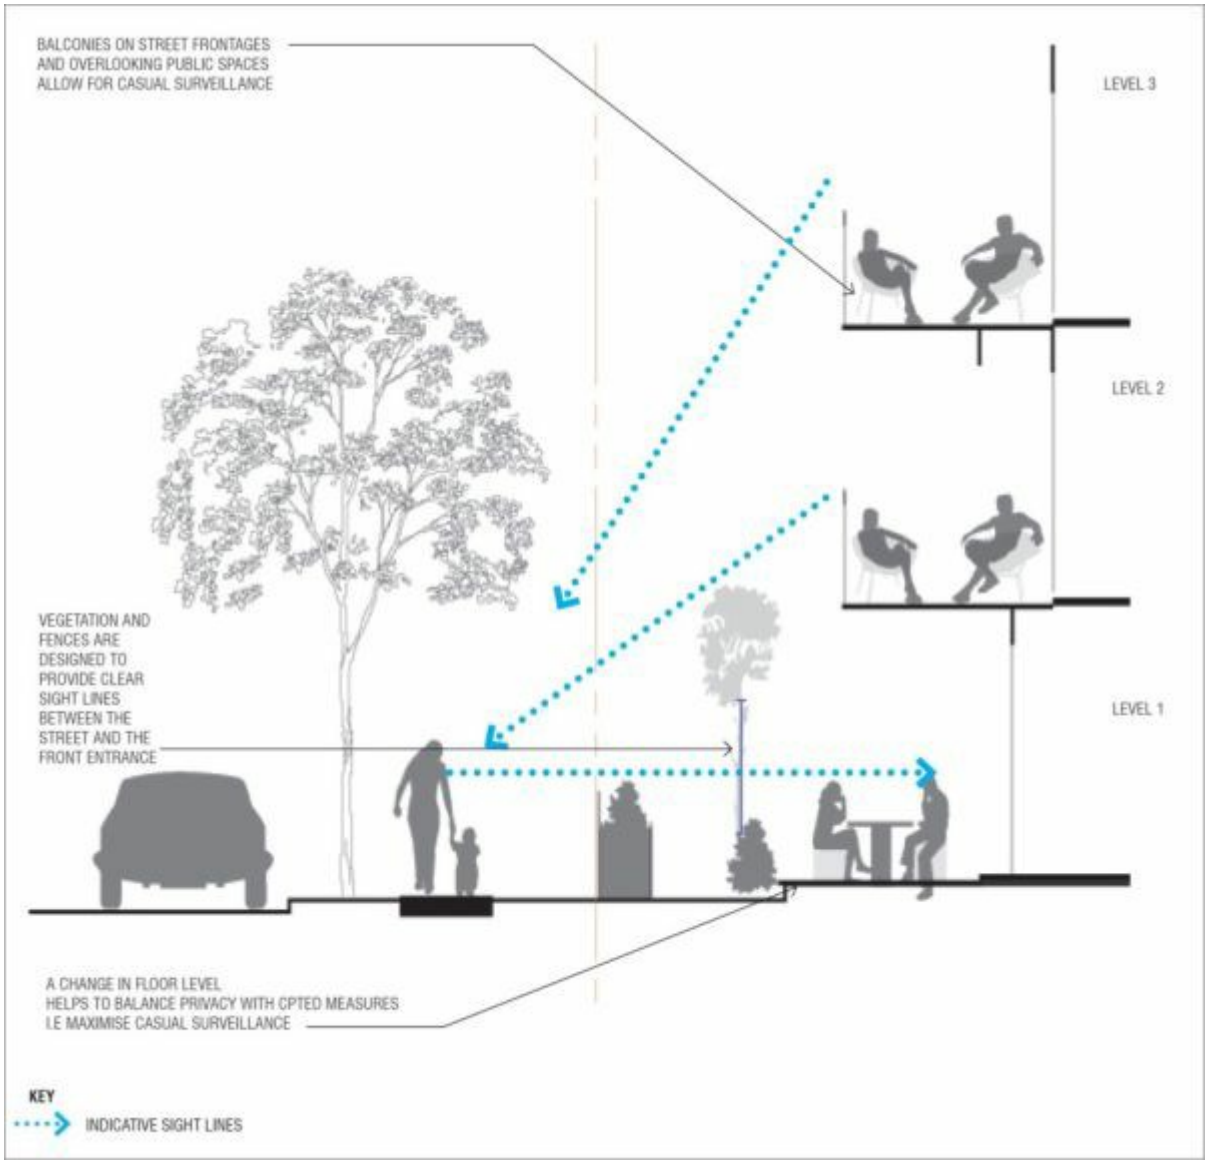

Figure 6.24 – Design for casual surveillance

Table 6.2.2.3(a)-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
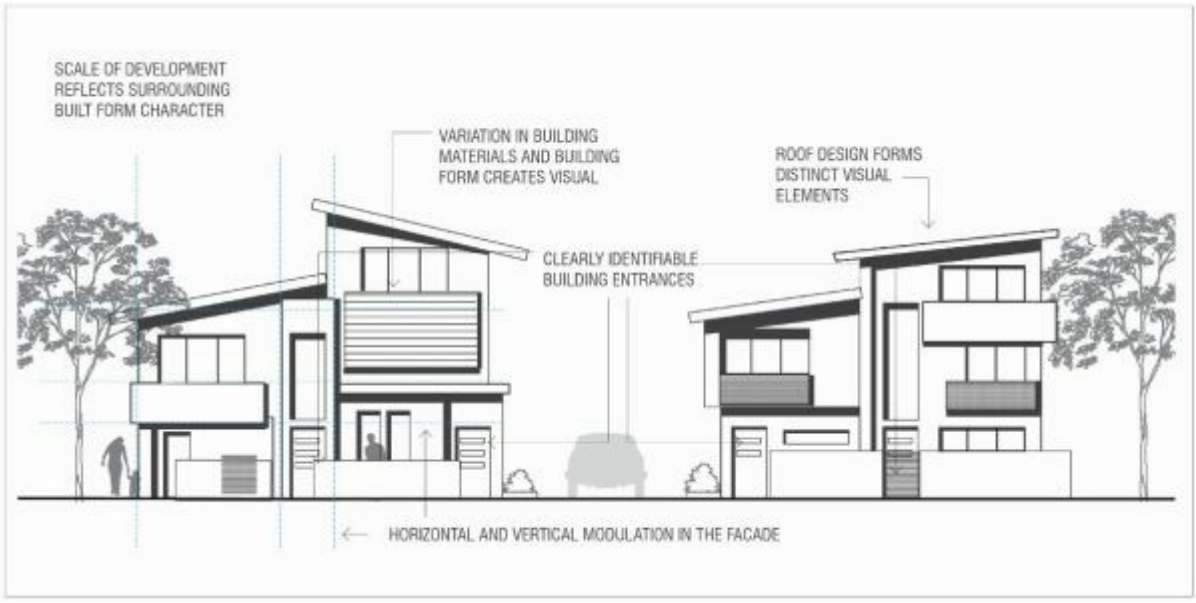
Built form	
PO7 Design elements contribute to an interesting and attractive streetscape and building through: (a) the provision of projections and recesses in the façade which reflect changes in internal functions of buildings including circulation; (b) variations in material and building form; (c) modulation in the façade, horizontally or vertically; (d) articulation of building entrances and openings; (e) corner treatments to address both street frontages for a premises on a corner; (f) elements which assist in wayfinding and legibility; and (g) elements which relates to the context including surrounding buildings, parks, streets and open spaces. Figure 6.25 – Building design elements provides indicative guidance.	No acceptable outcome is nominated.



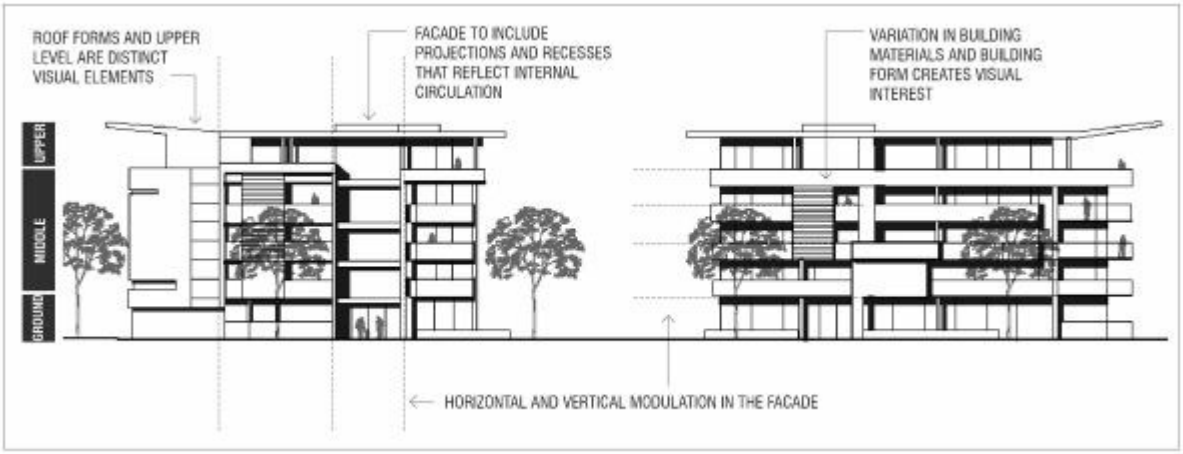


Figure 6.25 – Building design elements

PO8 Air conditioning units are insulated so that adjoining properties are not affected by the noise source, and are not significantly visible from the street.	No acceptable outcome is nominated.

Table 6.2.2.3(a)-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Parking and servicing	
PO9 Parking facilities are located to be concealed from public view to ensure an attractive streetscape.	**AO9** Vehicle parking structures are located: (a) behind the building setback; or (b) behind the building; or (c) at basement level. Figure 6.26 – Concealment of parking structures illustrates.

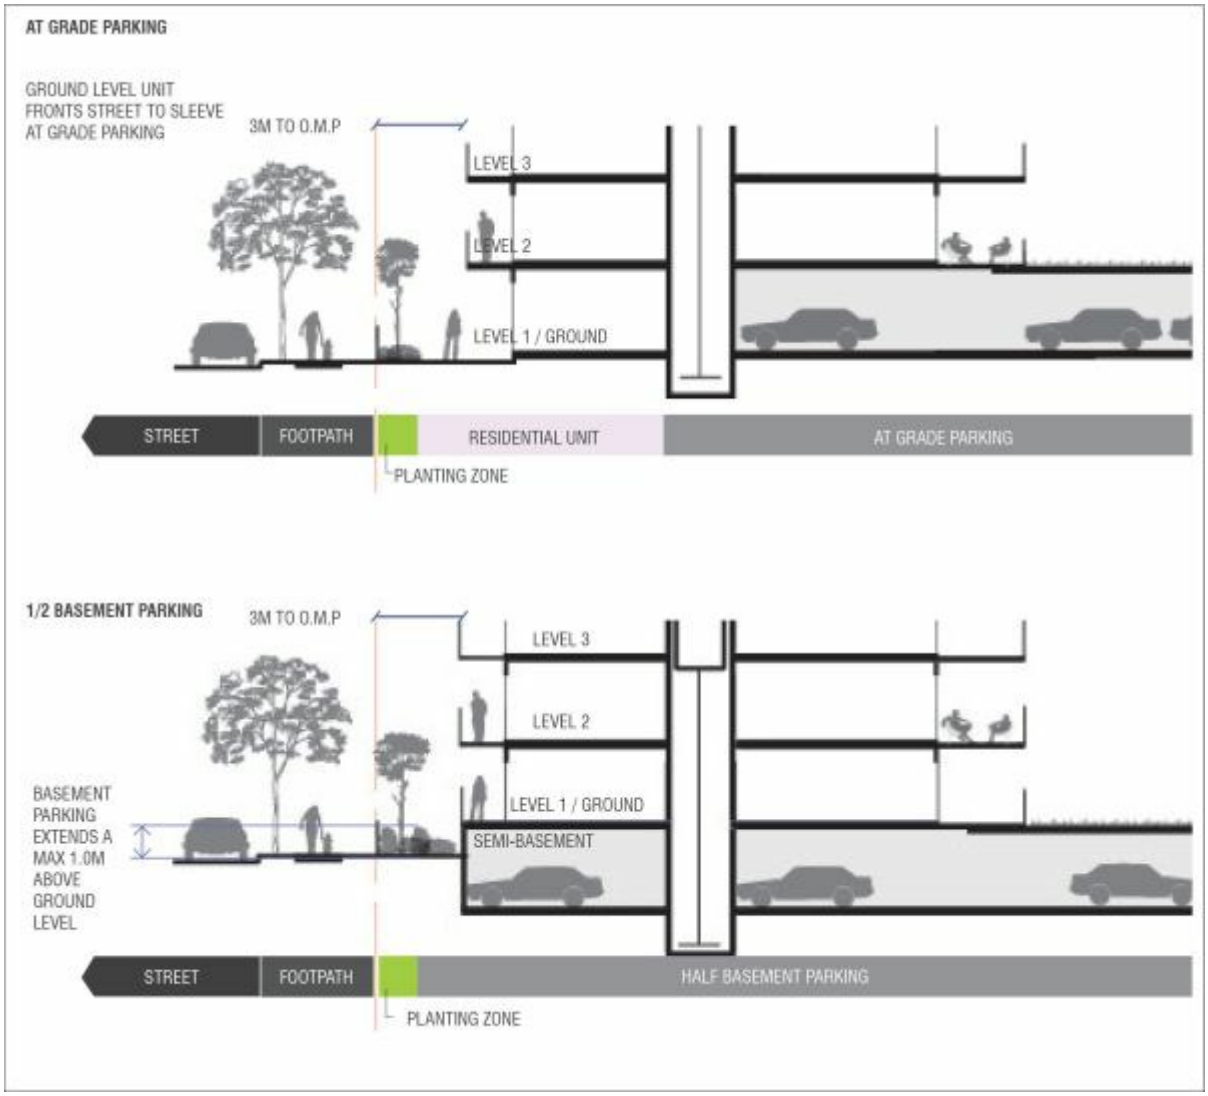

Figure 6.26 – Concealment of parking structures

PO10 Waste disposal and servicing areas are screened from public view and do not have adverse amenity impacts on adjoining properties.	No acceptable outcome is nominated.

Table 6.2.2.3(a)-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development – where a non-residential use	
PO11 Non-residential uses establish only where: (a) compatible with local character and amenity; (b) limited in scale and supporting the day-to-day needs of the local community or as specifically intended for a particular precinct; and (c) not impacting on the role and function of the city's network of centres or more appropriately located in another zone.	No acceptable outcome is nominated. **Editor's note—**Applicants should have regard to Economic impact assessment planning scheme policy SC6.5 for guidance on how to demonstrate compliance with the performance outcome.

Table 6.2.2.3(a)-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
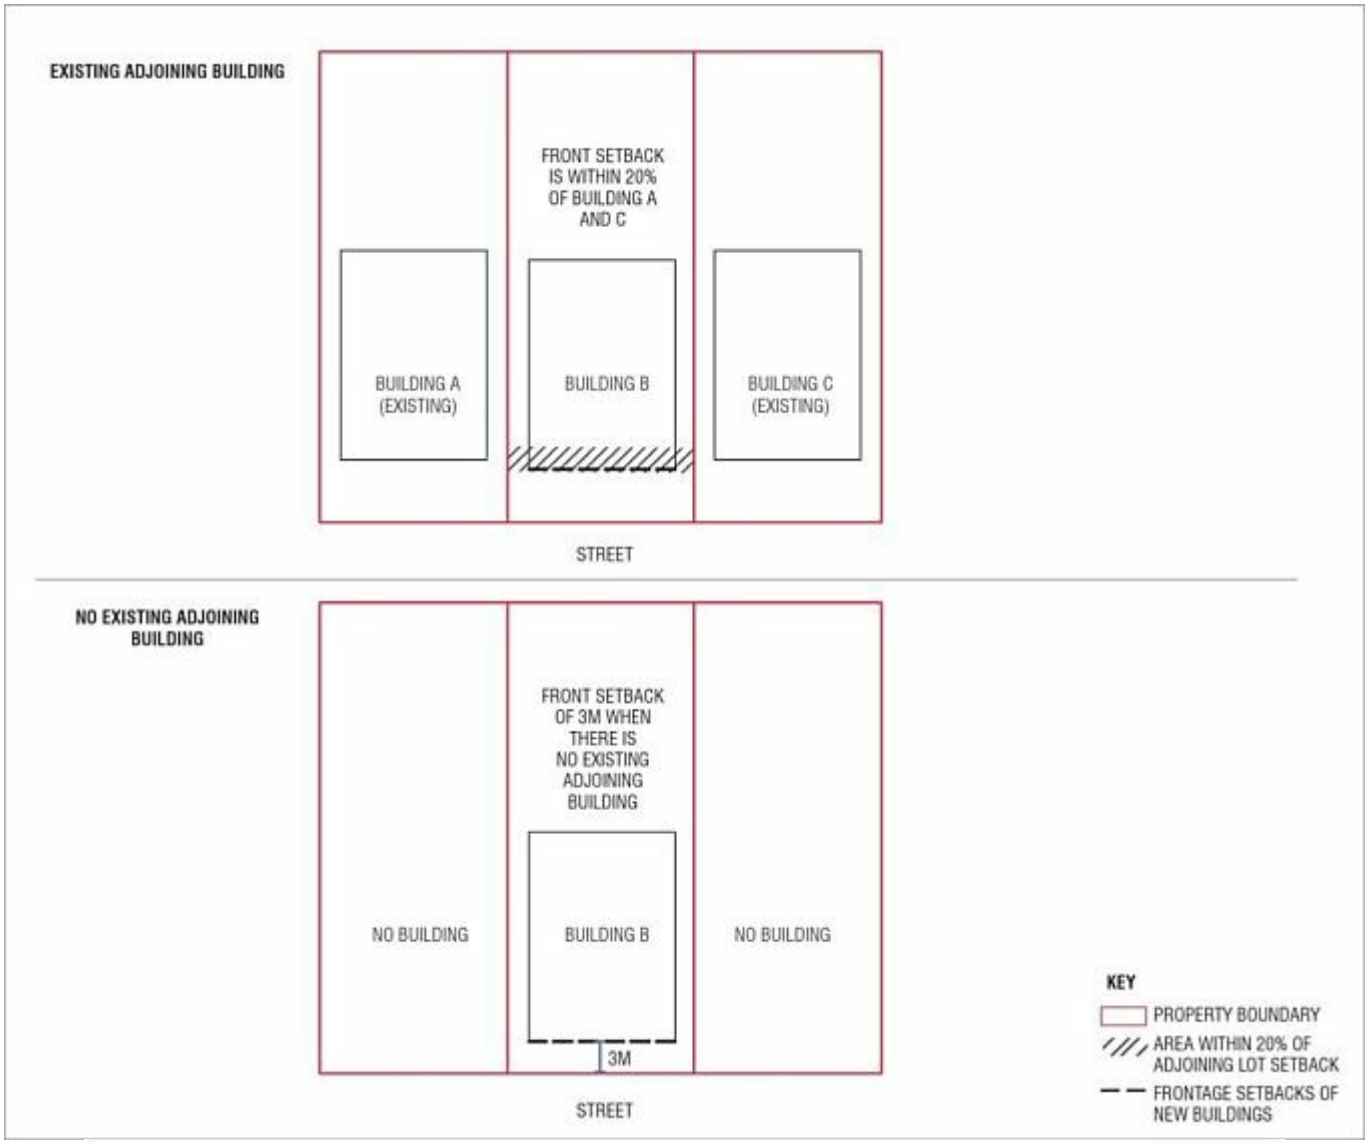
For assessable development – where a multiple dwelling, residential care facility, retirement facility or short-term accommodation with a building height of 3 storeys or less	
Built form	
PO12 Building height and scale is proportionate to the size of the premises and the desired low-rise character of the area.	**AO12** Building design achieves: (a) a site cover that does not exceed 65%; and (b) a building height that does not exceed 3 storeys.
PO13 Building design and setbacks: (a) create an attractive, consistent and cohesive scale along the streetscape; (b) maintain appropriate levels of light and solar penetration, air circulation, privacy and amenity for existing and future buildings; and (c) do not prejudice the development of adjoining sites.	**AO13.1** Buildings are set back from street frontages: (a) within 20% of the average front setback of adjoining buildings; or (b) where there are no adjoining buildings, 3m. Figure 6.27 – Building setbacks illustrates.
	AO13.2 The side boundary setback, except for a wall built to the boundary, is a minimum of: (a) 1.5m for a wall up to 4.5m high; (b) 2m for a wall up to 7.5m high; and (c) 2.5m for any part of a wall over 7.5m high. Figure 6.27 – Building setbacks illustrates.
	AO13.3 The rear boundary setback is a minimum of 6m. Figure 6.27 – Building setbacks illustrates.
	AO13.4 A landscape area with a minimum dimension of 1.5m is provided along the full frontage of any road frontage (excluding crossover and pedestrian access only).



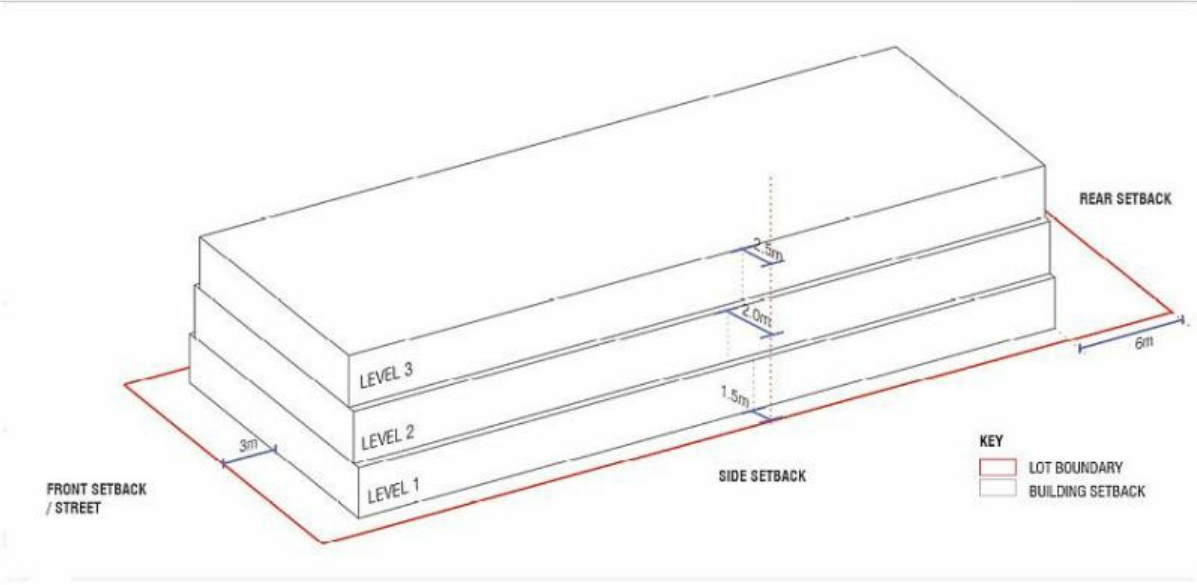


Figure 6.27 – Building setbacks

PO14 Built to boundary walls do not impact on the amenity or privacy of adjoining premises. **Editor's note–**Built to boundary wall heights and lengths may be increased where abutting an existing or proposed built to boundary wall on an adjoining property.	**AO14** Built to boundary walls: (a) are for non-habitable rooms or spaces only; (b) are not located within 1.5m of a habitable room or house on an adjoining site; (c) are not located within the front or rear setback; (d) have a maximum height of 3m; and (e) have a maximum length of 15m.
PO15 Roof form assists in reducing the appearance of building bulk by: (a) articulating individual dwellings; and (b) incorporating variety in design through use of roof pitch, height, gables and skillions.	No acceptable outcome is nominated.
PO16 Development provides private open space that is: (a) well-proportioned, appealing, functional and easily accessible, and promotes outdoor living as an extension of the dwelling; (b) provides a high level of privacy for residents and neighbours; and (c) has sufficient size and shape to meet the needs of a diversity of potential residents.	**AO16.1** For a ground floor dwelling, ground floor private open space is provided with: (a) a minimum area of 25m²; (b) a minimum dimension of 4m; and (c) clear of any utilities such as gas, water tanks or air-conditioning units
	AO16.2 Balconies are provided with a minimum area of 9m² for a 1 bedroom unit or 16m² for a 2 or more bedroom unit, with a minimum dimension of 4m and clear of any air conditioning unit or drying space.
	AO16.3 Where clothes drying areas are provided on private balconies they are screened from public view.
	AO16.4 Private open space is located or screened so it does not directly overlook main living areas or private open space of adjoining dwellings.
PO17 Sufficient communal open space is provided to create flexible spaces suitable for a range of activities.	No acceptable outcome is nominated.
PO18 Communal open space provides facilities including landscaping and shade treatments such as green roofs, green walls or community gardens contribute to the attractiveness of these spaces.	No acceptable outcome is nominated.

Table 6.2.2.3(a)-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development – where a multiple dwelling, residential care facility, retirement facility or short-term accommodation within a precinct intended for building heights of 4 storeys or more	
Built form	
PO19 Building design creates an enjoyable pedestrian environment and experience through the use of: (a) design elements that promote a sense of human scale at the street level, including use of awnings where appropriate; (b) design that breaks up the ground floor elevation on the principle street frontage into distinct elements; and (c) articulation of the built form above ground floor through use of balconies, recesses and changes in material.	No acceptable outcome is nominated.
PO20 Building design and setbacks: (a) create an attractive, consistent and cohesive scale along the streetscape; (b) maintain appropriate levels of light and solar penetration, air circulation, privacy, landscaping and amenity for existing and future buildings; and (c) do not prejudice the development of adjoining land.	**AO20.1** The design meets the setback requirements outlined by Table 6.2.2.3(b) — Building setbacks Medium density residential zone. Figure 6.28 – Building setbacks illustrates.
	AO20.2 A deep planting landscape area with a minimum width of 1.5m is provided along the full frontage of any road frontage (excluding crossover and pedestrian access). Figure 6.28 – Building setbacks illustrates.
	AO20.3 A deep planting landscape area with a minimum width of 1.5m is provided along the rear site boundary. Figure 6.28 – Building setbacks illustrates.

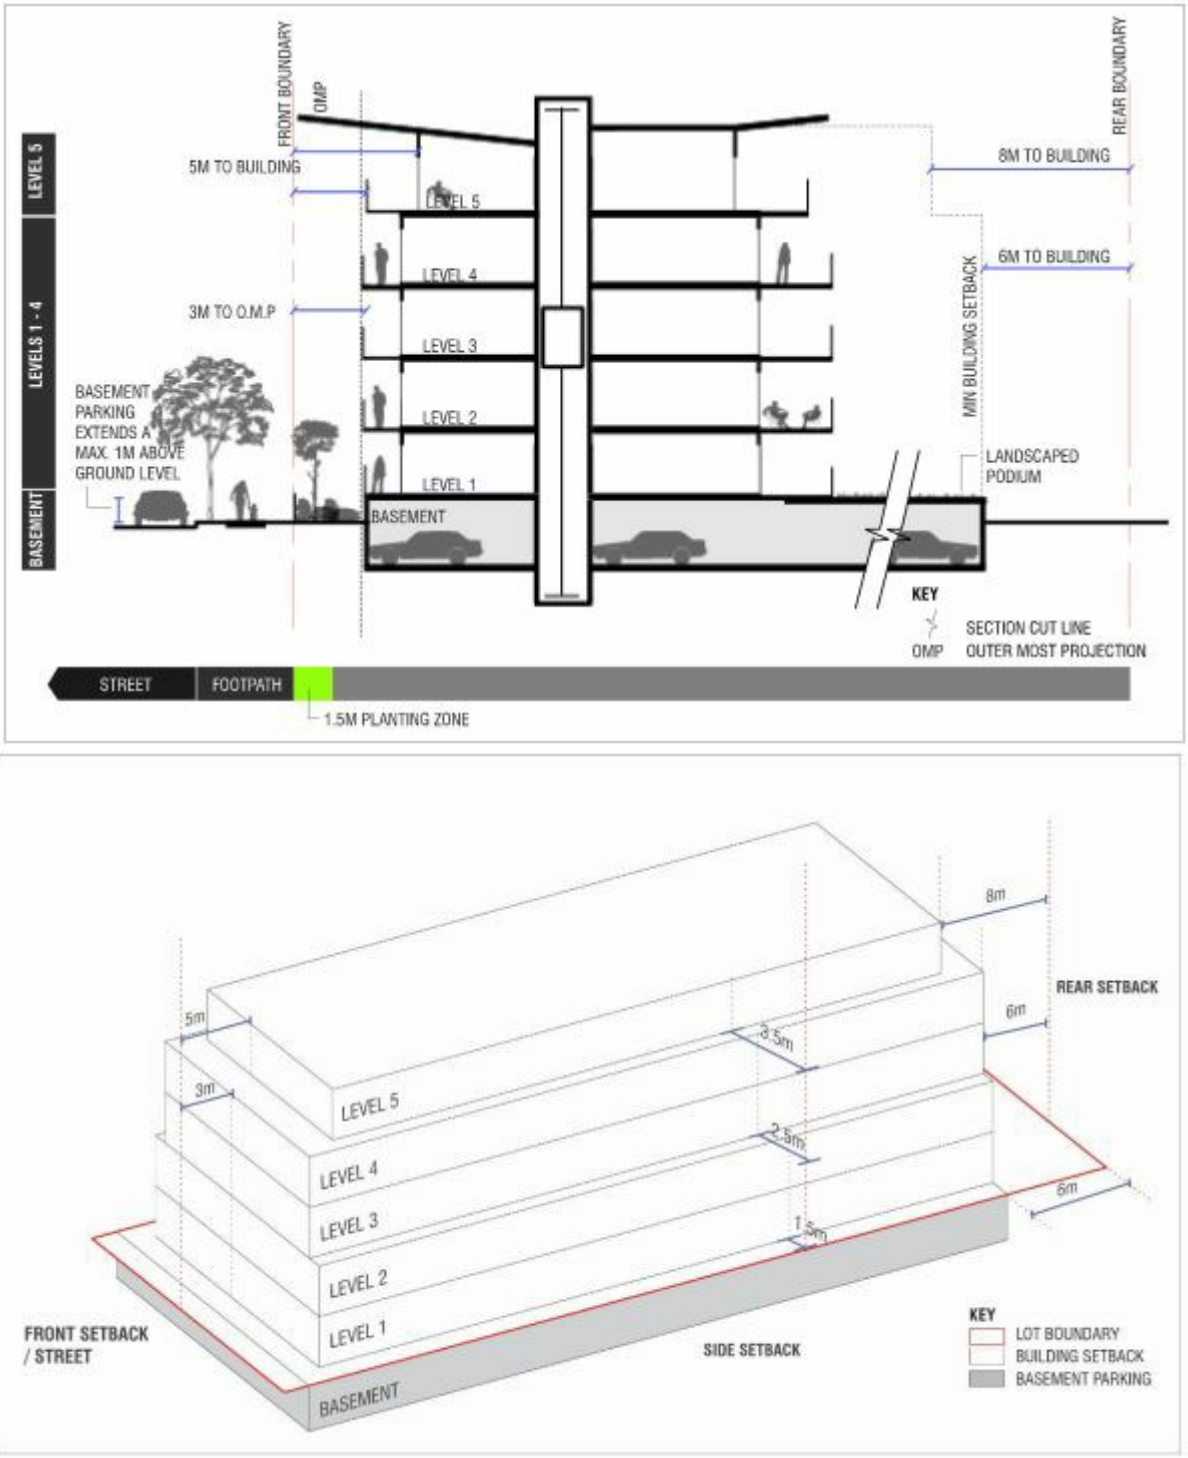

Figure 6.28 – Building setbacks

PO21 Roof forms assist in articulating the facade as a combination of distinct elements integrated with the facade design.	No acceptable outcome is nominated.
PO22 Roof top plant and equipment are contained within roof forms and are screened from the street and from adjoining buildings using a consistent range of non-reflective materials to provide a cohesive design element.	No acceptable outcome is nominated.

PO23 Development provides private open space that is: (a) well-proportioned, appealing and functional and easily accessible, and promotes outdoor living as an extension of the dwelling; (b) provides a high level of privacy for residents and neighbours; and (c) has sufficient size and shape to meet the needs of a diversity of potential residents.	**AO23.1** Balconies are provided with a minimum area of 9m² for a 1 bedroom unit or 16m² for 2 or more bedroom unit, with a minimum dimension of 4m and clear of any air conditioning unit or drying space.
	AO23.2 Where clothes drying areas are provided on private balconies they are screened from public view.
	AO23.3 Private open space is located or screened so it does not directly overlook main living areas or private open space of adjoining dwellings.
PO24 Sufficient communal open space is provided to create flexible spaces suitable for a range of activities and to mitigate the intensity of the built form.	No acceptable outcome is nominated.
PO25 Communal open space provides facilities including seating, shade, flexible spaces suitable for a range of activities. Treatments such as green roofs, green walls or community gardens contribute to the attractiveness of these spaces.	No acceptable outcome is nominated.

Table 6.2.2.3(a)-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	**Acceptable outcomes**
Additional benchmarks for assessable development in precincts **Note–**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Thuringowa South precinct	
PO26 New road linkages are created in accordance with Figure 6.29 – Thuringowa South precinct concept plan, including an alternative east west link from Riverway Drive to North Beck Drive and to provide a direct link into the Thuringowa Central major centre precinct.	No acceptable outcome is nominated.
PO27 Development creates a compatible interface with the centre activities and facilitates pedestrian and cyclist access to the Thuringowa Central major centre precinct in accordance with Figure 6.29 – Thuringowa South precinct concept plan.	No acceptable outcome is nominated.
PO28 Building height and scale is consistent with the character desired for the precinct. The size of the development site allows for the primary orientation of buildings to the street, and the provision of building setbacks, on-site services and circulation and open space at ground storey.	**AO28.1** Building height does not exceed 5 storeys where fronting Riverway Drive in the area shown on Figure 6.29 – Thuringowa South precinct concept plan, and 3 storeys otherwise.
	AO28.2 Where accommodating a building of more than 3 storeys, development sites have a minimum size of 1,000m2.

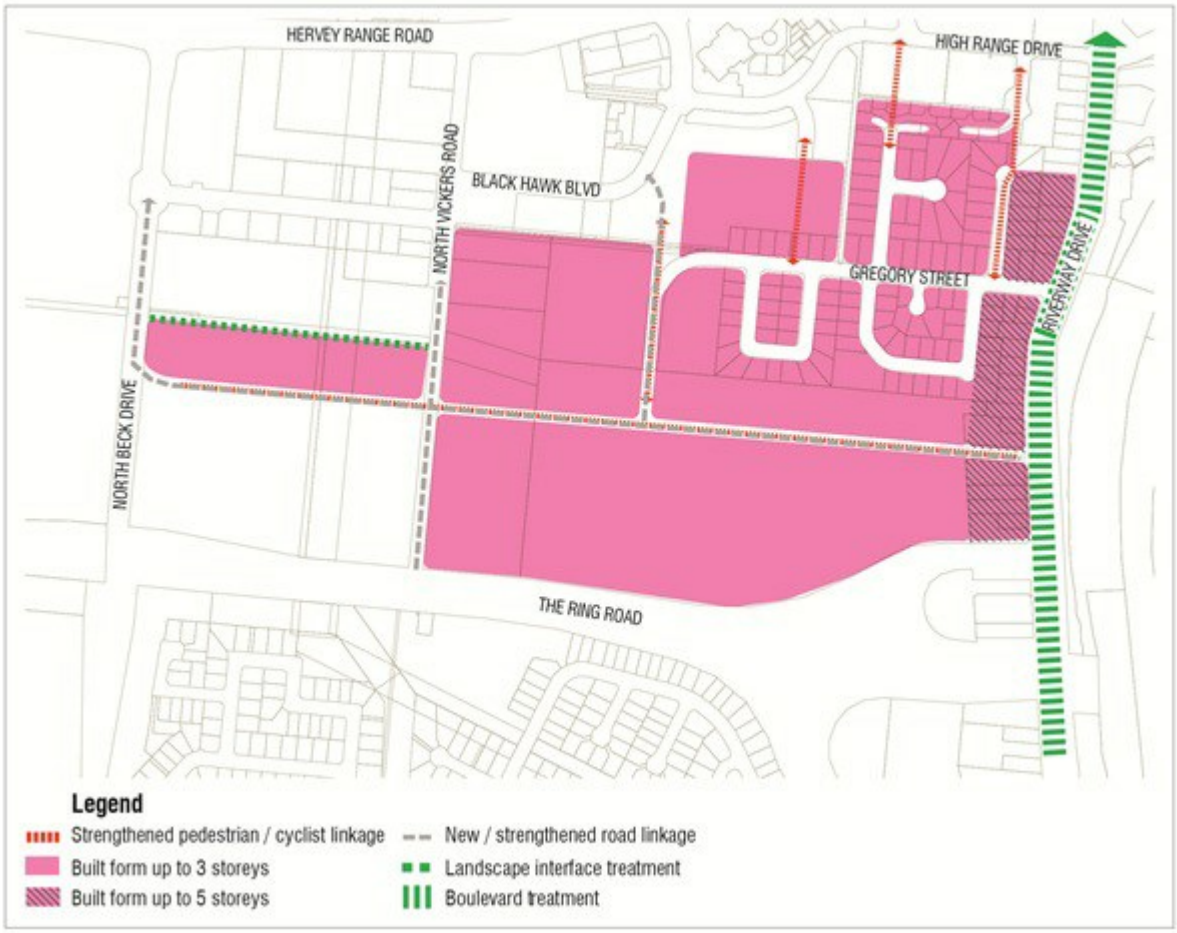

Figure 6.29 – Thuringowa South precinct concept plan

PO29 Development contributes to the boulevard treatment of Riverway Drive, through landscaping and streetscape treatments along the road frontage.	No acceptable outcome is nominated.

Table 6.2.2.3(a)-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	**Acceptable outcomes**
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Thuringowa East precinct	
PO30 Development contributes, through street improvements, to the boulevard treatment of Thuringowa Drive, Riverway Drive and Ross River Road.	No acceptable outcome is nominated.
PO31 Building height and scale is consistent with the character desired for the precinct. The size of the development site allows for the primary orientation of buildings to the street, and the provision of building setbacks, on-site services and circulation and open space at ground storey. Built form provides for sensitive transitioning in height and scale to nearby Low density residential zoned land.	**AO31.1** Building height does not exceed 5 storeys in the areas shown on Figure 6.30 – Thuringowa East precinct concept plan, and 3 storeys otherwise.
	AO31.2 Where accommodating a building of more than 3 storeys, development sites have a minimum size of 1,000m^2.

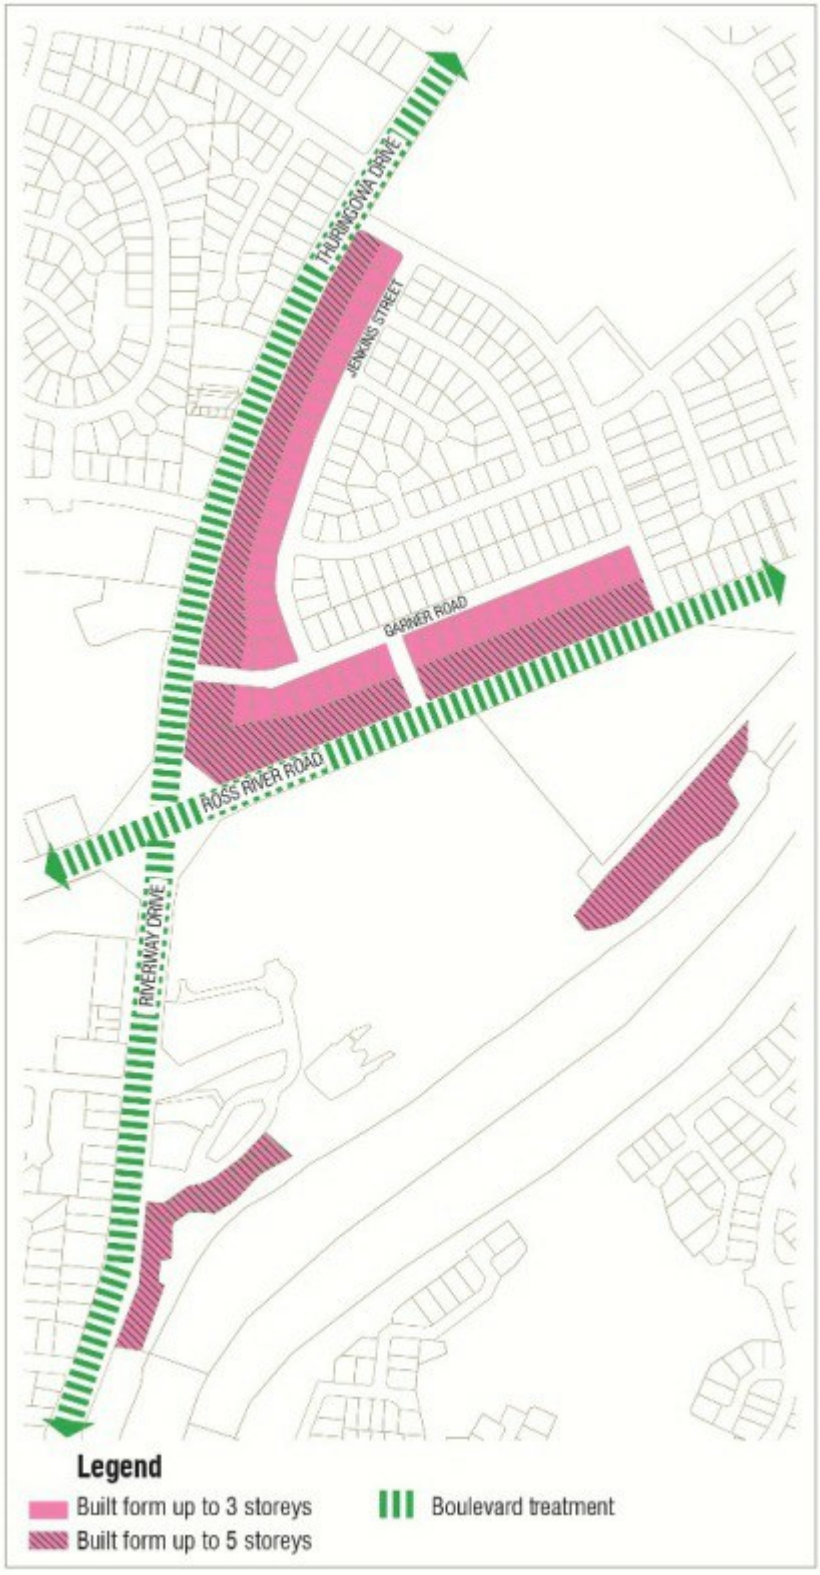

Figure 6.30 – Thuringowa East precinct concept plan

PO32 Access to Ross River Road, Thuringowa Drive and Riverway Drive is consolidated.	**AO32.1** Development sites have a minimum size of 1,000m2 and contain no more than 1 access driveway.
	AO32.2 Access driveways are provided from rear or side streets rather than Thuringowa Drive or Riverway Drive.
PO33 No new non-residential development is established within the precinct.	No acceptable outcome is nominated.
PO34 Expansion of existing non-residential development is minor in nature and does not significantly increase the intensity of non-residential activity.	**AO34** New gross floor area is only added through internal building work to an existing building.

Table 6.2.2.3(a)-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	**Acceptable outcomes**
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Rossiter Park precinct	
PO35 Development achieves a coordinated redevelopment of this precinct into a high quality medium density urban environment which is highly responsive to the amenity offered by Ross River and its parklands through building orientation, intensity of built form and landscaping treatment. Development site planning is undertaken in accordance with Figure 6.31 – Rossiter Park precinct concept plan.	No acceptable outcome is nominated.
PO36 Building height and scale is consistent with the character desired for the precinct. The size of the development site allows for primary orientation of buildings to the street, the provision of building setbacks, on-site services and circulation and open space at ground storey. Development over 3 storeys occurs only on large, amalgamated sites that facilitate well-proportioned buildings permitting primary orientation to the park.	**AO36.1** Building height does not exceed 6 storeys in the area shown on Figure 6.31 – Rossiter Park precinct concept plan, and 3 storeys otherwise.
	AO36.2 Where accommodating a building of more than 3 storeys, development sites have a minimum size of 1,000m2.
PO37 Development facilitates new street connections and promotes visual and pedestrian connectivity through the precinct to Rossiter Park to the south and Aitkenvale major centre precinct to the north, in accordance with Figure 6.31 – Rossiter Park precinct concept plan.	No acceptable outcome is nominated.

PO38 On frontages shown on Figure 6.31 – Rossiter Park precinct concept plan as having a responsive edge, buildings contribute to the creation of a strong and pedestrian oriented edge to the street, by: (a) having a primary orientation overlooking the street and Rossiter Park; and (b) having facades which contain windows, doors, materials and features which generate visual interest at the street level.	No acceptable outcome is nominated.

Figure 6.31 – Rossiter Park precinct concept plan

Table 6.2.2.3(a)-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Aitkenvale medium density precinct	
PO39 Building height and scale is consistent with the character desired for the precinct. The size of the development site allows for the primary orientation of buildings to the street, and the provision of building setbacks, on-site services and circulation and open space at ground storey.	**AO39.1** Building height does not exceed 5 storeys.
	AO39.2 Where accommodating a building of more than 3 storeys, development sites have a minimum size of 1,000m^2.
PO40 Pedestrian routes are defined by building streetscape improvements that provide shade and improve pedestrian comfort.	No acceptable outcome is nominated.

Table 6.2.2.3(a)-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in Aitkenvale village precinct **Note**-Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Aitkenvale village precinct	
PO41 Supermarket and showroom retail uses do not occur in this precinct.	No acceptable outcome is nominated.
PO42 Food and drink outlets are established where they are (a) orientated to the street; (b) incorporate outdoor dining; and (c) are located on the ground floor with accommodation above.	No acceptable outcome is nominated.
PO43 Where incorporating ground floor non-residential use, the design of buildings provides for pedestrian friendly and visually interesting frontages.	**AO43.1** Front setbacks at the ground floor do not exceed 3m.
	AO43.2 Ground floor tenancies where including a non-residential use are articulated through: (a) variation in use of materials (glass, timber, steel, masonry); and (b) a change in plane of a minimum 0.5m for any length of the facade exceeding 10m.
	AO43.3 Ground floor tenancies are designed to be adaptable and flexible in configuration allowing for creation of indoor and outdoor spaces through use of large openings.

PO44 Building height and scale is consistent with the character desired for the precinct. The size of the development site allows for the primary orientation of buildings to the street, and the provision of building setbacks, on-site services and circulation and open space at the ground storey.	**AO44.1** Building height does not exceed 5 storeys.
	AO44.2 Where accommodating a building of more than 3 storeys, development sites have a minimum size of 1,000m^2.
PO45 Where incorporating ground floor non-residential uses, weather protection is provided to usable outdoor spaces at the street frontage.	**AO45** Awnings are provided over outdoor spaces.
PO46 On the frontage shown on Figure 6.32 - Aitkenvale village precinct concept plan as having built form edge, buildings contribute to the creation of a strong and pedestrian-oriented edge to the street, by: (a) creating a generally continuous building alignment; (b) having facades which contain windows, doors, materials and features which generate visual interest at the street level; and (c) incorporating an attractive streetscape and planting theme.	No acceptable outcome is nominated.

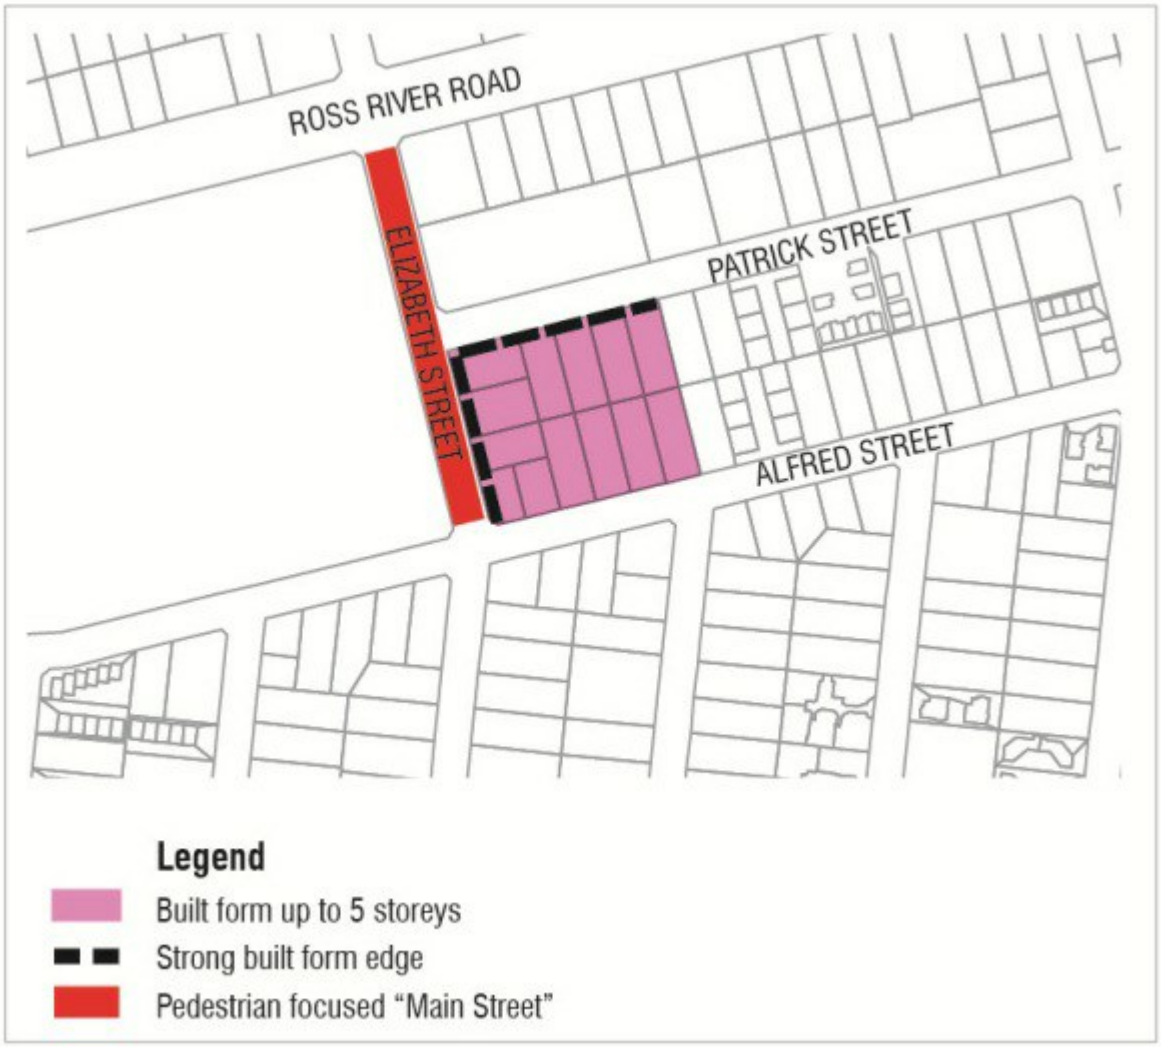

Figure 6.32 Aitkenvale village precinct concept plan

Table 6.2.2.3(a)-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Hyde Park medium density precinct	
PO47 Building height creates a low to medium-rise environment, and transitions to nearby Low density residential zoned land.	**AO47** Building height does not exceed 3 storeys in the area shown on Figure 6.33 – Hyde Park medium density precinct concept plan, and 5 storeys otherwise.
PO48 Development provides for improvements to the open space corridor such that it provides a major recreational node for the precinct and surrounding area, in a manner generally consistent with Figure 6.33 – Hyde Park medium density precinct concept plan.	No acceptable outcome is nominated.
PO49 Development adjacent to the open space corridor incorporates pedestrian access along the interface, in accordance with Figure 6.33 – Hyde Park medium density precinct concept plan.	No acceptable outcome is nominated.

PO50 Development overlooks and provides for casual surveillance of the open space corridor.	No acceptable outcome is nominated.
PO51 Development facilitates the establishment of a new road linkage connecting Woolcock Street to Dillane Street, in accordance with Figure 6.33 – Hyde Park medium density precinct concept plan. This new road assists in creating an active and attractive interface between the major centre and the Hyde Park medium density precinct.	No acceptable outcome is nominated.
PO52 Development facilitates the establishment of Virgil Street as the major east-west pedestrian thoroughfare connecting across into the Hyde Park major centre and the open space corridor, in accordance with Figure 6.33 – Hyde Park medium density precinct concept plan.	No acceptable outcome is nominated.
PO53 Non-residential uses may establish on the ground floor where fronting Woolcock street and where integrated with residential development in accordance with Figure 6.33 - Hyde Park medium density precinct concept plan.	No acceptable outcome is nominated.
PO54 Where incorporating ground floor non-residential uses, the design of buildings provides for pedestrian-friendly and visually interesting frontages.	**AO54** Ground floor tenancies where including a non-residential use are articulated through: (a) variation in use of materials (glass, timber, steel, masonry); and (b) a change in plane of a minimum of 0.5m for any length of facade exceeding 10m.
PO55 Where incorporating ground floor non-residential uses, weather protection is provided to usable outdoor spaces at the street frontage.	**AO55** Awnings are provided over outdoor spaces.

Figure 6.33 – Hyde Park medium density precinct concept plan

PO56 Development assists in creating a primary pedestrian and cycle pathway and improving the quality of the pedestrian environment along Woolcock Street.	No acceptable outcome is nominated.

Table 6.2.2.3(a)-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note–**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Kings Road medium density precinct	
PO57 Building height creates a medium-rise environment.	**AO57** Building height does not exceed 5 storeys.
PO58 Residential uses are appropriately buffered from the railway corridor.	No acceptable outcome is nominated.
PO59 Development provides for enhanced public realm and pedestrian connectivity throughout the precinct and connecting to the showground.	No acceptable outcome is nominated.
PO60 Safe pedestrian access is provided for across Kings Road.	No acceptable outcome is nominated.
PO61 Development assists in creating a primary pedestrian and cycle pathway and improving the quality of the pedestrian environment along Kings Road, in accordance with Figure 6.34 – Kings Road medium density precinct concept plan.	No acceptable outcome is nominated.

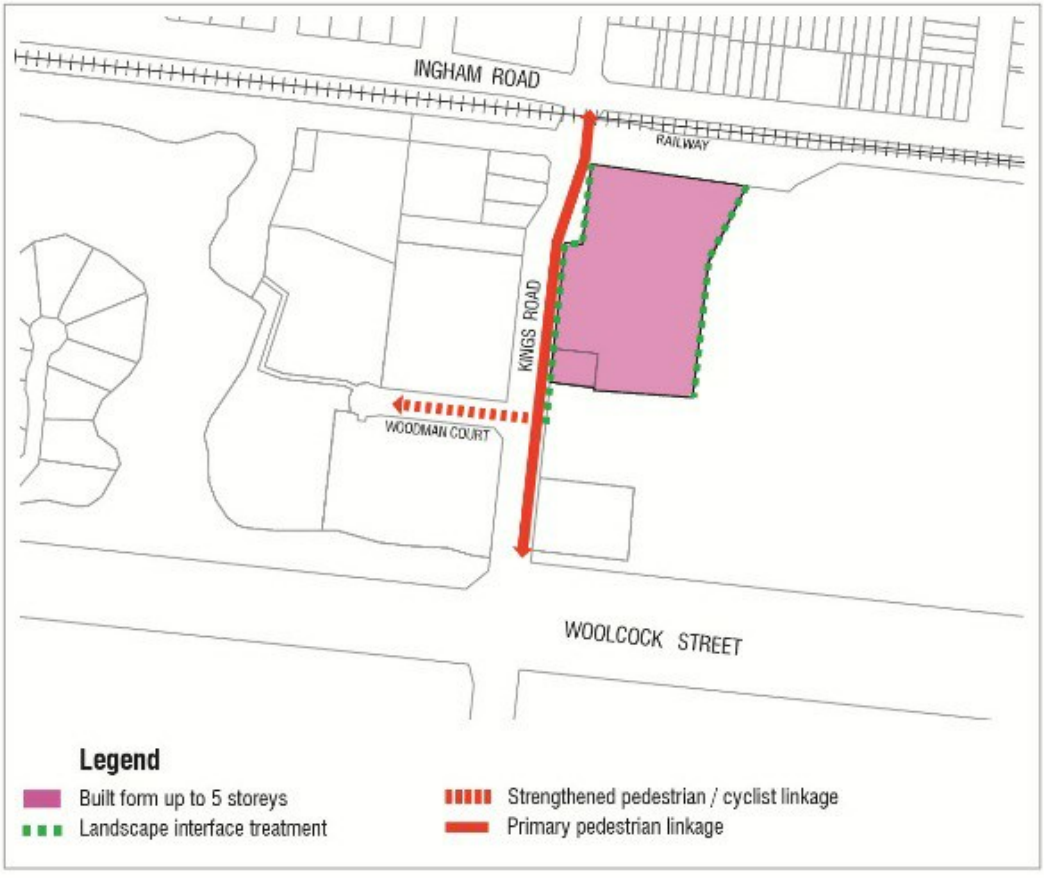

Figure 6.34 – Kings Road medium density precinct concept plan

Table 6.2.2.3(a)-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note–**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
The Strand precinct	
PO62 Building height and scale is consistent with the character desired for the precinct. The size of the development site allows for the primary orientation of buildings to the street and parkland, and the provision of building setbacks, on-site services and circulation and open space at ground storey.	**AO62.1** Building height does not exceed 5 storeys. Figure 6.35 – The Strand conceptual built form illustrates the desired built form.
	AO62.2 Where accommodating a building of more than 3 storeys, development sites have a minimum size of 1,000m^2.
PO63 Food and drink outlets are established where they are: (a) oriented to the street and parkland; (b) incorporate outdoor dining; and (c) are located on the ground floor with accommodation above. Figure 6.35 – The Strand conceptual built form illustrates the desired design principles.	No acceptable outcome is nominated.
PO64 Where incorporating ground floor non-residential use, the design of buildings provides for pedestrian friendly and visually interesting frontages.	**AO64.1** Front setbacks at the ground floor do not exceed 3m.
	AO64.2 Ground floor tenancies where including a non-residential use are articulated through: (a) variation in use of materials (glass, timber, steel, masonry); and (b) a change in plane of a minimum 0.5m for any length of the facade exceeding 10m.
	AO64.3 Ground floor tenancies are designed to be adaptable and flexible in configuration allowing for creation of indoor and outdoor spaces through use of large openings.
PO65 Where incorporating ground floor non-residential uses, weather protection is provided to usable outdoor spaces at the street frontage. Figure 6.35 – The Strand conceptual built form illustrates the desired design principles.	**AO65** Awnings are provided over outdoor spaces.

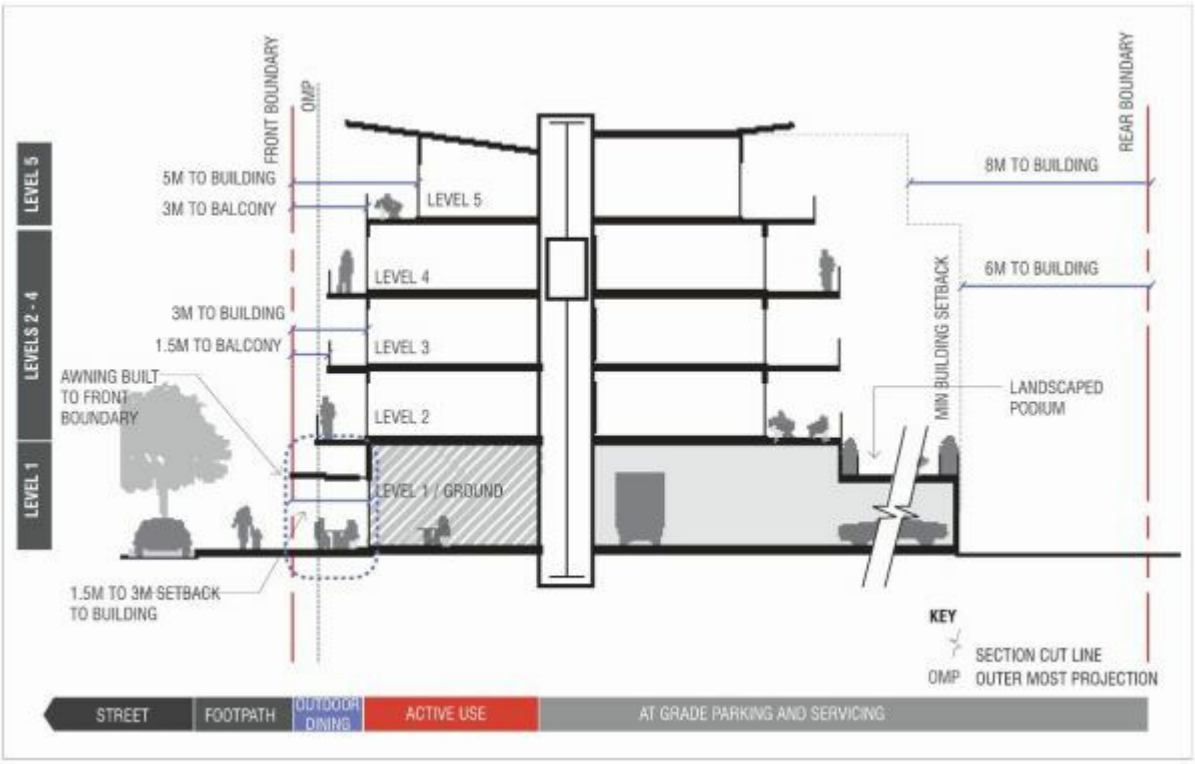

Figure 6.35 – The Strand conceptual built form

Table 6.2.2.3(a)-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note–**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
North Ward gateway precinct	
PO66 Building height and scale is consistent with the character desired for the precinct and reinforces Landsborough Street as a primary gateway to The Strand. The size of the development site allows for the primary orientation of buildings to the street, and the provision of building setbacks, on-site services and circulation and open space at ground storey. Figure 6.36 – North Ward gateway and villages conceptual built form illustrates.	**AO66.1** Building height does not exceed 8 storeys. **AO66.2** Development sites have a minimum size of 1,000m^2 where buildings of 5 storeys or above are proposed.
PO67 The design of buildings in this precinct provides for an arrival and wayfinding statement by: (a) addressing the street and are located to frame the edge of the street and focus view lines to The Strand; (b) creating an entry aesthetic by defining the street edge with a medium density built form; and (c) incorporating a streetscape and planting theme that creates a boulevard treatment of the street.	No acceptable outcome is nominated.

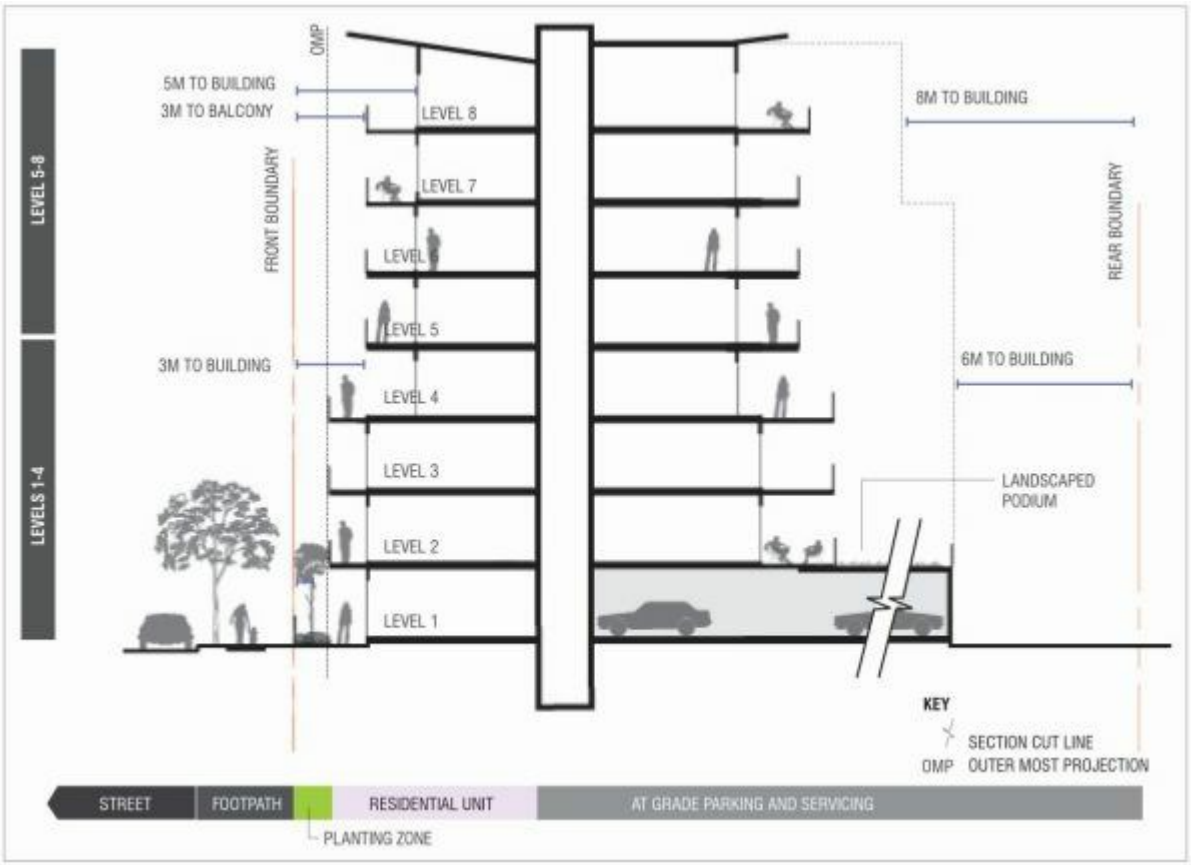

Figure 6.36 – North Ward gateway and villages conceptual built form

Table 6.2.2.3(a)-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note–**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
North Ward villages precinct	
PO68 Building height and scale is consistent with the character desired for the precinct and reinforces Gregory and Landsborough Streets as the primary activity spines and gateways to The Strand. The size of the development site allows for the primary orientation of buildings to the street, and the provision of building setbacks, on-site services and circulation and open space at ground storey. Figure 6.36 – North Ward gateway and villages conceptual built form.	**AO68.1** Building height does not exceed 8 storeys. **AO68.2** Development sites have a minimum size of 1,000m^2 where buildings of 5 storeys or above are proposed.
PO69 Non-residential uses are established where they are: (a) oriented to the street; (b) incorporate outdoor dining; and (c) are located on the ground floor with accommodation above.	No acceptable outcome is nominated.

PO70 Where incorporating non-residential uses, the design of buildings in this precinct provides for pedestrian friendly and visually interesting frontages.	**AO70.1** Front setbacks at the ground floor do not exceed 3m.
	AO70.2 Ground floor tenancies where including a non-residential use are articulated through: (a) variation in use of materials (glass, timber, steel, masonry); and (b) a change in plane of a minimum 0.5m for any length of the facade exceeding 10m.
	AO70.3 Ground floor tenancies are designed to be adaptable and flexible in configuration allowing for creation of indoor and outdoor spaces through use of large openings.
PO71 Where incorporating ground floor non-residential uses, weather protection is provided to usable outdoor spaces at the street frontage.	**AO71** Awnings are provided over outdoor spaces.
PO72 The design of buildings in this precinct provides for an arrival and wayfinding statement by: (a) focussing view lines to The Strand; (b) creating an entry aesthetic by defining the street edge with a medium density built form; and (c) incorporating a streetscape and planting theme that creates a boulevard treatment of the street. Figure 6.36 – North Ward gateway and villages conceptual built form.	No acceptable outcome is nominated.

Table 6.2.2.3(a)-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	**Acceptable outcomes**
Additional benchmarks for assessable development in precincts **Note–**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
North Ward medium density precinct	
PO73 Building height and scale is consistent with the character desired for the precinct. The former hospital building remains as the most significant building in the precinct. The size of the development site allows for the primary orientation of buildings to the street, and the provision of building setbacks, onsite services and circulation and open space at ground storey.	**AO73.1** Building height does not exceed 5 storeys other than the existing hospital building which is retained at its present height.
	AO73.2 Where accommodating a building of more than 3 storeys, development sites have a minimum size of 1,000m^2.
PO74 Building layout and design on the former hospital site facilitates a high level of pedestrian and cyclist permeability through the site.	No acceptable outcome is nominated.

Table 6.2.2.3(a)-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note–**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Magnetic Island medium density precinct	
PO75 Building design and massing is consistent with the low density scale of the locality and articulates individual dwellings.	**AO75** Building height does not exceed 2 storeys and is predominately in the form of single, single unit or multiple pavilions. Figure 6.37 – Magnetic Island indicative built form outcomes illustrates.

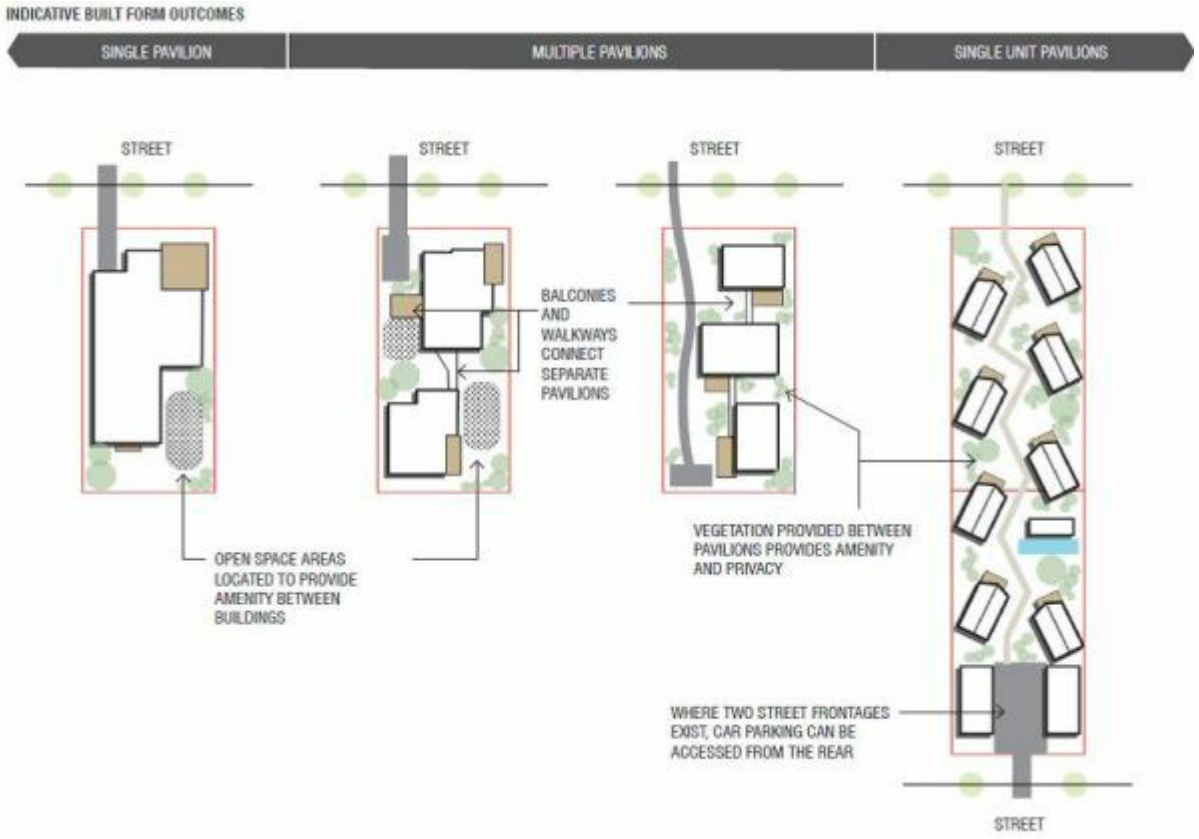

Figure 6.37 – Magnetic Island indicative built form outcomes

PO76 Design and articulation of buildings contribute to the creation of the local tropical character through: (a) use of tropical building design typologies; (b) natural setting of buildings within the landscape; and (c) maximising views to the bay. Figure 6.38 – Examples of the desired tropical building design typologies.	No acceptable outcome is nominated.

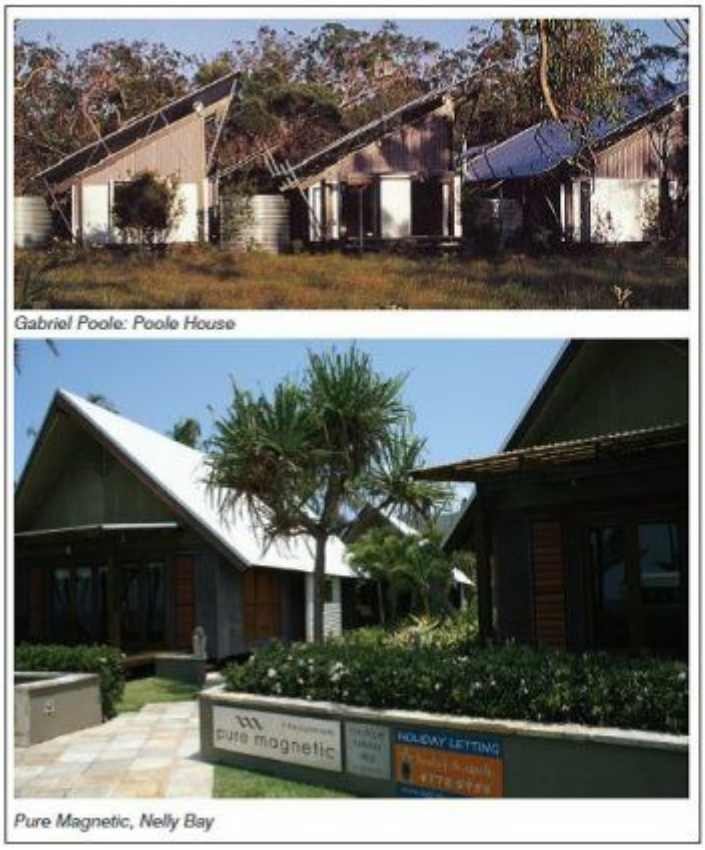

Figure 6.38 – Examples of the desired tropical building design typologies

Table 6.2.2.3(a)-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note–**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Picnic Bay precinct	
PO77 Non-residential uses are provided on the ground floor as part of a mixed use development along Granite Street and along the water frontage.	No acceptable outcome is nominated.
PO78 Building design and massing is consistent with the low density scale of the bay and articulates individual dwellings.	**AO78** Building height does not exceed 2 storeys and is predominately in the form of single, single unit or multiple pavilions. Figure 6.37 – Magnetic Island indicative built form outcomes illustrates.

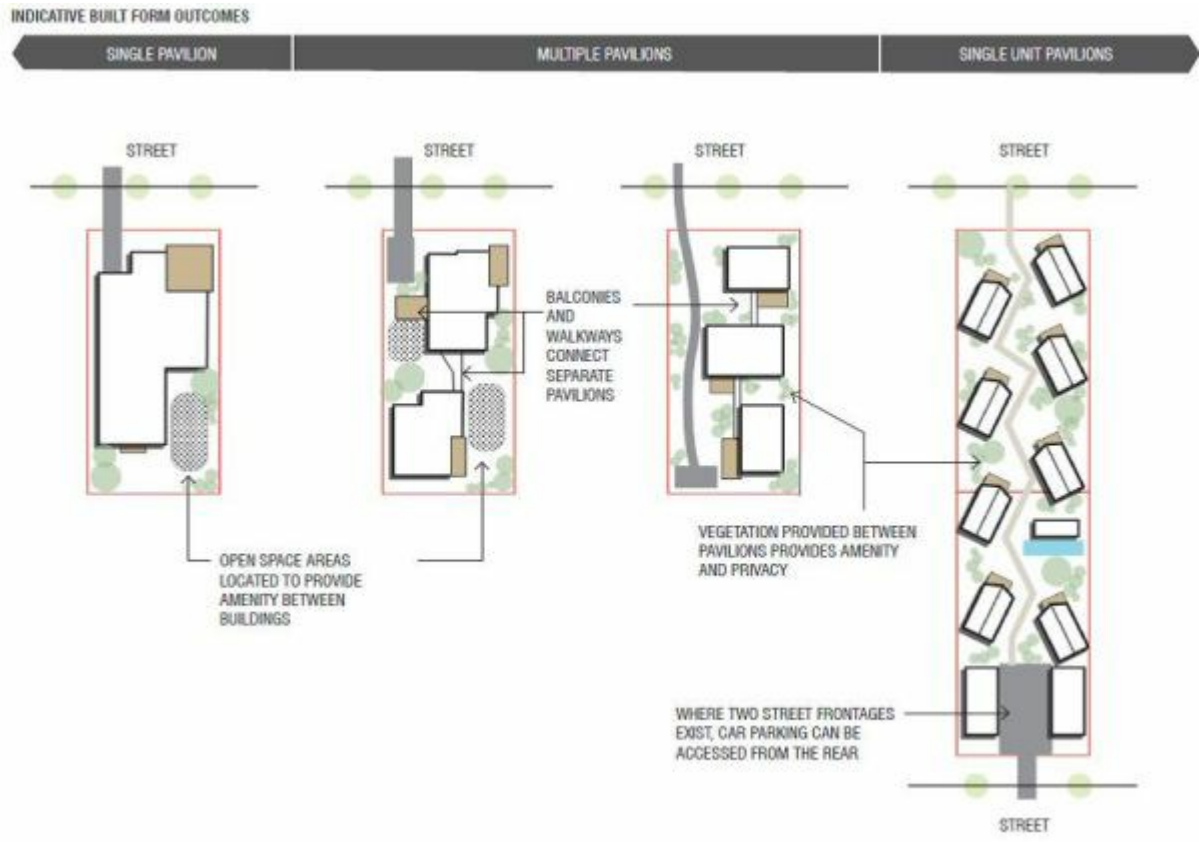

Figure 6.37 – Magnetic Island indicative built form outcomes

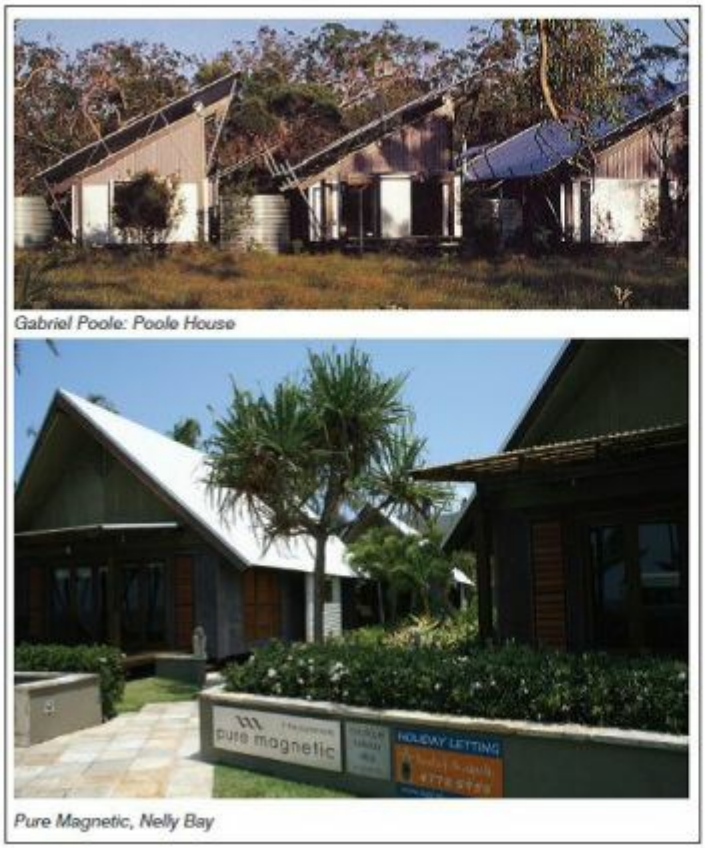
PO79 Design and articulation of buildings contribute to the creation of the local tropical character through: (a) use of tropical building design typologies; (b) natural setting of buildings within the landscape; and (c) maximising views to the bay. Figure 6.38 – Examples of the desired tropical building design typologies illustrates.	No acceptable outcome is nominated.



Gabriel Poole: Poole House

Pure Magnetic, Nelly Bay

Troppo Architects: Thiel House, Cullen Bay

Balconies and walkways connect individual pavilions and create transition between indoor and outdoor spaces

Figure 6.38 – Examples of the desired tropical building design typologies

PO80 Where incorporating non-residential uses, the design of buildings in this precinct provides for pedestrian friendly and visually interesting frontages.	**AO80.1** Front setbacks at the ground floor do not exceed 3m.
	AO80.2 Ground floor tenancies where including a non-residential use are articulated through: (a) variation in use of materials (glass, timber, steel, masonry); and (b) a change in plane of a minimum 0.5m for any length of the facade exceeding 10m.
	AO80.3 Ground floor dining tenancies are designed to be adaptable and flexible in configuration allowing for creation of indoor and outdoor spaces through use of large openings.
PO81 Where incorporating ground floor non-residential uses, weather protection via permanent or operable awnings is provided to usable outdoor spaces at the street frontage.	**AO81** Awnings are provided over outdoor spaces.

Table 6.2.2.3(a)-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note–**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Nelly Bay tourist precinct	
PO82 Non-residential uses are provided on the ground floor as part of a mixed use development and contribute to the creation of a waterfront promenade. Figure 6.39 – Nelly Bay waterfront promenade illustrates	No acceptable outcome is nominated.

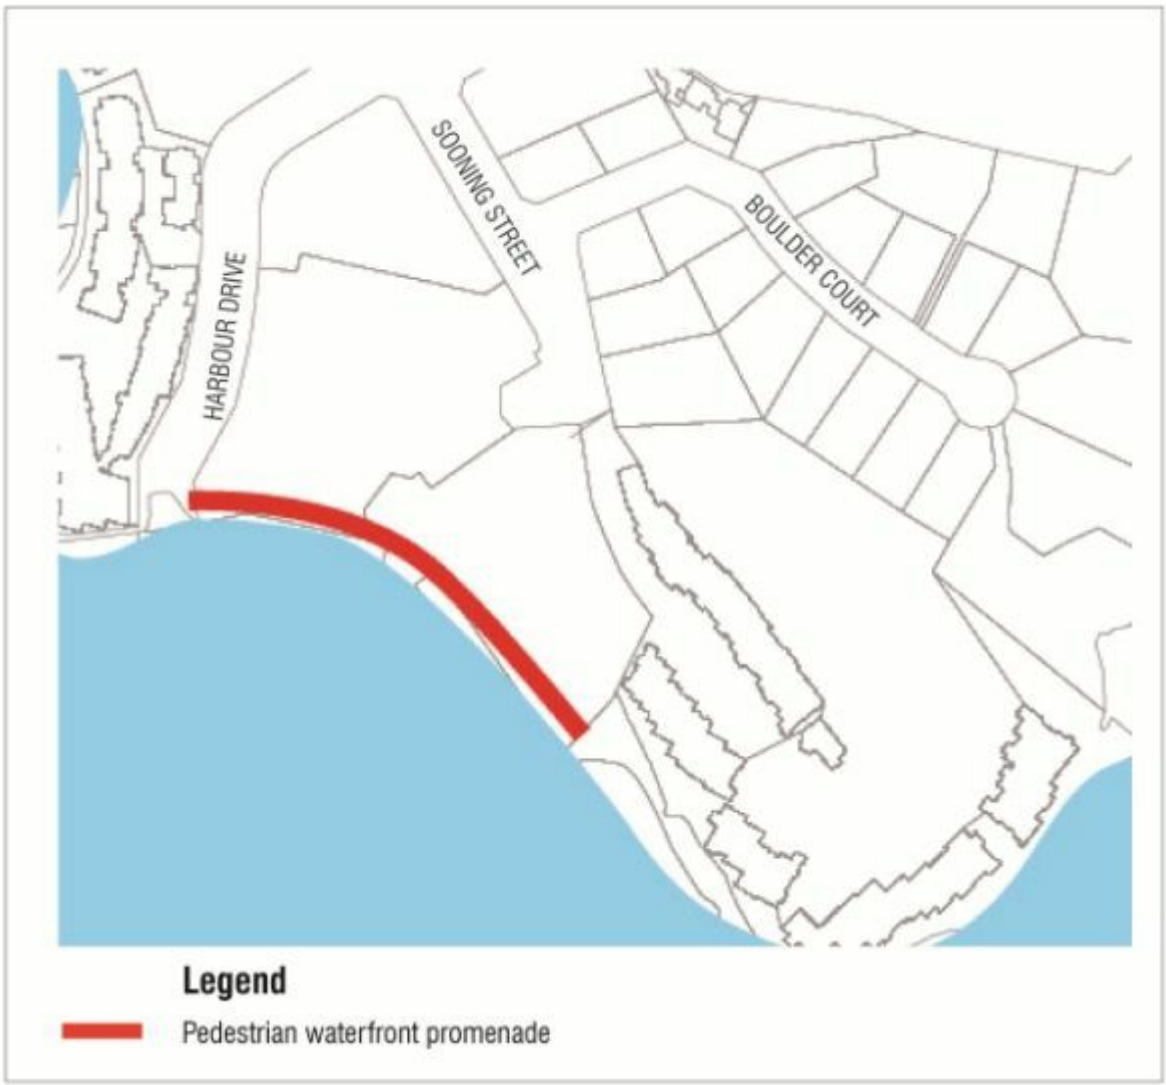

Figure 6.39 – Nelly Bay waterfront promenade

Performance outcomes	Acceptable outcomes
PO83 Tourist based services are located along Harbour Drive.	No acceptable outcome is nominated.
PO84 Building height is of a low to medium-rise scale and building massing is consistent with the low density character of the island.	**AO84.1** Building height does not exceed 4 storeys.
	AO84.2 Development consists of a number of distinct buildings where site frontage exceeds 20m. Figure 6.40 – Indicative building massing illustrates

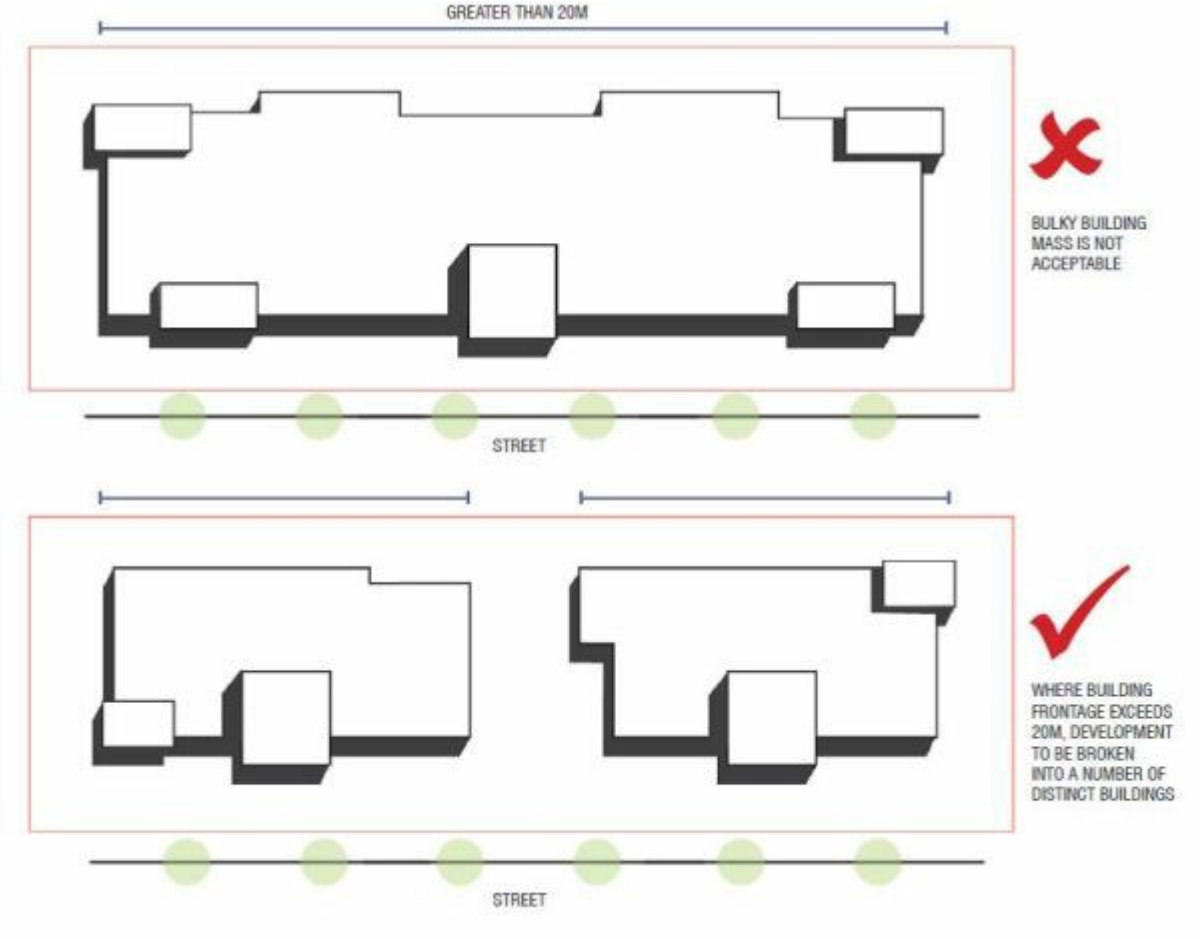

Figure 6.40 – Indicative building massing

PO85 Design of buildings contribute to the creation of an attractive and safe arrival through maximising views to the bay through use of: (a) balconies, verandas or windows overlooking the bay; and (b) opportunities for indoor and outdoor living spaces.	No acceptable outcome is nominated.
PO86 Where incorporating non-residential uses, the design of buildings in this precinct provides for pedestrian friendly and visually interesting frontages with active ground floors where feasible.	**AO86.1** Front setbacks at the ground floor do not exceed 3m.
	AO86.2 Ground floor tenancies where including a non-residential use are articulated through: (a) variation in use of materials (glass, timber, steel, masonry); and (b) a change in plane of a minimum 0.5m for any length of the facade exceeding 10m.
	AO86.3 Ground floor dining tenancies are designed to be adaptable and flexible in configuration allowing for creation of indoor and outdoor spaces through use of large openings.
PO87 Where incorporating ground floor non-residential uses, weather protection is provided to usable outdoor spaces at the street frontage.	**AO87** Awnings are provided over outdoor spaces.

Table 6.2.2.3(a) - Accepted development subject to requirements and assessable development (Part)

Performance outcomes	**Acceptable outcomes**
Additional benchmarks for assessable development in precincts **Note-**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcome takes precedence.	
Wills Street precinct	
PO88 Building height and scale is consistent with the character desired for the precinct. The size of the development site allows for the primary orientation of buildings to the street, and the provision of building setbacks, on-site services and circulation, and open space at ground storey.	**AO88.1** Building height does not exceed 4 storeys.
	AO88.2 Where accommodating a building of more than 3 storeys, development sites have a minimum size of 1,000m².
PO89 Built form provides for sensitive transitioning in height and scale to nearby Character residential zoned land.	No acceptable outcome is nominated.

6.2.3 High density residential zone code

6.2.3.1 Application

This code applies to development where the code is identified as applicable in the categories of development and assessment.

When using this code, reference should be made to section 5.3.2 and where applicable, section 5.3.3 located in Part 5.

6.2.3.2 Purpose

(1) The purpose of the High density residential zone is to provide for higher density multiple dwellings.

(2) The particular purpose of the code is to:

- (a) optimise opportunities for higher density living close to the city's principal centre, in order to maximise accessibility to services, employment and public transport, promote affordable living and maximise day and night-time vibrancy of the centres;
- (b) maintain a level of residential amenity that is consistent with an inner urban and near centre lifestyle; and
- (c) create well-designed built form and public spaces that are pedestrian friendly and provide opportunities for community interaction.

(3) The purpose of the zone will be achieved through the following overall outcomes:

- (a) development provides for high-rise and high density multiple dwellings and short-term accommodation in locations clustered around or near the principal centre (CBD);
- (b) building height steps down from taller buildings in the Principal centre (CBD) zone, and is generally up to 12 storeys;
- (c) development maintains a high level of residential amenity on the site and in the neighbourhood;
- (d) development is designed to incorporate sustainable practices including maximising energy efficiency, water conservation and public and active transport use;
- (e) development is supported by transport infrastructure which is designed to provide and promote safe and efficient public transport use, walking and cycling; and
- (f) non-residential uses occur where they directly support the day-to-day needs of the immediate residential community, do not unreasonably detract from the residential amenity of the area and are not better located in nearby centres.

(4) The purpose of the zone will also be achieved through the following additional overall outcomes for particular precincts:

Palmer Street precinct:

(a) this precinct continues to grow as Townville's primary contemporary entertainment and accommodation destination;

(b) Palmer Street is the continued focus for the establishment of restaurants, cafes and retail at the ground floor within a high quality streetscape;

(c) permanent residential accommodation occurs within this precinct where it does not compromise the function of Palmer Street as an entertainment destination;

(d) the public realm along the Ross Creek waterfront is of a high quality and provides continuous pedestrian access including the linking of the north and south banks by a new pedestrian bridge; and

(e) large-scale offices and other commercial activities are not established within the precinct.

Click here to view high resolution PDF.

Figure 6.41 – Palmer Street precinct

Flinders Street West precinct:

(a) this precinct grows to accommodate high density residential living;

(b) residential accommodation is provided in slender towers and takes advantage of the amenity of Ross Creek and views of Castle Hill, whilst protecting the heritage values of the historic railyards area;

(c) a hub of cultural activities is established within the historic railyards area, including a mix of education and entertainment activities;

(d) high quality public realm in and around the rail buildings is created and utilised for informal and formal performance spaces or events. Dining and local convenience retail may be located at ground storey; and

(e) new pedestrian connections are established within the precinct to:

(i) provide a linear connection along the edge of Ross Creek;

(ii) provide new connections to the Railway Estate precinct;

(iii) enhance the connectivity provided by the east west heritage rail path; and

(iv) provide connectivity within the precinct.

Click here to view high resolution PDF.

Figure 6.42 – Flinders Street West precinct

Railway Estate precinct:

(a) development provides a high quality residential environment which capitalises on the precinct's proximity to the principal centre (CBD) and Ross Creek;

(b) development is predominantly residential in nature set in an attractive urban setting;

(c) a new neighbourhood centre is envisaged within this precinct to service the needs of residents;

(d) a high level of integration with existing and future development in surrounding areas is achieved, having regard to movement networks, open space and recreational facilities and community infrastructure;

(e) movement networks are established to promote walking and cycling and public transport; and

(f) development which is, or has the potential to become, incompatible with future urban development of the area does not occur.

6.2.3.3 Assessment benchmarks

Table 6.2.3.3(a)-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
Home based business	
PO1 The use does not adversely impact on the amenity of the surrounding residential land uses and local character.	**AO1.1** The home based business: (a) is carried out in an existing building or structure; (b) does not use more than 60m² of the gross floor area of the building or structure; (c) involves at least one or more residents of the dwelling house; (d) involves not more than one non-resident employee; (e) where bed and breakfast accommodation does not exceed three bedrooms; (f) does not generate more than 1 heavy vehicle trip per week; **Editor's note—**A heavy vehicle is a vehicle with more than 4.5 tonnes gross vehicle mass. (g) does not generate more than 14 vehicle trips per day by other vehicles, where one trip includes arriving and departing the site. These trips are additional to normal domestic trips associated with the dwelling; (h) contains visitor parking within the site; (i) does not involve hiring out of materials, goods, appliances or vehicles; and (j) does not involve the repair or maintenance of vehicles, other than minor maintenance of vehicles used in conjunction of the home business on the site. **Editor's note—**Home based business operators should also refer to signage requirements under Table 5.8.2 -Operational work being placing an advertising device on a premises and Section 9.3.1-Advertising devices code.
	AO1.2 Functional aspects of the use such as service areas, material storage or use activities are not visible from the street.
	AO1.3 Other than where a bed and breakfast or home based child care, the business use does not operate outside the hours of 8am to 5pm Monday to Friday, 8am to 2pm Saturday and does not operate on Sunday.
	AO1.4 Noise levels do not exceed acoustic quality objectives under the Environmental Protection (Noise) Policy 2008.

Table 6.2.3.3(a)-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
Sales office	
PO2 The use does not adversely impact on the amenity of the surrounding residential land uses and local character.	**AO2** Development of the sales office is in place for no more than two years.

Table 6.2.3.3(a)-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Amenity	
PO3 Development minimises impacts on surrounding land and provides for an appropriate level of amenity within the site, having regard to: (a) noise; (b) hours of operation; (c) traffic; (d) visual impact; (e) odour and emissions; (f) lighting; (g) access to sunlight; (h) privacy; and (i) outlook.	No acceptable outcome is nominated.
PO4 Landscaping is provided to enhance the appearance of the development, screen unsightly components, create an attractive on-site environment and provide shading.	No acceptable outcome is nominated.

Table 6.2.3.3(a)-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Crime prevention through environmental design	
PO5 Development facilitates the security of people and property having regard to: (a) opportunities for casual surveillance and sight lines; (b) exterior building design that promotes safety; (c) adequate lighting; (d) appropriate signage and wayfinding; (e) minimisation of entrapment locations; and (f) building entrances, loading and storage areas that are well lit and lockable after hours. **Editor's note—**Applicants should have regard to Crime Prevention through Environmental Design Guidelines for Queensland.	No acceptable outcome is nominated.
PO6 Development promotes the safety of residents and visitors, particularly through casual surveillance of the street and public spaces.	**AO6.1** Buildings are designed to have balconies, windows and building openings overlooking streets and other areas which are accessible to the public. Figure 6.44 — Design for casual surveillance illustrates
	AO6.2 Fences or walls along a street frontage have a maximum height of 1.2m where solid, or 1.8m where that portion of the fence above 1.2m high is at least 50% transparent.

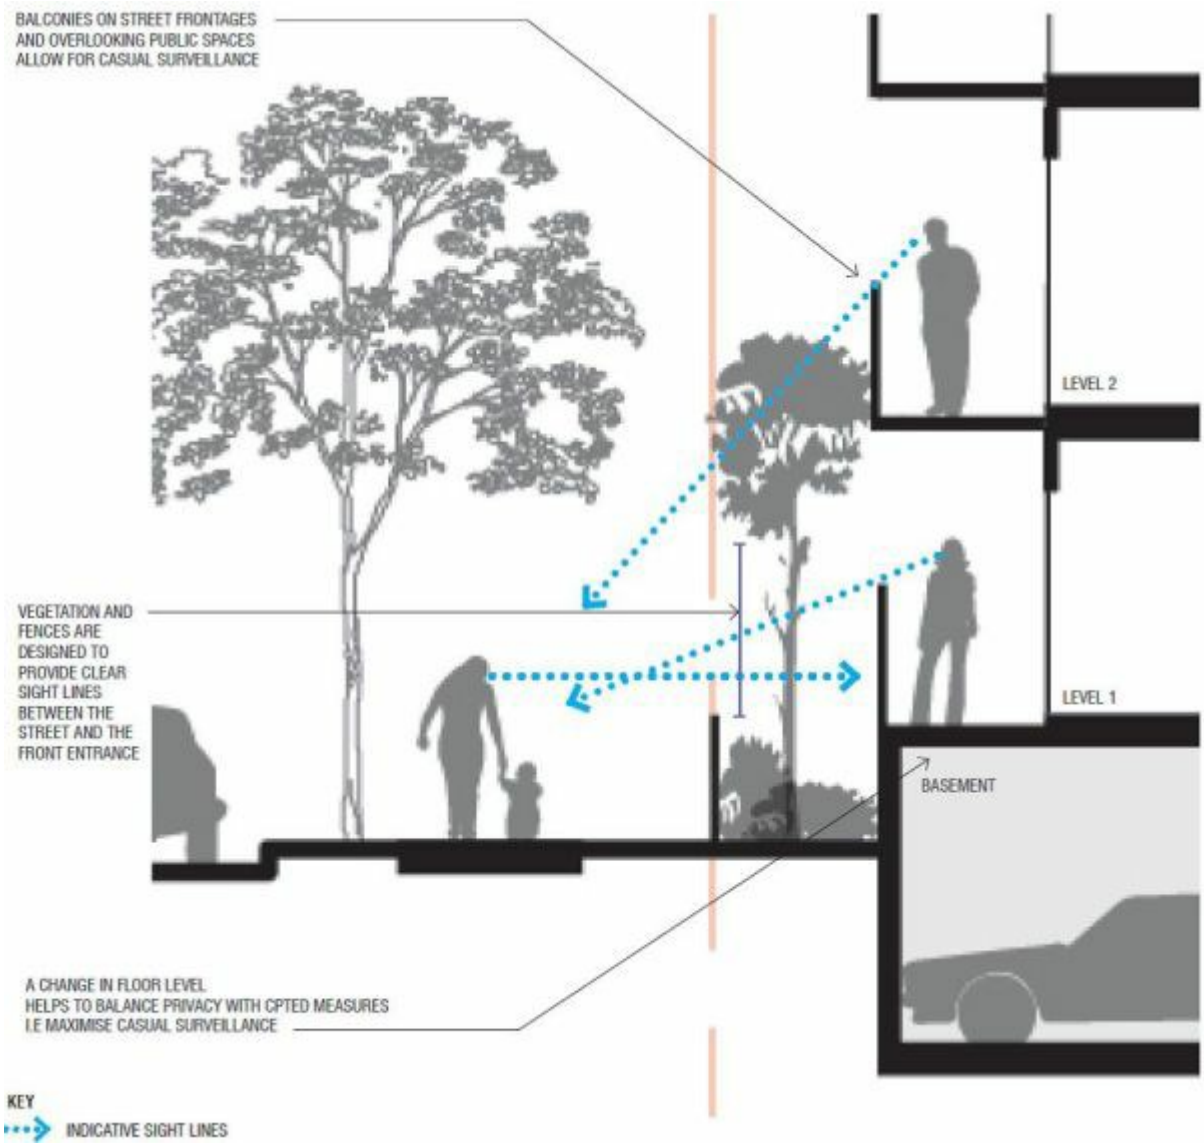

Figure 6.44 – Design for casual surveillance

Table 6.2.3.3(a)-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Built form	
PO7 Design elements contribute to an interesting and attractive streetscape and building through: (a) the provision of projections and recesses in the façade which reflect changes in internal functions of buildings including circulation; (b) variations in material and building form; (c) modulation in the façade, horizontally or vertically; (d) articulation of building entrances and openings; (e) corner treatments to address both street frontages for a premises on a corner; (f) at lower levels creates human/pedestrian scale experiences; (g) for upper levels, frames streets and public spaces; (h) elements which assist in wayfinding and legibility; and (i) elements which relates to the context including surrounding buildings, parks, streets and open spaces. Figure 6.45 – Building design elements provides indicative guidance.	No acceptable outcome is nominated.

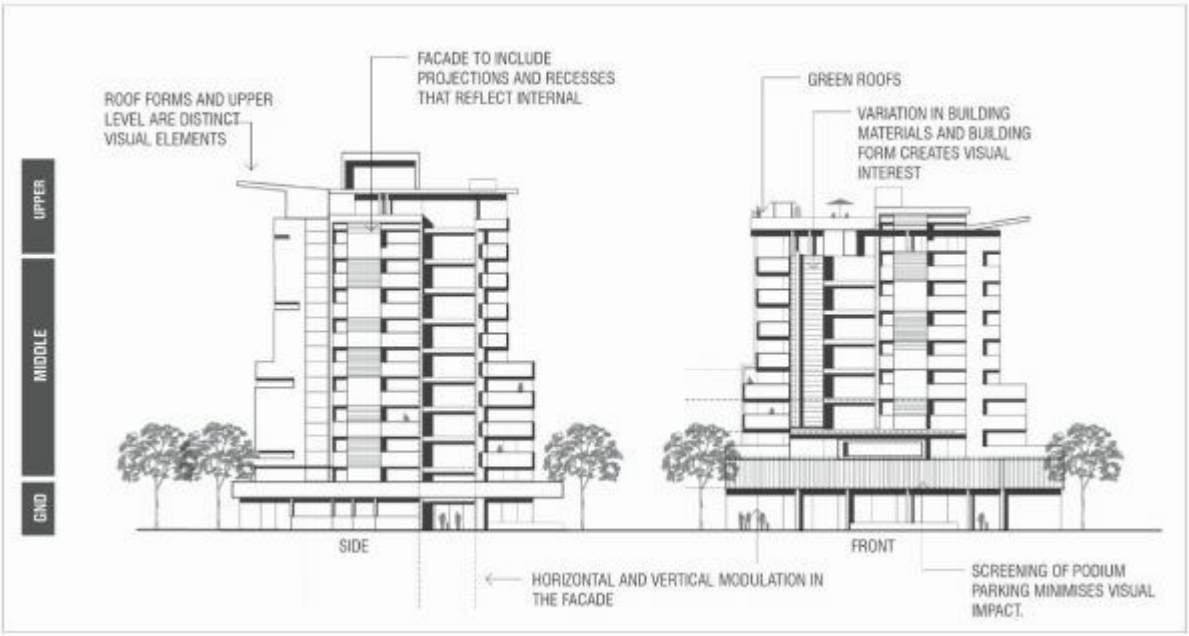

Figure 6.45 – Building design elements

PO8 Air conditioning units are insulated so that adjoining properties are not affected by the noise source, and are not significantly visible from the street.	No acceptable outcome is nominated.
PO9 The overall shape, configuration and placement of buildings create usable outdoor spaces.	No acceptable outcome is nominated.
PO10 Building height and scale, maintains the primacy of the principal centre (CBD) and is consistent with the character desired for the precinct.	**AO10** Building height does not exceed 12 storeys.
PO11 The size of the development site allows for primary orientation of buildings to the street, and the provision of building setbacks, on-site services and circulation and open space at ground storey.	**AO11** Where accommodating a building of 5 storeys or more, development sites have a minimum size of 1,000m^2.
PO12 Building design and setbacks: (a) create an attractive, consistent and cohesive scale along the streetscape; (b) maintain appropriate levels of light and solar penetration, air circulation, privacy and amenity for existing and future buildings; (c) do not prejudice the development or amenity of adjoining land; (d) retain the openness of street vistas, including to the sky, along major elements of the city grid; and (e) transition to lower scale heritage places and precincts.	**AO12** The design meets the setback requirements outlined by Table 6.2.3.3(b) - Building setbacks High density residential zone unless varied by a relevant precinct.
PO13 Built to boundary walls do not impact on the amenity or privacy of adjoining premises. **Editor's note—**Built to boundary wall heights and lengths may be increased where abutting an existing or proposed built to boundary wall on an adjoining property.	**AO13** Built to boundary walls: (a) are for non-habitable rooms or spaces only; (b) are not located within 1.5m of a habitable room on an adjoining site; (c) have a maximum height of 3m; and (d) have a maximum length of 15m.
PO14 Buildings are designed to achieve good solar access by: (a) minimising the extent of shadows on usable private open space or public spaces; and (b) maintaining access to sunlight for habitable rooms within adjoining premises.	No acceptable outcome is nominated.
PO15 Building caps and rooftops contribute to the: (a) architectural design of the building; and (b) the creation of an attractive roofscape.	No acceptable outcome is nominated.

PO16 Roof top levels incorporate open space or recreational spaces for the users of the building or are significantly dedicated to 'green roof' vegetation.	No acceptable outcome is nominated.
PO17 Development provides private open space that is: (a) well-proportioned, appealing, functional and easily accessible, and promotes outdoor living as an extension of the dwelling; (b) provides a high level of privacy for residents and neighbours; and (c) has sufficient size and shape to meet the needs of a diversity of potential residents.	**AO17.1** Balconies are provided with a minimum area of 9m² for 1 bedroom unit or 16m² for 2 or more bedroom unit, with a minimum dimension 4m and clear of any air conditioning unit or drying space.
	AO17.2 Where clothes drying areas are provided on private balconies they are screened from public view.
	AO17.3 Private open space is located or screened so it does not directly overlook main living areas or private open space of adjoining dwellings.
PO18 Sufficient communal open space is provided to create flexible spaces suitable for a range of activities.	**AO18** No acceptable outcome is nominated.
PO19 Communal open space provides facilities including seating, shade, flexible spaces suitable for a range of activities. Treatments such as green roofs, green walls or community gardens contribute to the attractiveness of these spaces.	No acceptable outcome is nominated.
PO20 Where incorporating ground floor non-residential use, the design of buildings provides for pedestrian-friendly and visually interesting frontages.	**AO20.1** Ground floor tenancies where including a non-residential use are articulated through: (a) variation in use of materials (glass, timber, steel, masonry); and (b) a change in plane of a minimum of 0.5m for any length of the facade exceeding 10m.
	AO20.2 Ground floor tenancies are designed to be adaptable and flexible in configuration allowing for creation of indoor and outdoor spaces through use of large openings.
PO21 Where incorporating ground floor non-residential use, weather protection is provided to usable outdoor spaces at the street frontage.	**AO21** Awnings are provided over outdoor spaces.

Table 6.2.3.3(a)-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Parking and servicing	
PO22 Parking facilities are located to be concealed from public view to ensure an attractive streetscape. Figure 6.46 — Concealment of parking structures.	No acceptable outcome is nominated.

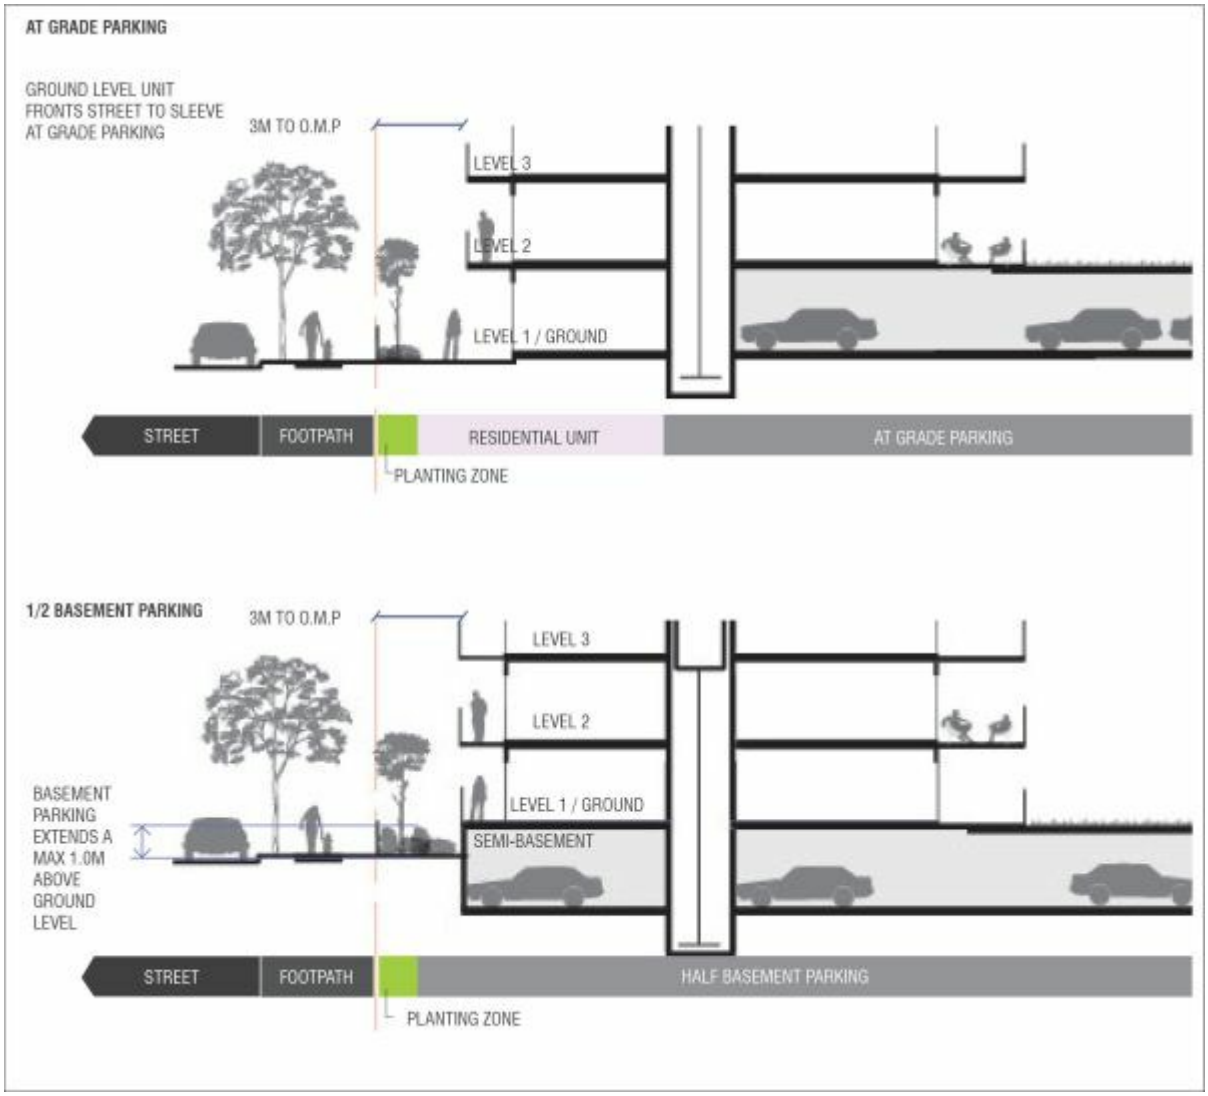

Figure 6.46 – Concealment of parking structures

PO23 Waste disposal and servicing areas are screened from public view and do not have adverse amenity impacts on adjoining properties.	No acceptable outcome is nominated.

Table 6.2.3.3(a)-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development — where a non-residential use	
PO24 Non-residential uses establish only where: (a) compatible with local character and amenity; (b) limited in scale and supporting the day-to-day needs of the local community or as specifically intended for a particular precinct; and (c) not impacting on the role and function of the city's network of centres or more appropriately located in another zone.	No acceptable outcome is nominated. **Editor's note—**Applicants should have regard to Economic impact assessment planning scheme policy SC6.5 for guidance on how to demonstrate compliance with this performance outcome.

Table 6.2.3.3(a)-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Palmer Street precinct	
PO25 Building height transitions down to create a low-rise interface with the Ross Creek Marina.	**AO25** Building height is in accordance with Figure 6.47 — Palmer Street precinct concept plan.
PO26 The design of buildings contributes to the creation of an interesting and attractive streetscape along Palmer Street by: (a) creating an entry aesthetic which defines the street edge with a high density built form; and (b) incorporating a streetscape and planting theme that creates a boulevard treatment of the street.	No acceptable outcome is nominated.
PO27 Development facilitates or supports primarily high density short-term or permanent accommodation uses.	No acceptable outcome is nominated.
PO28 An open space and pedestrian network is provided in accordance with Figure 6.47 — Palmer Street precinct concept plan which: (a) opens up opportunities for residents and visitors to view Ross Creek; and (b) creates quality walkable pathways along the creek edge in an attractive landscaped environment.	No acceptable outcome is nominated.
PO29 A new public space is provided along the Ross Creek frontage in accordance with Figure 6.47 — Palmer Street precinct concept plan which: (a) reduces the impact of traffic or service areas on pedestrians; (b) furnishes the space to provide a range of opportunities for sitting and social interaction; (c) connects the open space in the west with the yacht club in the east; and (d) provides an attractive environment for buildings to front.	No acceptable outcome is nominated.

PO30 On frontages shown on Figure 6.47 — Palmer Street precinct concept plan as having a built form edge, buildings contribute to the creation of a strong and pedestrian oriented edge to the street, by: (a) being built to the street frontage at the ground storey; (b) creating a generally continuous building alignment; (c) providing awnings over the footpaths; and (d) having facades which contain windows, doors, materials and features which generate visual interest at the street level.	No acceptable outcome is nominated.
PO31 Dining, entertainment and tourist oriented uses occur at ground storey within development identified on the Figure 6.47 — Palmer Street precinct concept plan as active frontage.	No acceptable outcome is nominated.

Figure 6.47 – Palmer Street precinct concept plan

PO32 Buildings contribute to the creation of an attractive and activated edge to Ross Creek by having facades which contain windows, doors, materials and features which generate visual interest.	No acceptable outcome is nominated.

Table 6.2.3.3(a)-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Flinders Street West precinct	
PO33 Building height transitions down from the principal centre (CBD) interface to lower rise buildings around the historic railyards and surrounding neighbourhoods.	**AO33** Building height is in accordance with Figure 6.48 — Flinders Street West precinct concept plan.
PO34 Development primarily facilitates or supports high density accommodation uses.	No acceptable outcome is nominated.
PO35 Non-residential uses occur at ground storey and may include small-scale offices, retail, community uses and dining where on an active frontage identified on the Figure 6.48 — Flinders Street West precinct concept plan.	No acceptable outcome is nominated.
PO36 Heritage buildings within the historic railyards are refurbished and reused for educational, cultural and community uses.	No acceptable outcome is nominated.
PO37 The ground floor of all non-heritage buildings within the historic railyards are used for educational, cultural and community uses or complementary activities.	No acceptable outcome is nominated.
PO38 An open space and pedestrian network is provided in accordance with Figure 6.48 — Flinders Street West precinct concept plan. Central access within the precinct is designed to be a pedestrian focused shared zone, ensuring that while vehicle access is available pedestrian accessibility is prioritised.	No acceptable outcome is nominated.
PO39 New development or redevelopment within the historic railyards protects heritage values and provides high quality public realm including: (a) informal and formal performance spaces; and (b) spaces for public events or gatherings.	No acceptable outcome is nominated.

PO40 New public spaces are provided in accordance with Figure 6.48 — Flinders Street West precinct concept plan which: (a) create quality walkable connections to public walkways on the river; (b) reduce the impact of traffic or service areas on pedestrians; (c) furnish the space to provide a range of opportunities for sitting and social interaction; and (d) provide an attractive environment for adjoining buildings to front.	No acceptable outcome is nominated.
PO41 On frontages shown on Figure 6.48 — Flinders Street West precinct concept plan as having a built frontage, buildings contribute to the creation of a strong and pedestrian oriented edge to Ross Creek and the street, by: (a) creating a generally continuous building alignment; (b) providing awnings over the footpaths; and (c) having facades which contain windows, doors, materials and features which generate visual interest at the street level.	No acceptable outcome is nominated.
PO42 Where shown as “built frontage” on Figure 6.48 – Flinders Street West precinct concept plan buildings contribute to the creation of an attractive and activated edge to Ross Creek and road frontage by having facades which contain windows, doors, materials and features which generate visual interest.	No acceptable outcome is nominated.

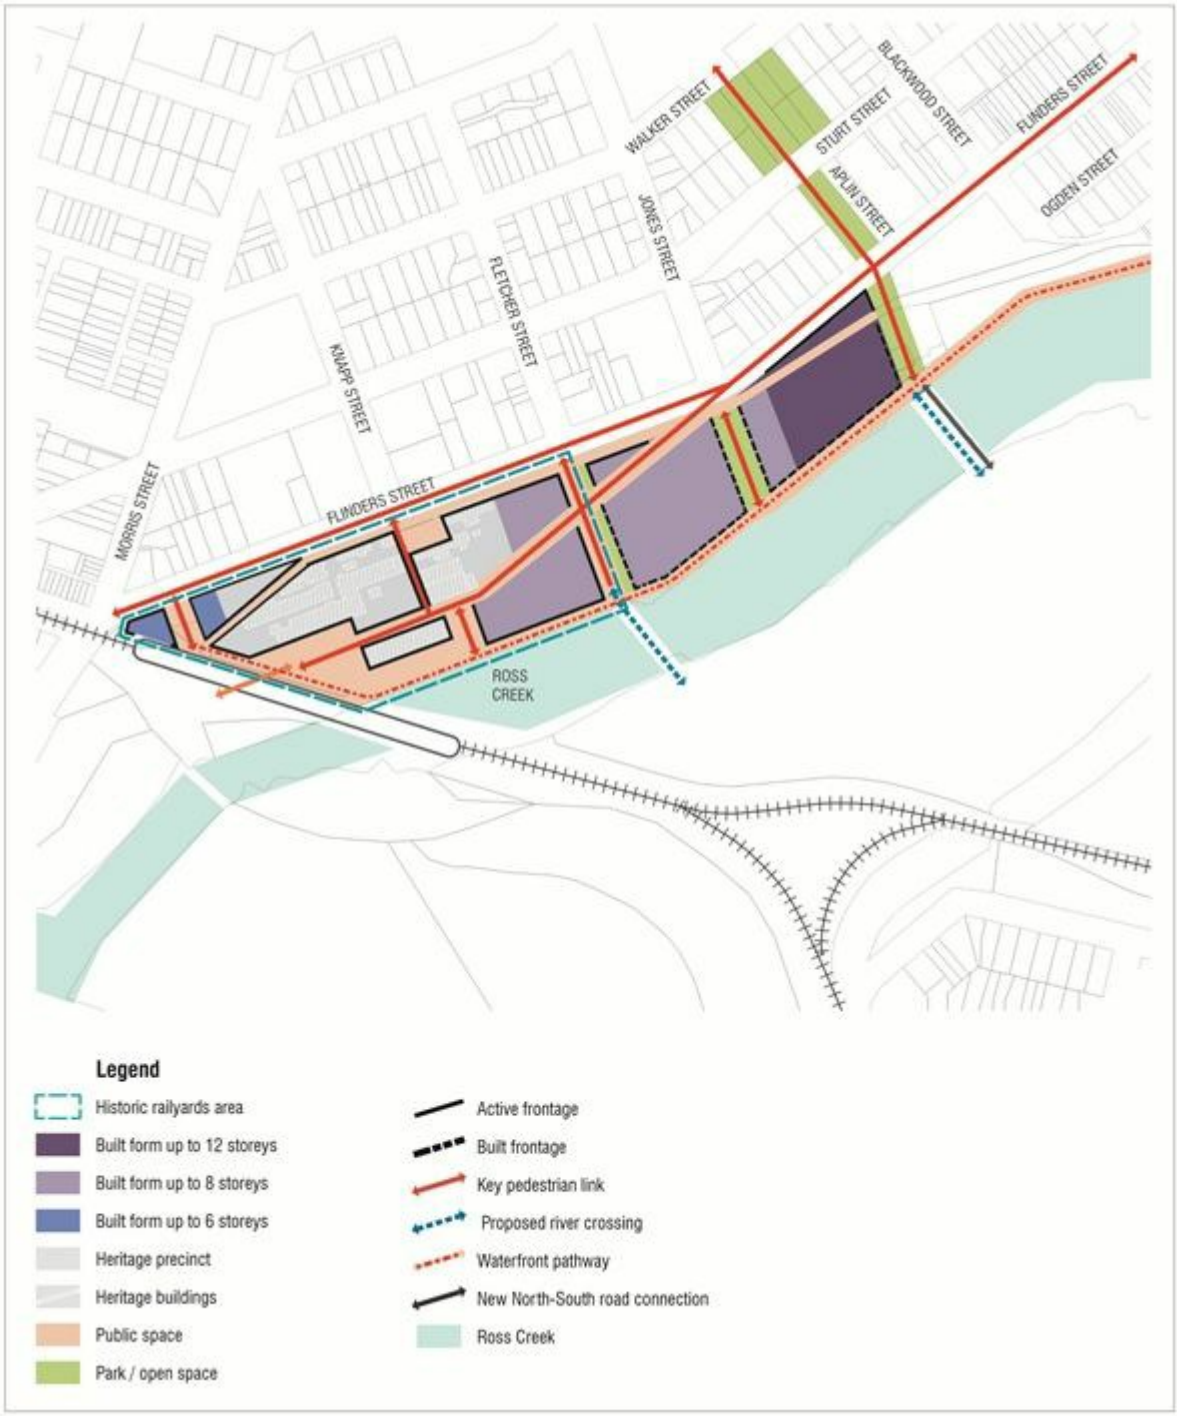

Figure 6.48 – Flinders Street West precinct concept plan

Table 6.2.3.3(a)-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Railway Estate precinct	
PO43 Development primarily facilitates or supports high density accommodation uses.	No acceptable outcome is nominated.
PO44 A new neighbourhood level centre may establish within the precinct in accordance with Figure 6.49 — Railway Estate precinct concept plan. The new centre is designed to create: (a) a coherent and integrated built form, public realm and circulation networks; (b) central, accessible and attractive public spaces for people to congregate and interact; (c) continuity of streetscape and landscape characteristics; (d) pedestrian friendly and visually interesting frontages to streets and public spaces; and (e) active primary frontages with car parking areas sleeved by buildings.	No acceptable outcome is nominated.
PO45 Development does not compromise or compete with the principal centre (CBD) or successful functioning of other centres in the network.	No acceptable outcome is nominated.
PO46 High level pedestrian and cyclist permeability is achieved, and primary elements of an open space, street and pedestrian network are provided in accordance with Figure 6.49 — Railway Estate precinct concept plan.	No acceptable outcome is nominated.

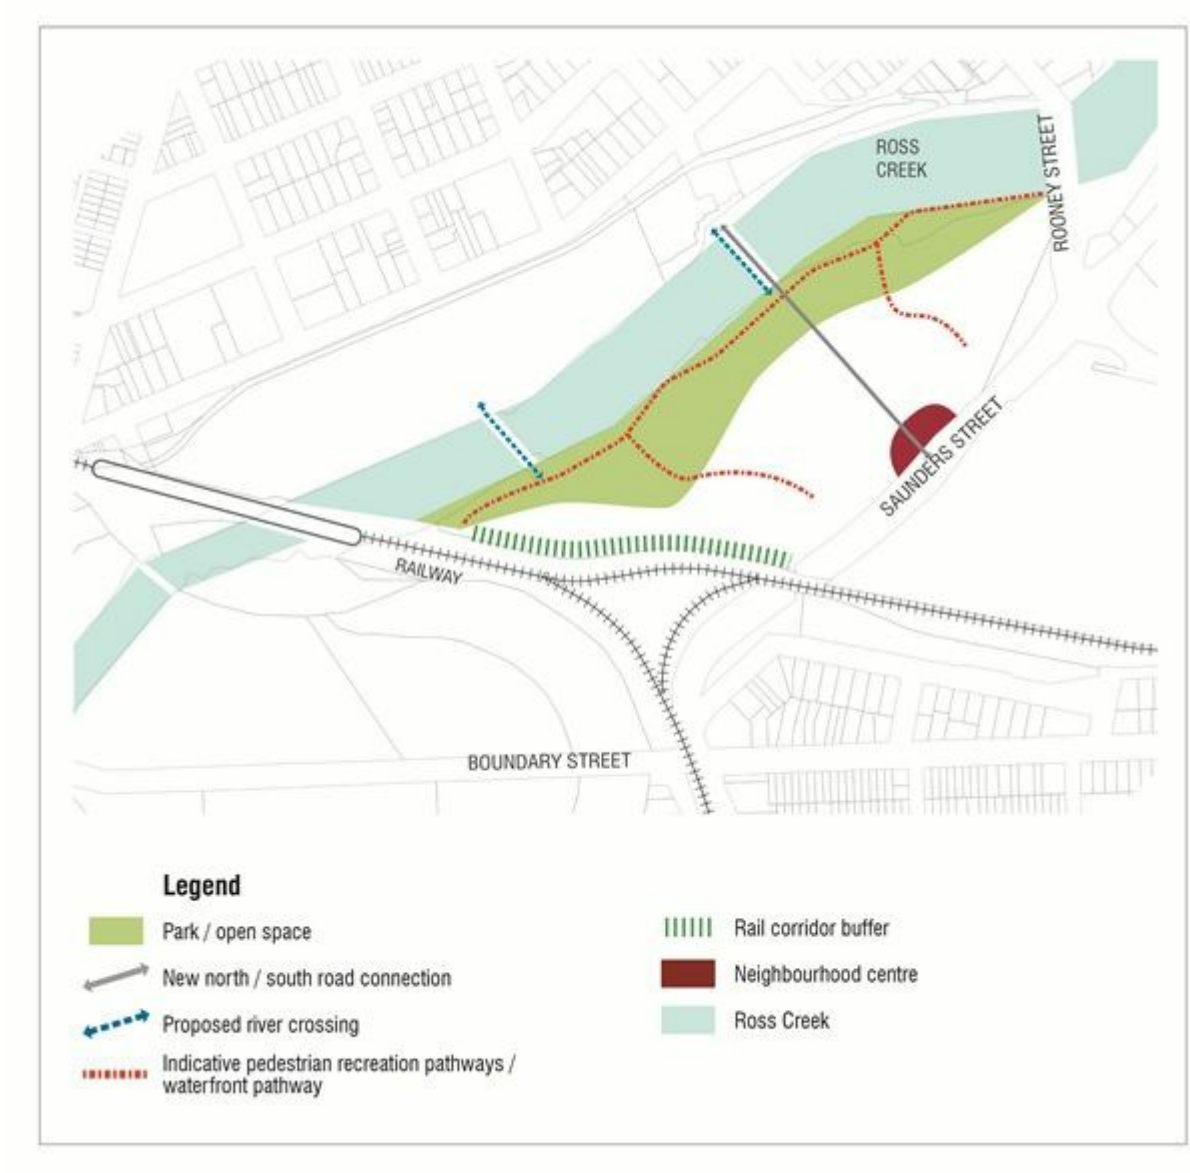

Figure 6.49 – Railway Estate precinct concept plan

PO47 New development provides high quality public realm including: (a) informal and formal performance spaces; (b) spaces for public events or gatherings; and (c) the creation of an attractive and activated edge to Ross Creek.	No acceptable outcome is nominated.
PO48 Development is attractively buffered from the railway, to achieve an acceptable level of residential amenity.	No acceptable outcome is nominated.

6.2.4 Rural residential zone code

6.2.4.1 Application

This code applies to development where the code is identified as applicable in the categories of development and assessment.

When using this code, reference should be made to section 5.3.2 and where applicable, section 5.3.3 located in Part 5.

6.2.4.2 Purpose

(1) The purpose of the Rural residential zone code is to provide for residential development on large lots where the intensity of residential development is dispersed.

(2) The particular purpose of the code is to:

- (a) provide for semi-rural lifestyles in which the primary use is dwelling houses on large lots which may have limited access to infrastructure and services;
- (b) provide for some subordinate, and generally domestic scale, rural activities and home based business to occur;
- (c) ensure development maintains the character and amenity of the rural residential locality; and
- (d) ensure any intensification of impacts on nearby ecological values or natural resources is avoided.

(3) The purpose of the zone will be achieved through the following overall outcomes:

- (a) residential development occurs in the form of dwelling houses, to the general exclusion of other more intensive residential uses;
- (b) reconfiguration creates large lots which support a semi-rural lifestyle and avoid intensification of impacts on on-site and on nearby ecological values, natural resources or rural activities;
- (c) lot sizes are sufficient to ensure the protection of environmental values and water quality objectives;
- (d) further expansion of existing rural residential areas does not occur beyond those areas zoned for this purpose;
- (e) home businesses occur to an extent that does not unduly diminish the semi-rural residential amenity, having regard to noise, odour, dust, traffic and other impacts;
- (f) roadside stalls and other sales of produce produced on the site are of a limited scale that is consistent with the semi-rural lifestyle;
- (g) non-residential uses occur within the zone where they primarily support the day-to-day needs of the immediate residential community and do not unreasonably detract from the residential amenity of the area;
- (h) development is buffered from nearby rural land such that the productive use of the rural land is not constrained;
- (i) residential development is protected from the impacts of nearby industrial activities, transport corridors and infrastructure installations and major facilities such as Department of Defence landholdings;
- (j) the natural bushland setting and village character of Balgal Beach and the Magnetic Island townships are maintained. Tourism accommodation in these communities is of a house compatible scale; and
- (k) development does not diminish water quality and does not intensify impacts on other environmental values including remaining areas of ecological significance within the zone.

6.2.4.3 Assessment benchmarks

Table 6.2.4.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
Home based business	
PO1 The use does not adversely impact on the amenity of the surrounding residential land uses and local character.	**AO1.1** The home based business: (a) is carried out in an existing building or structure (excluding truck parking); (b) does not use more than 60m² of the gross floor area of the building or structure; (c) involves at least one or more residents of the dwelling house; (d) involves not more than two non-resident employees; (e) where bed and breakfast or farm stay accommodation does not exceed three bedrooms; (f) does not generate more than 1 heavy vehicle trip per week; **Editor's note—**A heavy vehicle is a vehicle with more than 4.5 tonnes gross vehicle mass. (g) does not generate more than 14 vehicle trips per day by other vehicles, where one trip includes arriving and departing the site. These trips are additional to normal domestic trips associated with the dwelling; (h) contains visitor parking within the site; (i) does not involve hiring out of materials, goods, appliances or vehicles; and (j) does not involve the repair or maintenance of vehicles, other than minor maintenance of vehicles used in conjunction of the home business on the site. **Editor's note—**Home based business operators should also refer to signage requirements under Table 5.8.2 - Operational work being placing an advertising device on a premises and Section 9.3.1-Advertising devices code.
	AO1.2 Functional aspects of the use such as service areas, material storage or use activities are not visible from the street.
	AO1.3 Other than where a bed and breakfast, farm stay or home based childcare, the business use does not operate outside the hours of 8am to 5pm Monday to Friday, 8am to 2pm Saturday and does not operate on Sunday.
	AO1.4 Noise levels do not exceed acoustic quality objectives under the Environmental Protection (Noise) Policy 2008.

PO2 Heavy vehicle parking: (a) has a direct nexus with a home based business or rural use carried out on the site; and (b) does not adversely affect the amenity of neighbouring properties. **Editor's note—**A heavy vehicle is a vehicle with more than 4.5 tonnes gross vehicle mass.	**AO2.1** Not more than one heavy vehicle is parked on the site. **AO2.2** While on-site, vehicles: (a) are not left idling for more than 5 minutes at any one time; and (b) do not have a refrigeration unit running.

Table 6.2.4.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
Roadside stall	
PO3 Roadside stalls are small in scale and do not impact negatively upon the amenity, character or safety of the locality and the safety and efficiency of roads.	**AO3.1** Any structure used for the sale of goods or produce is limited to 20m^2 gross floor area.
	AO3.2 Access to the structure is via the primary property access point.
	AO3.3 Produce or goods sold is grown, made or produced on the land on which the road side stall is erected.

Table 6.2.4.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
Sales office	
PO4 The use does not adversely impact on the amenity of the surrounding land uses and local character.	**AO4** Development of the sales office is in place for no more than two years.

Table 6.2.4.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
Animal keeping and cropping	
PO5 Animal keeping and cropping do not adversely impact on the amenity of the surrounding residential land uses and local character.	**AO5.1** Non-residential buildings, animal enclosures, storage facilities and waste disposal areas are set back 50m from any dwelling on an adjoining or nearby site.
	AO5.2 The height of non-residential buildings or facilities does not exceed 2 storeys or 8.5m above ground level, whichever is the lesser.
	AO5.3 Cropping does not involve chemical spraying unless a 40m wide vegetated buffer is provided on the site between the crops which are being sprayed and adjoining land.

Table 6.2.4.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development - where a non-residential or tourist accommodation use	
PO6 Non-residential uses established only where: (a) compatible with local character and amenity; (b) limited in scale and supporting the day-to-day needs of the local community; and (c) not more appropriately located in another zone.	No acceptable outcome is nominated. **Editor's note—**Applicants should have regard to Economic impact assessment planning scheme policy no. SC6.5 for guidance on how to demonstrate compliance with this performance outcome.
PO7 Tourism accommodation within Balgal Beach and the Magnetic Island townships is compatible with the village character of these communities.	No acceptable outcome is nominated.

Table 6.2.4.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Built form	
PO8 Development is consistent with the height and scale of surrounding buildings and includes features that contribute to an attractive streetscape.	No acceptable outcome is nominated.

Table 6.2.4.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Amenity	
PO9 Development minimises impacts on surrounding land and provides for an appropriate level of amenity within the site, having regard to: (a) noise; (b) hours of operation; (c) traffic; (d) visual impact; (e) odour and emissions; (f) lighting; (g) privacy; and (h) outlook.	No acceptable outcome is nominated.
PO10 Landscaping is provided to contribute positively to the city image, particularly along major roads.	No acceptable outcome is nominated.
PO11 Development does not compromise the ongoing productive use of nearby rural land.	No acceptable outcome is nominated.

PO12 Development for the purposes of a sensitive use within 500m of land included in the High impact industry zone or Special purpose zone, or within 250m of land in the Medium impact industry zone: (a) achieves indoor noise levels consistent with the objectives set out in the Environmental Protection (Noise) Policy 2008; (b) achieves air quality levels consistent with the objectives set out in the Environmental Protection (Air) Policy 2008 and the relevant national standard; and (c) does not experience offensive odours.	No acceptable outcome is nominated.

Table 6.2.4.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Protection of natural values	
PO13 The site layout, size and design responds sensitively to on-site and surrounding topography, drainage patterns and ecological values by: (a) minimising earthworks; (b) maximising retention of natural drainage patterns; (c) ensuring existing drainage capacity is not reduced; (d) maximising the retention of existing vegetation; (e) providing buffers to protect the ecological functions of waterways; and (f) protecting environmental values and water quality objectives of receiving waters. **Editor's note—**The environmental values and water quality objectives are established under the Environmental Protection Policy (2009). For Townsville, they are specified in the Ross River Basin Environmental Values and Water Quality Objectives 2012 and Black River Basin Environmental Values and Water Quality Objectives (2012).	No acceptable outcome is nominated.

6.2.5 Character residential zone code

6.2.5.1 Application

This code applies to development where the code is identified as applicable in the categories of development and assessment.

When using this code, reference should be made to section 5.3.2 and where applicable, section 5.3.3 located in Part 5.

6.2.5.2 Purpose

(1) The purpose of the Character residential zone code is to provide for a particular character of a predominantly residential area.

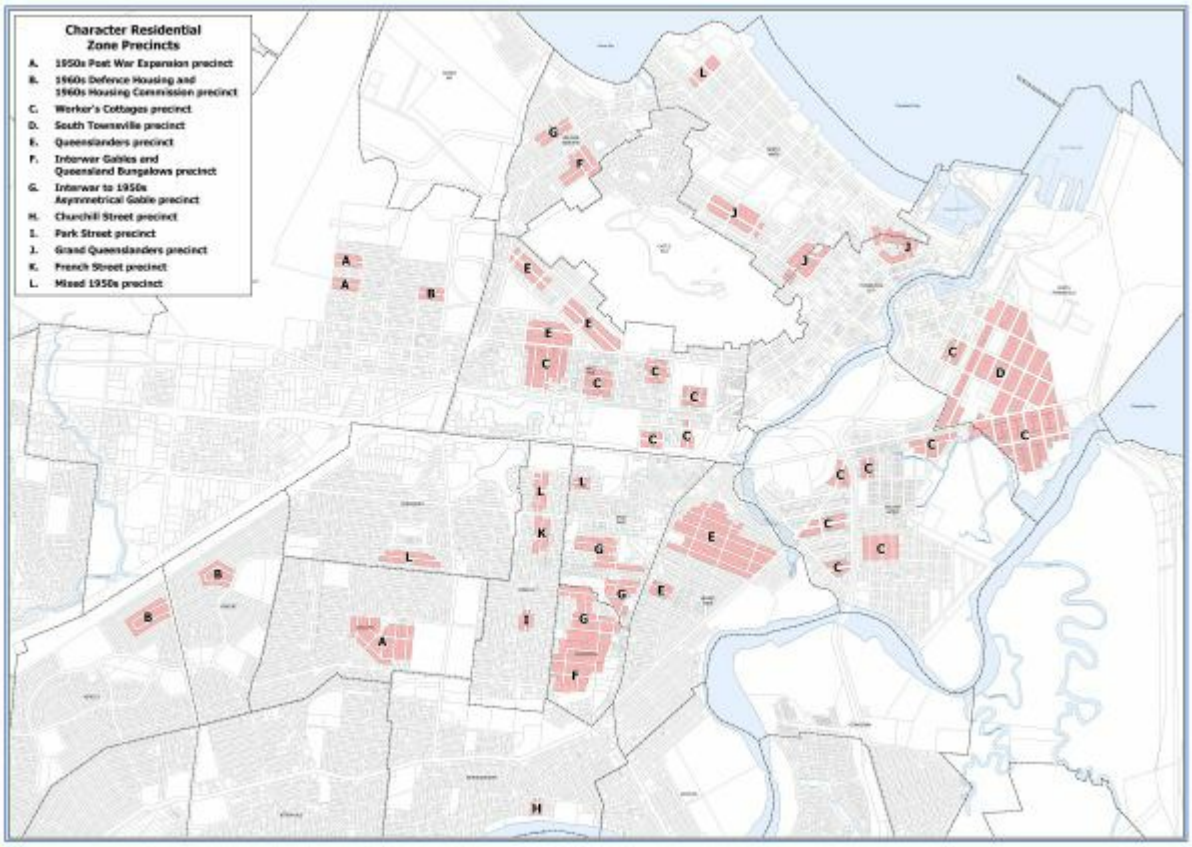
(2) The particular purpose of the code is to:

- (a) protect traditional character and streetscape values of the Character residential zone code by:
  - (i) preventing relocation off the site and demolition of contributing character buildings; and
  - (ii) ensuring the design of any new development is compatible with the places of character value within the zone.
- (b) primarily accommodate dwelling houses and ensure new development is sympathetic to the established character of the street or locality;
- (c) maintain a high level of residential amenity;
- (d) achieve accessible, well serviced and well-designed communities; and
- (e) maintain the low-rise and lower density character of Townsville's suburbs.

(3) The purpose of the zone will be achieved through the following overall outcomes:

- (a) contributing character buildings are protected and retained so they continue to contribute to the traditional character and amenity of the street and neighbourhood;
- (b) new development is limited to that which does not diminish the vernacular architectural character of houses or the traditional streetscape character;
- (c) new development incorporates design elements that are compatible with the established character;
- (d) reconfiguration of lots does not diminish the traditional streetscape character;
- (e) carports and garages do not dominate the frontage and are subservient to contributing character buildings;
- (f) dwelling houses are predominately low-rise, but may be low set or high set;
- (g) development maintains a high level of residential amenity on the site and in the precinct;
- (h) residential development is protected from the impacts of nearby industrial activities, transport corridors and infrastructure installations and major facilities such as the Port of Townsville, Townsville Airport and Department of Defence landholdings; and
- (i) non-residential uses only occur within the zone where they primarily support the day-to-day needs of the immediate residential community, do not unreasonably detract from the residential amenity, and are not better located in nearby centres.

Editor's note—The term "low set" refers to a building elevated 900mm or less. "High set" refers to buildings generally elevated 2,000mm above ground level.



Click here to view PDF high resolution map.

Figure 6.50 – Character residential zone precincts

(4) The purpose of the zone will also be achieved through the following additional overall outcomes for particular precincts:

1950s Post War Expansion precinct:

(a) this precinct consists mostly of compact, low set dwelling houses typical of the Queensland Housing Commission in the 1950s;

(b) buildings within this precinct have a low-set appearance and scale consistent with the predominant character of the precinct;

(c) built form maintains the existing setting and rhythm of the streetscape;

(d) the roof profile and overhang of buildings is consistent with that of contributing character buildings; and

(e) window scale and proportions of buildings are sympathetic to the predominant character of the precinct.

1960s Defence Housing and 1960s Housing Commission precinct:

(a) this precinct consists mostly of intact Defence housing and Queensland Housing Commission design homes of the 1960s;

(b) buildings within this precinct are elevated, generally high set, and light weight, ventilated design features, and maintains regularity of form and street presentation;

(c) the roof profile and overhang of buildings is consistent with that of contributing character buildings;

(d) window scale and proportions of buildings are sympathetic to the predominant character of the precinct; and

(e) enclosing the ground floor of a contributing character building does not have an adverse impact on the character of the building.

Worker's Cottages precinct:

(a) this precinct consists of low and high set Queensland worker's cottages and bungalows, constructed of lightweight materials;

(b) the consistent character of worker's cottages and interwar houses constructed of lightweight materials is maintained;

(c) buildings in this precinct have open facades which address the street and are consistent with the predominant front façade profile that contributes to the precinct's character;

(d) building floor level height in new development is consistent with adjoining contributing character buildings;

(e) enclosing the ground floor of a contributing character building does not have an adverse impact on the character of the building;

(f) the roof profile of buildings is consistent with that of contributing character buildings; and

(g) window scale and proportions of buildings are sympathetic to the predominant character of the precinct.

South Townsville precinct:

(a) this precinct contains predominantly low set Queensland worker's cottages and a large portion of non-residential facilities that are key attributes to the precinct's character;

(b) building floor level height in new development is consistent with adjoining contributing character buildings;

(c) enclosing the ground floor of a character building does not have an adverse impact on the character of the building;

(d) the roof profile of buildings is consistent with that of contributing character buildings;

(e) the front façade of buildings is consistent with the predominant front façade profiles of contributing character buildings and does not result in blank facades or facades with small openings;

(f) window scale and proportions of buildings are sympathetic to the predominant character of the precinct; and

(g) additions, alterations and adaptive reuse of existing non-residential contributing character buildings maintains the legibility of the historic use and is sympathetic to the prevailing residential character of the precinct.

Queenslanders precinct:

(a) this precinct consists of low and high set Queensland workers' cottages and bungalows;

(b) the consistent character of Queensland workers' cottages and interwar houses constructed of lightweight materials is maintained;

(c) building floor level height in new development is consistent with adjoining contributing character buildings;

(d) enclosing the ground floor of a contributing character building does not have an adverse impact on the character of the building;

(e) the roof profile of buildings is consistent with that of contributing character buildings;

(f) buildings have a verandah to the front façade which addresses the street and development does not result in blank facades or facades with small openings; and

(g) the subdivision pattern of the precinct is maintained.

Interwar Gables and Queensland Bungalows precinct:

(a) this precinct predominately consists of inter-war high-set dwelling houses and villa style residences with large workers' bungalows which have significant street presence;

(b) building floor level height in new development is consistent with adjoining contributing character buildings;

(c) enclosing the ground floor of a contributing character building does not have an adverse impact on the character of the building;

(d) the roof profile of buildings is consistent with that of contributing character buildings;

(e) the front facade of buildings is consistent with the predominant front facade profiles of contributing character buildings;

(f) window scale and proportions of buildings are sympathetic to the predominant character of the precinct;

(g) the front facade of buildings addresses and retains street presence; and

(h) the subdivision pattern of the precinct is maintained.

Interwar to 1950s Asymmetrical Gable precinct:

(a) the precinct consists of a mix of Queensland bungalows and inter-war designs;

(b) building floor level height in new development is consistent with adjoining contributing character buildings;

(c) enclosing the ground floor of a contributing character building does not have an adverse impact on the character of the building;

(d) the roof profile of buildings is consistent with that of contributing character buildings;

(e) window scale and proportions of buildings are sympathetic to the predominant character of the precinct;

(f) the front facade of buildings is consistent with the predominant front facade profiles of contributing character buildings; and

(g) the subdivision pattern of the precinct is maintained.

Churchill Street precinct:

(a) this precinct contains predominantly older detached, lightweight, post-war dwelling houses, displaying pre-war design elements;

(b) dwelling houses in this precinct are elevated and generally high set;

(c) building floor level height in new development is consistent with adjoining contributing character buildings;

(d) enclosing the ground floor of a contributing character building does not have an adverse impact on the character of the building;

(e) buildings within this precinct retain or enhance the setting and rhythm of the streetscape;

(f) the roof profile and overhang of buildings is consistent with that of contributing character buildings; and

(g) window scale and proportions of buildings are sympathetic to the predominant character of the precinct.

Park Street precinct:

(a) this precinct contains a mix of high and low set designs from the inter-war period;

(b) building floor level height in new development is consistent with adjoining contributing character buildings;

(c) enclosing the ground floor of a contributing character building does not have an adverse impact on the character of the building;

(d) buildings in this precinct retain or enhance the setting and rhythm of the streetscape;

(e) the roof profile and overhang of buildings is consistent with that of contributing character buildings;

(f) window scale and proportions of buildings are sympathetic to the predominant character of the precinct; and

(g) the front facade of buildings is consistent with the predominant front facade profiles of contributing character buildings.

Grand Queenslanders precinct:

(a) this precinct which contains Stanton Hill and Melton Hill, consists of large Queenslanders and other inter-war traditional timber buildings which have an iconic townscape appearance;

(b) building floor level height in new development is consistent with adjoining contributing character buildings;

(c) enclosing the ground floor of a contributing character building does not have an adverse impact on the character of the building;

(d) the roof profile of buildings is consistent with that of contributing character buildings; and

(e) the front facade of buildings is consistent with the predominant front facade profiles of contributing character buildings.

French Street precinct:

(a) this precinct consists of large inter-war gabled Queenslander dwelling houses;

(b) dwelling houses in this precinct are elevated and generally high set;

(c) building floor level height in new development is consistent with adjoining contributing character buildings;

(d) enclosing the ground floor of a contributing character building does not have an adverse impact on the character of the building;

(e) development maintains the uniformity and consistency of dwelling design style, setting and the rhythm of the streetscape;

(f) the roof profile and overhang of buildings is consistent with that of contributing character buildings;

(g) the front facade of buildings is consistent with the predominant front facade profiles of contributing character buildings; and

(h) window scale and proportions of buildings are sympathetic to the predominant character of the precinct.

Mixed 1950s precinct:

(a) the precinct contains older timber dwelling houses and gabled, inter-war and post-war designs;

(b) building floor level height in new development is consistent with adjoining contributing character buildings;

(c) enclosing the ground floor of a contributing character building does not have an adverse impact on the character of the building;

(d) the roof profile and overhang of buildings is consistent with that of contributing character buildings;

(e) window scale and proportions of buildings are sympathetic to the predominant character of the precinct;

and

(f) the front facade of buildings is consistent with the predominant front facade profiles of contributing character buildings.

6.2.5.3 Assessment benchmarks

Table 6.2.5.3—Accepted development subject to requirements and assessable development (Part)

Editor's note—This code contains alternative provisions for dwelling houses and dual occupancies to those set out in the Queensland Development Code (MP 1.1, MP 1.2 and MP1.3), for the purposes of section 33 of the *Building Act 1975*.

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
Home based business	
PO1 The use does not adversely impact on the amenity of the surrounding residential land uses and local character.	**AO1.1** The home based business: (a) is carried out in an existing building or structure; (b) does not use more than 60m² of the gross floor area of the building or structure; (c) involves at least one or more residents of the dwelling house; (d) involves not more than one non-resident employee; (e) where bed and breakfast accommodation does not exceed three bedrooms; (f) does not generate more than 1 heavy vehicle trip per week; **Editor's note—**A heavy vehicle is a vehicle with more than 4.5 tonnes gross vehicle mass. (g) does not generate more than 14 vehicle trips per day by other vehicles, where one trip includes arriving and departing the site. These trips are additional to normal domestic trips associated with the dwelling; (h) contains visitor parking within the site; (i) does not involve hiring out of materials, goods, appliances or vehicles; and (j) does not involve the repair or maintenance of vehicles, other than minor maintenance of vehicles used in conjunction of the home business on the site. **Editor's note—**Home based business operators should also refer to signage requirements under Table 5.8.2 - Operational work being placing an advertising device on a premises and Section 9.3.1-Advertising devices code.
	AO1.2 Functional aspects of the use such as service areas, material storage or use activities are not visible from the street.

	AO1.3 Other than where a bed and breakfast or home based childcare the business use does not operate outside the hours of 8am to 5pm Monday to Friday, 8am to 2pm Saturday and does not operate on Sunday.
	AO1.4 Noise levels do not exceed acoustic quality objectives under the Environmental Protection (Noise) Policy 2008.
PO2 Commercial vehicle parking: (a) has a direct nexus with a home based business carried out on the site; and (b) does not adversely affect the amenity of neighbouring properties.	**AO2.1** Not more than one commercial vehicle is parked on the site.
	AO2.2 While on-site, vehicles; (a) are not left idling for more than 5 minutes at any one time; and (b) do not have a refrigeration unit running.
	AO2.3 Any commercial vehicle does not exceed 4.5 tonnes gross vehicle mass and is housed behind the building line.

Table 6.2.5.3—Accepted development subject to requirements and assessable development (Part)

Editor's note—This code contains alternative provisions for dwelling houses and dual occupancies to those set out in the Queensland Development Code (MP 1.1, MP 1.2 and MP 1.3), for the purposes of section 33 of the *Building Act 1975*.

Performance outcomes	Acceptable outcomes
For assessable development	
Amenity	
PO3 Development minimises impacts on surrounding land and provides for an appropriate level of amenity within the site, having regard to: (a) noise; (b) hours of operation; (c) traffic; (d) visual impact; (e) odour and emissions; (f) lighting; (g) access to sunlight; (h) privacy; and (i) outlook.	No acceptable outcome is nominated.

PO4 Development for the purposes of a sensitive use within 500m of land included in the High impact industry zone or Special purpose zone, or within 250m of land in the Medium impact industry zone: (a) achieves indoor noise levels consistent with the objectives set out in the Environmental Protection (Noise) Policy 2008; (b) achieves air quality levels consistent with the objectives set out in the Environmental Protection (Air) Policy 2008 and the relevant national standard; and (c) does not experience offensive odours.	No acceptable outcome is nominated.

Table 6.2.5.3—Accepted development subject to requirements and assessable development (Part)

Editor's note–This code contains alternative provisions for dwelling houses and dual occupancies to those set out in the Queensland Development Code (MP 1.1, MP 1.2 and MP 1.3), for the purposes of section 33 of the *Building Act 1975*.

Performance outcomes	Acceptable outcomes
For assessable development	
Crime prevention through environmental design	
PO5 Development facilitates the security of people and property having regard to: (a) opportunities for casual surveillance and sight lines; (b) exterior building design that promotes safety; (c) adequate lighting; (d) appropriate signage and way finding; (e) minimisation of entrapment locations; and (f) building entrances, loading and storage areas that are well lit and lockable after hours. **Editor's note–**Applicants should have regard to Crime Prevention through Environmental Design Guidelines for Queensland.	No acceptable outcome is nominated.
PO6 Development minimises impacts on remaining areas of ecological significance within the zone.	No acceptable outcome is nominated.

Table 6.2.5.3—Accepted development subject to requirements and assessable development (Part)

Editor's note–This code contains alternative provisions for dwelling houses and dual occupancies to those set out in the Queensland Development Code (MP 1.1, MP 1.2 and MP 1.3), for the purposes of section 33 of the *Building Act 1975*.

Performance outcomes	Acceptable outcomes
For assessable development	
Demolition and removal	
PO7 The removal, relocation or a partial or total demolition of a contributing character building only occurs if it can be demonstrated that the: (a) total or partial loss of the building will not contribute to the loss of the character values; (b) total or partial loss of the building will not impact on the rhythm of the streetscape; or (c) the building or part proposed for demolition is not capable of structural repair.	No acceptable outcome is nominated. **Editor's note–**An impact statement produced by a suitably qualified professional may be required to demonstrate that there is no adverse impact on the character of the precinct due to the loss of the place, or a suitably qualified professional provides a report on the buildings condition, demonstrating that the place is not capable of repair. **Editor's note–**Applicants should have regard to the Character Residential planning scheme policy no. SC6.2 for guidance on how to write an impact statement.

Table 6.2.5.3—Accepted development subject to requirements and assessable development (Part)

Editor's note–This code contains alternative provisions for dwelling houses and dual occupancies to those set out in the Queensland Development Code (MP 1.1, MP 1.2 and MP 1.3), for the purposes of section 33 of the *Building Act 1975*.

Performance outcomes	Acceptable outcomes
For assessable development	
Carports and garages	
PO8 When viewed from a street, ancillary buildings such as carports and garages: (a) do not visually dominate the streetscape character; (b) are subservient to existing buildings on the site; (c) do not detract from the character or appearance of the contributing character buildings; and (d) are consistent with the established rhythm of the streetscape.	**AO8** Class 10a structures such as carports, garages: (a) are set back an equal or greater distance from the street as the main building; (b) have a maximum width not exceeding 3m; (c) do not have a garage door or solid face presented to the street; (d) are detached or semi-detached structures with minimum carport roof gap to the building face of 0.6m (as shown in Figure 6.51 – Appropriate carport or garage type and roof gap); (e) have a roof pitch which matches the main building's predominant roof pitch or has a roof pitch no greater than 3 degrees (as shown in Figure 6.52 - Appropriate roof pitch of a carport or garage); (f) have their highest point lower or equal to the gutter/facia level of the main building (as shown in Figure 6.53 - Appropriate height relative to the main building); and (g) are built using materials that complement the existing dwelling (as shown in Figure 6.54 - Appropriate complementary building materials).

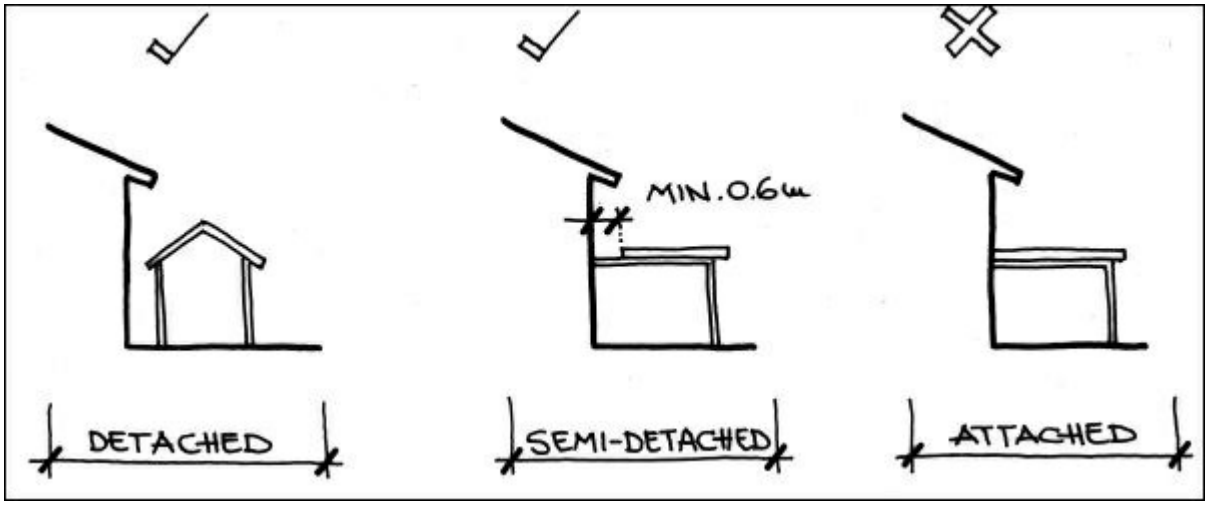

Figure 6.51 - Appropriate carport or garage type and roof gap

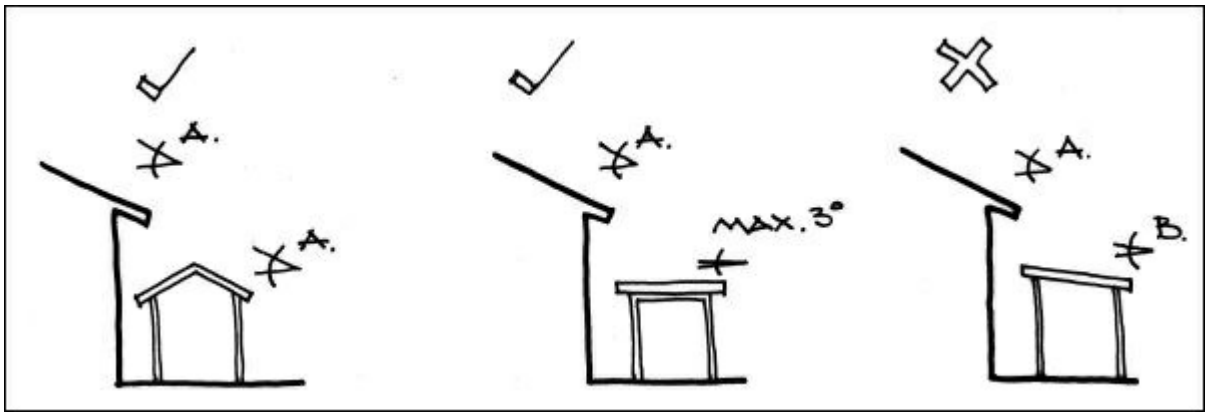

Figure 6.52 - Appropriate roof pitch of a carport or garage

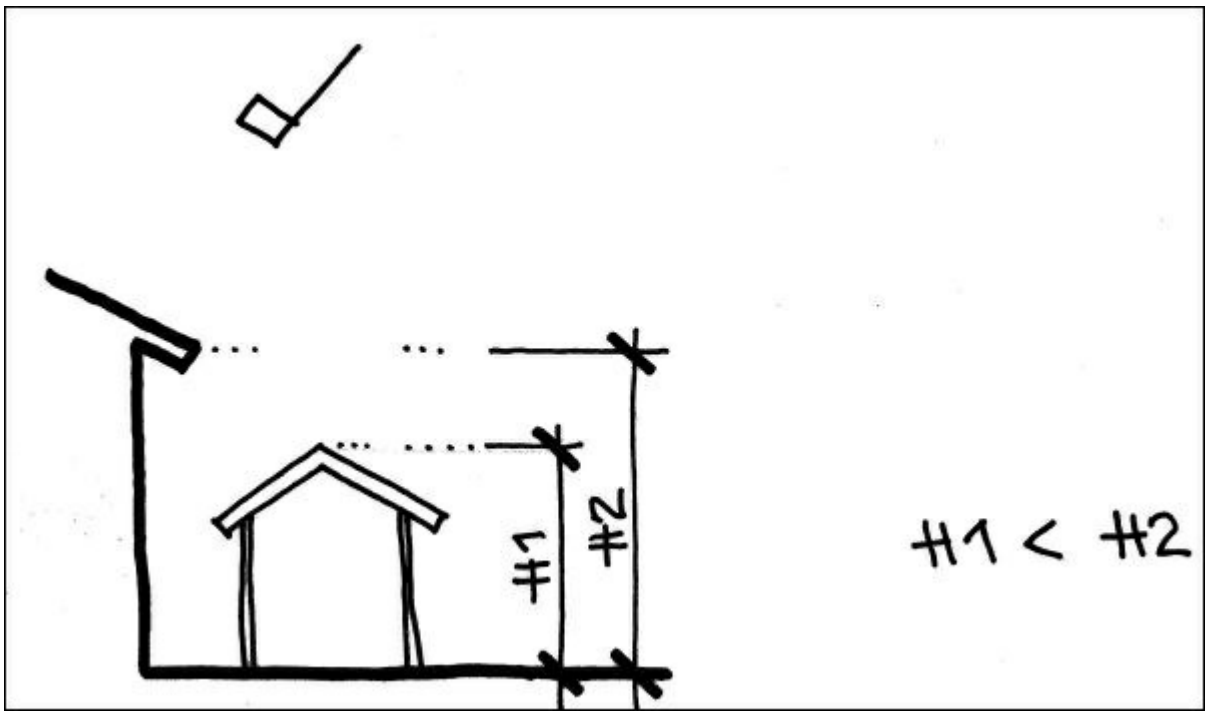

Figure 6.53 - Appropriate height relative to the main building

Figure 6.54 - Appropriate complementary building materials

Table 6.2.5.3—Accepted development subject to requirements and assessable development (Part)

Editor's note—This code contains alternative provisions for dwelling houses and dual occupancies to those set out in the Queensland Development Code (MP 1.1, MP 1.2 and MP 1.3), for the purposes of section 33 of the *Building Act 1975*.

Performance outcomes	Acceptable outcomes
For assessable development - where a non-residential use	
PO9 Non-residential uses establish only where: (a) compatible with local character and amenity; (b) limited in scale and supporting the day-to-day needs of the local community; and (c) not impacting on the role and function of the city's network of centres or more appropriately located in another zone.	No acceptable outcome is nominated. **Editor's note—**Applicants should have regard to the Economic impact assessment planning scheme policy no SC6.5 for guidance on how to demonstrate compliance with this performance outcome.
PO10 Development is of a house compatible scale.	**AO10.1** The use only involves minor building work. OR
	AO10.2 Where a new building is proposed: (a) buildings and other structures do not exceed 8.5m or 2 storeys in building height, whichever is the lesser; (b) the building does not exceed 250m² in gross floor area; (c) site cover does not exceed 60%; and (d) the maximum length of any wall is 12m.

Table 6.2.5.3—Accepted development subject to requirements and assessable development (Part)

Editor's note—This code contains alternative provisions for dwelling houses and dual occupancies to those set out in the Queensland Development Code (MP 1.1, MP 1.2 and MP 1.3), for the purposes of section 33 of the *Building Act 1975*.

Performance outcomes	Acceptable outcomes
For assessable development	
Reconfiguring a lot	
PO11 Reconfiguration of lots is consistent with the predominant subdivision pattern of the precinct.	No acceptable outcome is nominated. **Editor's note—**Applicants should have regard to the Character residential planning scheme policy no. SC6.2 for guidance on how to demonstrate compliance with this performance outcome.

Table 6.2.5.3—Accepted development subject to requirements and assessable development (Part)

Editor's note—This code contains alternative provisions for dwelling houses and dual occupancies to those set out in the Queensland Development Code (MP 1.1, MP 1.2 and MP 1.3), for the purposes of section 33 of the *Building Act 1975*.

Performance outcomes	Acceptable outcomes
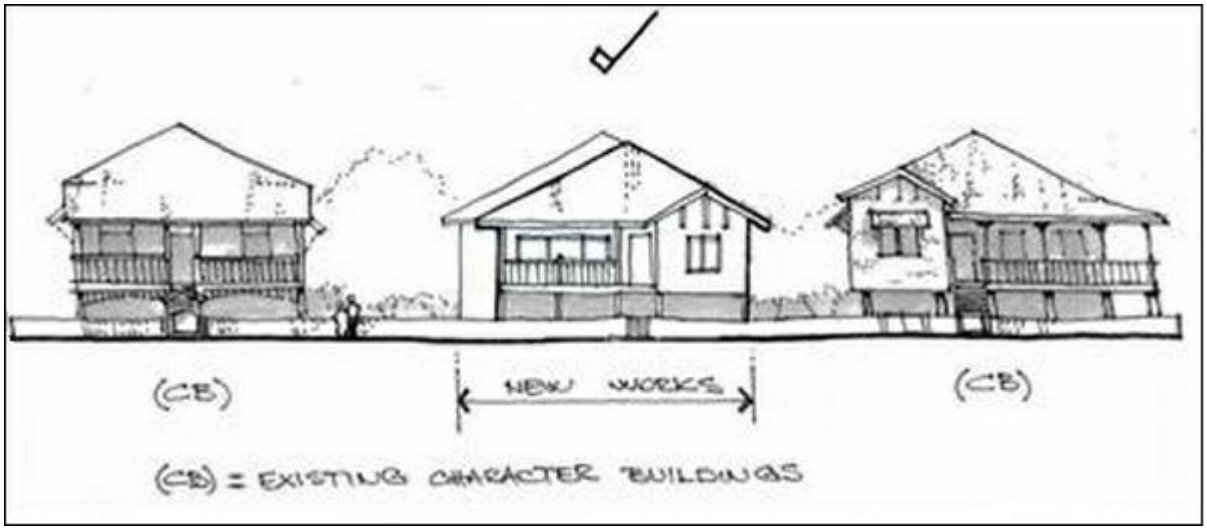
For assessable development — where a new building, relocation of a contributing character building within the site or extension or alteration to an existing contributing character building	
PO12 Building height is consistent to adjoining contributing character buildings.	**AO12.1** Development does not involve raising or lowering a dwelling by more than 1m.
	AO12.2 Unless otherwise stated for a particular precinct, buildings and structures do not exceed 8.5m or 2 storeys in building height, whichever is the lesser.
PO13 The existing setting and rhythm of the streetscape is retained and enhanced.	**AO13.1** Buildings and extensions are setback from street frontages within 10% of the average front setback of adjoining contributing character buildings. Figure 6.55 — Appropriate front setbacks illustrates.  **Figure 6.55 — Appropriate front setbacks**

	AO13.2 Unless otherwise stated for a particular precinct, the front facade width of the building is the same as the front facade width of the adjoining contributing character buildings, to a minimum depth of 3m. Figure 6. 56 — Appropriate front facade width illustrates.  **Figure 6.56 — Appropriate front facade width**
PO14 Buildings maintain the regularity of building form and street presentation. **Editor's note**—Applicants should have regard to the Character residential planning scheme policy no. SC6.2 for guidance on how to demonstrate compliance with this performance outcome. Figure 6.57 — Street presentation provides indicative guidance.	No acceptable outcome is nominated.



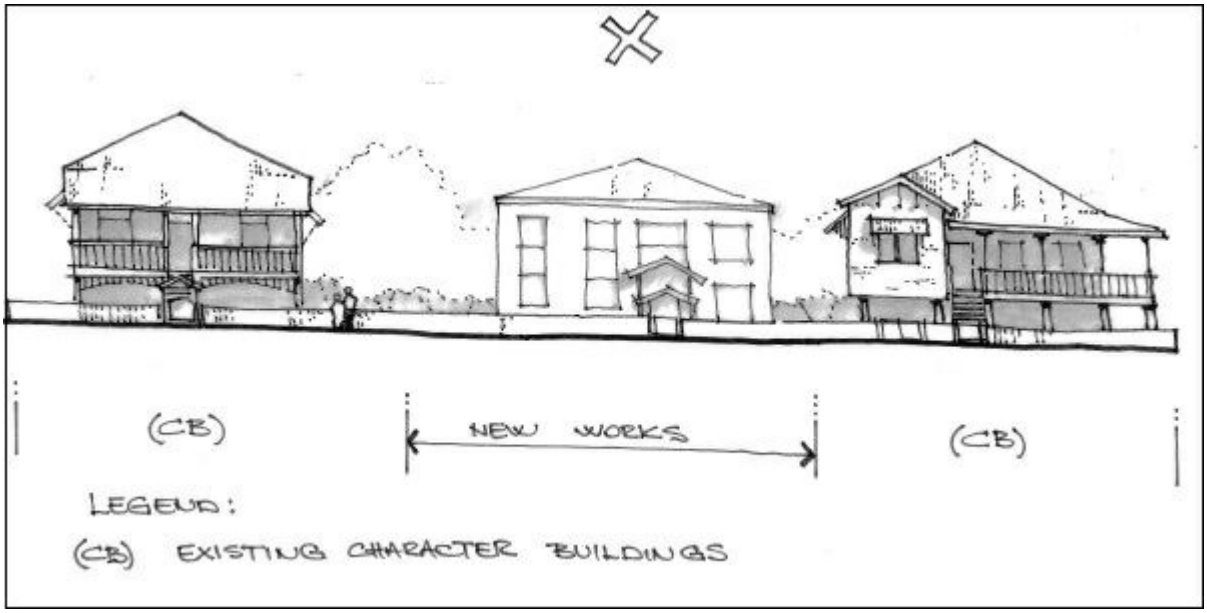


Figure 6.57 – Street presentation

PO15 Buildings use materials that have a lightweight appearance, and assist in reducing building bulk and form. **Editor's note—**Applicants should have regard to the Character planning scheme policy no. SC6.2 for guidance on how to demonstrate compliance with this performance outcome.	**AO15.1** Walls are clad with lightweight materials with an expressed surface profile.
	AO15.2 Roofs are clad with corrugated iron.
	AO15.3 Windows are timber framed or have the appearance of being timber.

Table 6.2.5.3—Accepted development subject to requirements and assessable development (Part)

Editor's note—This code contains alternative provisions for dwelling houses and dual occupancies to those set out in the Queensland Development Code (MP 1.1, MP 1.2 and MP 1.3), for the purposes of section 33 of the *Building Act 1975*.

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
1950s Post War Expansion precinct	
PO16 Buildings have a low-set appearance and scale consistent with the predominant character of the precinct.	**AO16.1** Building height does not exceed 1 storey.
	AO16.2 Dwelling houses have elevated floor levels between 600mm to 750mm above ground level.
PO17 The existing setting and rhythm of the streetscape is retained and enhanced.	**AO17** The front facade width is 8m to 11m wide, to a minimum depth of 3m. Figure 6.58 - 1950s Post War Expansion precinct (Parsons street) illustrates. **Figure 6.58 - 1950s Post War Expansion precinct (Parsons Street)**
PO18 The roof profile is consistent with the predominant roof profile of dwellings that contribute to the precinct's character. **Editor' note—**Applicants should have regard to the Character residential planning scheme policy no SC6.2 for guidance on how todemonstrate compliance with this performance outcome.	**AO18** The roof profile is: (a) hipped with a 15 degree to 22.5 degree pitch; or (b) hipped with a 15 degree to 22.5 degree pitch incorporating a hipped or gabled projection towards the street.

PO19 The roof overhang is consistent with the predominant roof overhang of contributing character buildings. **Editor' note—**Applicants should have regard to the Character residential planning scheme policy no SC6.2 for guidance on how to demonstrate compliance with this performance outcome.	**AO19** Roof overhangs are: (a) 600mm wide; and (b) gable end overhangs are 300mm to 400mm wide.
PO20 Window scale and proportions are sympathetic to the predominant character of the precinct. **Editor's note—**Applicants should have regard to the Character residential planning scheme policy no. SC6.2 for guidance on how to demonstrate compliance with this performance outcome.	**AO20** Windows are half-height with 2, 3, or 4 vertically proportioned frames, where the frame height is greater than its width by a 3:1 ratio. Figure 6.59 - Half-height vertically proportioned frames in the 1950s Post War Expansion precinct (Kent street) illustrates. **Figure 6.59 - Half-height vertically proportioned frames in the 1950s Post War Expansion precinct (Kent Street)**

Table 6.2.5.3—Accepted development subject to requirements and assessable development (Part)

Editor's note—This code contains alternative provisions for dwelling houses and dual occupancies to those set out in the Queensland Development Code (MP 1.1, MP 1.2 and MP 1.3), for the purposes of section 33 of the *Building Act 1975*.

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
1960s Defence Housing and 1960s Housing Commission precinct	
PO21 The roof profile is consistent with the predominant roof profile of the contributing character buildings. **Editor' note—**Applicants should have regard to the Character residential planning scheme policy no SC6.2 for guidance on how to demonstrate compliance with this performance outcome.	**AO21** The roof profile is simple gabled or simple hipped with a 10 degree to 15 degree roof pitch.
PO22 The roof overhang is consistent with the predominant roof overhang of the contributing character buildings. **Editor' note—**Applicants should have regard to the Character residential planning scheme policy no SC6.2 for guidance on how to demonstrate compliance with this performance outcome.	**AO22** Roof overhangs are 750mm to 900mm wide.
PO23 Window scale and proportions are sympathetic to the predominant contributing character of the precinct. **Editor's note—**Applicants should have regard to the Character residential planning scheme policy no. SC6.2 for guidance on how to demonstrate compliance with this performance outcome.	No acceptable outcome is nominated.
PO24 Enclosing the ground floor storey of a building does not have an adverse impact on the character of the building and ensures the original fabric of the building is identifiable.	**AO24** Development on any ground floor storey is: (a) semi-enclosed with timber battens from view; and (b) aligned with the upper levels walls. Figure 6.60 - Appropriate enclosure to the ground floor in the 1960s Defence Housing and 1960s Housing Commission precinct (Pixley Street) illustrates. **Figure 6.60 — Appropriate enclosure to the ground floor in the 1960s Defence Housing and 1960s Housing Commission precinct (Pixley Street)**

Table 6.2.5.3—Accepted development subject to requirements and assessable development (Part)

Editor's note—This code contains alternative provisions for dwelling houses and dual occupancies to those set out in the Queensland Development Code (MP 1.1, MP 1.2 and MP 1.3), for the purposes of section 33 of the *Building Act 1975*.

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Worker's Cottages precinct	
PO25 Building height and building floor level height are consistent to adjoining contributing character buildings.	**AO25** Dwelling houses: (a) have a floor level minimum of 700mm above ground level; or (b) are 2 storeys.
PO26 The front facade includes a verandah consistent with the predominant front facade profile of the contributing character buildings.	**AO26.1** The front facade includes an open or semi-enclosed front verandah for a minimum 60% width of the front facade; OR **AO26.2** Enclosed verandahs are articulated with openings such as windows, louvers or screens, continuously across 60% or more of the front facade of the dwelling and wrap around one or both sides of the front facade for a minimum of 2m and the enclosure is capable of being reversed. Figure 6.61 - A front verandah in the Worker's Cottages precinct (Castling Street) illustrates. **Figure 6.61 — A front verandah in the Worker's Cottages precinct (Castling Street)**

PO27 Enclosing the ground floor storey of a building does not have an adverse impact on the character of the building and ensures the original fabric of the building is identifiable.	**AO27** Development on any ground floor storey includes a valance, and: (a) is set back the full depth of all open or enclosed verandahs; or (b) is set back 1m from the upper level of an exterior wall where there is no verandah. Figure 6.62 - Appropriate enclosures to the ground floor illustrates. **Figure 6.62 — Appropriate enclosures to the ground floor**
PO28 The roof profile is consistent with the predominant roof profile of the contributing character buildings. **Editor's note—**Applicants should have regard to the Character residential planning scheme policy no. SC6.2 for guidance on how to demonstrate compliance with this performance outcome.	**AO28.1** The roof profile is simple hipped or pyramid with a 15 degree to 25 degree roof pitch.
	AO28.2 Verandahs are contained under the main roof form, or roofed separately with skillion or gently curved roofs.
PO29 Window scale and proportions, and window hoods and awnings are sympathetic to the predominant character of the precinct. **Editor' note**—Applicants should have regard to the Character residential planning scheme policy no SC6.2 for guidance on how to demonstrate compliance with this performance outcome.	**AO29.1** The windows are half-height with vertically proportioned frames, where the frame height is greater than its width by a 3:1 ratio.
	AO29.2 Where windows are not sheltered by a verandah or roof overhang (which has a minimum overhang of 600mm), window hoods are provided.

Table 6.2.5.3—Accepted development subject to requirements and assessable development (Part)

Editor's note—This code contains alternative provisions for dwelling houses and dual occupancies to those set out in the Queensland Development Code (MP 1.1, MP 1.2 and MP 1.3), for the purposes of section 33 of the *Building Act 1975*.

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
South Townsville precinct	
PO30 Building height and building floor level height are consistent to adjoining contributing character buildings. **Editor's note**—Applicants should have regard to the Character residential planning scheme policy no SC6.2 for guidance on how to demonstrate compliance with this performance outcome.	**AO30** Dwelling houses: (a) have a floor level minimum of 700mm above ground level; or (b) are 2 storeys.
PO31 The front facade is articulated with openings consistent with the predominant front facade profile of the contributing character buildings. **Editor's note—**Applicants should have regard to the Character residential planning scheme policy no. SC6.2 for guidance on how to demonstrate compliance with this performance outcome.	**AO31.1** The front façade includes an open or semi-enclosed front verandah, at a minimum 60% width of the front facade. OR **AO31.2** Enclosed verandahs are articulated with openings such as windows, louvers or screens, continuously across 60% or more of the front facade of the dwelling and wrap around one or both sides of the front facade for a minimum of 2m and the enclosure is capable of being reversed.
	AO31.3 Where the front facade exceeds 8.5m in width, the front verandah wraps around one or both sides of the dwelling house.
PO32 Enclosing the ground floor storey of a building does not have an adverse impact on the character of the building and ensures the original fabric of the building is identifiable.	**AO32** Development on any ground floor storey includes a valance, and: (a) is set back the full depth of all open or enclosed verandahs; or (b) is set back 1m from the upper level of an exterior wall where there is no verandah; Figure 6.63 - appropriate enclosures to the ground floor illustrates.  **Figure 6.63 — Appropriate enclosures to the ground floor**

PO33 The roof profile is consistent with the predominant roof profile of the contributing character buildings. **Editor's note**—Applicants should have regard to the Character residential planning scheme policy no SC6.2 for guidance on how to demonstrate compliance with this performance outcome.	**AO33.1** The roof profile is: (a) simple hipped or pyramid with a 15 degree to 25 degree roof pitch; or (b) side gabled with a 15 degree to 25 degree roof pitch.
	AO33.2 Verandahs are contained under the main roof form, or roofed separately with skillion or gently curved roofs.
PO34 Window scale and proportions and window hoods or awnings are sympathetic to the dominant character of the precinct. **Editor's note**—Applicants should have regard to the Character residential planning scheme policy no SC6.2 for guidance on how to demonstrate compliance with this performance outcome.	**AO34.1** The windows are half-height with vertically proportioned frames, where the frame height is greater than its width by a 3:1 ratio.
	AO34.2 Where windows are not sheltered by a verandah or roof overhang (which has a minimum overhang of 600mm), window hoods are provided. Figure 6.64 - vertically proportioned frames with window hoods in the South Townsville precinct (Bell Street) illustrates. **Figure 6.64 — Vertically proportioned frames with window hoods in the South Townsville precinct (Bell Street)**
PO35 Additions, alterations and adaptive reuse of existing contributing non-residential character buildings maintain the legibility of the historic use and are sympathetic to the prevailing residential character of the precinct.	No acceptable outcome is nominated. **Editor's note**—Applicants should have regard to the Character residential planning scheme policy no SC6.2 for guidance on how to demonstrate compliance with this performance outcome.

Table 6.2.5.3—Accepted development subject to requirements and assessable development (Part)

Editor's note—This code contains alternative provisions for dwelling houses and dual occupancies to those set out in the Queensland Development Code (MP 1.1, MP 1.2 and MP 1.3), for the purposes of section 33 of the *Building Act 1975*.

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Queenslanders precinct	
PO36 Building height and building floor level height are consistent to adjoining contributing character buildings.	**AO36** Dwelling houses: (a) have a floor level minimum of 700mm above ground level; or (b) are 2 storeys.
PO37 The front facade includes a verandah consistent with the predominant front facade profile of contributing character buildings. **Editor's note—**Applicants should have regard to the Character residential planning scheme policy no. SC6.2 for guidance on how to demonstrate compliance with this performance outcome.	**AO37.1** The front facade includes an open or semi-enclosed front verandah across, at a minimum 60% width of the front facade.
	AO37.2 Where the front facade exceeds 9m in width the front verandah wraps around one or both sides of the dwelling house. Figure 6.65 - A front verandah that wraps around both sides in the Queenslanders precinct (Ackers Street) illustrates. **Figure 6.65 — A front verandah that wraps around both sides in the Queenslanders precinct (Ackers Street)**

PO38 Enclosing the ground floor storey of a building does not have an adverse impact on the character of the building and ensures the original fabric of the building is identifiable.	**AO38** Development on any ground floor storey includes a valance, and: (a) is set back the full depth of all open or enclosed verandahs; or (b) is set back 1m from the upper level of an exterior wall where there is no verandah. Figure 6.66 - Appropriate enclosures to the ground floor illustrates.  **Figure 6.66 — Appropriate enclosures to the ground floor**
PO39 Reconfiguration of a lot maintains the existing layout, streetscape character and subdivision pattern of the precinct and is consistent with the established rhythm of the streetscape. **Editor's note—**This Performance outcome varies from Performance outcome 28 in Section 9.3.4 Reconfiguring a lot code and does take precedence.	**AO39** The side boundary of the new lot maintains the existing side boundary depth. Figure 6.67 - Lot design illustrates.  **Figure 6.67 - Lot design**
PO40 The roof profile is consistent with the predominant roof profile of contributing character buildings. **Editor's note**—Applicants should have regard to the Character residential planning scheme policy no SC6.2 for guidance on how to demonstrate compliance with this performance outcome.	**AO40.1** The roof profile of new building works is a simple hipped or pyramid main roof with a 17.5 degree to 27.5 degree roof pitch. **AO40.2** Verandahs are contained under the main roof form, or roofed separately with a skillion roof.

Table 6.2.5.3—Accepted development subject to requirements and assessable development (Part)

Editor's note—This code contains alternative provisions for dwelling houses and dual occupancies to those set out in the Queensland Development Code (MP 1.1, MP 1.2 and MP 1.3), for the purposes of section 33 of the *Building Act 1975*.

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Interwar Gables and Queensland Bungalows precinct	
PO41 Building height and building floor level height are consistent to adjoining contributing character buildings.	**AO41** Dwelling houses: (a) have a floor level minimum of 700mm above ground level; or (b) are 2 storeys.
PO42 The front facade is articulated with openings consistent with the predominant front facade profile of contributing character buildings. **Editor's note—**Applicants should have regard to the Character residential planning scheme policy no. SC6.2 for guidance on how to demonstrate compliance with this performance outcome.	**AO42** The front facade includes: (a) an open front verandah; or (b) an enclosed or semi-enclosed front verandah with window, louvres or screens continuous across the front facade of the dwelling. Figure 6.68 - A front verandah in the Interwar Gables and Queensland Bungalows precinct (McKillop Street) illustrates. Figure 6.69 - An enclosed front verandah with continuous windows across the front facade in the Interwar Gables and Queensland Bungalows precinct (Chapman Street) illustrates. **Figure 6.68 — A front verandah in the Interwar Gables and Queensland Bungalows precinct (McKillop Street)** **Figure 6.69 — An enclosed front verandah with continuous windows across the front facade in the Interwar Gables and Queensland Bungalows precinct (Chapman Street)**

PO43 Enclosing the ground floor storey of a building does not have an adverse impact on the character of the building and ensures the original fabric of the building is identifiable.	**AO43** Development on any ground floor storey includes a valance and: (a) is set back the full depth of all open or enclosed verandahs; or (b) is set back 1m from the upper level of an exterior wall where there is no verandah. Figure 6.70 - Appropriate enclosures to the ground floor illustrates.  **Figure 6.70 — Appropriate enclosures to the ground floor**
PO44 Reconfiguration of a lot maintains the existing layout, streetscape character and subdivision pattern of the precinct and is consistent with the established rhythm of the streetscape. **Editor's note—**This Performance outcome varies from Performance outcome 28 in Section 9.3.4 Reconfiguring a lot code and does take precedence.	**AO44** The side boundary of the new lot maintains the existing side boundary depth. Figure 6.71 - Lot design illustrates.  **Figure 6.71 - Lot design**
PO45 The roof profile is consistent with the predominant roof profile of contributing character buildings. **Editor's note**—Applicants should have regard to the Character residential planning scheme policy no SC6.2 for guidance on how to demonstrate compliance with this performance outcome.	**AO45.1** The roof profile is: (a) simple hipped or pyramid, roofed with asymmetrical gable projections with a 22.5 degree to 27.5 degree roof pitch; or (b) gable fronted with asymmetrical gable projections with a 17.5 degree to 22.5 degree roof pitch.
	AO45.2 The primary roof form extends over the entire floor plan, including any front or side verandahs.

PO46 Window scale and proportions are sympathetic to the predominant contributing character of the precinct. **Editor's note**—Applicants should have regard to the Character residential planning scheme policy no SC6.2 for guidance on how to demonstrate compliance with this performance outcome.	**AO46.1** Windows are half-height with vertically proportioned frames, where the frame height is greater than its width by a 3:1 ratio.
	AO46.2 Windows below front gabled roofs: (a) are located symmetrically under the apex gable; and (b) have a minimum of two vertically proportioned frames or have bay windows. Figure 6.72 - Half-height vertically proportioned window located symmetrically under gable in the Interwar Gables and Queensland Bungalows precinct (Lawson Street) illustrates. **Figure 6.72 — Half-height vertically proportioned window located symmetrically under gable in the Interwar Gables and Queensland Bungalows precinct (Lawson Street)**

Table 6.2.5.3—Accepted development subject to requirements and assessable development (Part)

Editor's note—This code contains alternative provisions for dwelling houses and dual occupancies to those set out in the Queensland Development Code (MP 1.1, MP 1.2 and MP 1.3), for the purposes of section 33 of the *Building Act 1975*.

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Interwar to 1950s Asymmetrical Gable precinct	
PO47 Building height and building floor level height are consistent to adjoining contributing character buildings.	**AO47** Dwelling houses: (a) have a floor level minimum of 700mm above ground level; or (b) are 2 storeys.

PO48 The front facade profile is articulated consistent with the predominant front façade profile of contributing character buildings. **Editor's note—**Applicants should have regard to the Character residential planning scheme policy no. SC6.2 for guidance on how to demonstrate compliance with this performance outcome.	**AO48** The front facade includes: (a) asymmetrical projecting building forms, or steps in plan, a minimum of 1.2m in depth; or (b) open or semi-enclosed front verandah across the full width of the building. Figure 6.73 — Asymmetrical projecting building forms for a minimum 1.2m in depth (Burton Street) illustrates. **Figure 6.73 — Asymmetrical projecting building forms for a minimum 1.2m in depth (Burton Street)**
PO49 Enclosing the ground floor storey of a building does not have an adverse impact on the character of the building and ensures the original fabric of the building is identifiable.	**AO49** Development on any ground floor storey includes a valance, and: (a) is set back the full depth of all open or enclosed verandahs; or (b) is set back 1m from the upper level of an exterior wall where there is no verandah. Figure 6.74 - Appropriate enclosures to the ground floor illustrates.  **Figure 6.74 - Appropriate enclosures to the ground floor**

PO50 Reconfiguration of a lot maintains the existing layout, streetscape character and subdivision pattern of the precinct and is consistent with the established rhythm of the streetscape. **Editor's note—**This Performance outcome varies from Performance outcome 28 in Section 9.3.4 Reconfiguring a lot code and does take precedence.	**AO50** The side boundary of the new lot maintains the existing side boundary depth. Figure 6.75 - Lot design illustrates.  **Figure 6.75 - Lot design**
PO51 The roof profile is consistent with the predominant roof profile of contributing character buildings. **Editor's note**—Applicants should have regard to the Character residential planning scheme policy no SC6.2 for guidance on how to demonstrate compliance with this performance outcome.	**AO51.1** The roof form is: (a) simple hipped or pyramid with a 22.5 degree to 30 degree roof pitch with asymmetrical gable projections; or (b) gable fronted with a 17.5 degree to 22.5 degree roof pitch with asymmetrical gable projections. **AO51.2** Where front verandahs are included, they are contained under the main roof form.
PO52 Window scale and proportions are sympathetic to the predominant contributing character of the precinct. **Editor's note**—Applicants should have regard to the Character residential planning scheme policy no SC6.2 for guidance on how to demonstrate compliance with this performance outcome.	**AO52.1** Windows have a minimum of 3 vertically proportioned frames, where the frame height is greater than its width by a 3:1 ratio. **AO52.2** Windows below front gabled roofs: (a) are located symmetrically under the apex gable; and (b) have a minimum of two vertically proportioned frames or have bay windows. Figure 6.76 - Symmetrically located bay windows under gable (Hooper Street) illustrates. **Figure 6.76 — Symmetrically located bay windows under gable (Hooper Street)**

Table 6.2.5.3—Accepted development subject to requirements and assessable development (Part)

Editor's note—This code contains alternative provisions for dwelling houses and dual occupancies to those set out in the Queensland Development Code (MP 1.1, MP 1.2 and MP 1.3), for the purposes of section 33 of the *Building Act 1975*.

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Churchill Street precinct	
PO53 Building height and building floor level height are consistent to adjoining contributing character buildings.	No acceptable outcome nominated.
PO54 The existing setting and rhythm of the streetscape is retained and enhanced.	**AO54** The front facade width is 11.5m to 13.5m wide.
PO55 Enclosing the ground floor storey of a building does not have an adverse impact on the character of the building and ensures the original fabric of the building is identifiable.	**AO55** Development on any ground floor storey includes a valance, and: (a) is set back the full depth of all open or enclosed verandahs; or (b) is set back 1m from the upper level of an exterior wall where there is no verandah. Figure 6.77 - Appropriate enclosures to the ground floor illustrates.  **Figure 6.77 — Appropriate enclosures to the ground floor**
PO56 The roof profile is consistent with the predominant roof profile of contributing character buildings. **Editor's note**—Applicants should have regard to the Character residential planning scheme policy no SC6.2 for guidance on how to demonstrate compliance with this performance outcome.	**AO56** The roof pitch is between 15 degree to 20 degree.
PO57 The roof overhang is consistent with the predominant roof overhang of contributing character buildings. **Editor's note**—Applicants should have regard to the Character residential planning scheme policy no SC6.2 for guidance on how to demonstrate compliance with this performance outcome.	**AO57** Roof overhangs are 450mm to 750mm wide.
PO58 Window scale and proportions are sympathetic to the predominant contributing character of the precinct. **Editor's note—**Applicants should have regard to the Character residential planning scheme policy no. SC6.2 for guidance on how to demonstrate compliance with this performance outcome.	**AO58** Windows are half height with a minimum of 3 vertically proportioned frames, where the frame height is greater than its width by a 3:1 ratio.

Table 6.2.5.3—Accepted development subject to requirements and assessable development (Part)

Editor's note—This code contains alternative provisions for dwelling houses and dual occupancies to those set out in the Queensland Development Code (MP 1.1, MP 1.2 and MP 1.3), for the purposes of section 33 of the *Building Act 1975*.

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Park Street precinct	
PO59 Building height and building floor level height are consistent to adjoining contributing character buildings.	**AO59** Dwelling houses: (a) have a floor level minimum of 700mm above ground level; or (b) are 2 storeys.
PO60 The front facade openings are consistent with the predominant front facade profile of contributing character buildings. **Editor's note—**Applicants should have regard to the Character residential planning scheme policy no. SC6.2 for guidance on how to demonstrate compliance with this performance outcome.	**AO60.1** The front facade includes: (a) a front verandah; or (b) a bay window.
	AO60.2 Enclosed verandahs are articulated with openings such as windows, louvers or screens, continuously across the full width of the verandah.
PO61 Enclosing the ground floor storey of a building does not have an adverse impact on the character of the building and ensures the original fabric of the building is identifiable.	**AO61** Development on any ground floor storey includes a valance, and: (a) is set back the full depth of all open or enclosed verandahs; or (b) is set back 1m from the upper level of an exterior wall where there is no verandah. Figure 6.78 - Appropriate enclosures to the ground floor illustrates.  **Figure 6.78 — Appropriate enclosures to the ground floor**
PO62 The existing setting and rhythm of the streetscape is retained and enhanced.	**AO62** The front facade width is 9m to 12.5m wide.
PO63 The roof profile is consistent with the predominant roof profile of contributing character buildings. **Editor's note**—Applicants should have regard to the Character residential planning scheme policy no SC6.2 for guidance on how to demonstrate compliance with this performance outcome.	**AO63** The roof pitch is between 15 degree to 30 degree.

PO64 The roof overhang is consistent with the dominant roof overhang of contributing character buildings. **Editor's note**—Applicants should have regard to the Character residential planning scheme policy no SC6.2 for guidance on how to demonstrate compliance with this performance outcome.	**AO64** Roof overhangs are 400mm to 600mm wide.
PO65 Window scale and proportions are sympathetic to the predominant contributing character of the precinct. **Editor's note**—Applicants should have regard to the Character residential planning scheme policy no SC6.2 for guidance on how to demonstrate compliance with this performance outcome.	**AO65** Windows are half height with a minimum of 3 vertically proportioned frames, where the window height is greater than its width by a 3:1 ratio.

Table 6.2.5.3—Accepted development subject to requirements and assessable development (Part)

Editor's note—this code contains alternative provisions for dwelling houses and dual occupancies to those set out in the Queensland Development Code (MP 1.1, MP 1.2 and MP 1.3), for the purposes of section 33 of the *Building Act 1975*.

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Grand Queenslanders precinct	
PO66 Building height and building floor level height are consistent to adjoining contributing character buildings.	**AO66** Dwelling houses: (a) have a floor level a minimum of 700mm above ground level; or (b) are 2 storeys.
PO67 The front facade profile is articulated with openings consistent with the predominant front facade profile of contributing character buildings. **Editor's note—**applicants should have regard to the Character residential planning scheme policy no. SC6.2 for guidance on how to demonstrate compliance with this performance outcome.	**AO67.1** The front facade includes an open or semi-enclosed front verandah for the full width of the building and extends around at a minimum, down 2m one or both sides. OR **AO67.2** Enclosed verandahs are articulated with openings such as windows, louvers or screens, continuously across the full width of the verandah. Figure 6.79 - An open front verandah for the full width of the front facade; including removable blinds (Alexandra Street) illustrates. **Figure 6.79 — An open front verandah for the full width of the front facade; including removable blinds (Alexandra Street)**

PO68 Enclosing the ground floor storey of a building does not have an adverse impact on the character of the building and ensures the original fabric of the building is identifiable.	**AO68** Development on any ground floor storey includes a valance, and: (a) is set back the full depth of all open or enclosed verandahs; or (b) is set back 1m from the upper level of an exterior wall where there is no verandah. Figure 6.80 - Appropriate enclosures to the ground floor illustrates.  **Figure 6.80 — Appropriate enclosures to the ground floor**
PO69 The roof profile is consistent with the predominant roof profile of contributing character buildings. **Editor's note**—Applicants should have regard to the Character residential planning scheme policy no SC6.2 for guidance on how to demonstrate compliance with this performance outcome.	**AO69.1** The roof profile is simple hipped or pyramid main roof, with a 17.5 degree to 27.5 degree roof pitch.
	AO69.2 Verandahs are contained under the main roof form, or roofed separately with a skillion roof.

Table 6.2.5.3—Accepted development subject to requirements and assessable development (Part)

Editor's note—This code contains alternative provisions for dwelling houses and dual occupancies to those set out in the Queensland Development Code (MP 1.1, MP 1.2 and MP 1.3), for the purposes of section 33 of the *Building Act 1975*.

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
French Street precinct	
PO70 Building height and building floor level height are consistent to adjoining contributing character buildings.	**AO70** Dwelling houses have a floor level minimum of 2m above ground level or is 2 storeys.
PO71 The front facade is articulated consistent with the predominant front facade of contributing character buildings. **Editor's note**—Applicants should have regard to the Character residential planning scheme policy no SC6.2 for guidance on how to demonstrate compliance with this performance outcome.	**AO71** The front facade includes asymmetrical projecting building forms or steps in plan, a minimum of 1.2m in depth.
PO72 Enclosing the ground floor storey of a building does not have an adverse impact on the character of the building and ensures the original fabric of the building is identifiable.	**AO72** Development on any ground floor storey includes a valance, and: (a) is set back the full depth of all open or enclosed verandahs; or (b) is set back 1m from the upper level of an exterior wall where there is no verandah. Figure 6.81 - Appropriate enclosures to the ground floor.  **Figure 6.81 — Appropriate enclosures to the ground floor**
PO73 The existing setting and rhythm of the streetscape is retained and enhanced.	**AO73** The front facade width is 10m to 12m wide.
PO74 The roof profile is consistent with the predominant roof profile of contributing character buildings. **Editor's note**—Applicants should have regard to the Character residential planning scheme policy no SC6.2 for guidance on how to demonstrate compliance with this performance outcome.	**AO74** Roof form is 17.5 degree in pitch and is simple hipped or pyramid and includes asymmetrical gable fronted projections.
PO75 The roof overhang is consistent with the predominant roof overhang of contributing character buildings. **Editor's note**—Applicants should have regard to the Character residential planning scheme policy no SC6.2 for guidance on how to demonstrate compliance with this performance outcome.	**AO75** Roof overhangs are: (a) a minimum of 400mm wide; and (b) with gable end overhangs a minimum of 200mm wide.

PO76 Window scale and proportions are sympathetic to the predominant contributing character of the precinct. **Editor's note—**Applicants should have regard to the Character residential planning scheme policy no. SC6.2 for guidance on how to demonstrate compliance with this performance outcome.	**AO76.1** Windows have a minimum of 3 vertically proportioned frames. Where the frame height is greater than its width by a 3:1 ratio.
	AO76.2 Windows below front gabled roofs: (a) are located symmetrically under the apex gable; and (b) have a minimum of 2 vertically proportioned frames or have bay windows. Figure 6.82 - Symmetrically located windows under gable (French Street) illustrates. **Figure 6.82 — Symmetrically located windows under gable (French Street)**

Table 6.2.5.3—Accepted development subject to requirements and assessable development (Part)

Editor's note—This code contains alternative provisions for dwelling houses and dual occupancies to those set out in the Queensland Development Code (MP 1.1, MP 1.2 and MP 1.3), for the purposes of section 33 of the *Building Act 1975*.

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Mixed 1950s precinct	
PO77 Building height and building floor level height are consistent to adjoining contributing character buildings.	**AO77** Dwelling houses: (a) have a floor level minimum of 700mm above ground level; or (b) are 2 storeys.
PO78 The front facade is articulated consistent with the predominant front facade of contributing character buildings. **Editor's note—**Applicants should have regard to the Character residential planning scheme policy no. SC6.2 for guidance on how to demonstrate compliance with this performance outcome.	**AO78** The front facade includes asymmetrical projecting building forms; or steps in plan, a minimum of 1.2m in depth. Figure 6.83 - Asymmetrical projecting building forms a minimum 1.2m in depth (Goodwin Street) illustrates. **Figure 6.83 — Asymmetrical projecting building forms a minimum 1.2m in depth (Goodwin Street)**

PO79 Enclosing the ground floor storey of a building does not have an adverse impact on the character of the building and ensures the original fabric of the building is identifiable.	**AO79** Development on any ground floor storey includes a valance, and: (a) is set back the full depth of all open or enclosed verandahs; or (b) is set back 1m from the upper level of an exterior wall where there is no verandah. Figure 6.84 - Appropriate enclosures to the ground floor illustrates.  **Figure 6.84 —Appropriate enclosures to the ground floor**
PO80 The roof profile is consistent with the predominant roof profile of contributing character buildings. **Editor's note**—Applicants should have regard to the Character residential planning scheme policy no SC6.2 for guidance on how to demonstrate compliance with this performance outcome.	**AO80** The roof profile is: (a) hipped with a 15 degree to 20 degree pitch; or (b) simple hipped or pyramid with asymmetrical gable projections with a 17.5 degree to 22.5 degree roof pitch.
PO81 The roof overhang is consistent with the predominant roof overhang of contributing character buildings. **Editor's note**—Applicants should have regard to the Character residential planning scheme policy no SC6.2 for guidance on how to demonstrate compliance with this performance outcome.	**AO81** Roof overhangs are 400mm to 600mm wide.
PO82 Window scale and proportions are sympathetic to the predominant character of the precinct. **Editor's note—**Applicants should have regard to the Character residential planning scheme policy no. SC6.2 for guidance on how to demonstrate compliance with this performance outcome.	No acceptable outcome is nominated.

6.3 Centre zones category

6.3.1 Neighbourhood centre zone code

6.3.1.1 Application

This code applies to development where the code is identified as applicable in the categories of development and assessment.

When using this code, reference should be made to section 5.3.2 and where applicable, section 5.3.3 located in Part 5.

6.3.1.2 Purpose

(1) The purpose of the Neighbourhood centre zone code is to provide for a small mix of land uses to service residential neighbourhoods.

It includes small-scale convenience shopping, professional offices, community services and other uses that directly support the immediate community.

(2) The particular purpose of the code is to provide for a network of centres that are readily accessible, integrated and well-designed, form vibrant focal points for the community, and provide a mix and range of services and facilities that are appropriate to their respective function and catchments. This promotes the efficient provision of services and contributes to the quality of life, character and identity of communities.

(3) The purpose of the zone will be achieved through the following overall outcomes:

- (a) neighbourhood centres contain a generally limited range of retail, commercial and community-related activities which are focused on meeting the basic, day-to-day convenience needs of a surrounding neighbourhood within a walkable catchment. Neighbourhood centre catchments are in the order of 1,500 households;
- (b) neighbourhood centres are located as an integral part of residential communities. Wherever possible they are co-located with other local facilities such as child care centres, parks or community uses;
- (c) centres do not compromise the intended role or successful functioning of higher order centres or each other;
- (d) residential development may occur within the centres, primarily where integrated in a mixed use development;
- (e) the built form and layout of a centre reinforces its integration with the local neighbourhood and creates a safe and pleasant community meeting place;
- (f) centres create a pedestrian-focussed frontage, activated by shop fronts, awnings and kerbside activities. Buildings are low-rise and smaller scale in nature;
- (g) the design of centres gives priority to improved accessibility by walking and cycling; and
- (h) centres are designed and operated to avoid adverse impacts on the amenity of surrounding residential neighbourhoods.

6.3.1.3 Assessment benchmarks

Table 6.3.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
PO1 Hours of operation are consistent with maintaining a reasonable level of amenity for nearby land in a residential zone.	**AO1** Hours of operation are limited to 6am to 10pm.
PO2 Where provided, outdoor lighting does not adversely affect the amenity of adjoining properties or create a traffic hazard on adjacent roads.	**AO2.1** Light emanating from any source complies with *Australian Standard AS4282 Control of the Obtrusive Effects of Outdoor Lighting*.
	AO2.2 Outdoor lighting is provided in accordance with *Australian Standard AS 1158.1.1 – Road Lighting – Vehicular Traffic (Category V) Lighting – Performance and Installation Design Requirement*.
PO3 Residential uses within the centre do not interrupt the continuity of the streetscape or the active, pedestrian focus of the street frontage.	**AO3** Any residential uses are located above or behind ground storey retail, commercial or community uses.
PO4 Residential uses within the centre are provided with a reasonable level of privacy.	**AO4.1** Windows, balconies, and terraces of a dwelling unit are screened where overlooking a habitable room or private open space of another dwelling within 9m.
	AO4.2 Screening is a solid translucent screen or perforated panels or trellises which have a maximum of 50% openings.
PO5 Residential uses within the centre are provided with a reasonable level of private outdoor living space.	**AO5** Dwellings are provided with private open space or a balcony directly accessible from a habitable room with: (a) a minimum area of 9m^2; and (b) a minimum dimension of 3m; and (c) clear of any utilities such as gas, water tanks or air conditioning units.

Table 6.3.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Built form	
PO6 Buildings are low-rise and are designed to break down the facade into finer-scaled components.	**AO6.1** All buildings and structures do not exceed 2 storeys or 8.5m in building height, whichever is the lesser.
	AO6.2 Buildings provide for tenancies fronting the street frontage which have a maximum width of 10m.
PO7 A strong sense of enclosure and definition of pedestrian space is created along street frontages, with buildings designed to provide visual interest, foster social interaction and create a safe and pleasant pedestrian-focussed environment.	**AO7.1** Buildings are built to the street frontage and provide an awning over the full width of the footpath.
	AO7.2 On-site car parking is provided to the side or the rear of buildings or below ground level, and is not located at the street frontage.
	AO7.3 Entrances to buildings face the street.
	AO7.4 Where buildings are located on a corner site, the main entrance faces the principal street or the corner.
	AO7.5 At the ground storey, a minimum of 65% of building frontage is provided as predominantly transparent windows or glazed doors and a maximum of 35% as solid facade.
	AO7.6 Clear windows are provided at ground storey and where provided, grille or translucent security screens are used rather than solid shutters, screens or roller-doors.

Table 6.3.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Community uses, community care centres, clubs	
PO8 Adequate lockable storage space is provided on-site to meet the needs of users.	**AO8** At least one (1) lockable storage space is provided of at least 4m^2 for each room or area that can be hired out or used by community organisations or the public.

Table 6.3.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Role and function	
PO9 Development is consistent with the intended role, scale and character of the neighbourhood centre and does not compromise the intended role or successful functioning of other centres.	**AO9** The combined area of all existing and proposed shops, shopping centres, offices, service industries, health care services and food and drink outlets within the centre do not exceed a total gross leasable area of 1,000m^2. For other uses, no acceptable outcome is nominated. **Editor's note—**Applicants should have regard to Economic impact assessment planning scheme policy SC6.5 for guidance on how to demonstrate compliance with this performance outcome.
PO10 Showrooms are not established in the neighbourhood centre.	No acceptable outcome is nominated.
PO11 Development facilitates opportunities for appropriate co-location of community-related activities or facilities to the extent practical.	No acceptable outcome is nominated.

Table 6.3.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Amenity	
PO12 Development minimises impacts on surrounding land and provides for an appropriate level of amenity within the centre, having regard to: (a) noise; (b) hours of operation; (c) traffic; (d) visual impact; (e) signage; (f) odour and emissions; (g) lighting; (h) access to sunlight; (i) privacy; and (j) outlook.	No acceptable outcome is nominated.
PO13 Streetscape treatments are provided to enhance amenity and to contribute positively to the city image, particularly along major roads and streets.	No acceptable outcome is nominated.

PO14 On-site landscaping is provided to: (a) enhance the appearance of the development, particularly in parking and service areas and in public spaces; (b) contribute to pedestrian comfort through shade; and (c) screen servicing components.	No acceptable outcome is nominated.
PO15 Development is designed and located so that adverse impacts on privacy and amenity on nearby land in a residential zone are minimised.	**AO15.1** Buildings are set back 2m from any boundary shared with a residential zone, or half the height of that part of the building, whichever is the greater.
	AO15.2.1 A 1.8m high solid screen fence is provided along all boundaries shared with a residential zone, and **AO15.2.2** A landscaped buffer with a minimum width of 2m and consisting of dense screen planting is provided along all boundaries shared with a residential zone.
	AO15.3 Windows that have a direct view into an adjoining residential use are provided with fixed screening that is a maximum of 50% transparent to obscure views and maintain privacy for residents.
PO16 Refuse storage areas, loading/unloading and other service or storage areas are screened from view from the street and adjoining land.	**AO16** Refuse storage areas loading/unloading and other service or storage areas are located to the rear or side of a building and are screened from view by a 1.8m high solid fence.

Table 6.3.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Crime prevention through environmental design	
PO17 Development facilitates the security of people and property having regard to: (a) opportunities for casual surveillance and sight lines; (b) exterior building design that promotes safety; (c) adequate lighting; (d) appropriate signage and wayfinding; (e) minimisation of entrapment locations; and (f) building entrances, loading and storage areas that are well lit and lockable after hours. **Editor's note—**Applicants should have regard to Crime Prevention through Environmental Design Guidelines for Queensland.	No acceptable outcome is nominated.

Table 6.3.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Accessibility	
PO18 Convenient and legible connections are provided for pedestrians and cyclists to the site, particularly having regard to linkages with existing and proposed public transport infrastructure, the open space network, centres and other community-related activities.	No acceptable outcome is nominated.

6.3.2 Local centre zone code

6.3.2.1 Application

This code applies to development where the code is identified as applicable in the categories of development and assessment for the Local centre zone.

When using this code, reference should be made to section 5.3.2 and where applicable, section 5.3.3 located in Part 5.

6.3.2.2 Purpose

(1) The purpose of the Local centre zone code is to provide for a limited range of land uses and activities to service local needs. It includes local shopping, local employment nodes, commercial, cafes and dining, entertainment, community services and residential development where it can integrate and enhance the fabric of the activity centre, but it is not the predominant use.

(2) The particular purpose of the code is to provide for a network of centres that are readily accessible, integrated and well-designed, form vibrant focal points for the community, and provide a mix and range of services and facilities that are appropriate to their respective function and catchments. This promotes efficient provision of services and contributes to the quality of life, character and identity of communities.

(3) The purpose of the zone will be achieved through the following overall outcomes:

- (a) local centres provide a range of retail, commercial and community activities that are focused on grocery shopping and local service needs of their surrounding catchments. They may include a single full-line supermarket and a small range of specialty shops, food and drink outlets, personal services and local offices;
- (b) local centres provide a significant focal point for the surrounding community. Wherever possible they are co-located with or include other local facilities such as child care centres, parks or community uses;
- (c) centres do not compromise the intended role or successful functioning of higher order centres or other local centres. Local centre catchments are in the order of 3,000 to 5,000 households;
- (d) residential development may occur within the centres, primarily where integrated in a mixed use development;
- (e) the built form and layout of a centre creates a safe and pleasant community meeting place. Centres create pedestrian-focussed public spaces and street frontages, activated by shop fronts, awnings and kerbside activities;
- (f) buildings are low-rise and create a sensitive transition in scale from the surrounding neighbourhood;
- (g) the design of centres gives priority to improved accessibility by walking and cycling;
- (h) centres are designed and operated to avoid adverse impacts on the amenity of surrounding residential neighbourhoods; and
- (i) opportunities for energy efficiency through built form are maximised.

(4) The purpose of the zone will also be achieved through the following additional overall outcomes for particular precincts:

Rising Sun local centre precinct:

(a) development facilitates the consolidation of local centre uses in the area bounded by Ross River Road, Cross Street, and Bowen Road;

(b) built form, public space and streetscape treatments in this area contribute to a distinct character for the local centre, in particular on the frontages of Ross River Road, Cross Street, and Bowen Road; and

(c) development of this precinct facilitates a consolidation of vehicular access points.

Click here to view high resolution PDF.

Figure 6.85 — Rising Sun local centre precinct

North Ward local centre precinct:

(a) development reinforces the character of this centre as a mixed use café and dining hub, with residential or tourist accommodation uses, in addition to its local service role;

(b) built form, public space and streetscape treatments in this area contribute to an integrated character for the centre, with a focus on the frontage of Gregory Street; and

(c) built form creates a higher-medium rise environment (up to 8 storeys in building height) along Gregory Street, transitioning down to medium rise (up to 5 storeys) behind.

Click here to view high resolution PDF.

Figure 6.86 - North Ward local centre precinct

6.3.2.3 Assessment benchmarks

Table 6.3.2.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
PO1 Hours of operation are consistent with maintaining a reasonable level of amenity for nearby land in a residential zone.	**AO1** Hours of operation are limited to 6am to 10pm.
PO2 Where provided, outdoor lighting does not adversely affect the amenity of adjoining properties or create a traffic hazard on adjacent roads.	**AO2.1** Light emanating from any source complies with *Australian Standard AS 4282 Control of the Obtrusive Effects of Outdoor Lighting*.
	AO2.2 Outdoor lighting is provided in accordance with *Australian Standard AS 1158.1.1 –Road Lighting – Vehicular Traffic (Category V) Lighting – Performance and Installation Design Requirements*.
PO3 Residential uses within the centre do not interrupt the continuity of the streetscape or the active, pedestrian focus of the street frontage.	**AO3** Any residential uses are located above or behind ground storey retail, commercial or community uses.
PO4 Residential uses within the centre are provided with a reasonable level of privacy.	**AO4.1** Windows, balconies, and terraces of a dwelling unit are screened where overlooking a habitable room or private open space of another dwelling within 9m.
	AO4.2 Screening is a solid translucent screen or perforated panels or trellises which have a maximum of 50% openings.
PO5 Residential uses within the centre are provided with a reasonable level of private outdoor living space.	**AO5** Dwellings are provided with private open space or a balcony directly accessible from a habitable room with: (a) a minimum area of 9m^2; and (b) a minimum dimension of 3m; and (c) clear of any utilities such as gas, water tanks or air conditioning units.

Table 6.3.2.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Built form	
PO6 Buildings are low-rise and are designed to break down the facade into finer scaled components, avoiding large expanses of blank walls.	**AO6.1** All buildings and structures do not exceed 2 storeys or 8.5m in building height, whichever is the lesser.
	AO6.2 Buildings provide for tenancies fronting the street frontage which have a maximum width of 10m.

PO7 A strong sense of enclosure and definition of pedestrian space is created along street frontages, with buildings designed to provide visual interest, foster social interaction and create a safe and pleasant pedestrian-focussed environment.	**AO7.1** Buildings are built to the street frontage and provide an awning over the full width of the footpath.
	AO7.2 Parking is provided to the side or the rear of buildings or below ground level, and is not located along the street frontage.
	AO7.3 Entrances to buildings face the street and any public space to which the building has frontage.
	AO7.4 Where buildings are located on a corner site, the main entrance faces the principal street or the corner.
	AO7.5 At the ground storey, a minimum of 65% of building frontage is provided as predominantly transparent windows or glazed doors and a maximum of 35% as solid facade.

Table 6.3.2.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	**Acceptable outcomes**
For assessable development	
Community uses, community care centres, clubs	
PO8 Adequate lockable storage space is provided on-site to meet the needs of users.	**AO8** At least one (1) lockable storage space of at least 4m^2 is provided for each room or area that can be hired out or used by community organisations or the public.

Table 6.3.2.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	**Acceptable outcomes**
For assessable development	
Role and function	
PO9 Development is consistent with the intended role, scale and character of the local centre and does not compromise the intended role or successful functioning of other local or higher order centres.	No acceptable outcome is nominated. **Editor's note—**Applicants should have regard to Economic impact assessment planning scheme policy SC6.5 for guidance on how to demonstrate compliance with this performance outcome.
PO10 Showrooms are not established in the local centre.	No acceptable outcome is nominated.
PO11 Development facilitates opportunities for appropriate co-location of community-related activities or facilities to the extent practical.	No acceptable outcome is nominated.

Table 6.3.2.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Centre design and built form	
PO12 The design of the centre provides for: (a) a coherent and integrated built form, public realm and circulation networks; (b) central, accessible and attractive public spaces for the people to congregate and interact; (c) continuity of streetscape and landscape characteristics; (d) pedestrian-friendly and visually interesting frontages to street and public spaces; (e) optimum energy efficiency; (f) connectivity of pedestrian and cyclist paths and spaces internal and external to the centre; and (g) sensitive transitioning to surrounding land and uses. **Editor's note–**Applicants may be requested to prepare a centre design master plan to demonstrate compliance with this performance outcome.	No acceptable outcome is nominated.
PO13 Building caps and rooftops create an attractive roofscape and screen plant and equipment.	No acceptable outcome is nominated.
PO14 Streetscape treatments are provided at the street frontage to create a visually cohesive precinct and enhance pedestrian amenity.	No acceptable outcome is nominated.

Table 6.3.2.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Crime prevention through environmental design	
PO15 Development facilitates the security of people and property having regard to: (a) opportunities for casual surveillance and sight lines; (b) exterior building design that promotes safety; (c) adequate lighting; (d) appropriate signage and wayfinding; (e) minimisation of entrapment locations; and (f) building entrances, loading and storage areas that are well lit and lockable after hours. **Editor's note—**Applicants should have regard to Crime Prevention through Environmental Design Guidelines for Queensland.	No acceptable outcome is nominated.

Table 6.3.2.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Accessibility	
PO16 Convenient and legible connections are provided for pedestrians and cyclists to the site, particularly having regard to linkages with existing and proposed public transport infrastructure, the open space network, centres and other community-related activities.	No acceptable outcome is nominated.

Table 6.3.2.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Amenity	
PO17 Development minimises impacts on surrounding land and provides for an appropriate level of amenity within the centre, having regard to: (a) noise; (b) hours of operation; (c) traffic; (d) visual impact; (e) signage; (f) odour and emissions; (g) lighting; (h) access to sunlight; (i) privacy; and (j) outlook.	No acceptable outcome is nominated.
PO18 Development is located, designed and operated so that adverse impacts on privacy and amenity on nearby land in a residential zone are minimised.	**AO18.1** Buildings are set back 3m from any boundary shared with a residential zone, or half the height of the part of the building, whichever is the greater.
	AO18.2.1 A 1.8m high solid screen fence is provided along all boundaries shared with a residential zone. AND **AO18.2.2** A landscaped buffer with a minimum width of 3m and consisting of dense screen planting is provided along all boundaries shared with a residential zone.
	AO18.3 Windows that have a direct view into an adjoining residential use are provided with fixed screening that is a maximum of 50% transparent to obscure views and maintain privacy for residents.

PO19 Refuse storage areas, loading/unloading and other service or storage areas are screened from view from the street and adjoining land.	**AO19** Refuse storage areas loading/unloading and other service or storage areas are located to the rear or side of a building and are screened from view by a 1.8m high solid fence.
PO20 On-site landscaping is provided to: (a) enhance the appearance of the development, particularly in parking and service areas and in public spaces; (b) contribute to pedestrian comfort through shade; and (c) screen servicing components.	No acceptable outcome is nominated.

Table 6.3.2.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Rising Sun local centre precinct	
PO21 Development is consistent with Figure 6.87 — Rising Sun local centre precinct concept plan, including an internal public space and parking area that is framed by buildings with an active edge.	No acceptable outcome is nominated.
PO22 Frontages shown on Figure 6.87 — Rising Sun local centre precinct concept plan as having active edges, contain: (a) primary building entrances; (b) awnings to provide shade for pedestrians; (c) significant use of glazing or transparent materials; and (d) uses which promote a high level of pedestrian movement and interaction.	No acceptable outcome is nominated.
PO23 Frontages shown on Figure 6.87 — Rising Sun local centre precinct concept plan as having built form edge are well-defined by a continuous building façade built to the street edge, awnings and significant use of glazing.	No acceptable outcome is nominated.

Figure 6.87 – Rising Sun local centre precinct concept plan

PO24 Development contributes to the boulevard treatment of Ross River Road and Bowen Road through landscaping and streetscape treatments along the road frontage in accordance with Figure 6.87 - Rising Sun local centre precinct concept plan.	No acceptable outcome is nominated.
PO25 Vehicular access to the site is constrained to one single point of entry from Ross River Road and Bowen Road in accordance with Figure 6.87 - Rising Sun local centre precinct concept plan.	No acceptable outcome is nominated.
PO26 Development at the intersection of Ross River Road and Bowen Road creates a landmark gateway to the Rising Sun Local Centre. Built form, landscape and streetscape treatment at this intersection reinforces a gateway statement in accordance with Figure 6.87 - Rising Sun local centre precinct concept plan.	No acceptable outcome is nominated.

PO27 Built form, landscape and streetscape treatment at the corner of Ross River Road and Bowen Road, creates a gateway to the Rising Sun local centre.	No acceptable outcome is nominated.

Table 6.3.2.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
North Ward local centre precinct	
PO28 Building height and scale is consistent with the character desired for the precinct and reinforces Gregory Street as the primary activity spine and gateway to The Strand.	**AO28** Building height does not exceed 8 storeys where fronting Gregory Street or 5 storeys otherwise.
PO29 Development primarily consists of retail, commercial and dining activities at ground level and residential or tourist accommodation above.	No acceptable outcome is nominated.
PO30 Development is consistent with Figure 6.88 — North Ward local centre precinct concept plan.	No acceptable outcome is nominated.
PO31 Development provides for an internal public space and parking area that is framed by buildings with an active edge within the block bounded by Gregory, Mitchell, Leichardt and Eyre Streets, in accordance with Figure 6.88 — North Ward local centre precinct concept plan.	No acceptable outcome is nominated.
PO32 Development at the intersection of Gregory Street and Eyre Street creates a landmark gateway to the North Ward local centre. Built form, landscape and streetscape treatment at this intersection reinforces a gateway statement.	No acceptable outcome is nominated.
PO33 Frontages shown on Figure 6.88 — North Ward local centre precinct concept plan as having active edges, contain: (a) primary building entrances; (b) awnings to provide shade for pedestrians; (c) significant use of glazing or transparent materials; and (d) uses which promote a high level of pedestrian movement and interaction.	No acceptable outcome is nominated.
PO34 Frontages shown on Figure 6.88 — North Ward local centre precinct concept plan as having a built form edge are well-defined by a continuous building facade built to the street edge, awnings and significant use of glazing.	No acceptable outcome is nominated.

Figure 6.88 – North Ward local centre precinct concept plan

PO35 Development contributes to the boulevard treatment of Eyre Street and the integration of the Gregory Street village environment through landscaping and streetscape treatments.	No acceptable outcome is nominated.

6.3.3 District centre zone code

6.3.3.1 Application

This code applies to development where the code is identified as applicable in the categories of development and assessment.

When using this code, reference should be made to section 5.3.2 and where applicable, section 5.3.3 located in Part 5.

6.3.3.2 Purpose

(1) The purpose of the District centre zone code is to provide for a mix of uses and activities. It includes a concentration of land uses including retail, commercial, residential, offices, administrative and health services, community, entertainment and recreational facilities capable of servicing a district.

(2) The particular purpose of the code is to provide for a network of centres that are readily accessible, integrated and well-designed, form vibrant focal points for the community, and provide a mix and range of services and facilities that are appropriate to their respective function and catchments. This promotes efficient provision of services and contributes to the quality of life, character and identity of communities.

(3) The purpose of the zone will be achieved through the following overall outcomes:

(a) district centres provide a community focus for weekly or fortnightly shopping trips and a range of services, and include Idalia, Deeragun, Rasmussen, Annandale and a future centre at Shaw. Retail functions are anchored by major supermarkets with a wide range of speciality shops; however, these centres operate as multifunctional community hubs. They contain a range of district level personal and community services such as community centres and health and fitness facilities;

Editor's note—the centre in Shaw is within the Emerging community zone. It is planned within the Greater Ascot area.

(b) centres do not compromise the intended role or successful functioning of higher order centres or other district centres. District centre catchments are in the order of 5,000 to 8,000 households. They do not contain discount department stores;

(c) the mix of uses promotes a vibrant centre which includes medium density residential development and active day and night-time uses;

(d) showrooms may occur within the district centres, but are generally located and designed so that they do not detract from the intended built form, pedestrian focus and accessibility of the district centres;

(e) district centres provide a major focal point for their catchment communities. The built form and layout of a centre creates a safe and pleasant community meeting place. Centres create pedestrian-focussed public spaces and street fronts, kerbside activities, awnings and landscape and streetscape treatments;

(f) buildings are generally low-medium rise and create a sensitive transition in scale from the surrounding neighbourhood;

(g) the design of district centres gives priority to improved accessibility to and within centres by walking, cycling and public transport;

(h) centres are designed and operated to minimise adverse impacts on the amenity of surrounding residential neighbourhoods; and

(i) opportunities for energy efficiency through built form are maximised.

(4) The purpose of the zone will also be achieved through the following additional overall outcomes for particular precincts:

Idalia district centre precinct:

(a) Idalia will develop to provide a focus for larger format showrooms for the southern parts of the city, and will complement, but not undermine the role of the Domain Central precinct on the northern side of Townsville. It will service a wider catchment than other district centres in this respect. Other retail functions of this centre do not expand substantively; and

(b) new floor space within the centre provides for a wider mix of non-retail uses including residential uses, community uses, commercial and medical offices and dining activities.

Click here to view high resolution PDF.

Figure 6.89 — Idalia district centre precinct

Annandale district centre precinct:

(a) no significant expansion of this centre for retail purposes occurs; and

(b) new floor space within the centre provides for a wider mix of non-retail uses including residential uses, community uses, commercial and medical offices and dining activities.

Click here to view high resolution PDF.

Figure 6.90 — Annandale district centre precinct

Deeragun district centre precinct:

(a) further outward expansion of the centre or the establishment of additional supermarkets does not occur;

(b) development assists in consolidating the centre, and facilitates improved integration and connectivity;

(c) showrooms servicing the district catchment may be accommodated; and

(d) new floor space within the centre provides for a wider mix of non-retail uses including residential uses, community uses, commercial and medical offices and dining activities.

Click here to view high resolution PDF.

Figure 6.91 — Deeragun district centre precinct

Rasmussen district centre precinct:

(a) further outward expansion of the centre does not occur;

(b) showrooms servicing the district catchment may be accommodated in the longer term; and

(c) new floor space within the centre provides for a wider mix of non-retail uses including residential uses, community uses, commercial and medical offices and dining activities.

Click here to view high resolution PDF.

Figure 6.92— Rasmussen district centre precinct

6.3.3.3 Assessment benchmarks

Table 6.3.3.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
General	
PO1 Where provided, outdoor lighting does not adversely affect the amenity of adjoining properties or create a traffic hazard on adjacent roads.	**AO1.1** Light emanating from any source complies with *Australian Standard AS4282 Control of the Obtrusive Effects of Outdoor Lighting*.
	AO1.2 Outdoor lighting is provided in accordance with *Australian Standard AS 1158.1.1 – Road Lighting – Vehicular Traffic (Category V) Lighting – Performance and Installation Design Requirements*.
PO2 Residential uses within the centre do not interrupt the continuity of the streetscape or the active, pedestrian focus of the street frontage.	**AO2** Any residential uses are located above or behind ground storey retail, commercial or community uses.
PO3 Residential uses within the centre are provided with a reasonable level of privacy.	**AO3.1** Windows, balconies, and terraces of a dwelling unit are screened where overlooking a habitable room or private open space of another dwelling within 9m.
	AO3.2 Screening is a solid translucent screen or perforated panels or trellises which have a maximum of 50% openings.
PO4 Residential uses within the centre are provided with a reasonable level of private outdoor living space.	**AO4** Dwellings are provided with private open space or a balcony directly accessible from a habitable room with: (a) a minimum area of $9m^2$; (b) a minimum dimension of 3m; and (c) clear of any utilities such as gas, water tanks or air conditioning units.

Table 6.3.3.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Role and function	
PO5 Development is consistent with the intended role, scale and character of the district centre and does not compromise the intended role or successful functioning of other district or higher order centres. The growth of floor space within centres is balanced with anticipated growth within their primary catchment and does not substantively impact on the trading of other centres for an extended period of time or unduly undermine the potential for another centre to expand into its intended role.	No acceptable outcome is nominated. **Editor's note—**Applicants should have regard to Economic impact assessment planning scheme policy no. SC6.5 for guidance on how to demonstrate compliance with this performance outcome.
PO6 Development facilitates a range of uses that contributes to the vibrancy of the centre and provides for a compatible mix of active day and night-time uses.	No acceptable outcome is nominated.
PO7 Development facilitates opportunities for appropriate co-location of residential uses and community-related activities or facilities within the centre, to the extent practical.	No acceptable outcome is nominated.

Table 6.3.3.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Centre design and built form	
PO8 The design of the centre provides for: (a) a coherent and integrated built form, public realm and circulation networks; (b) central, accessible and attractive public spaces for people to congregate and interact; (c) continuity of streetscape and landscape characteristics; (d) pedestrian-friendly and visually interesting frontages to streets and public spaces; (e) optimum energy efficiency; (f) a well-integrated mix of uses; (g) connectivity of pedestrian and cyclist paths and spaces internal and external to the centre; and (h) sensitive transitioning to surrounding land and uses. **Editor's note–**Applicants may be requested to prepare a centre design master plan to demonstrate compliance with this performance outcome.	No acceptable outcome is nominated.

PO9 Buildings are low-rise and are designed to break down the facade into finer scaled components, avoiding large expanses of blank walls.	**AO9.1** Building height does not exceed 3 storeys.
	AO9.2.1 Buildings provide for tenancies fronting the street frontage which have a maximum width of 10m. or **AO9.2.2** Where showrooms are proposed, the maximum length of any unarticulated wall is 15m, without a change in plane of at least 0.75m.
PO10 A strong sense of enclosure and definition of pedestrian space is created along street frontages, with buildings designed to provide visual interest, foster social interaction and create a safe and pleasant pedestrian-focussed environment.	**AO10.1** Buildings are built to the street frontage and provide an awning over the full width of the footpath.
	AO10.2 Parking is provided to the side or the rear of buildings or below ground level, and is not located along the street frontage.
	AO10.3 Entrances to buildings face the street and any public space to which the building has frontage.
	AO10.4 Where buildings are located on a corner site, the main entrance faces the principal street or the corner.
	AO10.5 At the ground storey, a minimum of 65% of building frontage is provided as predominantly transparent windows or glazed doors and a maximum of 35% as solid facade.
PO11 Streetscape treatments and street trees are provided along the street frontage to create a visually cohesive precinct and enhance pedestrian amenity.	No acceptable outcome is nominated.
PO12 Building caps and rooftops create an attractive roofscape and screen plant and equipment.	No acceptable outcome is nominated.
PO13 Buildings housing residential uses within the centre do not interrupt the continuity of the streetscape or the active, pedestrian focus of the street frontage.	**AO13** Any residential uses are located above or behind ground storey retail, commercial or community uses.
PO14 Built form maximises use of natural ventilation, solar heating/cooling and water conservation through building orientation and design, landscaping, building materials and on-site infrastructure.	No acceptable outcome is nominated.

Table 6.3.3.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Crime prevention through environmental design	
PO15 Development facilitates the security of people and property having regard to: (a) opportunities for casual surveillance and sight lines; (b) exterior building design that promotes safety; (c) adequate lighting; (d) appropriate signage and wayfinding; (e) minimisation of entrapment locations; and (f) building entrances, loading and storage areas that are well lit and lockable after hours. **Editor's note—**Applicants should have regard to Crime Prevention through Environmental Design Guidelines for Queensland.	No acceptable outcome is nominated.

Table 6.3.3.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Accessibility	
PO16 Convenient and legible connections are provided for pedestrians and cyclists to the site, particularly having regard to linkages with existing and proposed public transport infrastructure, the open space network, centres and other community-related activities.	No acceptable outcome is nominated.

Table 6.3.3.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Amenity	
PO17 Development minimises impacts on surrounding land and provides for an appropriate level of amenity within the centre, having regard to: (a) noise; (b) hours of operation; (c) traffic; (d) visual impact; (e) signage; (f) odour and emissions; (g) lighting; (h) access to sunlight; (i) privacy; and (j) outlook.	No acceptable outcome is nominated.
PO18 Development is located, designed and operated so that adverse impacts on privacy and amenity on nearby land in a residential zone are minimised.	**AO18.1** Buildings are set back 3m from any boundary shared with a residential zone, or half the height of the part of the building, whichever is the greater.
	AO18.2.1 A 1.8m high solid screen fence is provided along all boundaries shared with a residential zone. AND **AO18.2.2** A landscaped buffer with a minimum width of 3m and consisting of dense screen planting is provided along all boundaries shared with a residential zone.
	AO18.3 Windows that have a direct view into an adjoining residential use are provided with fixed screening that is a maximum of 50% transparent to obscure views and maintain privacy for residents.
PO19 Refuse storage areas, loading/unloading and other service or storage areas are screened from view from the street and adjoining land.	**AO19** Refuse storage areas loading/unloading and other service or storage areas are located to the rear or side of a building and are screened from view by a 1.8m high solid fence.
PO20 On-site landscaping is provided to: (a) enhance the appearance of the development, particularly in parking and service areas and in public spaces; (b) contribute to pedestrian comfort through shade; and (c) screen servicing components.	No acceptable outcome is nominated.

Table 6.3.3.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Community uses, community care centres, clubs	
PO21 Adequate lockable storage space is provided on-site to meet the needs of users.	**AO21** At least one (1) lockable storage space of at least 4m^2 is provided for each room or area that can be hired out or used by community organisations or the public.

Table 6.3.3.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Showrooms	
PO22 Showrooms are designed and located as an integrated part of the centre, having regard to the continuity of built form and streetscapes, active street frontages and pedestrian and cyclist accessibility and circulation.	No acceptable outcome is nominated.

Table 6.3.3.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note-**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Deeragun district centre precinct	
PO23 Development in the Deeragun district centre precinct contributes to the consolidation and integration of the centre.	No acceptable outcome is nominated.

6.3.4 Major centre zone code

6.3.4.1 Application

This code applies to development where the code is identified as applicable in the categories of development and assessment.

When using this code, reference should be made to section 5.3.2 and where applicable, section 5.3.3 located in Part 5.

6.3.4.2 Purpose

(1) The purpose of the Major centre zone code is to provide for a mix of uses and activities. It includes concentrations of higher order retail, commercial, offices, residential, administrative and health services, community, cultural and entertainment facilities and other uses capable of servicing a sub-region in the planning scheme area.

(2) The particular purpose of the code is to provide for a network of centres that are readily accessible, integrated and well-designed, form vibrant focal points for the community, and provide a mix and range of services and facilities that are appropriate to their respective function and catchments. This promotes efficient provision of services and contributes to the quality of life, character and identity of communities.

(3) The purpose of the zone will be achieved through the following overall outcomes:

(a) Hyde Park, Aitkenvale, Thuringowa Central and the future Julago and Burdell major centres act as the most significant centres for the Townsville community after the principal centre (CBD). They service sub-regional catchments and do not compromise the intended role or successful functioning of other major centres or the CBD;

Editor's note—The Julago and Burdell areas are included in the Emerging community zone. The future major centre at Burdell is planned within the North Shore area.

(b) these centres operate as major multifunctional community hubs. They contain the highest order of community, retail and office based functions after the principal centre (CBD), including sub-regional level services such as theatres, major libraries and community centres and health and educational facilities. However, they do not contain any additional department stores;

(c) major centres evolve as vibrant mixed use places where people live, work and play in a high density environment which is active both during the day and night-time and includes residential uses;

(d) major centres are highly accessible by walking and cycling from surrounding medium density residential areas;

(e) major centres become a hub for major public transport routes providing frequent services to other parts of the city, and development facilitates convenient access to public transport facilities as a priority;

(f) showrooms occur within the major centres, but are generally located and designed so that they do not detract from the intended built form, pedestrian focus and accessibility;

(g) centre design and built form creates a walkable and legible pedestrian-focussed environment, with a range of connected, safe and pleasant public spaces forming community focal points. Public spaces and primary pedestrian circulation streets are activated by shop fronts, awnings and kerbside activities;

(h) the height and scale of buildings reinforce the character, legibility and accessibility of the centre. Centres predominantly contain medium-rise buildings. However, a human scale and attractive, pedestrian friendly environment is created at street level;

(i) centres are designed to create a desirable interface with surrounding neighbourhoods, providing for attractive streetscapes and transitioning of building form and scale and minimising potential land use conflicts; and

(j) opportunities for energy efficiency through built form are maximised.

(4) The purpose of the zone will also be achieved through the following additional overall outcomes for particular precincts and sub-precincts:

Aitkenvale major centre precinct:

(a) The Aitkenvale major centre builds on existing uses and underutilised land to become a diverse major activity centre;

(b) Aitkenvale leverages its location on the transport corridor to the principal centre (CBD) and James Cook University and Townsville Hospital;

(c) the existing department store at Aitkenvale is not significantly expanded and no additional department store is established;

(d) housing includes student and visitor accommodation to reinforce links with the James Cook University and Townsville Hospital; and

(e) Ross River Road and Nathan Street become tropical boulevards providing a sense of arrival at the centre and strong landscape amenity. This is achieved through street tree planting, stronger definition of road edges by buildings fronting the street and screening of parking areas.

Click here to view high resolution PDF.

Figure 6.93 – Aitkenvale major centre precinct

Aitkenvale centre core sub-precinct:

(i) the Aitkenvale centre core encompasses the retail focus of the centre;

(ii) the mix of uses within this sub-precinct is diversified as part of future redevelopment to include additional uses including shopping, office, higher density residential uses, community facilities and dining and entertainment uses;

(iii) residential and office uses are accommodated in mixed use developments, with shopping or entertainment uses at the ground storey;

(iv) a new town square is accommodated within the south-east corner of the sub-precinct. This space is sleeved by medium-rise built form fronting Alfred and Elizabeth Streets;

(v) Elizabeth Street is the focus for the creation of an active main street environment;

(vi) frontages to Nathan Street and Ross River Road are treated with a responsive built form that avoids unarticulated or 'back of house' design responses;

(vii) linkages between the Aitkenvale centre core sub-precinct (north and south sides of Ross River Road), the Aitkenvale centre frame sub-precinct and the surrounding Medium density residential zone are improved through the strengthening of primary pedestrian linkages along Nathan and Elizabeth Streets; and

(viii) streetscaping along Nathan and Elizabeth Street frontages also occurs to improve the interface between the site and the street whilst also improving the pedestrian streetscape environment and experience.

Aitkenvale centre frame sub-precinct:

(i) the centre frame sub-precinct complements the retail core with a mix of uses including additional shopping, offices, community and residential uses that reinforce the centre's role as a mixed use activity centre;

(ii) residential components are accommodated in mixed use developments, with retail or commercial uses at the ground storey; and

(iii) buildings have a strong relationship with their street frontage by contributing to streetscape improvements, passive surveillance, and creation of an identifiable major centre.

Thuringowa Central major centre precinct:

(a) development in the Thuringowa Central major centre continues to grow and diversify the range of activities within the centre. However, a department store is not established within this centre;

(b) higher density housing includes student and visitor accommodation to reinforce economic links with the James Cook University and Townsville Hospital;

(c) the centre is focussed on a new main street and town square along High Range Drive, which provides a strong connector between Riverway and the Willows sub-precinct;

(d) further outward expansion of the centre does not occur, with all new development contributing to the increasing consolidation of the centre and the clear definition of its edges;

(e) new development facilitates improved permeability within the centre for pedestrians and cyclists, provides for safer and shadier pedestrian routes and promotes access to public transport facilities;

(f) a bus interchange forms a focal point within the centre that is well-connected to the Thuringowa town centre heart sub-precinct, the Willows sub-precinct and the surrounding neighbourhoods;

(g) built form is highest and most intensive in the Thuringowa town centre heart sub-precinct, decreasing to the centre edges;

(h) visual and physical connections to Pioneer Park and Riverway are maximised wherever possible; and

(i) Thuringowa Drive, Riverway Drive and Hervey Range Road become tropical boulevards providing a sense of arrival at the centre and strong landscape amenity. This is achieved through street tree planting, stronger definition of road edges by buildings fronting the street and screening of parking areas.

Click here to view high resolution PDF.

Figure 6.94 – Thuringowa Central major centre precinct

Thuringowa town centre heart sub-precinct:

(i) a new main street and town square for Thuringowa Central are created along High Range and Pioneer Drive, and provides a community heart and a strong connection between Riverway and the Willows sub-precinct;

(ii) the sub-precinct contains a concentrated mix of uses, including shopping, office, higher density residential uses, community facilities and dining and entertainment uses. Residential and office uses are accommodated in mixed use developments, with shopping or entertainment uses at the ground storey;

(iii) the sub-precinct contains the highest and most concentrated built form within Thuringowa Central, with the most intensive built form along Riverway Drive and the main street sections of High Range and Pioneer Drives;

(iv) buildings along High Range and Pioneer Drive create a strong relationship with the street frontage and facilitate a highly activated environment, accommodating day and night-time activities, shop fronts, outdoor dining and other opportunities for community interaction;

(v) development creates a strong relationship with Hervey Range Road, Riverway Drive and Blackhawk Boulevard, by sleeving the sub-precinct with buildings that are oriented to the street and screen parking areas behind;

(vi) pedestrian spaces and pathways are provided with extensive shading;

(vii) parking is consolidated wherever practicable and is screened and separated from the street by buildings;

(viii) pedestrian and cyclist linkages are improved to the residential neighbourhood to the south and to the centre sub-precincts to the west and north. Additional and safe pedestrian crossings are provided across Hervey Range Road to the Willows sub-precinct; and

(ix) development minimises impacts on the amenity of adjoining residential land to the south of the sub-precinct.

Willows sub-precinct:

(i) this sub-precinct is the primary shopping destination for Thuringowa Central but may also contain a mix of other office, higher density residential uses, community facilities and dining and entertainment uses;

(ii) an improved relationship between built form and Thuringowa Drive, Hervey Range Road and Kern Brothers Drive is created by sleeving the sub-precinct with buildings oriented to the street and screening parking areas;

(iii) built form assists in reducing the internalised orientation of the shopping centre, creating a sense of external activity and reducing the visual dominance of the parking areas;

(iv) development facilitates pedestrian connections with the Thuringowa town centre heart sub-precinct and the surrounding residential neighbourhood; and

(v) development along Kern Brothers Drive and Carthew Street provides an attractive interface and minimises impacts on the amenity of nearby residential land.

Thuringowa Drive sub-precinct:

(i) a mix of office, shops, service industries and residential uses occur within this sub-precinct;

(ii) the corner of Thuringowa Drive and Hinchinbrook Drive creates a gateway to Thuringowa Central. Built form at this corner reinforces this gateway function;

(iii) development facilitates a more continuous building line along Thuringowa Drive, by providing a strong building edge along the street front and locating parking areas to the side or rear of buildings; and

(iv) access points and parking are consolidated wherever practicable.

Thuringowa centre support sub-precinct:

(i) larger format showroom uses, service industries and some low impact industries are accommodated in this sub-precinct. The sub-precinct may also contain office uses and community facilities, but does not contain shopping uses other than those of a convenience nature;

(ii) buildings are oriented to the street frontages, and streetscape is improved through the quality of the adjoining built form and landscaping;

(iii) built form is generally lower rise and less intensive than in the rest of the Thuringowa Central major centre;

(iv) convenient pedestrian connections are created to the Thuringowa town centre heart sub-precinct; and

(v) development along the edges of this sub-precinct provides an attractive interface and minimises impacts on the amenity of nearby residential land.

Hyde Park major centre precinct:

(a) the Hyde Park major centre contains an increasing diversity of business activities and community services. However, a department store is not located within this centre, and no significant expansion of showroom based floor space is intended;

(b) residential and office uses are accommodated in mixed use developments, with shopping or entertainment uses at the ground storey;

(c) development facilitates improved integration with surrounding residential and activity areas, including the showgrounds. Wherever possible, the interface with the lake is enhanced and opportunities for recreational use improved;

(d) Virgil and Dillane Streets are established as primary linkages to new infill residential development within the Hyde Park medium density precinct. Virgil Street becomes the major east-west pedestrian thoroughfare for the locality;

(e) development provides for appropriate immunity to flooding and drainage characteristics; and

(f) development facilitates improved public transport, pedestrian and cyclist connectivity to the principal centre (CBD), particularly along Woolcock Street.

Figure 6.95 – Hyde Park major centre precinct

6.3.4.3 Assessment benchmarks

Table 6.3.4.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
PO1 Where provided, outdoor lighting does not adversely affect the amenity of adjoining properties or create a traffic hazard on adjacent roads.	**AO1.1** Light emanating from any source complies with *Australian Standard AS4282 Control of the Obtrusive Effects of Outdoor Lighting*.
	AO1.2 Outdoor lighting is provided in accordance with *Australian Standard AS 1158.1.1 –Road Lighting – Vehicular Traffic (Category V) Lighting – Performance and Installation Design Requirements*.
PO2 Residential uses within the centre do not interrupt the continuity of the streetscape or the active, pedestrian focus of the street frontage.	**AO2** Any residential uses are located above or behind ground storey retail, commercial or community uses.
PO3 Residential uses within the centre are provided with a reasonable level of privacy.	**AO3.1** Windows, balconies, and terraces of a dwelling unit are screened where overlooking a habitable room or private open space of another dwelling within 9m.
	AO3.2 Screening is a solid translucent screen or perforated panels or trellises which have a maximum of 50% openings.
PO4 Residential uses within the centre are provided with a reasonable level of private outdoor living space.	**AO4** Dwellings are provided with private open space or a balcony directly accessible from a habitable room with: (a) a minimum area of 9m^2; and (b) a minimum dimension of 3m; and (c) clear of any utilities such as gas, water tanks or air conditioning units.

Table 6.3.4.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Role and function	
PO5 Development is consistent with the intended role, scale and character of the major centre and does not compromise the intended role or successful functioning of the principal centre (CBD) or other major centres. The growth of floor space within centres is balanced with anticipated growth within their primary catchment and does not substantively impact on the trading of other centres for an extended period of time or unduly undermine the potential for another centre to expand into its intended role.	No acceptable outcome is nominated. **Editor's note—**Applicants should have regard to Economic impact assessment planning scheme policy SC6.5 for guidance on how to demonstrate compliance with this performance outcome.

PO6 Development facilitates a range of uses that contributes to the vibrancy of the centre and provides for a compatible mix of active day and night-time uses.	No acceptable outcome is nominated.
PO7 Development facilitates opportunities for appropriate co-location of residential uses and community-related activities or facilities with retail or commercial development within the centre, to the extent practical.	No acceptable outcome is nominated.

Table 6.3.4.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	**Acceptable outcomes**
For assessable development	
Centre design and built form	
PO8 The design of the centre provides for: (a) a coherent and integrated built form, public realm and circulation networks; (b) central, accessible and attractive public spaces for people to congregate and interact; (c) continuity of streetscape and landscape characteristics; (d) pedestrian friendly and visually interesting frontages to streets and public spaces; (e) optimum energy efficiency; (f) a well-integrated mix of uses; (g) connectivity of pedestrian and cyclist paths and spaces internal and external to the centre; and (h) sensitive transitioning to surrounding land and uses. **Editor's note–**Applicants may be requested to prepare a centre design master plan to demonstrate compliance with this performance outcome.	No acceptable outcome is nominated.
PO9 Buildings create a human scale at street level.	No acceptable outcome is nominated.
PO10 A strong sense of enclosure and definition of pedestrian space is created along street frontages, with buildings designed to provide visual interest, foster social interaction and create a safe and pleasant pedestrian-focussed environment.	No acceptable outcome is nominated.
PO11 Streetscape treatments and street trees are provided along the street frontage to create a visually cohesive precinct and enhance pedestrian amenity.	No acceptable outcome is nominated.
PO12 Parking areas are not located along the street frontage.	No acceptable outcome is nominated.
PO13 Building caps and rooftops create an attractive roofscape and screen plant and equipment.	No acceptable outcome is nominated.

PO14 Built form maximises use of natural ventilation, solar heating/cooling and water conservation through building orientation and design, landscaping, building materials and on-site infrastructure.	No acceptable outcome is nominated.

Table 6.3.4.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Crime prevention through environmental design	
PO15 Development facilitates the security of people and property having regard to: (a) opportunities for casual surveillance and sight lines; (b) exterior building design that promotes safety; (c) adequate lighting; (d) appropriate signage and wayfinding; (e) minimisation of entrapment locations; and (f) building entrances, loading and storage areas that are well lit and lockable after hours. **Editor's note—**Applicants should have regard to Crime Prevention through Environmental Design Guidelines for Queensland.	No acceptable outcome is nominated.

Table 6.3.4.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Accessibility	
PO16 Convenient and legible connections are provided for pedestrians and cyclists to the site, particularly having regard to linkages with existing and proposed public transport infrastructure, the open space network, centres and other community-related activities.	No acceptable outcome is nominated.

Table 6.3.4.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Amenity	
PO17 Development minimises impacts on surrounding land and provides for an appropriate level of amenity within the centre, having regard to: (a) noise; (b) hours of operation; (c) traffic; (d) visual impact; (e) signage; (f) odour and emissions; (g) lighting; (h) access to sunlight; (i) privacy; and (j) outlook.	No acceptable outcome is nominated.
PO18 Refuse storage areas, loading/unloading and other service or storage areas are screened from view from the street and adjoining land.	**AO18** Refuse storage areas loading/unloading or other service or storage areas are located to the rear or side of a building and are screened from view by a 1.8m high solid fence.
PO19 Development is located, designed and operated so that adverse impacts on privacy and amenity on nearby land in a residential zone are minimised.	**AO19.1** Buildings are set back 4m from any boundary shared with a residential zone.
	AO19.2.1 A 1.8m high solid screen fence is provided along all boundaries shared with a residential zone. AND **AO19.2.2** A landscaped buffer with a minimum width of 3m and consisting of dense screen planting is provided along all boundaries shared with a residential zone.
	AO19.3 Windows that have a direct view into an adjoining residential use are provided with fixed screening that is a maximum of 50% transparent to obscure views and maintain privacy for residents.
PO20 On-site landscaping is provided to: (a) enhance the appearance of the development, particularly in parking and service areas and in public spaces; (b) contribute to pedestrian comfort through shade; and (c) screen servicing components.	No acceptable outcome is nominated.

Table 6.3.4.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Community uses, community care centres, clubs	
PO21 Adequate lockable storage space is provided on-site to meet the needs of users.	**AO21** At least one (1) lockable storage space of at least 4m^2 is provided for each room or area that can be hired out or used by community organisations or the public.

Table 6.3.4.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Showrooms	
PO22 Showrooms are designed and located as an integrated part of the centre, having regard to the continuity of built form and streetscapes, active street frontages and pedestrian and cyclist accessibility and circulation.	No acceptable outcome is nominated.

Table 6.3.4.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in Aitkenvale major centre sub-precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Aitkenvale centre core sub-precinct	
PO23 Development facilitates a town square sleeved by medium-rise mixed use built form at the corner of Elizabeth and Alfred Streets, in accordance with Figure 6.96 — Aitkenvale major centre precinct concept plan.	No acceptable outcome is nominated.
PO24 Development assists in creating a main street environment along Elizabeth Street by facilitating an active edge incorporating externally oriented shops, dining and entertainment uses at the ground storey. Buildings contribute to the creation of this active edge by incorporating features such as: (a) primary building entrances; (b) awnings to provide shade for pedestrians; and (c) significant use of glazing or transparent materials.	No acceptable outcome is nominated.

PO25 On frontages shown on Figure 6.96 — Aitkenvale major centre precinct concept plan as having a strong built form edge, buildings contribute to the creation of a strong and pedestrian-oriented edge to the street, by: (a) being built to the street frontage at the ground storey; (b) creating a generally continuous building alignment; (c) providing awnings over the full width of footpaths; and (d) having facades which contain windows, doors, materials and features which generate visual interest at the street level.	No acceptable outcome is nominated.
PO26 The visual dominance of the parking areas is reduced by buildings sleeving road frontages and by landscape screening.	No acceptable outcome is nominated.
PO27 Pedestrian connections between the centre core north and centre core south are improved wherever possible.	No acceptable outcome is nominated.
PO28 Development provides for pedestrian and cyclist connections to the Rossiter Park precinct and to surrounding areas.	No acceptable outcome is nominated.
PO29 Pedestrian routes are defined by buildings streetscape improvements that provide shade and improve pedestrian comfort.	No acceptable outcome is nominated.
PO30 Building height assists in identifying the centre core as the primary focus of activity within the centre and as a mixed use environment.	**AO30** Building height does not exceed: (a) 8 storeys where as part of a mixed use development and located in accordance with Figure 6.96 - Aitkenvale major centre precinct concept plan; and (b) 5 storeys otherwise.

Figure 6.96 – Aitkenvale major centre precinct concept plan

PO31 Development contributes to the boulevard treatment of Nathan Street and Ross River Road through streetscape and landscape treatments.	No acceptable outcome is nominated.
PO32 Development provides sufficient land and infrastructure to support a new bus interchange along Elizabeth Street.	No acceptable outcome is nominated.

Table 6.3.4.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	**Acceptable outcomes**
Additional benchmarks for assessable development in Aitkenvale major centre sub-precincts **Note—**where acceptable outcomes in this section vary from those provided earlier in this code, the precinct- based acceptable outcomes take precedence.	
Aitkenvale centre frame sub-precinct	
PO33 On frontages shown on Figure 6.96 — Aitkenvale major centre precinct concept plan as having a strong built form edge, buildings contribute to the creation of a strong and pedestrian-oriented edge to the street, by: (a) being built to the street frontage at the ground storey; (b) creating a generally continuous building alignment; (c) providing awnings over the full width of footpaths; and (d) having facades which contain windows, doors, materials and features which generate visual interest at the street level.	No acceptable outcome is nominated.

Figure 6.96 – Aitkenvale major centre precinct concept plan

PO34 Development provides for pedestrian and cyclist connections to surrounding areas wherever practicable.	No acceptable outcome is nominated.
PO35 Development contributes to the boulevard treatment of Nathan Street and Ross River Road through streetscape and landscape treatments.	No acceptable outcome is nominated.
PO36 Parking is provided in consolidated areas wherever practicable.	No acceptable outcome is nominated.
PO37 Parking areas are sleeved by buildings which screen them from street frontages.	No acceptable outcome is nominated.
PO38 Building height creates a medium-rise environment and assists in identifying the centre core as the primary focus of activity within the centre and as a mixed use environment.	**AO38** Building height does not exceed 5 storeys.

Table 6.3.4.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	**Acceptable outcomes**
Additional benchmarks for assessable development in Thuringowa Central major centre sub-precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Thuringowa town centre heart sub-precinct	
PO39 Development facilitates or supports a mix of uses and day and night-time activity throughout the sub-precinct.	No acceptable outcome is nominated.
PO40 Shops, dining and entertainment uses are predominant at the ground storey along the main street section of High Range Drive and Pioneer Drive, identified on Figure 6.97 — Thuringowa town centre heart sub-precinct concept plan.	No acceptable outcome is nominated.
PO41 Residential and office uses are accommodated but do not interrupt ground storey activation by shopping and dining uses along the main street section of High Range Drive and Pioneer Drive, identified on Figure 6.97 — Thuringowa town centre heart sub-precinct concept plan.	No acceptable outcome is nominated.
PO42 Development facilitates a town square at the corner of High Range and Pioneer Drive.	No acceptable outcome is nominated.

PO43 On frontages shown on Figure 6.97 — Thuringowa town centre heart sub-precinct concept plan as having a strong built form edge, buildings contribute to the creation of a strong and pedestrian oriented edge to the street, by: (a) being built to the street frontage at the ground storey; (b) creating a generally continuous building alignment; (c) providing awnings over the footpaths; and (d) having facades which contain windows, doors, materials and features which generate visual interest at the street level.	No acceptable outcome is nominated.
PO44 Building height reinforces the sub-precinct's role as the heart of Thuringowa Central, and is generally medium-rise. The tallest buildings in the sub-precinct occur along Riverway Drive and the main street section of High Range and Pioneer Drives.	**AO44** Building height does not exceed: (a) 8 storeys fronting Riverway Drive and the main street section of High Range and Pioneer Drives, consistent with Figure 6.97 — Thuringowa town centre heart sub-precinct concept plan; and (b) 5 storeys otherwise.
PO45 Parking is provided in consolidated areas wherever practicable.	No acceptable outcome is nominated.
PO46 Parking areas are sleeved by buildings which screen them from street frontages.	No acceptable outcome is nominated.
PO47 Development provides for pedestrian and cyclist connections from Riverway and Pioneer Park to the Willows sub-precinct and to surrounding areas in accordance with Figure 6.97 — Thuringowa town centre heart sub-precinct concept plan.	No acceptable outcome is nominated.

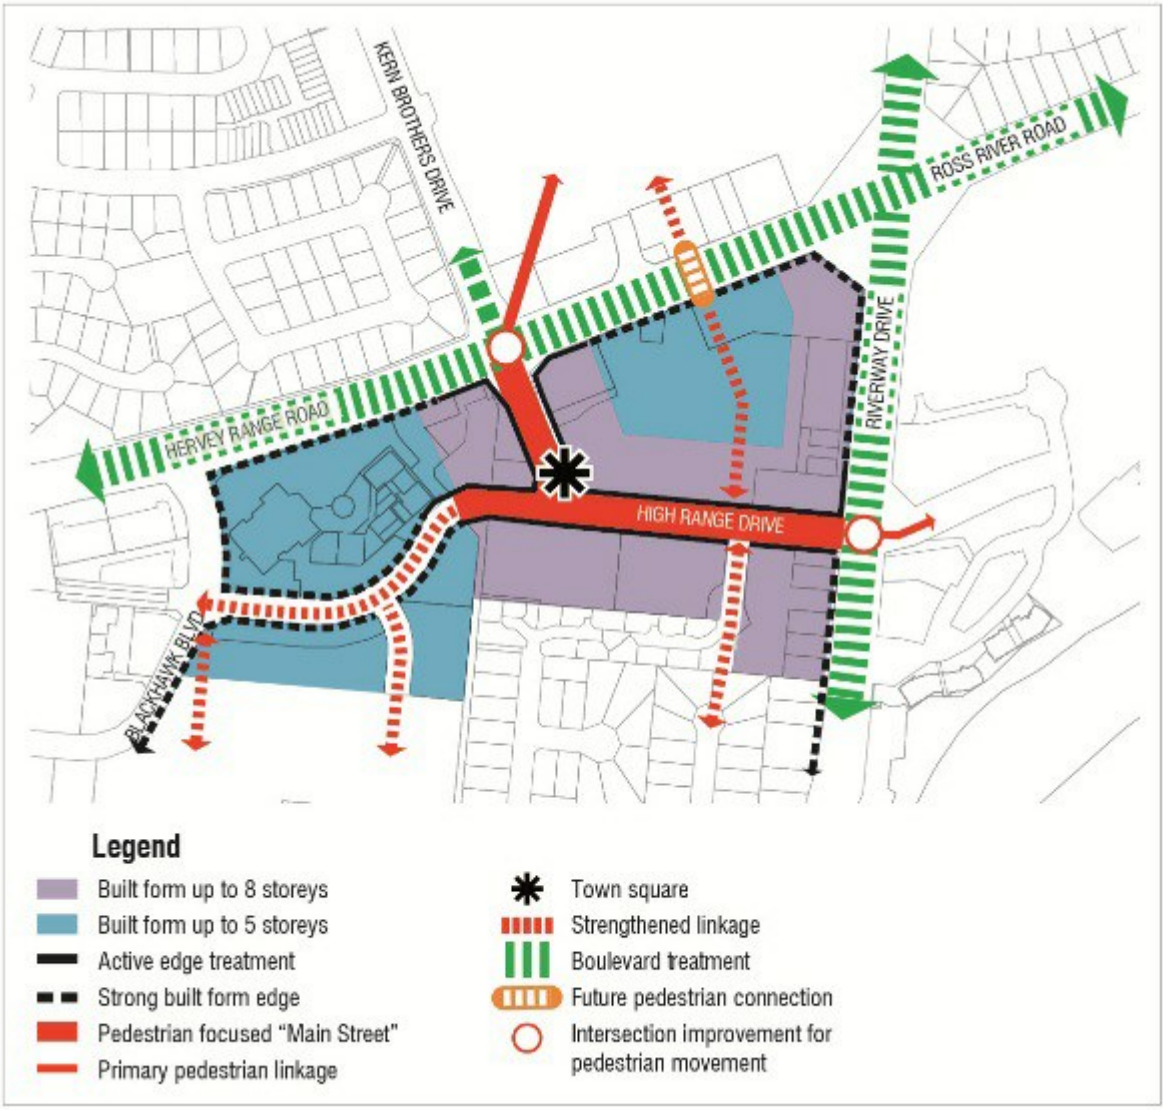

Figure 6.97 – Thuringowa town centre heart sub-precinct concept plan

PO48 Development contributes to the boulevard treatment of Riverway Drive and Hervey Range Road through streetscape and landscape treatments as identified on Figure 6.97 — Thuringowa town centre heart sub-precinct concept plan.	No acceptable outcome is nominated.

Table 6.3.4.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in Thuringowa Central major centre sub-precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Willows sub-precinct	
PO49 Development assists in creating strong edges at the street by buildings that are oriented to the street frontages, identified on Figure 6.98 — Willows sub-precinct concept plan.	No acceptable outcome is nominated.

PO50 Development assists in reducing the internalised orientation of the shopping centre by facilitating externally oriented uses.	No acceptable outcome is nominated.
PO51 The visual dominance of the parking areas are reduced by buildings sleeving road frontages and by landscape screening.	No acceptable outcome is nominated.
PO52 Built form generates visual interest at the street level, having regard to the proportion of openings, windows, materials and features. Large expanses of blank walls are avoided.	No acceptable outcome is nominated.
PO53 Parking is provided in consolidated areas wherever practicable.	No acceptable outcome is nominated.
PO54 Visual connections to Pioneer Park and Riverway are maximised wherever possible.	No acceptable outcome is nominated.
PO55 Development provides for pedestrian and cyclist connections to the Town centre heart sub-precinct, Riverway and Pioneer Park and to surrounding areas in accordance with Figure 6.98 — Willows sub-precinct concept plan.	No acceptable outcome is nominated.

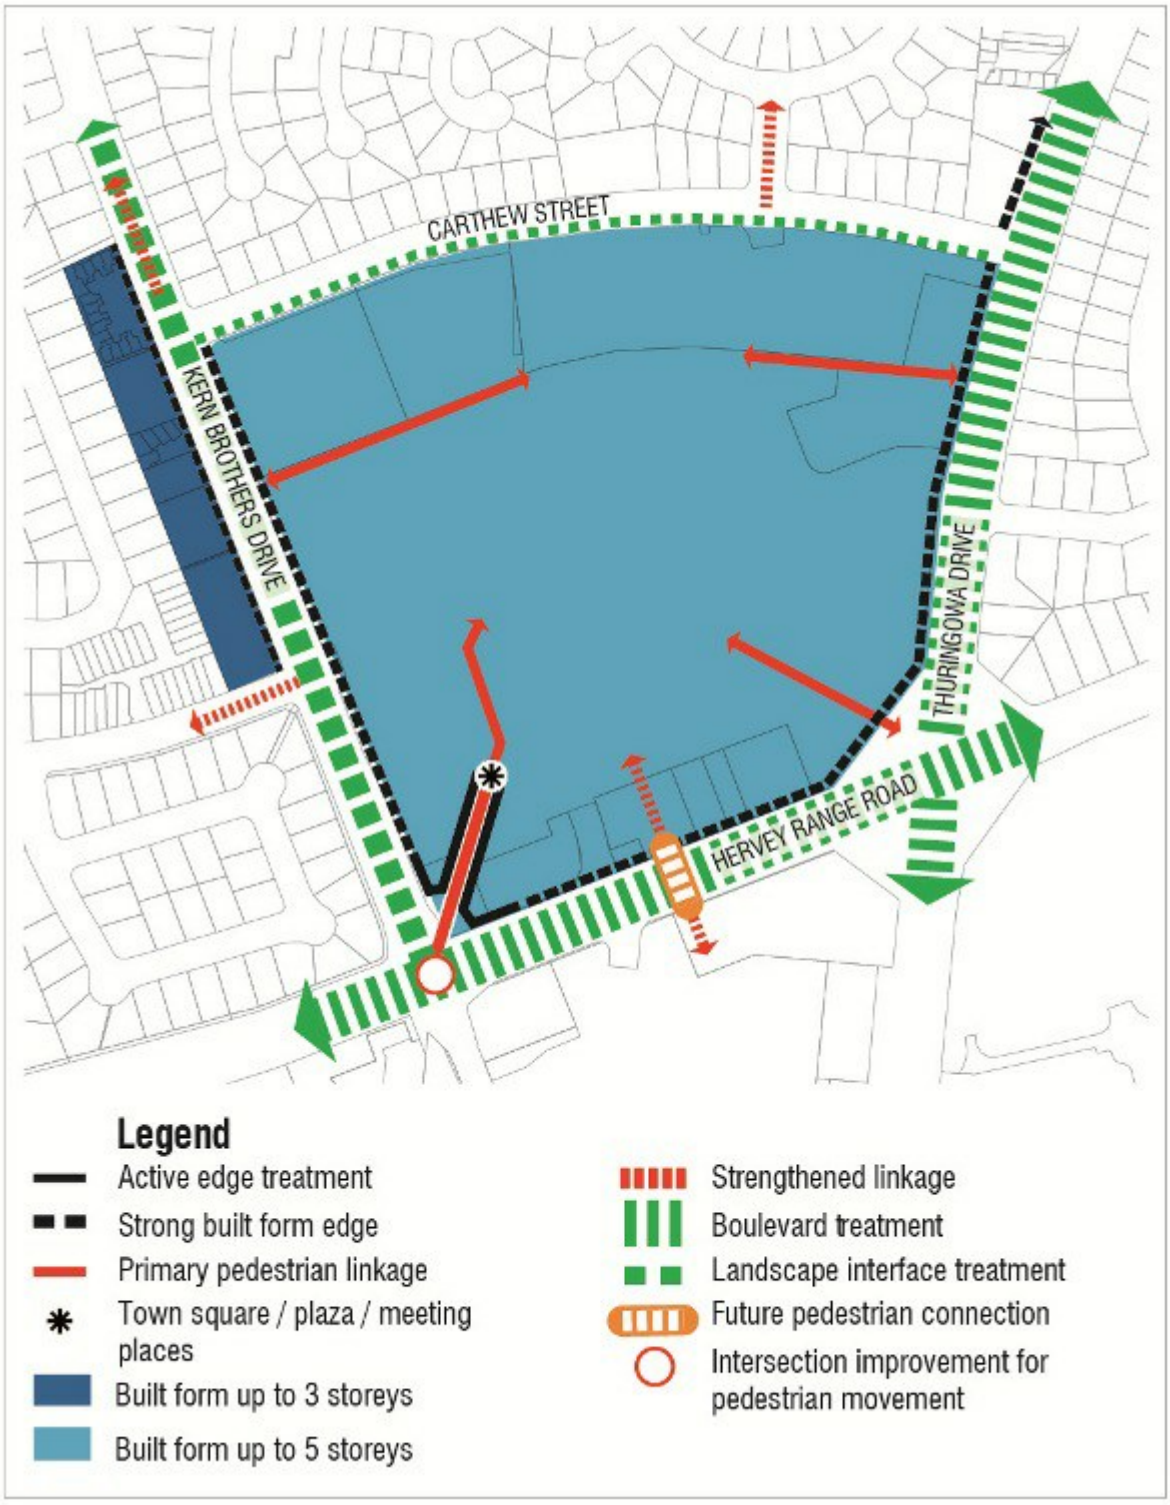

Figure 6.98 – Willows sub-precinct concept plan

PO56 The main pedestrian route connecting to the Town centre heart sub-precinct is defined by buildings and uses creating an active edge.	No acceptable outcome is nominated.
PO57 Building height is generally medium rise, but provides for a transition in building heights to the surrounding neighbourhood.	**AO57** Building height does not exceed 5 storeys within the block bounded by Thuringowa Drive, Hervey Range Road Kern Brothers Drive and Carthew Street, and 3 storeys otherwise, as identified on Figure 6.98 – Willows sub-precinct concept plan.
PO58 Landscaping and streetscape treatments are provided along Kern Brothers Drive and Carthew Street to enhance the outlook from the surrounding neighbourhood.	No acceptable outcome is nominated.
PO59 Development contributes to the boulevard treatment of Riverway Drive and Hervey Range Road through streetscape and landscape treatments.	No acceptable outcome is nominated.

Table 6.3.4.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	**Acceptable outcomes**
Additional benchmarks for assessable development in Thuringowa Central major centre sub-precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Thuringowa Drive sub-precinct	
PO60 Strong edges at the street are created by buildings that are oriented to the street frontages and forming a continuous building line, as identified on Figure 6.99 – Thuringowa sub-precinct concept plan.	No acceptable outcome is nominated.
PO61 Built form generates visual interest at the street level, having regard to the proportion of openings windows, materials and features. Large expanses of blank walls are avoided.	No acceptable outcome is nominated.
PO62 Parking is provided in consolidated areas wherever practicable.	No acceptable outcome is nominated.
PO63 Building height is generally low-rise.	**AO63** Building height does not exceed 3 storeys.
PO64 As identified on Figure 6.99 –Thuringowa sub-precinct concept plan, the corner of Thuringowa Drive and Hinchinbrook Drive creates a gateway to Thuringowa Central. Built form, landscape and streetscape treatment at this corner reinforces a gateway statement, and landscape treatment along Hinchinbrook Drive assists in connecting and unifying the sub-precinct.	No acceptable outcome is nominated.

PO65 Development contributes to the boulevard treatment of Thuringowa Drive through streetscape and landscape treatments.	No acceptable outcome is nominated.

Figure 6.99 – Thuringowa Drive sub-precinct concept plan

Table 6.3.4.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in Thuringowa Central major centre sub-precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Thuringowa centre support sub-precinct	
PO66 Supermarket and discount department store retail uses do not occur in this sub-precinct.	No acceptable outcome is nominated.
PO67 Buildings are oriented to the street frontages along Hervey Range Road and Blackhawk Boulevard, and the streetscape is improved through the quality of the adjoining built form and landscaping, as identified on Figure 6.100 — Thuringowa centre support sub-precinct concept plan.	No acceptable outcome is nominated.
PO68 All building frontages to Hervey Range Road and Blackhawk Boulevard, are provided with large windows and clearly identifiable building entrances.	No acceptable outcome is nominated.
PO69 A pedestrian connection is provided between Blackhawk Boulevard and High Range Drive, in accordance with Figure 6.100 — Thuringowa centre support sub-precinct concept plan.	No acceptable outcome is nominated.
PO70 Development facilitates new road linkages between Blackhawk Boulevard and the residential neighbourhood to the south in accordance with Figure 6.100 — Thuringowa centre support sub-precinct concept plan.	No acceptable outcome is nominated.

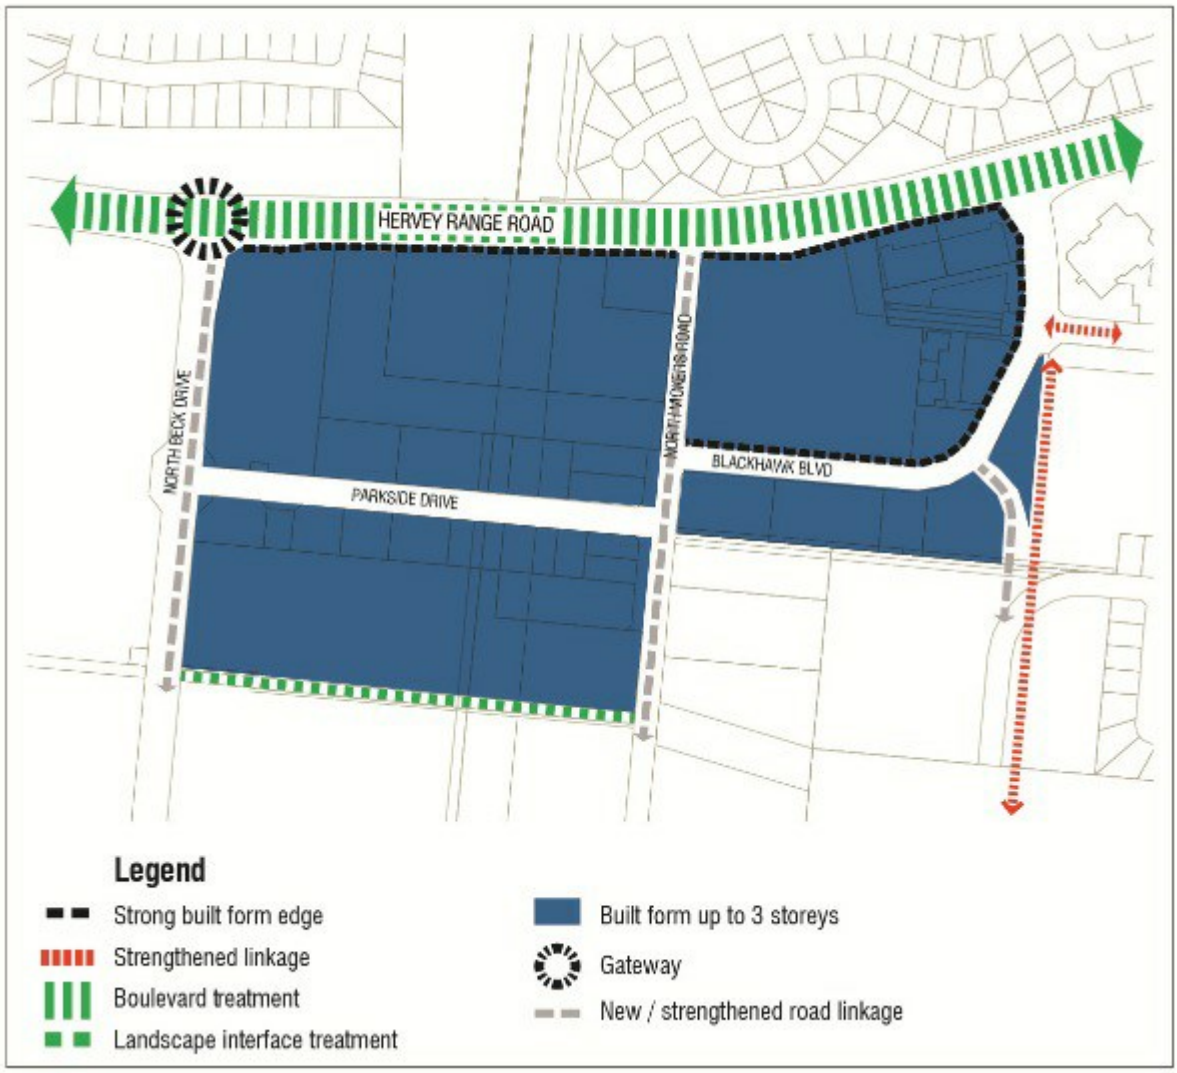

Figure 6.100 – Thuringowa centre support sub-precinct concept plan

PO71 Building height is generally low-rise.	**AO71** Building height does not exceed 3 storeys.
PO72 Landscaping and streetscape treatments are provided along North Beck Drive and Vickers Road North to enhance the outlook from the surrounding neighbourhood.	No acceptable outcome is nominated.
PO73 The appearance of development along the southern edge of this sub-precinct is enhanced through landscape treatment, as identified on Figure 6.100 — Thuringowa centre support sub-precinct concept plan.	No acceptable outcome is nominated.
PO74 As identified on Figure 6.100 — Thuringowa centre support sub-precinct concept plan, the corner of North Beck Drive and Hervey Range Road creates a gateway to Thuringowa Central. Built form, landscape and streetscape treatment at this corner reinforces a gateway statement.	No acceptable outcome is nominated.

PO75 Development contributes to the boulevard treatment of Hervey Range Road through streetscape and landscape treatments.	No acceptable outcome is nominated.

Table 6.3.4.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in Hyde Park major centre precinct **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Hyde Park major centre precinct	
PO76 Strong edges at the street are created by buildings that are oriented to the street frontages and forming a continuous building line, in accordance with Figure 6.101 — Hyde Park major centre precinct concept plan.	No acceptable outcome is nominated.
PO77 Built form generates visual interest at the street level, having regard to the proportion of openings, windows, materials and features. Large expanses of blank walls are avoided.	No acceptable outcome is nominated.
PO78 Parking is provided in consolidated areas wherever practicable.	No acceptable outcome is nominated.
PO79 Building height is generally medium rise.	**AO79** Building height does not exceed 5 storeys.
PO80 Development facilitates the establishment of a new road linkage connecting Woolcock Street to Dillane Street, in accordance with Figure 6.101 — Hyde Park major centre precinct concept plan. This new road assists in creating an active and attractive interface between the major centre and the Hyde Park medium density precinct.	No acceptable outcome is nominated.
PO81 Development facilitates the establishment of Virgil Street as the major east-west pedestrian thoroughfare connecting across Kings Road and east into the Hyde Park medium density precinct and the nearby open space corridor, in accordance with Figure 6.101 — Hyde Park major centre precinct concept plan.	No acceptable outcome is nominated.

Figure 6.101 – Hyde Park major centre precinct concept plan

Table 6.3.4.3 - Accepted development subject to requirements and assessable development (Part)

PO82 Development assists in creating a primary pedestrian and cycle pathway and improving the quality of pedestrian environment along Woolcock Street and Kings Road.	No acceptable outcome is nominated.
PO83 Landscape treatment along Virgil Street, Dillane Street and the parkland assists in connecting and unifying the precinct.	No acceptable outcome is nominated.

6.3.5 Principal centre (CBD) zone code

6.3.5.1 Application

This code applies to development where the code is identified as applicable in the categories of development and assessment.

When using this code, reference should be made to section 5.3.2 and where applicable, section 5.3.3 located in Part 5.

6.3.5.2 Purpose

(1) The purpose of the Principal centre (CBD) zone code is to provide for the largest and most diverse mix of uses and activities in Townsville.

It includes key concentrations of high-order retail, commercial, employment, residential, health services, administrative, community, cultural, recreational and entertainment activities and other uses, capable of servicing the planning scheme area.

(2) The particular purpose of the code is to:

(a) re-enforce the Townsville central business district (CBD) as the economic heart of the region, and the primary location for business, government and administration uses;

(b) promote the principal centre (CBD) as the location for the highest order activities and facilities of the city including retail, commercial, cultural, civic, sporting, and recreational uses;

(c) consolidate Townsville as Queensland's second capital and be an exemplar city in tropical urban sustainability; and

(d) ensure the principal centre (CBD) contributes to the identity, character and life of the city.

(3) The purpose of the zone will be achieved through the following overall outcomes:

(a) the principal centre (CBD) is a vibrant mixed use place where people live, work and play in a high density environment which is active both during the day and night-time;

(b) the principal centre is the highest order centre in Townsville and services a regional catchment, supported by a network of centres;

(c) the principal centre is the focus for the highest intensity of retail, commercial, administrative, government and employment uses in the city and is the primary location for major office and commercial buildings;

(d) the principal centre offers a more distinctive and higher order retailing than the major centres in an outdoor, main street environment that is characterised by arcades, laneways and footpath dining. The preferred location for any new department store in Townsville is in the Flinders Street retail precinct;

(e) high density residential development, tourist and short-term accommodation are located within the principal centre (CBD);

(f) new, larger scale strategic facilities, such as sports arenas, stadiums, convention centres and entertainment centres are located in other zones outside the CBD. These facilities are intended to be located close to the fringe of and well-connected to the CBD. Shops and commercial uses associated with these facilities do not compromise the CBD;

(g) the scale and density of development creates a critical mass of people living and working in the principal centre, to support the provision of the highest order of public and active transport facilities and promotes sustainable transport choices including public transport, walking and cycling;

(h) the principal centre (CBD) is a major hub for most public transport routes providing a single interchange to access frequent services to other parts of the city. An on-street transport interchange for bus routes to and through the CBD is to be located immediately adjacent to the Flinders Street retail precinct;

(i) Flinders Street, Ogden Street and Hanran Street are slow-speed vehicle environments and provide the main pedestrian and cycle spines through the principal centre. Through traffic is diverted to the fringes, including Walker Street, Blackwood Street, Denham Street and Stanley Street;

(j) pedestrian and cycle access is complemented by a network of shared paths along the banks of Ross Creek and new pedestrian and cycle creek crossings;

(k) Stokes Street is intended to be the primary east-west pedestrian spine linking the Civic and administration precinct, public transport interchange, commercial office, retail heart, Flinders Street, Victoria Bridge and Palmer Street;

(l) public realm provides a platform for public life and is characterised by high quality streetscapes, landscape elements, planting and hardscape materials reflective of the climate and character of Townsville;

(m) a variety of public open space areas at different scales and forms are provided for event and gathering spaces throughout the city, including public plazas, parks and gardens. These are appropriate to the required use and include:

(i) Flinders Square forming the primary civic event and gathering space;

(ii) a new 'front door' to Castle Hill at 'The Cutting', incorporating an information and interpretive centre, viewing platform over the CBD and providing walking track access to Castle Hill;

(iii) Flinders Street East park and plaza, which create a waterfront park for passive recreation, taking advantage of views and amenity; and

(iv) Flinders Street spine, which forms a linear plaza street from Stanley Street to Wickham Street with wider footpaths and slow vehicle speeds.

(n) natural features are retained, enhanced and buffered from the impacts of adjacent uses. Impacts are minimised through location, design, operation and management requirements;

(o) public spaces and streets are activated by shop fronts and kerbside activities at the ground storey whilst awnings over the full width of the footpaths provide protection from the elements;

(p) development is designed to incorporate exemplar sustainable practices including new technologies in maximising energy efficiency, water conservation and climate-responsive design principles;

(q) the height and scale of buildings reinforce the principal role of the centre and contribute to character, legibility and accessibility of the centre. The principal centre predominantly contains high-rise buildings. However, a human scale and attractive, pedestrian friendly environment is created at street level; and

(r) buildings located to the north of Sturt Street do not extend above the maximum height of buildings to the south of Sturt Street.

(4) The purpose of the zone will also be achieved through the following additional overall outcomes for particular precincts:

Civic and administration precinct:

(a) the Civic and administration precinct anchors the top of the principal centre (CBD) and is focused around government, administration and civic functions, such as the library and courthouse, local and state government departments;

(b) high quality public and semi-public spaces are incorporated into development to support the community function of these buildings, particularly at the intersection of Stokes and Walker Streets;

(c) lower building forms are contained in this precinct in response to the local topography and the need to provide an appropriate interface with adjoining residential land uses to the north of Wills Street;

(d) building heights in the precinct do not exceed 8 storeys; and

(e) building forms reflect a 'building in plaza' form incorporating a tower design with side and rear setbacks. Recesses in the ground level accommodate plaza spaces which are particularly focussed on presentation to Walker Street.

Click here to view high resolution PDF.

Figure 6.102 – Civic and administration precinct

Flinders Street retail precinct:

(a) the Flinders Street retail precinct is the core focus for future retail activity and the provision of a new department store in this precinct is highly desired and actively encouraged;

(b) department stores, arcades and internal retail developments connect directly into Flinders Street, supporting the retail spine and do not detract from the attractiveness and activity on the street;

(c) highly attractive and permeable pedestrian-based built form is created with a highly active ground floor and cross block links available during operating hours;

(d) this precinct includes a large concentration of historic buildings. New buildings reflect and integrate with this built form with a low podium height and continuous frontages;

(e) taller building elements are set back from the street frontage to allow for light and air into the street and maintain the outdoor quality and human scale of the street;

(f) shop fronts, café and or restaurant premises are continuous along both sides of the street. Retail is the predominant use; and

(g) parking is not situated at the street frontage at the ground floor, and does not detract from the street activity or create blank walls. Parking structures are screened with green walls, planting, vines, creepers or public art. There are no blank facades along Flinders Street.

Click here to view high resolution PDF.

Figure 6.103 – Flinders Street retail precinct

Flinders Street East precinct:

(a) the Flinders Street East precinct frames the eastern end of the principal centre (CBD). The precinct will continue to emerge as a vibrant entertainment and boutique shopping location, integrated with the principal centre (CBD) but with its own unique identity as a destination;

(b) the precinct will continue to develop at a lower scale than the rest of the principal centre (CBD);

(c) re-use of existing heritage buildings is actively encouraged, and new buildings are designed to respect the heritage attributes of the precinct;

(d) building height fronting Flinders Street East and Melton Terrace is low-rise and consistent with the scale of nearby character and heritage buildings;

(e) retail uses do not compete with the rest of the principal centre (CBD), and will generally be of a boutique shopping and convenience nature;

(f) active uses such as restaurants and pubs are located to the Flinders Street frontage, with new development to Melton Terrace to predominantly consist of residential uses; and

(g) new development contributes to a consistent pallet of local streetscape elements and designs, resulting in the continuing development of a local streetscape character for the precinct.

Figure 6.104 – Flinders Street East precinct

6.3.5.3 Assessment benchmarks

Table 6.3.5.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
PO1 Where provided, outdoor lighting does not adversely affect the amenity of adjoining properties or create a traffic hazard on adjacent roads.	**AO1.1** Light emanating from any source complies with *Australian Standard AS4282 Control of the Obtrusive Effects of Outdoor Lighting*.
	AO1.2 Outdoor lighting is provided in accordance with *Australian Standard AS 1158.1.1 –Road Lighting – Vehicular Traffic (Category V) Lighting – Performance and Installation Design Requirements*.
PO2 Residential uses within the centre do not interrupt the continuity of the streetscape or the active, pedestrian focus of the street frontage.	**AO2** Any residential uses are located above or behind ground storey retail, commercial or community uses.
PO3 Residential uses within the centre are provided with a reasonable level of privacy.	**AO3.1** Windows, balconies, and terraces of a dwelling unit are screened where overlooking a habitable room or private open space of another dwelling within 9m.
	AO3.2 Screening is a solid translucent screen or perforated panels or trellises which have a maximum of 50% openings.
PO4 Residential uses within the centre are provided with a reasonable level of private outdoor living space.	**AO4** Dwellings are provided with private open space or a balcony directly accessible from a habitable room with: (a) a minimum of 9m^2; (b) a minimum dimension of 3m; and (c) clear of any utilities, water tanks and air conditioning units.

Table 6.3.5.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Role and function	
PO5 Development is consistent with the intended role, scale and character of the principal centre. The growth of retail and office floor space and residential uses within this centre allow for it to expand into its intended role as the economic and administrative heart of the region.	No acceptable outcome is nominated.
PO6 Development is generally in accordance with the Figure 6.105 – Principal centre concept plan.	No acceptable outcome is nominated.

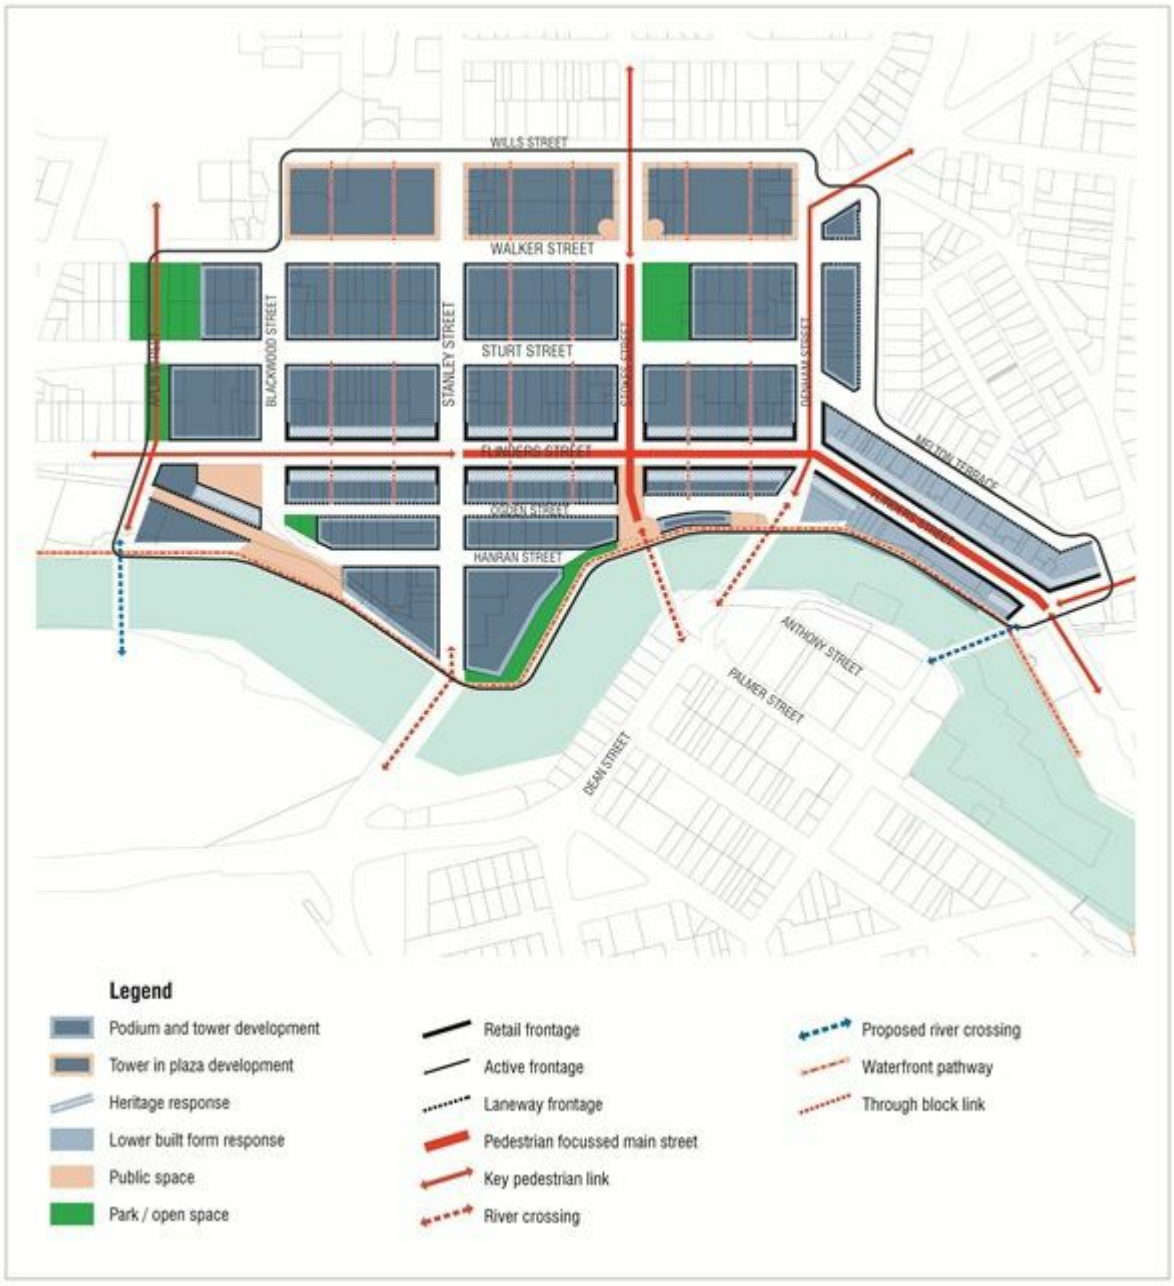

Figure 6.105 – Principal centre concept plan

PO7 Ground floor and podium level development is occupied with uses that contribute to: (a) the core economic, entertainment and cultural functions of the principal centre (CBD); (b) the vitality and vibrancy of the city's public domain; and (c) a compatible mix of active day and night-time uses.	**AO7.1** Podium level development accommodates non-residential uses.
	AO7.2 Uses at ground storey are active and include: (a) retail; or (b) cafes and restaurants incorporating outdoor dining; or (c) services and commercial offices which generate a high level of pedestrian traffic; or (d) recreational and entertainment; or (e) community and cultural uses; or (f) entrance foyers to commercial and residential uses above.

	AO7.3 Car parking is located in basements unless servicing significant citywide infrastructure or unresolvable geotechnical issues means basement parking is inappropriate or unachievable. In this case, parking is located above ground floor.
PO8 Tower development forms are occupied by uses that contribute to the accommodation of a critical mass of people (a resident or working population) within the principal centre (CBD).	**AO8** Uses within tower elements are predominantly: (a) residential accommodation either short or long-term; or (b) commercial offices; or (c) a combination of these.

Table 6.3.5.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Built form	
PO9 Building heights, site cover and setbacks contribute to the legibility, distinctiveness and place making of the city centre by creating an attractive skyline, and reinforcing the sense of primacy of the principal centre (CBD) core through built form outcomes.	**AO9.1** Unless otherwise stated for a particular precinct: (a) buildings greater than 8 storeys have a podium for a minimum of 2 storeys up to a maximum of 4 storeys, and a tower above, in accordance with Figure 6.106 – Tower and podium form; or (b) buildings of 8 storeys or less have a single tower form in accordance with Figure 6.107 – Single tower form.
	AO9.2 Unless otherwise stated for a particular precinct, setbacks and site cover are: (a) for buildings greater than 8 storeys incorporating tower and podium, in accordance with Figure 6.106 – Tower and podium form, and the following: Design Provisions - Zone & Precinct Codes Acceptable Outcome Building Form: > 8 Storey's: Tower & Podium Podium: Height: up to 4 storeys; Site Cover: 100%; SETBACKS Front: 0m; Side: 0m; Rear: 0m Tower: Height: 20 storeys + (including podium); Site Cover: 60%; SETBACKS Front: 4m; Side: 3m; Rear: 10m

	(b) for buildings 8 storeys or less and in a single tower form, in accordance with Figure 6.107 – Single tower form, and the following: **Design Provisions - Zone & Precinct Codes** **Acceptable Outcome** **Building Form**: Tower **Height**: Up to 8 storeys **Site Cover**: 70% **SETBACKS** – **Front:** 0m; **Side:** 3m; **Rear:** 6m
PO10 Building heights and massing: (a) contribute to the intended role, scale and character of the principal centre by: (i) accommodating sufficient floor space to provide critical mass and intensity of use to activate the city; (ii) concentrate major development in the CBD core and transition building height at the fringes to ensure appropriate interface with lower scale adjoining developments; and (iii) maximising active uses at lower levels to activate, interact with and overlook street frontages. (b) is appropriate to the character and climate of Townsville and: (i) retains the openness of street vistas, including to the sky, along major elements of the city grid; (ii) provides privacy, natural light penetration and air circulation; (iii) provide transition to and design compatibility with lower scale heritage places and precincts; and (iv) retains an appropriate relationship with established streetscapes. (c) contributes to safe, active streets and public domain, by: (i) defining the street space with human scale elements; (ii) retains the continuity of facades along the street; and (iii) addressing all streets and public spaces with active uses, windows, doors, openings and balconies.	No acceptable outcome is nominated.

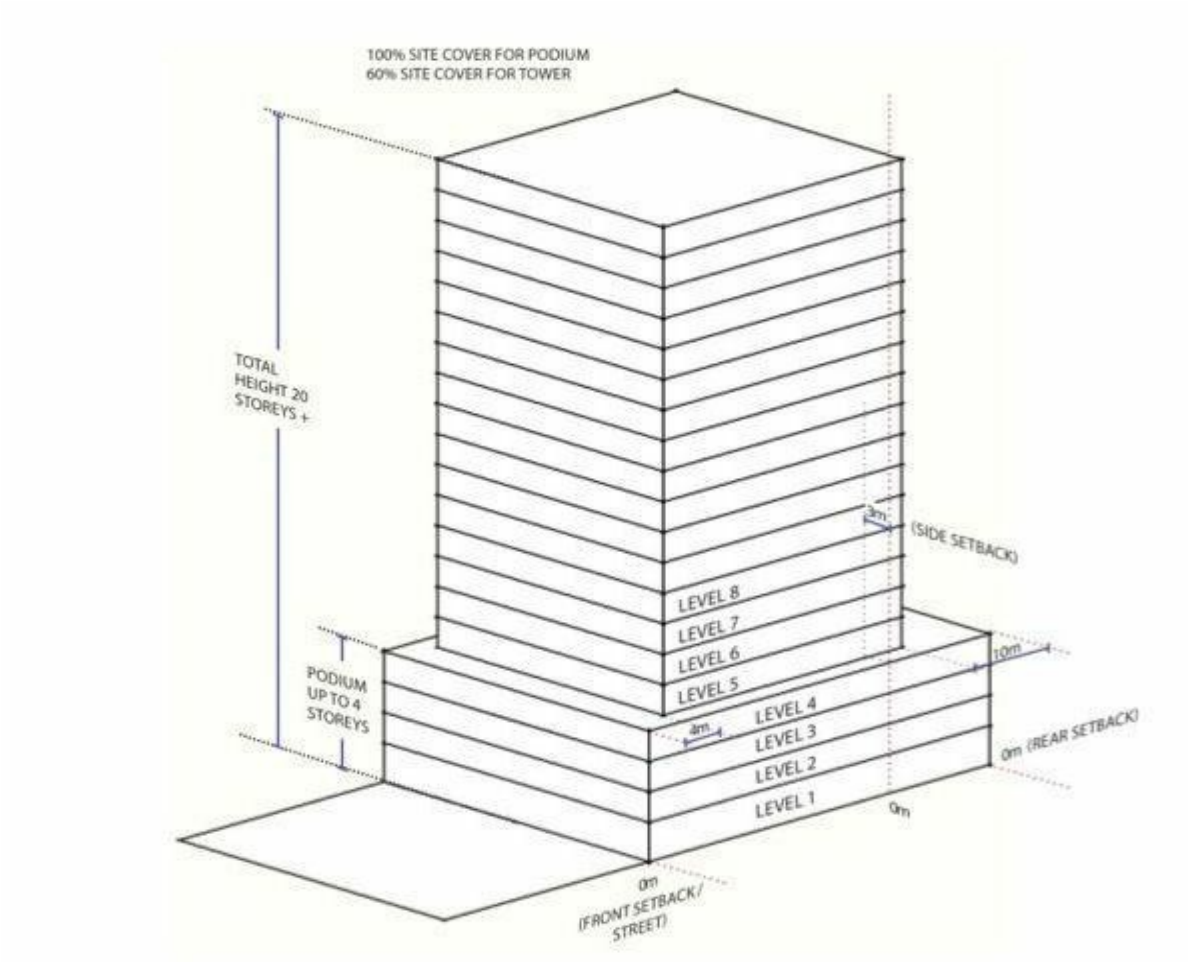

Figure 6.106 – Tower and podium form

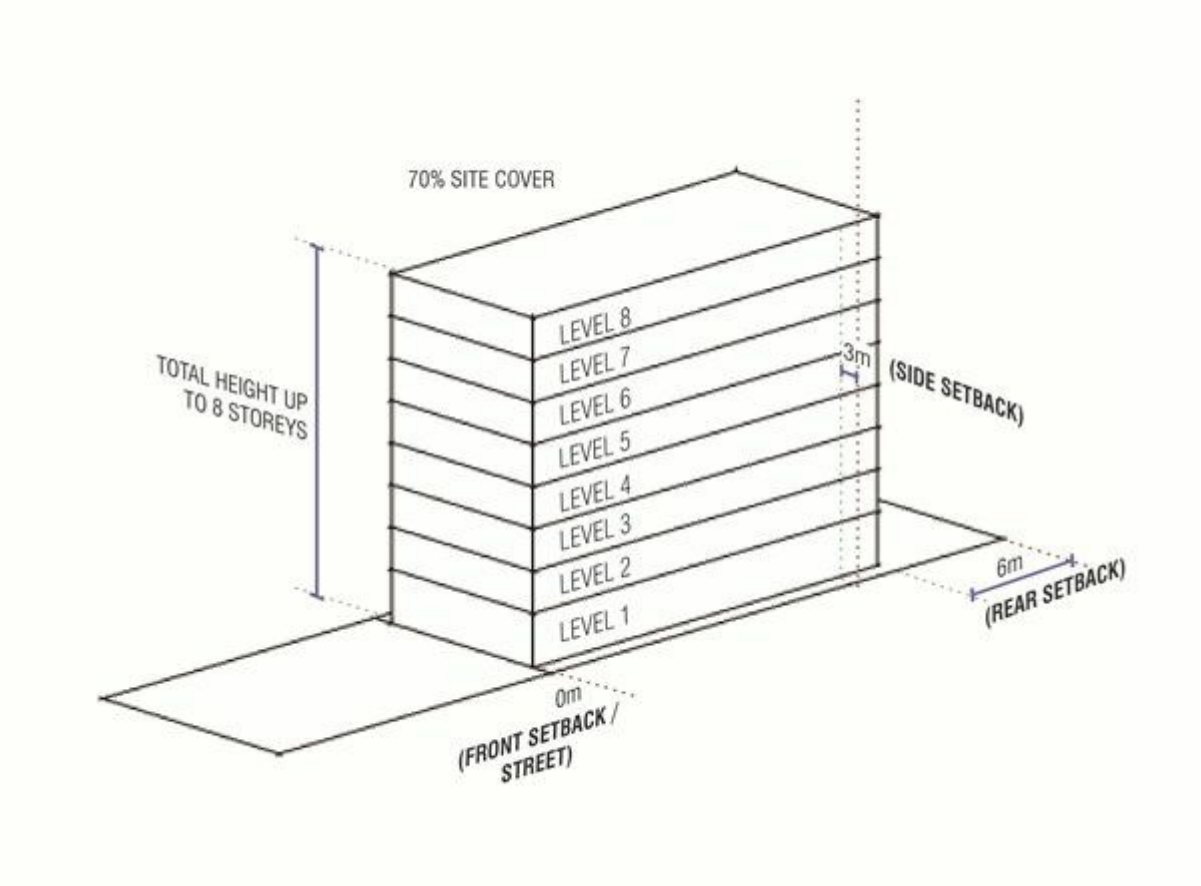

Figure 6.107 – Single tower form

PO11 Tower forms are clearly defined slender building elements with adequate spacing between them to provide for privacy, natural light penetration and air circulation.	**AO11.1** Maximum horizontal dimension for a tower on any side is 40m or 75% of the width of the site, whichever is the lesser.
	AO11.2 On a site greater than 3,000m^2, more than 1 tower is provided.
PO12 Ground floor and podium forms relate positively to streets and public spaces, and activate the public domain by incorporating: (a) operable elements within the building facade such as large window openings, sliding doors, window seating; (b) strong visual and physical connections between internal and external spaces; (c) usable outdoor/semi-outdoor spaces that support outdoor lifestyles and engage with the public realm; and (d) a gradual transition between the public domain and private outdoor or building spaces.	No acceptable outcome is nominated.
PO13 Through block connections are provided in accordance with Figure 6.105 – Principal centre concept plan which are publicly accessible during normal working/operating hours.	No acceptable outcome is nominated.

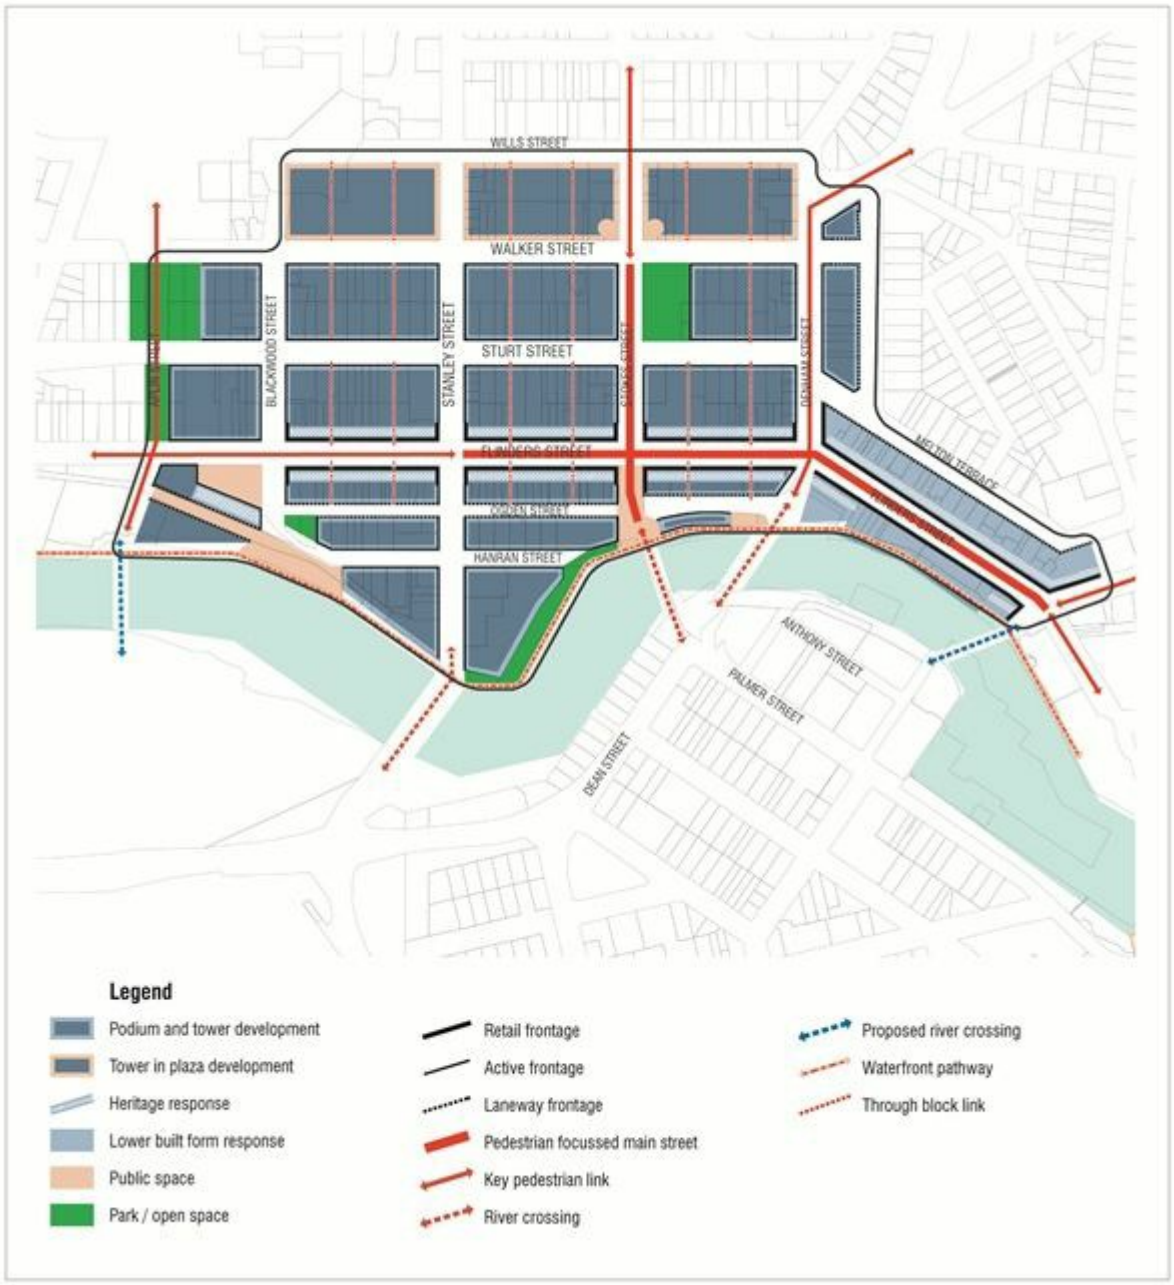

Figure 6.105 – Principal centre concept plan

PO14 Development provides continuity of building facades with adjoining buildings or provides appropriate transitions where a difference necessarily exists.	No acceptable outcome is nominated.
PO15 Ground floor and podium forms exhibit a human scale through: (a) the incorporation of detailed building elements; (b) articulation and definition of windows and openings including framing; (c) creation of a finer grain building rhythm, through design articulation such as variations in horizontal and vertical profiles, and variation in occupancy layouts within the overall building; and (d) where development sites are amalgamated, design of ground floor premises and facade to reflect the original lot widths.	No acceptable outcome is nominated.
PO16 Buildings or towers make a positive contribution to the skyline by: (a) exhibiting exceptional architectural design and quality; (b) utilising high quality materials that contribute to the tropical/Townsville character, are easily maintained and do not readily stain, discolour or deteriorate; and (c) articulating the building silhouette.	No acceptable outcome is nominated. **Editor's note–**where new buildings are proposed within the Principal centre (CBD) zone a design statement/response document is to be submitted with any development application demonstrating achievement of the relevant performance outcomes.
PO17 Roofscapes make a positive contribution to the attractiveness and function of the city through: (a) integrating them with the architectural design of the building; (b) service structures, lift motor rooms, externally mounted air conditioning units and mechanical plant designed as an architectural feature or with attractive screening; (c) creation of a coherent skyline for the city centre; and (d) creation of attractive and usable visual, open space, recreational or ecological spaces, including at podium level.	No acceptable outcome is nominated.
PO18 Buildings do not incorporate any type of glass or other surface that is likely to reflect solar rays that could create undue nuisance, discomfort or hazard to any part of the surrounding locality.	**AO18** Any reflective glass material has: (a) a level of light reflectivity of not greater than 20%; and (b) a level of heat transmission of not less than 20%.

PO19 Fenestration and sun control elements are used to: (a) minimise solar heat gain on building walls and windows; (b) reduce glare; (c) enrich the tropical character; and (d) provide texture to the building facades.	No acceptable outcome is nominated.

Table 6.3.5.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Crime prevention through environmental design	
PO20 Development facilitates the safety and security of people and property having regard to: (a) maximising opportunities for casual surveillance and sight lines; (b) exterior building design that promotes safety; (c) provision of adequate lighting; (d) appropriate signage and wayfinding mechanisms; (e) minimisation of entrapment locations; (f) building entrances, loading and storage areas that are well lit and lockable after hours; and (g) provision of direct movements along desire lines with clear unobscured sight lines. **Editor's note—**Applicants should have regard to Crime Prevention through Environmental Design Guidelines for Queensland.	No acceptable outcome is nominated.

Table 6.3.5.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Accessibility	
PO21 Ground storey pedestrian footpaths and access ways are the same level as, and connect without any lip or step to, the footpath and abutting pedestrian areas on neighbouring sites. Where the footpath is sloping, entries to the building are at the same level as the footpath.	No acceptable outcome is nominated.

Table 6.3.5.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Amenity	
PO22 Development minimises impacts on surrounding land and provides for an appropriate level of amenity within the centre, having regard to: (a) noise; (b) hours of operation; (c) traffic; (d) visual impact; (e) signage; (f) odour and emissions; (g) lighting; (h) access to sunlight; (i) privacy; and (j) outlook.	No acceptable outcome is nominated.
PO23 Development provides private open space that is: (a) well-proportioned, appealing, functional and easily accessible, and promotes outdoor living as an extension of the dwelling; (b) provides a high level of privacy for residents and neighbours; and (c) has sufficient size and shape to meet the needs of a diversity of potential residents.	**AO23.1** Private open space is provided as a balcony with: (a) a minimum area of 9m^2 for a 1 bedroom unit or 16m^2 for a 2 or more bedroom unit; and (b) a minimum dimension of 3m, clear of any utilities such as gas, water tanks or air-conditioning units.
	AO23.2 Where clothes drying areas are provided on private balconies they are screened from public view.
	AO23.3 Private open space is located or screened so it does not directly overlook main living areas or private open space of adjoining dwellings.
PO24 Sufficient communal open space is provided to create flexible spaces suitable for a range of activities.	No acceptable outcome is nominated.
PO25 Communal open space provides facilities including seating, shade, flexible spaces suitable for a range of activities. Treatments such as green roofs, green walls or community gardens contribute to the attractiveness of these spaces.	No acceptable outcome is nominated.

PO26 On-site landscaping is provided to: (a) enhance the appearance of the development, particularly in parking and service areas and public spaces; (b) contribute to pedestrian comfort through shade; (c) create green rooves, walls or other sustainable building elements; and (d) screen unsightly components.	No acceptable outcome is nominated.

Table 6.3.5.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Loading and servicing	
PO27 The design and location of parking areas, refuse storage areas, loading/unloading and servicing areas, plant and building control on-site: (a) minimise disruption or breaks in building frontages; and (b) are screened from view from the street and adjoining uses.	**AO27.1** Non-active frontage (vehicle access, fire egress, control room, plant, building services etc.) occupies a maximum 8m or 25% of the primary frontage, whichever is the lesser.
	AO27.2 Refuse storage areas, loading and services bays are: (a) contained within the ground floor or podium built form; and (b) screened from the street by active uses/occupied building space.

Table 6.3.5.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Public domain	
PO28 Footpaths and pathways provide all weather protection within a safe, unobstructed and attractive environment. Awnings are: (a) continuous and compatible with existing awnings; (b) allow for street trees and landscaping; (c) visually safe and amenable; (d) located along key pedestrian routes and connects key destinations; (e) contributes to legibility and wayfinding; (f) do not impede the normal flow of pedestrians; and (g) constructed of materials that reflect the tropical climate and character of Townsville.	**AO28.1** Awnings are provided in accordance with Figure 6.108 – Awning location.
	AO28.2 Awnings: (a) are located above ground floor and is a minimum of 3.2m and generally not more than 4.2m above pavement height; (b) extend from the face of the building and is set back from the inside of the kerb line: 1.5m; (c) are continuous across all street frontages of the site; (d) are contiguous with adjoining buildings and awnings; (e) are cantilevered from the building and does not include posts within the footpath (except within the Flinders Street East precinct); (f) are provided with under awning lighting; and (g) are constructed of lightweight materials.
	AO28.3 Additional pedestrian shelter is provided as free-standing shade structures (such as umbrellas) which: (a) are constructed of lightweight materials; (b) have a minimum number of posts; (c) are a minimum 2.5m above pavement height; and (d) maintain the normal flow of pedestrians.

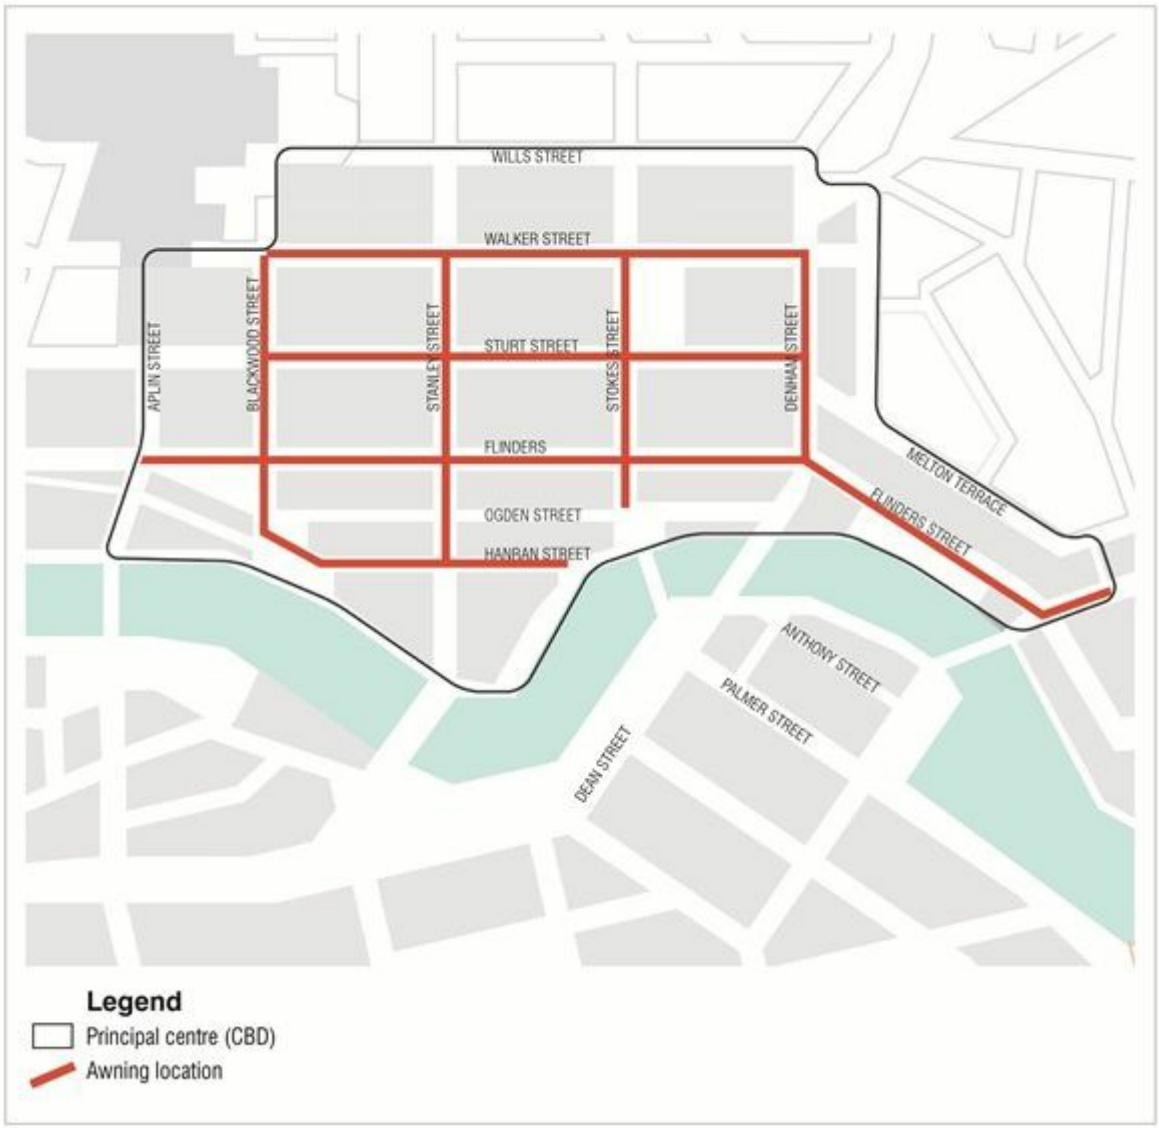

Figure 6.108 – Awning location

PO29 Where the ground floor is setback and upper podium levels overhang, or awnings are provided, these are cantilevered to avoid columns, ensuring no visual or physical obstruction occurs between the footpath and ground floor premises.	No acceptable outcome is nominated.
PO30 The location and placement of steps, escalators, ramps, lifts, automatic teller machines and other facilities which require queuing, standing areas or waiting such as bus stops and taxi ranks: (a) do not impede the normal flow of pedestrians; (b) maintain visibility and good sight lines; and (c) provide adequate space for queuing, standing areas.	**AO30** Any steps, escalators, ramps, lifts and automatic teller machines are set back 1.5m from the building facade at ground floor to allow for adequate waiting space in a manner that does not create concealment spots.
PO31 Pedestrian movement is continuous, convenient, safe and comfortable. Development: (a) provides pathways at street level and not provided via overhead bridges; (b) provides additional through block connections; (c) provides direct connections between key destinations; and (d) priorities pedestrian movement throughout the CBD.	No acceptable outcome is nominated.
PO32 Footpath and public realm design delivers pedestrian spaces that: (a) accommodate the requirements of the adjacent land use and the likely pedestrian traffic; (b) provide all weather protection; (c) provide vegetation that contributes to the city's tropical character; and (d) are constructed and maintained to a consistent standard.	No acceptable outcome is nominated.

Table 6.3.5.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Provision of public spaces	
PO33 A variety of public spaces are provided throughout the principal centre (CBD) and include: (a) small-scale spaces; (b) laneways; (c) public promenades; (d) public squares; (e) urban boulevards; (f) parks and gardens; (g) performance spaces; and (h) arcades and through block links.	**AO33** New public spaces, corridors, pathways and through block connections are provided in accordance with Figure 6.105 – Principal centre concept plan.
PO34 Development adjoining Ross Creek contributes to the provision of a continuous riverside bikeway/walkway linking Reid Park to The Strand and extending out to the Breakwater precinct. The pathway system: (a) provides a shared path for pedestrians and cyclists; (b) is safe and attractive providing opportunities for pausing and weather protection along the route; and (c) provides direct connections between the pathway and the adjoining street network.	**AO34** Any development on premises adjoining Ross Creek provides: (a) a fully publicly accessible riverside walkway/bikeway that is dedicated to council and has a minimum unobstructed pavement width of 4.5m and a minimum overall width of 6m; (b) tree planting, lighting, balustrading, and pavement treatment are provided along the full length and within the pathway; and (c) furniture, including seating, awnings and public art for weather protection are provided at the intersection of the pathway and key streets.

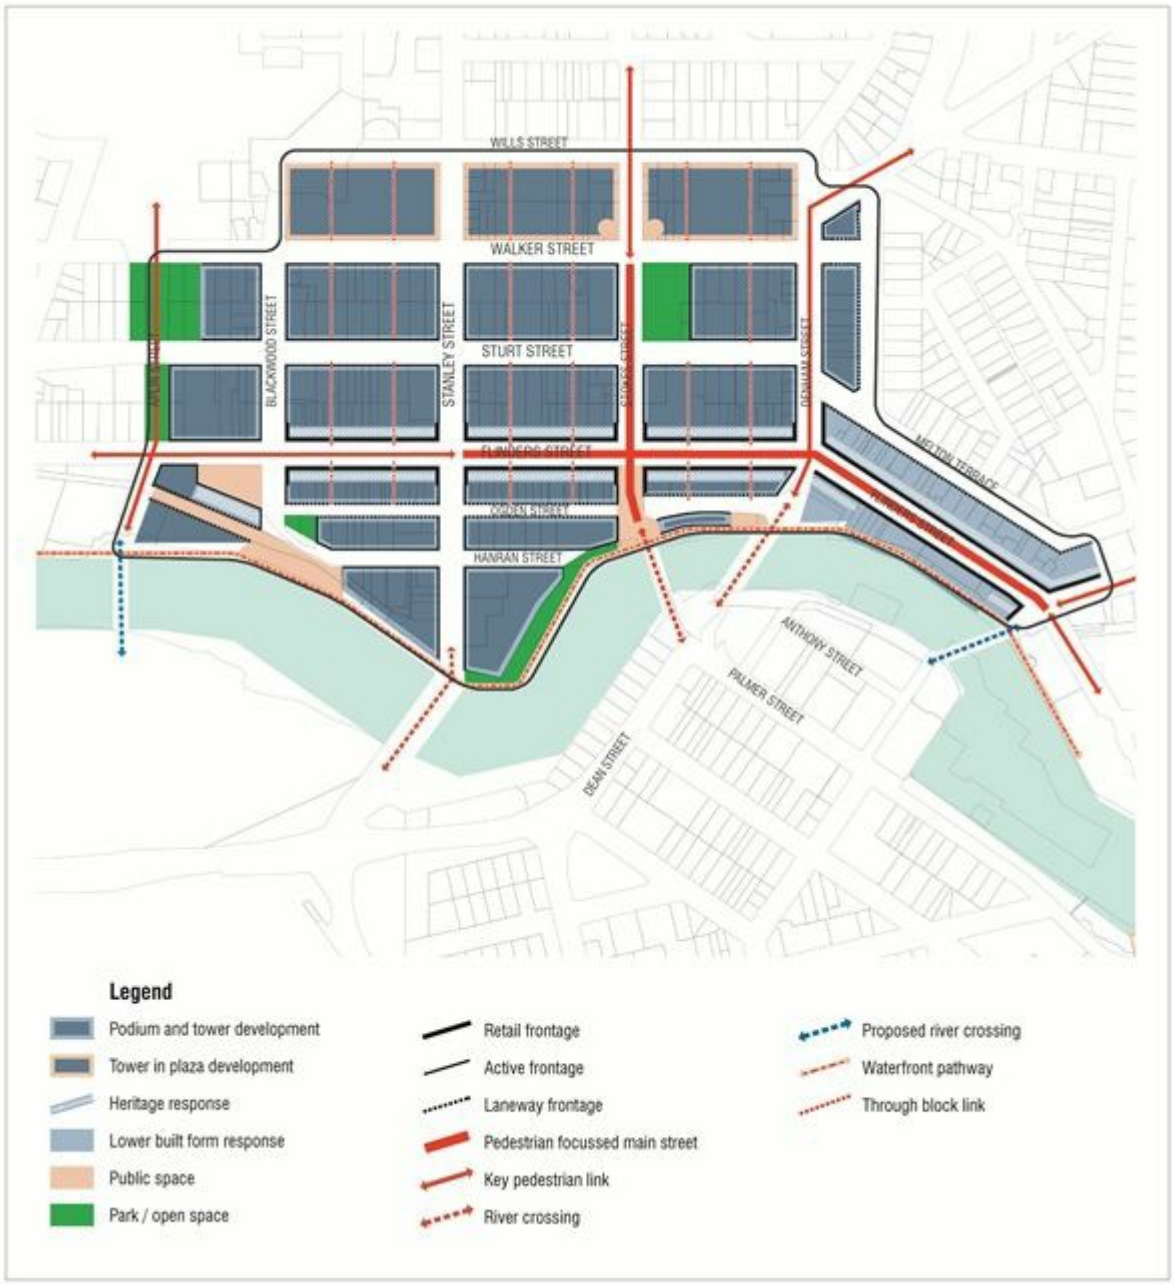

Figure 6.105 – Principal centre concept plan

Table 6.3.5.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Civic and administration precinct	
PO35 Development facilitates or supports a mix of uses and day and night-time activity throughout the precinct including: (a) civic, administration, government, education and commercial office buildings are the predominant uses; and (b) shops, dining, café and restaurant uses may occur at the ground storey along street frontages and adjoining public entrances and forecourts.	No acceptable outcome is nominated.
PO36 Building form and massing reflect a distinctive 'building in plaza' setting to contribute to the civic character and identity of the precinct including: (a) substantial areas of the ground plane given over to public access; (b) a high quality public realm including both hard and soft-scape materials; (c) creation of stand-alone pavilions; and (d) consistent single, uniform building elements.	**AO36.1** Buildings: (a) do not have a site cover exceeding 60% of the site; and (b) incorporate a significant space as an entrance plaza/waiting or meeting area. Figure 6.109 — Civic and administration precinct built form illustrates the desired outcome. **AO36.2** Building setbacks are: (a) a minimum of 5m from street and side boundaries; (b) a minimum of 6m from the rear boundary; and (c) are generally consistent for the full height of the building on a single side, with only minor (less than 1m) indents or projections in the facade. Figure 6.109 — Civic and administration precinct built form illustrates the desired outcome.

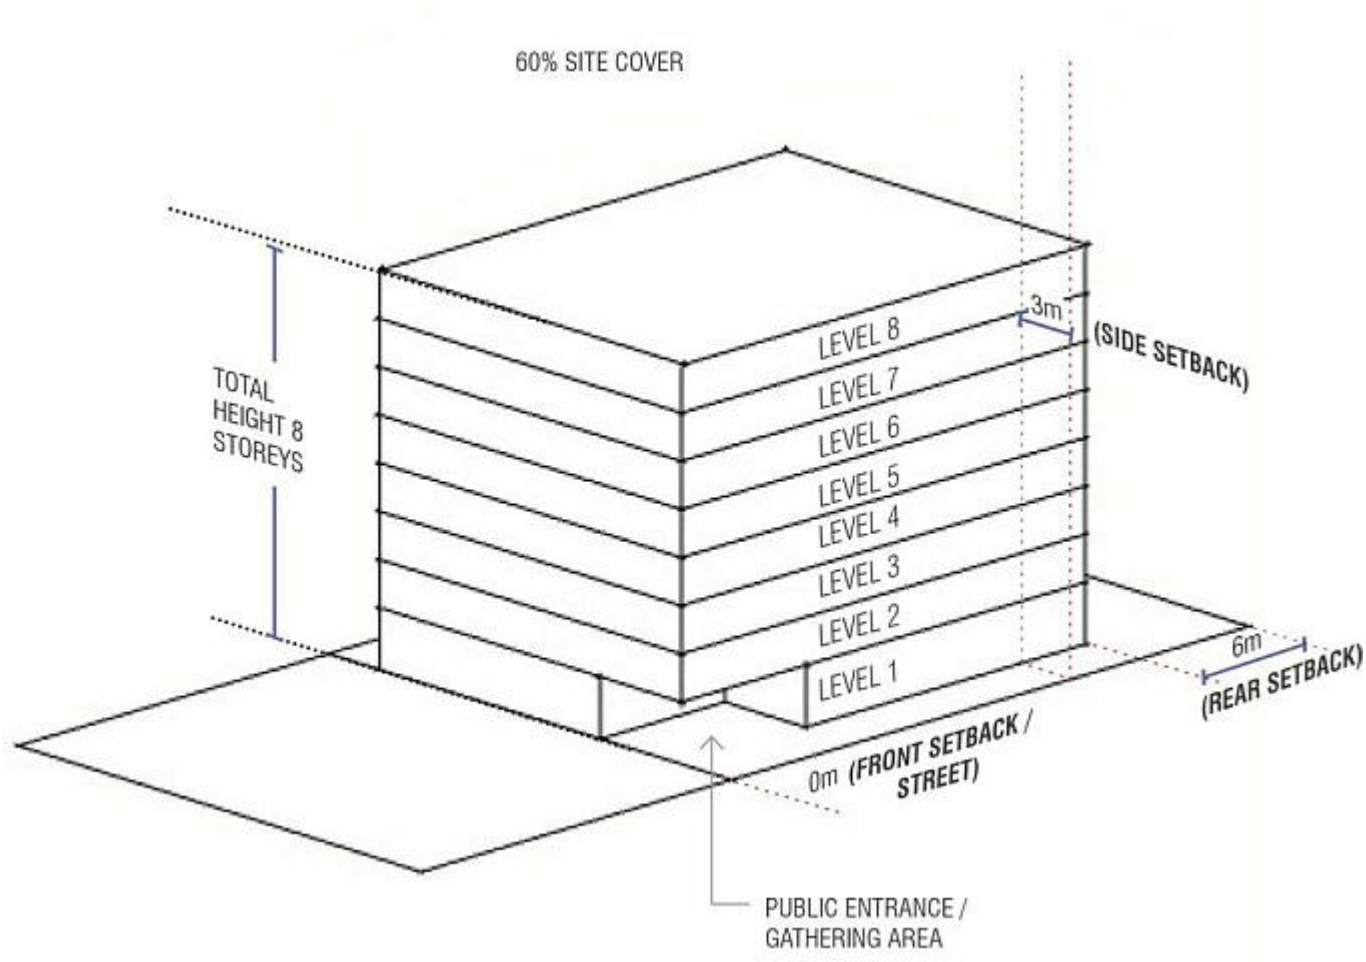

Figure 6.109 – Civic and administration precinct built form

PO37 Building heights and setbacks contribute to the legibility, distinctiveness and place making of the city centre by contributing to an attractive skyline, and reinforce the sense of primacy of the principal centre (CBD) core through built form outcomes. Buildings in the Civic and administration precinct provide a transition from the built form intensity and scale to the central parts of the CBD to adjoining residential development generally at a lower scale.	**AO37** Building height does not exceed 8 storeys.
PO38 Overall building siting and location on the site: (a) provides glimpses of Castle Hill between buildings as a constant reference point, wherever possible; and (b) creates spaces in and around the building which are proportionate to the overall dimensions of the building.	No acceptable outcome is nominated.
PO39 At the ground floor, design is to incorporate innovative responses to public realm interface, including the use of additional corner setbacks integrated with public entrances and gathering areas.	No acceptable outcome is nominated.

Table 6.3.5.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Flinders Street retail precinct	
Role and function	
PO40 Ground floors of buildings on Flinders Street frontage are occupied by uses that have a visible presence on and interaction with the street and public domain. Predominant uses reflect the role of this precinct as the focus for retail uses within the principal centre (CBD) and the highest order retailing in the city by: (a) retail and other active uses at ground floor along Flinders Street and Odgen Street in this precinct; (b) accommodating specialist retailing; and (c) accommodating a department store.	**AO40** New development provides at least the same amount of retail floor space as existed prior to that development, ensuring there is no net loss.
PO41 Active uses including retail, shops, banks, active commercial tenancies and café uses are located: (a) at ground floor along Flinders Street and Odgen Street; (b) along the ground floor of any through block links, arcades or indoor retail developments; and (c) at upper levels where indoor retail developments.	No acceptable outcome is nominated.
PO42 Any department or discount department store has a frontage to Flinders Street and is incorporated into larger retail and entertainment development where possible.	No acceptable outcome is nominated.

Table 6.3.5.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Flinders Street retail precinct	
Building form and massing	
PO43 Building heights and massing: (a) reflect and respond to the scale of adjoining historic building forms; (b) facilitate a high degree of pedestrian amenity by: (i) minimising overshadowing and adverse wind effects; (ii) providing for good light penetration and air circulation with visibility to the sky; and (c) ensure the scale and character of the heritage buildings is the prevailing built form.	**AO43.1** Along the Flinders Street frontage and Sturt Street frontage: (a) podium height is a maximum of 4 storeys; (b) where adjoining a heritage or character building, podium height is a maximum of 2 storeys, or is within 20% of the height of the adjoining building height; (c) podium development is built to boundary on all site boundaries; (d) towers are set back from Flinders Street a minimum of 10m; (e) towers are set back from Sturt Street a minimum of 4m; and (f) unless otherwise stated building form, setbacks, heights, and site cover are as illustrated in Figure 6.110 – Flinders Street retail precinct building massing, and the following: Design Provisions - Zone & Precinct Codes Acceptable Outcome Building Form: Heritage Frontage and Tower set back from street Podium / Tower Height: 2-3 storey's Flinders Street; 4 storeys Sturt St & Ogden St / 20 storeys + (including podium) Site Cover: 100% / 60% SETBACKS Front/ Street: 0m / 20m Flinders St, 4m Sturt & Ogden St SETBACKS Side: 0m / 3m SETBACKS Rear: 0m / 10m or between tower elements

AO43.2

Along the Ogden Street frontage:

(a) podium height is maximum of 4 storeys;

(b) podium development is built to boundary on all site boundaries;

(c) the tower are setback a minimum of 5m from the street frontage; and

(d) unless otherwise stated building form, setbacks, heights, and site cover are as illustrated in Figure 6.106 – Tower and podium form, and the following:

Design Provisions - Zone & Precinct Codes

Acceptable Outcome

Building Form		> 8 Storey's:	Tower & Podium
		Podium	**Tower**
Height		up to 4 storeys	20 storeys + (including podium)
Site Cover		100%	60%
SETBACKS	**Front:**	0m	4m
	Side:	0m	3m
	Rear:	0m	10m

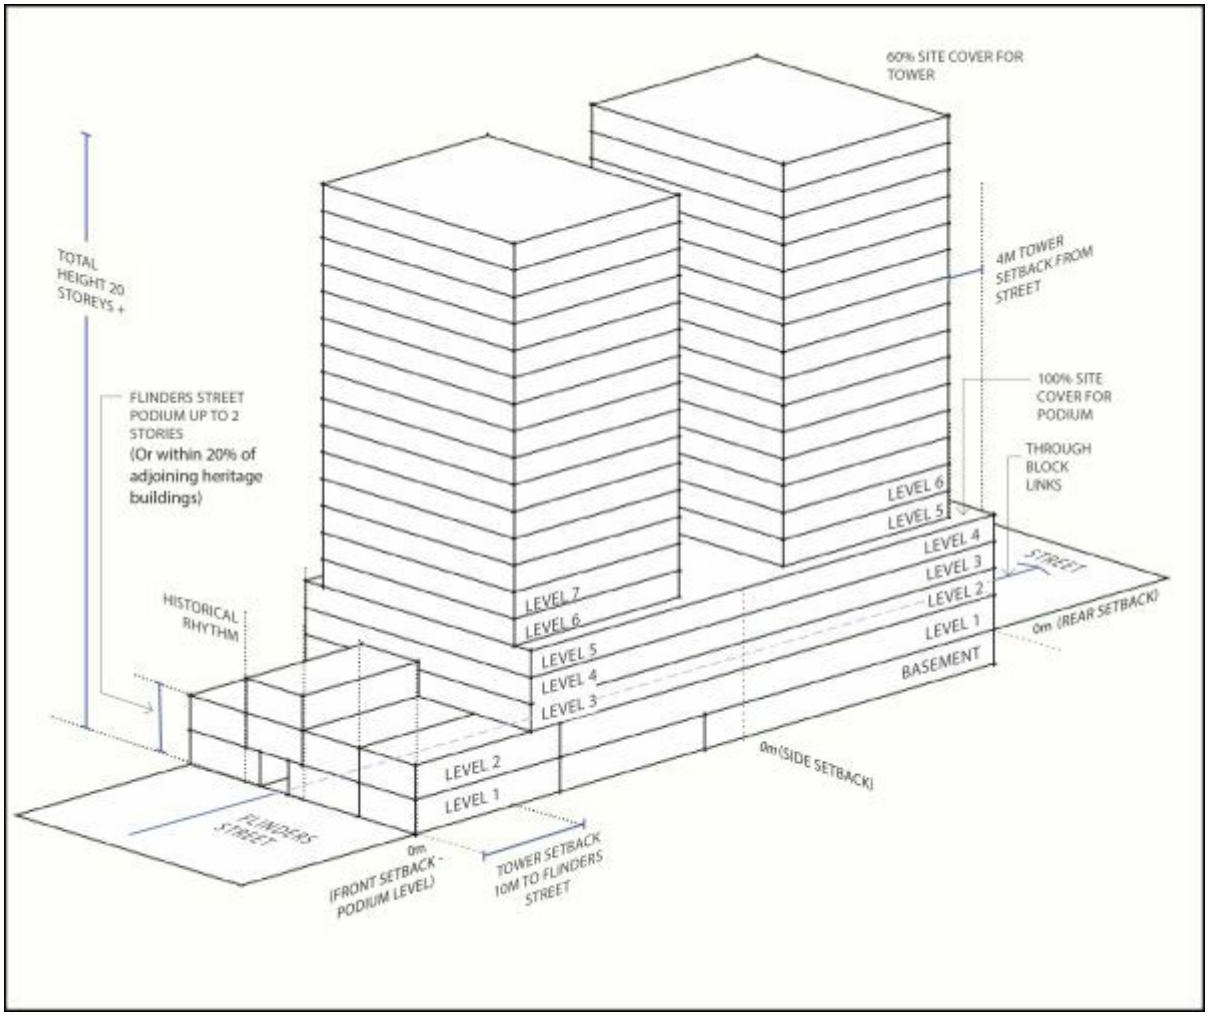

Figure 6.110 – Flinders Street retail precinct building massing

Table 6.3.5.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Flinders Street East precinct	
Role and function	
PO44 Development is consistent with the role of this precinct as the focus for entertainment and late night-time economy.	No acceptable outcome is nominated.
PO45 Development contributes to a mix of day and night-time activity on Flinders Street (East) which enhances the safety of the precinct, including some retail uses and nightclub entertainment facilities with extended operating hours for daytime dining.	No acceptable outcome is nominated.
PO46 Retail uses are not established to a level that would undermine the Flinders Street retail precinct as the primary shopping area in the principal centre (CBD).	**AO46** Where retail uses are provided these are located at ground floor and do not contribute to the overall retail frontage on the street exceeding 40% of the entire length of the street frontage at ground floor.
PO47 Where short-term accommodation is located within this precinct it is accommodated above ground floor.	No acceptable outcome is nominated.

Table 6.3.5.3—Accepted development subject to requirements and assessable development (Part)

Flinders Street East precinct	
Roof form and awnings	
PO49 Roof form is contemporary and contributes to tropical design character, complementing but not mimicking heritage building elements.	No acceptable outcome is nominated.

6.3.6 Specialised centre zone code

6.3.6.1 Application

This code applies to development where the code is identified as applicable in the categories of development and assessment.

When using this code, reference should be made to section 5.3.2 and where applicable, section 5.3.3 located in Part 5.

6.3.6.2 Purpose

(1) The purpose of the Specialised centre zone code is to provide for one or more specialised uses.

(2) The particular purpose of the code is to:

(a) recognise the role and function of each of the specialised centres and guide development within each centre; and

(b) protect each centre from encroachment by development which may impact on that role and function.

(3) The purpose of the zone will be achieved through the following overall outcomes:

(a) the zone accommodates large public, commercial or institutional facilities which are significant to the economic and social well-being of Townsville but are not appropriately included in other zones. These centres include Domain Central, the James Cook University-Townsville Hospital precinct, Lavarack Barracks, Townsville Airport, Port of Townsville and major medical precincts;

Editor's note—While the planning scheme does not regulate land within some of these sites, this code is intended to give direction to development within or in the vicinity of these sites, to the extent possible.

(b) the centres perform a specific function for the Townsville and wider North Queensland community, and are major nodes of business activity, services or employment;

(c) these centres generally have strong relationships with the other multifunctional activity centres in Townsville, but do not incorporate the breadth and depth of activities of these other centres and do not compete with or undermine the retail and commercial functions of these other centres;

(d) development supports and is compatible with the primary focus for the centre. The specialised centre retains its dominant function and new development does not prejudice its ongoing operation or significantly impact on the amenity of nearby sensitive uses;

(e) shops and shopping centres within these centres are limited to convenience retail, food and drink outlets servicing on-site businesses, workers and, where they exist, residents. Offices are limited to those directly related to the primary focus of the centre;

(f) specialised centres grow in a consolidated way that makes efficient use of the zoned area. Development near the boundaries of specialised centres is located and designed to minimise impacts on sensitive land uses in other zones;

(g) development surrounding a specialised centre does not impact on the continued functioning and expansion of the centre for its intended primary purpose;

(h) design of built form and public spaces facilitates safe and secure environments and discourages antisocial behaviour; and

(i) opportunities for energy efficiency through built form are maximised.

(4) The purpose of the zone will also be achieved through the following additional overall outcomes for particular precincts and sub-precincts:

Townsville Airport precinct:

(a) the long-term operation and expansion of the Townsville Airport is supported for both Department of Defence purposes, and to satisfy the primary air transport needs of the Townsville and North Queensland regions;

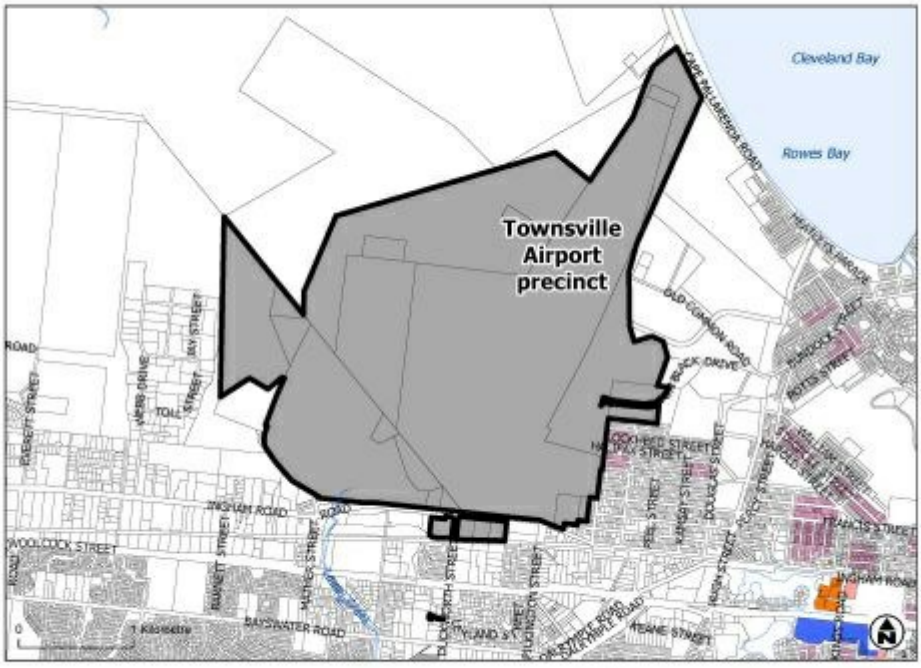
(b) the timely and cost-effective provision of aeronautical infrastructure is facilitated;

(c) aviation-related related businesses, research and technology industries and low impact industries are accommodated;

(d) development is not of a type or scale that undermines the successful operation of the principal centre (CBD) or major centres in Townsville; and

(e) residential development is limited to short-term accommodation.

Editor's note—The Townsville Airport does not fall within the regulatory jurisdiction of the Townsville City Plan. However, council recognises its important joint defence and civil functions through this zoning and acknowledges the intentions of Townsville Airport's master planning document.



Click here to view PDF high resolution map.

Figure 6.112 – Townville Airport precinct

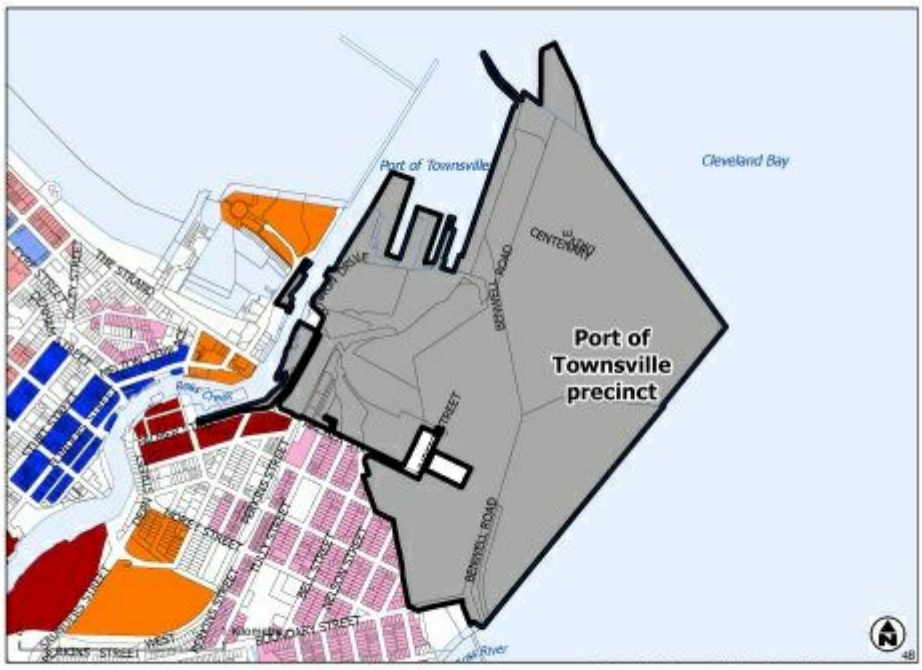
Port of Townsville precinct:

(a) the long-term operation of the Port of Townsville is protected for the benefit of the local and regional economy;

(b) the operations of the port are protected from incompatible land uses and activities on nearby land; and

(c) waterfront development within the port is integrated with the Palmer Street and The Strand areas where possible, to maximise community access to and use of waterfront areas.

Editor's note—The Port of Townsville does not fall within the regulatory jurisdiction of the Townsville City Plan. However, council recognises its important function through this zoning and the acknowledges the intentions of Port of Townsville's master planning documents.



Click here to view PDF high resolution map.

Figure 6.113 – Port of Townsville precinct

Lavarack Barracks precinct:

(a) the ongoing use and development of the barracks area for Department of Defence-related purposes, including aviation, communications, logistics, administration, training, and accommodation and recreation facilities for defence personnel is protected; and

(b) to the extent practicable, development is encouraged to create an attractive frontage to University Road.

Editor's note—Lavarack Barracks does not fall within the regulatory jurisdiction of the Townsville City Plan. However, council recognises its important function through this zoning.

Click here to view high resolution PDF.

Figure 6.114 – Lavarack Barracks precinct

Domain Central precinct:

(a) this centre accommodates showrooms primarily servicing the northern Townsville community;

(b) apart from small-scale food and drink outlets, Domain Central is not substantially expanded to include further shops or shopping centres; and

(c) the integration of this centre is strengthened through built form and layout, and pedestrian-based accessibility is improved.

Click here to view high resolution PDF.

Figure 6.115 – Domain Central precinct

Fulham Road medical precinct:

(a) the precinct continues to be the focus for private acute medical services in the Townsville region;

(b) the continued efficient and effective operation of the hospital is protected;

(c) the precinct accommodates medical centres, medical offices and health care services, research and technology industries, accommodation and other activities that support or are otherwise allied to the hospital activities;

(d) the hospital has the highest scale and intensity of any use within the precinct; and

(e) development facilitates an active pedestrian environment along Fulham Road which promotes connectivity to adjoining areas including Anderson Park.

Click here to view high resolution PDF.

Figure 6.116 – Fulham Road medical precinct

Bayswater Road medical precinct:

(a) the continued efficient and effective operation of the hospital is protected;

(b) the hospital has the highest scale and intensity of any use within the precinct;

(c) the precinct accommodates medical centres, medical offices and health care services, research and technology industries, accommodation and other activities that support or are otherwise related to the hospital activities;

(d) the primary hospital entry and pedestrian activity within the precinct is focused around the Oxford Street and Regent Street intersection;

(e) Oxford and Regent Street are active pedestrian environments and direct pedestrian connections are provided through the hospital site; and

(f) parking associated with the hospital and other allied health uses is provided in consolidated areas.

Click here to view high resolution PDF.

Figure 6.117 – Bayswater Road medical precinct

James Cook University-Townsville Hospital precinct:

(a) the James Cook University-Townsville hospital precinct is evolving into a 'world-class knowledge community' with a focus on the tropics and on sustainability. Prominent land uses include health and education services and a range of research and technology industries;

(b) the land use mix and scale of development reflects the role of the precinct in the city and the tropics. Land uses which benefit and enhance the knowledge community are accommodated. Development not related to the focus of the precinct, and that would adversely affect other centres, is not established;

(c) the precinct changes from a collection of single use campuses into a mixed use urban centre. The precinct integrates existing institutions and is integrated into the wider city including strong links to the CBD and the Aitkenvale and Thuringowa Central major centres;

(d) the James Cook University-Townsville Hospital precinct takes on a specific role in leadership in sustainability. Development provides exemplar and culture changing projects in areas like public transport, housing, public spaces and community development as well in its traditional academic and healthcare focus;

(e) the James Cook University-Townsville Hospital precinct exhibits increased self-containment compared to normal practice, with people living and working within the centre. Development minimises the use of finite resources like land, energy, water and wastewater. An overall test for all development at the centre, including residential development, is that it exemplifies sustainable development in all its realms;

(f) an emerging and sustainable resident community is well-connected to the wider city by active and public transport;

(g) car dominance within the precinct is redressed, with walking and cycling given priority in all development components;

(h) development does not extend into areas of landslip or bushfire risk, high scenic amenity or local, regional or state ecological significance; and

(i) development is well-designed at the centre, precinct, street, public space and building scales.

Editor's note—Development of James Cook University (Douglas Campus), which is undertaken in terms of a Ministerial Designation, does not fall within the regulatory jurisdiction of the Townsville City Plan.

Click here to view high resolution PDF.

Figure 6.118 – James Cook University-Townsville Hospital precinct

Discovery Central sub-precinct:

(i) at the heart of the precinct, development at Discovery Central exhibits the most intensive mix of uses and is busy with people throughout the day, week and year;

(ii) Discovery Central provides a strong focus for the hospital and university communities. Significant uses include research institutions and teaching facilities. Student and short-term accommodation is also present;

(iii) at street level, shops, cafes and bars are part of the mix;

(iv) Discovery Central is focussed on the 'ideas market', a significant public space located on the axis between the hospital and university library, and Mt Stuart Street, a new urban street connecting east-west through the centre. Pocket parks and small-scale spaces punctuate the area;

(v) buildings are 4 to 6 storeys and frame the street with no setbacks. Many buildings are mixed use;

(vi) footpaths and public spaces are well shaded. Walking is the best way to get around Discovery Central;

(vii) retail, including a supermarket, and other business uses support the daily needs of the knowledge community and are only established when need is demonstrated. Comparison shopping is not found here; and

(viii) buildings, streets and spaces are well-designed. The image and identity speaks strongly of Townsville's climate and place in the 21st century.

Discovery village sub-precinct:

(i) dwelling density within the precinct achieves a minimum net residential density of 30 dwellings per hectare through a mix of housing types including a range of townhouses, apartments and small lot homes. A focus on traditional dwelling houses does not occur;

(ii) buildings and neighbourhood design exhibit exemplar sustainable and social principles;

(iii) development does not alter the natural topography and maximises the retention of vegetation through street and housing design;

(iv) housing areas are well-connected to the central parts of the campus via pedestrian paths;

(v) a high quality public realm is created with passive recreation areas overlooked by verandahs and other living spaces in residences, shaded footpaths along all streets and a high level of permeability for pedestrians and bicycles; and

(vi) housing design provides exemplar responses to the Dry Tropics climate having regard to building massing and depth, solar orientation and shading and use of cooling and water sensitive landscape elements.

Editor's note—Sub-precincts are shown in Figure 6.123 — James Cook University-Townsville Hospital centre strategy plan.

6.3.6.3 Assessment benchmarks

Table 6.3.6.3—Assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Role and function	
PO1 Development does not prejudice or detract from the primary function of the specialised centre.	No acceptable outcome is nominated.
PO2 Other uses occur on a site where they: (a) directly support or are directly allied with the primary function of the particular centre; and (b) are subordinate to that primary function.	No acceptable outcome is nominated.
PO3 Development is consistent with the intended role, scale and character of the centre and does not compromise the intended role or successful functioning of the other specialised centres, the Principal centre (CBD) or major centres.	No acceptable outcome is nominated. **Editor's note—**Applicants should have regard to Economic impact assessment planning scheme policy no. SC6.5 for guidance on how to demonstrate compliance with this performance outcome.
PO4 Shops and shopping centres accommodate convenience retail, food and drink outlets, service industries and other services providing for the day-to-day needs of on-site businesses, workers, visitors or residents.	No acceptable outcome is nominated.

Table 6.3.6.3—Assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Design and built form	
PO5 The design of the precinct provides for: (a) efficient use of the available land; (b) a coherent and integrated built form, public realm and circulation networks; (c) central, accessible and attractive public spaces for people to congregate and interact; (d) continuity and complementarity of streetscape and landscape characteristics; (e) pedestrian friendly and visually interesting frontages to streets and public spaces; (f) optimum energy efficiency; (g) a compatible mix of uses; (h) connectivity of pedestrian and cyclist paths and spaces internal and external to the centre; and (i) sensitive transitioning of built form and uses to surrounding land. **Editor's note—**Applicants may be requested to prepare centre design master plans to demonstrate compliance with this performance outcome.	No acceptable outcome is nominated.
PO6 Building setbacks and orientation provide for an attractive streetscape that is sympathetic to existing characteristics of the local area.	No acceptable outcome is nominated.
PO7 Development is sympathetic to the scale of surrounding buildings, avoids expanses of blank walls and includes features that contribute to an attractive streetscape.	**AO7.1** The maximum length of any unarticulated wall is 15m, without a change in plane of at least 0.75m.
	AO7.2 Landscaping is provided along the street frontage, including substantive planting along at least 50% of the length of the frontage.
PO8 Streetscape treatments and street trees are provided along the street frontage to create a visually cohesive precinct and enhance pedestrian amenity.	No acceptable outcome is nominated.
PO9 Building caps and rooftops create an attractive roofscape and screen plant and equipment.	No acceptable outcome is nominated.
PO10 Built form maximises use of natural ventilation, solar heating/cooling and water conservation through building orientation and design, landscaping, building materials and on-site infrastructure.	No acceptable outcome is nominated.

Table 6.3.6.3—Assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Crime prevention through environmental design	
PO11 Development facilitates the security of people and property having regard to: (a) opportunities for casual surveillance and sight lines; (b) exterior building design that promotes safety; (c) adequate lighting; (d) appropriate signage and wayfinding; (e) minimisation of entrapment locations; and (f) building entrances, loading and storage areas that are well lit and lockable after hours. **Editor's note—**Applicants should have regard to Crime Prevention through Environmental Design Guidelines for Queensland.	No acceptable outcome is nominated.

Table 6.3.6.3—Assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Accessibility	
PO12 Convenient and legible connections are provided for pedestrians and cyclists to the site, particularly having regard to linkages with existing and proposed public transport infrastructure, the open space network, centres and other community-related activities.	No acceptable outcome is nominated.

Table 6.3.6.3—Assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Amenity	
PO13 Development minimises impacts on surrounding land and provides for an appropriate level of amenity within the centre, having regard to: (a) noise; (b) hours of operation; (c) traffic; (d) visual impact; (e) signage; (f) odour and emissions; (g) lighting; (h) access to sunlight; (i) privacy; and (j) outlook.	No acceptable outcome is nominated.
PO14 Where provided, outdoor lighting does not adversely affect the amenity of adjoining properties or create a traffic hazard on adjacent roads.	**AO14.1** Light emanating from any source complies with *Australian Standard AS 4282 Control of the Obtrusive Effects of Outdoor Lighting*.
	AO14.2 Outdoor lighting is provided in accordance with *Australian Standard AS 1158.1.1 – Road Lighting – Vehicular Traffic (Category V) Lighting – Performance and Installation Design Requirements*.
PO15 Refuse storage areas and storage of goods or materials in open areas is presented in a manner that does not detract from the visual amenity of the local area.	**AO15** The open area used for the storage of refuse, vehicles, machinery, goods and materials used on the site is: (a) located no closer than 3m from any boundary; and (b) are screened from view by a 1.8m high solid screen fence.
PO16 On-site landscaping is provided to: (a) enhance the appearance of the development, particularly in parking and service areas and in public spaces; (b) to contribute to pedestrian comfort through shade; and (c) to screen servicing components.	No acceptable outcome is nominated.

Table 6.3.6.3—Assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Protection of natural values	
PO17 The site layout, size and design responds sensitively to on-site and surrounding topography, drainage patterns and ecological values by: (a) minimising earthworks; (b) maximising retention of natural drainage patterns; (c) ensuring existing drainage capacity is not reduced; (d) maximising the retention of existing vegetation; and (e) providing buffers to protect the ecological functions of waterways; and protects environmental values and water quality objectives of receiving waters. **Editor's note—**The environmental values and water quality objectives are established under the Environmental Protection (Water) Policy (2009). For Townsville, they are specified in the Ross River Basin Environmental Values and Water Quality Objectives 2012 and Black River Basin Environmental Values and Water Quality Objectives (2012).	No acceptable outcome is nominated.

Table 6.3.6.3—Assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Domain Central precinct	
PO18 Domain Central is not substantially expanded to include further shops or shopping centres.	No acceptable outcome is nominated.
PO19 Development is consistent with the height of existing buildings in the area.	**AO19** Building height does not exceed 3 storeys.
PO20 Buildings create an attractive, safe and pleasant pedestrian-focussed environment along street frontages.	No acceptable outcome is nominated.

Table 6.3.6.3—Assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Fulham Road medical precinct	
PO21 Development creates a medium-rise environment with the highest built form, scale and intensity centred on the hospital, and built form stepping down to a low-rise environment at the eastern and western edges of the precinct.	**AO21** Development occurs in accordance with building heights shown on Figure 6.119 — Fulham Road medical precinct concept plan.
PO22 Development has a direct nexus with the hospital or other medical uses within the precinct. The type and scale of retail and other commercial development does not compromise the intended role or successful functioning of the CBD, district or major centres.	No acceptable outcome is nominated.
PO23 Development provides an active interface at the street level.	**AO23.1** Buildings are oriented to all street frontages and have points of entry visible to each street frontage.
	AO23.2 Non-residential uses occur at the street level where shown as a primary or secondary active frontage on Figure 6.119 — Fulham Road medical precinct concept plan.
	AO23.3 Development provides outdoor seating and dining along the primary active frontage.
	AO23.4 Development involving the expansion of the Mater Hospital provides a formal entrance along Park Street.
PO24 Building setbacks: (a) assist in defining key activity areas; (b) create a well-defined edge to the street; and (c) provide a soft edge to the adjoining parkland.	**AO24.1** Buildings setbacks at ground level are in accordance with Figure 6.119 — Fulham Road medical precinct concept plan.
	AO24.2 Buildings built to 6 storeys are setback 20m from any property boundary.
PO25 Development provides protection from the weather for pedestrians along the frontage of the site.	**AO25** Development provides a 3m wide awning along the frontage of the site where identified on Figure 6.119 — Fulham Road medical precinct concept plan as having either a primary or secondary active frontage.
PO26 Private open space is located and oriented to allow passive surveillance of the street.	**AO26** Residential uses above the street level incorporate balconies and are setback 3m to the building wall. Figure 6.120 — Residential uses above street level illustrates.

Figure 6.119 – Fulham Road medical precinct concept plan

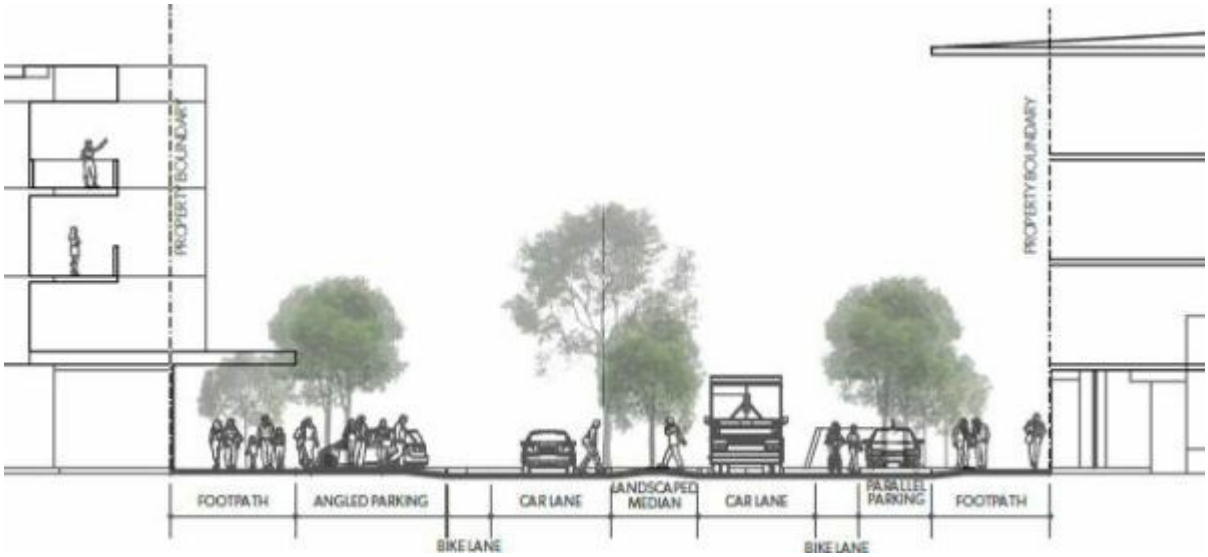

Figure 6.120 – Residential uses above street level

PO27 Development facilitates clear and safe pedestrian links between Anderson Park and Fulham Road.	No acceptable outcome is nominated.
PO28 Parking and access are consolidated and do not dominate the street frontage.	**AO28.1** Parking is provided within or behind buildings and is screened so that it is not visible from the street.
	AO28.2 Development does not obtain access to Fulham Road between Diprose Street and Thomas Street.
PO29 Where possible, development provides shared access and parking with adjoining uses.	No acceptable outcome is nominated.
PO30 Where development has a common boundary with Anderson Park, opportunities for overlooking and casual surveillance to the Park are created through the orientation of buildings and private open space.	No acceptable outcome is nominated.

Table 6.3.6.3—Assessable development (Part)

Performance outcomes	**Acceptable outcomes**
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
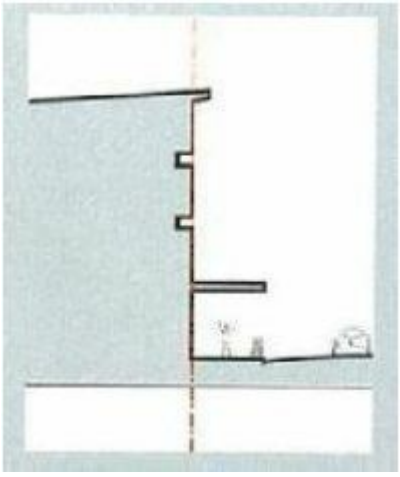
Bayswater Road medical precinct	
PO31 Development creates a medium-rise environment with the highest built form, scale and intensity centred on the hospital.	**AO31** The maximum building height is in accordance with Figure 6.121 — Bayswater Road medical precinct concept plan.
PO32 Development has a direct nexus with the hospital or other medical uses within the precinct. The type and scale of retail and other commercial development does not compromise the intended role or successful functioning of the CBD, district or major centres.	No acceptable outcome is nominated.
PO33 Buildings are oriented to the street frontages and have points of entry visible to each street frontage.	No acceptable outcome is nominated.
PO34 Development provides an active and pedestrian-friendly interface at the street level.	**AO34.1** Non-residential uses occur at the street level.
	AO34.2 Where development has an active frontage identified in Figure 6.121 — Bayswater Road medical precinct concept plan: (a) buildings are built to the street boundary; and (b) development provides a 3m wide awning over the footpath. Figure 6.122 — Buildings built to the frontage illustrates.

Figure 6.121 – Bayswater Road medical precinct concept plan



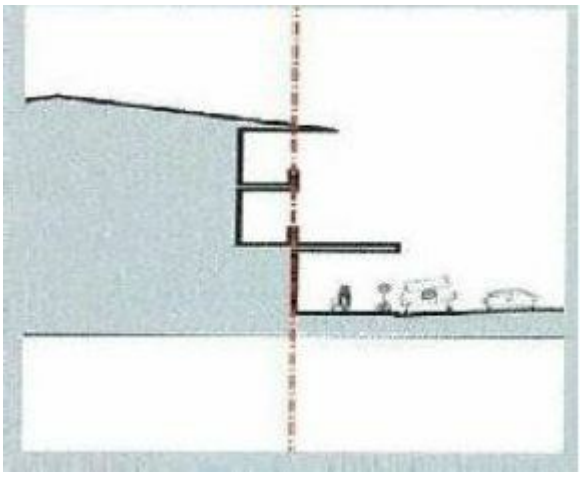


Figure 6.122 – Buildings built to the frontage

PO35 The primary pedestrian entrance to the Mater hospital is oriented to Oxford Street and the Oxford Street/Regent Street intersection.	No acceptable outcome is nominated.
PO36 Development facilitates a direct pedestrian connection from Bayswater Road through the Mater hospital site to the Oxford and Regent Street intersection.	No acceptable outcome is nominated.
PO37 Development on the hospital site facilitates the consolidation of parking within a centralised parking facility.	No acceptable outcome is nominated.

Table 6.3.6.3—Assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
James Cook University-Townsville Hospital precinct	
PO38 Development is generally in accordance with the land use allocations shown in Figure 6.123 — James Cook University- Townsville Hospital centre strategy plan and is consistent with the following intentions: (a) Townsville Hospital sub-precinct — development facilitates the efficient operation of Townsville's major hospital and ensures integration of the hospital and university campuses into a seamless urban centre; (b) Discovery Central sub-precinct — development creates a vibrant community heart containing the most intensive mix of uses; (c) Enterprise Village sub-precinct— development facilitates the establishment of knowledge businesses and industries; (d) Academic Core sub-precinct — development facilitates continued operation and expansion of educational purposes; (e) University Village sub-precinct and College sub-precinct — development facilitates student accommodation; (f) Discovery School sub-precinct — development facilitates the establishment of a new high school; (g) Discovery Village sub-precinct — development creates a mixed density residential community which has strong links to the university and hospital; and (h) Green Space sub-precinct — accommodates natural areas within the centre including watercourses, environmental areas and corridors, parks and sport and recreation area.	No acceptable outcome is nominated. **Editor's note—**The first stage of Discovery Village may develop as a pioneer project to demonstrate the sustainability principles sought.
PO39 The land use mix and scale of development have a direct nexus with, and enhance, the knowledge community focus.	No acceptable outcome is nominated.
PO40 The community is well-connected internally and to the wider city by active and public transport.	No acceptable outcome is nominated. **Editor's note -** Future growth of the precinct will increase transport demand. In order to support development in this precinct, and the preferred pattern of development in Townsville as a whole, improved public transport to this precinct will be necessary. Planning has identified the need to preserve a potential route for a rapid bus transit corridor and identify potential sites for Townsville Hospital and James Cook University Bus Stations.

PO41 Development exemplifies leadership in economic, social and environmental sustainability.	No acceptable outcome is nominated. **Editor's note—**For guidance, refer to Discovery Rise Design Guidelines adopted by the place making panel established for James Cook University (JCU).
PO42 Development is well-designed at the precinct, street, public space and building scales.	No acceptable outcome is nominated. **Editor's note—**For guidance, refer to Discovery Rise Design Guidelines adopted by the place making panel established for James Cook University (JCU).
PO43 Development is well planned and orderly, and within the capacity of available infrastructure.	No acceptable outcome is nominated. **Editor's note—**Council will request that an area/precinct scale structure plan — comprising land use, infrastructure, staging, urban design and implementation - is prepared and agreed to by the place making panel established for JCU before development takes place.
PO44 Development does not extend in to areas of landslip or bushfire risk, high scenic amenity or local, regional or state ecological significance.	No acceptable outcome is nominated.

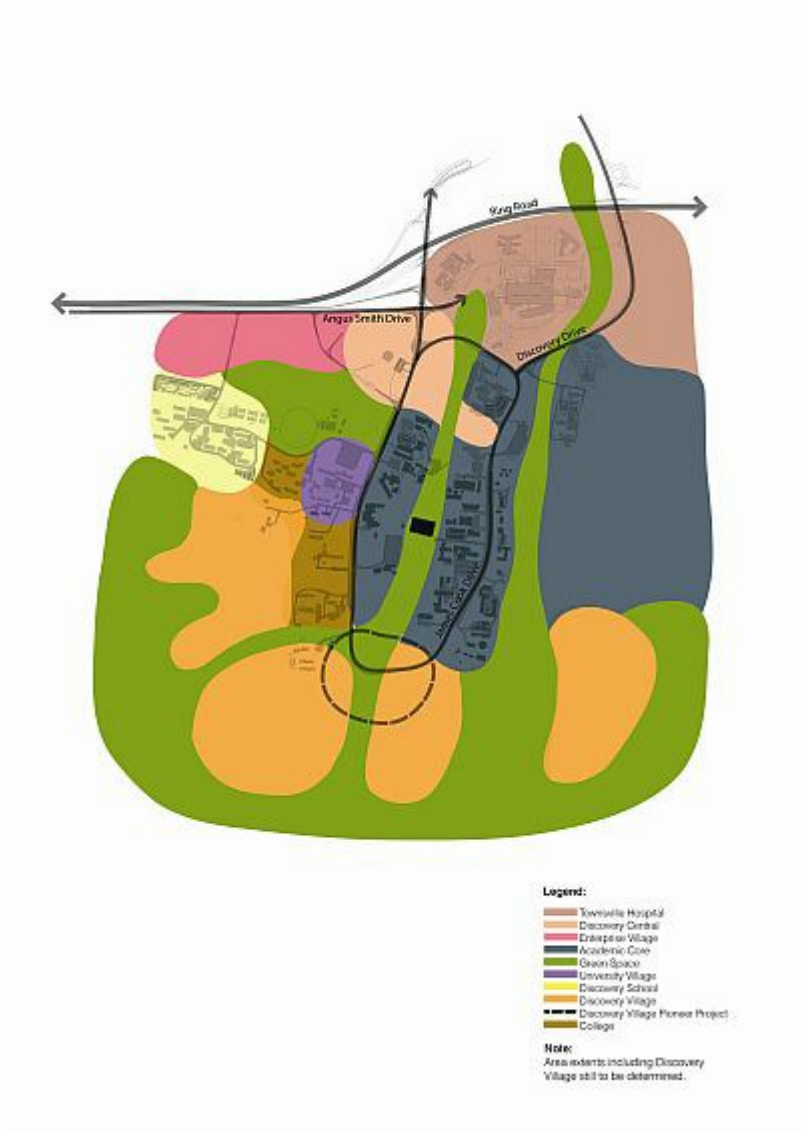

Figure 6.123 – James Cook University-Townsville Hospital centre strategy plan

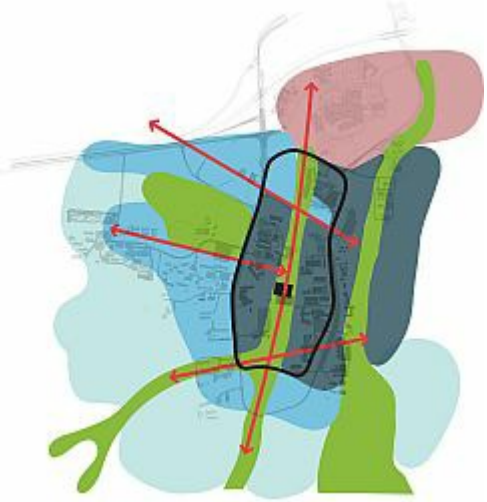
PO45 Development complies with and advances the design concepts set out in Figure 6.124 – James Cook University-Townsville Hospital precinct development concepts.	No acceptable outcome is nominated.

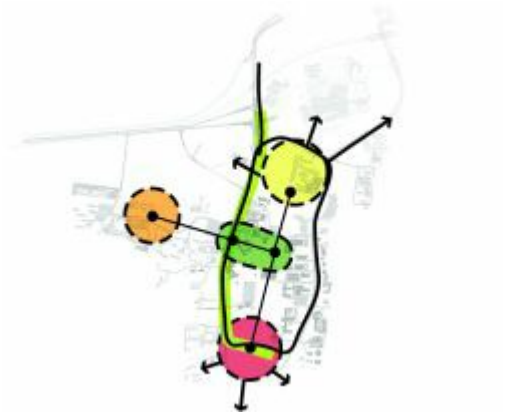
1. **Axes**
Original axes/view lines from Birell's 1964 Master Plan.

2. **Academic Core**
This needs to be retained as the heart of Discovery Rise.

3. **Connect Academic Core to New Uses:**
Existing campus axes from 'key connectors' linking new development around academic core into the heart of the campus.
Denser development closer to the academic core.

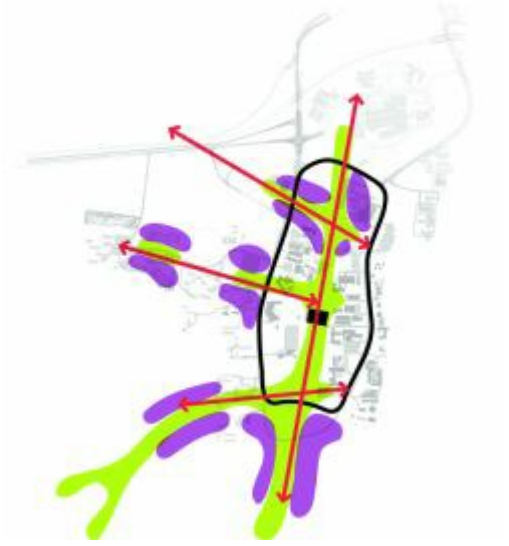


4. **Hubs Interconnected**
Create 'hubs' of mixed academic and new uses.



5. **Public Spaces**
Public spaces are located along 'key connectors', in the centre of significant hubs.

6. **Density**
Create greatest density along 'key connectors' streets, pedestrian pathways and public spaces.



7. **Pedestrian and Cycle Paths**
Create an interconnected network of paths and bike routes emphasising linkages into the campus heart and academic core. These paths are cool, shaded and green.

8. **Road Network**
James Cook Drive as primary circulating street, slower speed, shady street environments for east-west connecting streets. New street to link to existing neighbouring suburban development to the west.

9. **Public Transport**
Existing bus and taxi set down areas on Mt Stuart Street, at Discovery Village and at Discovery School. Approximately 10-20m wide corridor to be reserved for a future rapid bus transit corridor and associated Townsville Hospital and James Cook University Bus Stations, to be determined through collaborative planning between Townsville Hospital, James Cook University, Department of Transport and Main Roads and Townsville City Council.

Figure 6.124 - James Cook University-Townsville Hospital precinct development concepts

Table 6.3.6.3—Assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
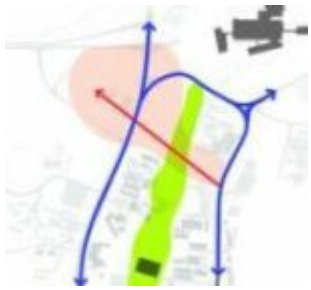
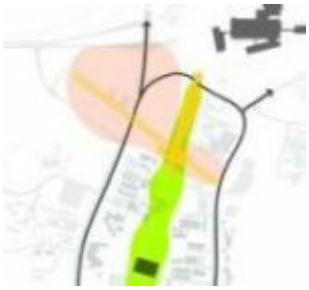
Discovery Central sub-precinct	
PO46 Development accommodates the primary structural elements shown in Figure 6.125 — Discovery Central primary elements.	No acceptable outcome is nominated.

1. Pedestrian Paths



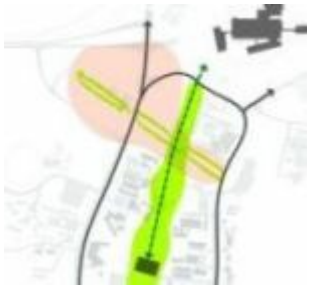
2. Road Linkages



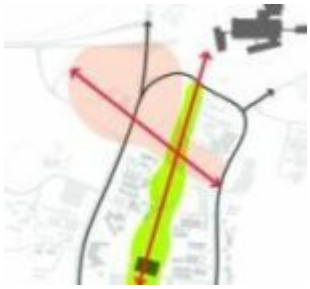
3. Public Spaces

4. Frontage Treatment

5. Shading



6. Greenspace Corridors



7. View and Connection Axes

Figure 6.125 – Discovery Central primary elements

Table 6.3.6.3—Assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
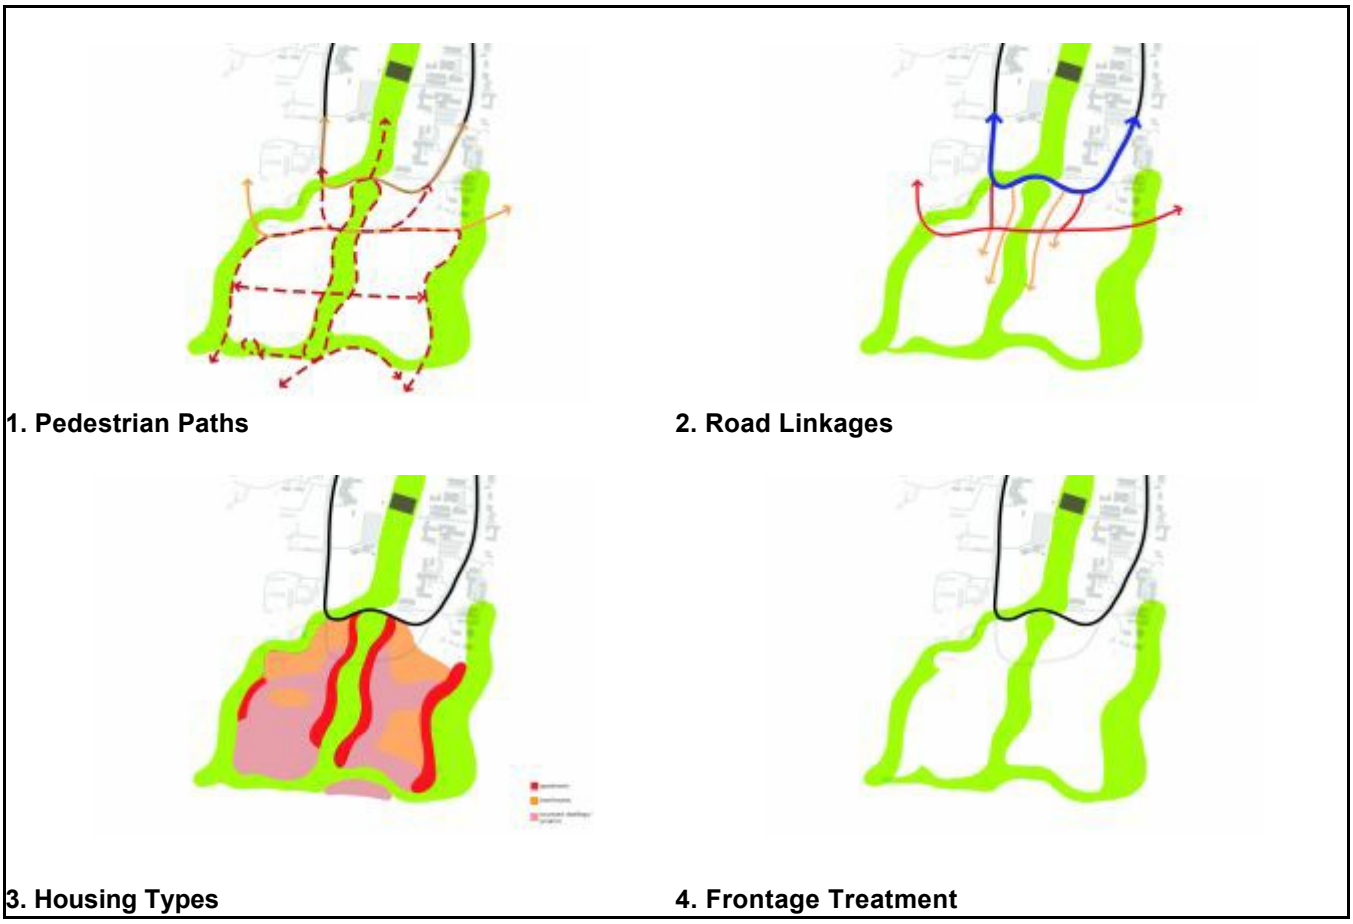
Discovery Village sub-precinct	
PO47 Development accommodates the primary structural elements shown in Figure 6.126 — Discovery Village primary elements.	No acceptable outcome is nominated.



1. Pedestrian Paths

2. Road Linkages

3. Housing Types

4. Frontage Treatment

Figure 6.126 – Discovery Village primary elements

PO48 Development occurs at medium densities that optimise public transport and walkability, and sustainable living.	**AO48** Dwelling density within the precinct achieves a minimum net residential density of 30 dwellings per hectare.

6.3.7 Mixed use zone code

6.3.7.1 Application

This code applies to assessing a development where the code is identified as applicable in the categories of development and assessment.

When using this code, reference should be made to section 5.3.2 and where applicable, section 5.3.3 located in Part 5.

6.3.7.2 Purpose

(1) The purpose of the Mixed use zone code is to provide for a mixture of development that may include service industry, business, retail, residential, tourist accommodation and associated services and low impact industrial uses.

(2) The particular purpose of the code is to guide a range of activities which create an attractive mixed business and living environment and which do not compromise the principal centre (CBD), district or major centres.

(3) The purpose of the zone will be achieved through the following overall outcomes:

- (a) this zone accommodates small to medium-sized pockets and corridors of mixed use development throughout Townsville, which are generally close to centres, significant entry points, and providing interface between residential, commercial, retail or industrial uses;
- (b) mixed use areas do not compromise the intended role or successful functioning of other centres. They do not contain full line supermarkets, discount department stores or department stores;
- (c) unless otherwise stated for a particular precinct, the areas in this zone evolve to contain a wider mix of medium density residential uses as well as dining, convenience shops and specialty retailing, small-scale office uses, professional services, and service and low impact industries;
- (d) uses such as showrooms and outdoor sales may occur in the zone, other than within the Breakwater precinct. Where they occur, showrooms are located and designed so that they contribute to the attractiveness, pedestrian focus and continuity of the streetscape;
- (e) built form and landscaping create an attractive, pedestrian oriented streetscape, and visual amenity along major roads is improved;
- (f) mixed use areas identified along major roads are designed to encourage a consolidation of built form and activities, access points and signage. Commercial strip development does not extend beyond the zoned mixed use land along major roads;
- (g) where they occur, residential uses are designed to minimise adverse impacts on occupants as a result of noise and other characteristics of the local environment;
- (h) development facilitates improved accessibility by walking, cycling and public transport. Along major roads, access is managed to avoid conflict points and to give priority to pedestrian and cyclist movements;
- (i) design of built form and public spaces facilitates safe and secure environments and discourages antisocial behaviour;
- (j) development is designed and operated to minimise adverse impacts on the amenity of surrounding residential neighbourhoods; and
- (k) opportunities for energy efficiency through built form are maximised.

Editor's note—To remove any doubt, each development site does not need to contain a mixed use development.

(4) The purpose of the zone will also be achieved through the following additional overall outcomes for particular precincts.

Magnetic Island villages precinct:

(a) development within this precinct supports the consolidation of retail, business, and service industry activities in dedicated activity nodes for residents and visitors to the various townships around Magnetic Island; and

(b) new buildings and streetscape treatments are in a design style that builds local character by articulation of buildings, incorporating extensive planting and the use of a variety of materials and finishes.

Click here to view high resolution PDF.

Figure 6.127 – Magnetic Island villages precinct

Nelly Bay sub-precinct:

(i) a range of tourist and residential uses is provided, including:

  (A) the continuation of small-scale retail and other uses which support tourism; and

  (B) island-style low-rise medium density residential and short-term accommodation close to tourist uses.

(ii) buildings within the precinct are low-rise (up to 2 storeys in building height) and the scale and massing of buildings limits the impact on the natural character of Magnetic Island.

Click here to view high resolution PDF.

Figure 6.128 – Nelly Bay sub-precinct

Picnic Bay sub-precinct:

(i) development supports tourism activities and contributes to the revitalisation of existing retail and food related uses including:

(A) cafes and restaurants; and

(B) the consolidation of new tourist and retail uses, in the vicinity of the hotel and the jetty/promenade.

(ii) buildings within the precinct are low-rise (up to 3 storeys in building height) and the scale and massing of buildings limits the impact on the natural character of Magnetic Island.

Click here to view high resolution PDF.

Figure 6.129 – Picnic Bay sub-precinct

Horseshoe Bay sub-precinct:

(i) development supports the ongoing tourism focus in this location, facilitating the consolidation of retail, office and tourist activity. Short-term accommodation occurs in a ‘shop-top’ format; and

(ii) buildings within the precinct are low-rise (up to 2 storeys in building height) and the scale and massing of buildings limits the impact on the natural character of Magnetic Island.

Click here to view high resolution PDF.

Figure 6.130 – Horseshoe Bay sub-precinct

Nelly Bay gateway precinct:

(a) development supports the creation of a gateway within proximity to the primary entrance point to Magnetic Island, at the Nelly Bay ferry terminal;

(b) local tourism-related and other retail and commercial uses and services are encouraged to establish in this precinct;

(c) development creates a strong relationship with Sooning Street and Mandalay Avenue, by sleeving the roads with buildings that are oriented to the street and screening parking areas behind;

(d) buildings within the precinct are low-rise (up to 3 storeys in building height) and the scale and massing of buildings limits the impact on the natural character of Magnetic Island; and

(e) new buildings and streetscape treatments are in a design style that builds local character by articulation of buildings, incorporating extensive planting and the use of a variety of materials and finishes.

Click here to view high resolution PDF.

Figure 6.131 – Nelly Bay gateway precinct

Arcadia Central precinct:

(a) development facilitates the transformation of the precinct as a defined local centre of activity for Arcadia including uses such as shops, small offices, medium density residential and tourist accommodation;

(b) development creates a strong relationship with Marine Parade and Armand Way, by sleeving the precinct with buildings that are oriented to the street and screening parking areas behind;

(c) development incorporates central community space with road frontage, located opposite the beach. Pedestrian connections are provided to surrounding uses such as the restaurants and cafes;

(d) buildings within the precinct are low-medium rise (up to 4 storeys in building height) and the scale and massing of buildings limits the impact on the natural character of Magnetic Island; and

(e) new buildings and streetscape treatments are in a design style that builds local character by articulation of buildings, incorporating extensive planting and use of a variety of materials and finishes.

Click here to view high resolution PDF.

Figure 6.132 – Arcadia Central precinct

Kirwan Traders precinct:

(a) small-scale commercial buildings are established, to provide space to incubate small, locally-based businesses;

(b) built form and streetscape treatments in this area contribute to a distinct character as a business hub, in particular on the frontages of Tavern Street, Carlton Street, Castlemaine Street and Burnda Street; and

(c) buildings within the precinct are generally low-medium rise and create a sensitive transition in scale from the surrounding neighbourhood.

Click here to view high resolution PDF.

Figure 6.133 – Kirwan Traders precinct

Charters Towers Road business precinct:

(a) built form and streetscape treatments in this area combine to create a distinct character as a business hub, in particular on the frontages of Woolcock Street, Charters Towers Road and Somer Street;

(b) development at the intersection of Charters Towers Road and Woolcock Street is appropriately treated and designed to serve as a significant gateway feature;

(c) new development located along the frontage of Charters Towers Road supports a transition to new and well-designed commercial activities, including small-scale offices and local service businesses;

(d) residential uses occur in this precinct where they do not restrict or impact on the intended industrial and commercial activities; and

(e) buildings within the precinct are generally low-medium rise and create a sensitive transition in scale from the surrounding neighbourhood.

Click here to view high resolution PDF.

Figure 6.134 – Charters Towers Road business precinct

CBD gateway precinct:

(a) this precinct provides for an emerging employment and business area in proximity to, and supporting the development of the principal centre (CBD). Uses in the precinct are intended to include service and low impact industrial uses, convenience shopping and showroom activities;

(b) offices occur where ancillary to industrial uses on the site;

(c) residential uses occur within this precinct where they do not restrict or impact on the intended industrial and commercial activities;

(d) Flinders Street (West) is reinforced as a significant gateway to the principal centre (CBD);

(e) the location of convenience shopping assist in reinforcing key intersections along Flinders Street (West); and

(f) improved pedestrian linkages to the principal centre (CBD) and Ross Creek are created.

Click here to view high resolution PDF.

Figure 6.135 – CBD gateway precinct

South Townsville Railyards and Dean Park precinct:

(a) the South Townsville Railyards and Dean Park present a significant opportunity for the delivery of future strategic infrastructure and 'city making' facilities for the whole of Townsville;

(b) the current use of the South Townsville Railyards site is protected until such time as these uses are relocated or become redundant. At that time, redevelopment of this area facilitates:

  (i) the provision of a city centre based sports stadium within an urban setting that relies on a nexus with public transport access;

  (ii) the redevelopment of Dean Park to create a usable parkland of approximately half its current size;

  (iii) the provision of an entertainment and convention centre on the other half of the Dean Park site; and

  (iv) the provision of a bus layover and driver facilities;

(c) interim uses do not compromise the future development of the land;

(d) new development is located and designed to be well-connected to the principal centre (CBD) and nearby high density residential areas;

(e) servicing and loading facilities in new development are considered within the overall design minimising impacts on surrounding residential uses and public spaces;

(f) the intended major facilities may be supported by a mix of complementary uses including service and low impact industry, office, retail and showroom activities, and residential uses, in a low to medium-rise built form; and

(g) Development of a commercial nature is not of a type or size that detracts from the function of the principal centre (CBD), district centres or major centres.

Click here to view high resolution PDF.

Figure 6.136 – South Townsville Railyards and Dean Park precinct

Wotton Street precinct:

(a) the precinct provides for a transition between service and low impact industries to the north and the mixed use area to the south adjoining Ross River Road;

(b) residential uses occur in this precinct where they do not restrict or impact on the intended industrial and commercial activities and where they are located above ground storey non-residential uses; and

(c) buildings within the precinct are generally low-medium rise and create a sensitive transition in scale from the surrounding neighbourhood.

Click here to view high resolution PDF.

Figure 6.137 – Wotton Street precinct

Breakwater precinct:

(a) the Breakwater precinct accommodates ongoing use and further development of residential, tourism and entertainment uses;

(b) the precinct will grow to establish a landmark high quality accommodation and entertainment destination for Townsville's tourists and residents;

(c) development includes the establishment of a new marina and waterfront pathway on the seaward side of the point, dining, boat club, local convenience facilities and tourist activities, as well as short and long-term accommodation. The precinct does not contain low impact industries other than where there is a nexus with a future marina or boat club;

(d) pedestrian access is focussed on a waterfront pathway, and includes integrated pedestrian pathways providing a high level of permeability throughout the precinct;

(e) development facilitates the consolidation of the casino and allied uses as a highly significant destination for Townsville. Should the Townsville Entertainment Centre re-locate, redevelopment of this site occurs which:

  (i) facilitates a range of activities including short-term accommodation, markets and a new boat club;

  (ii) integrates private and public transport options;

  (iii) enables reuse of existing surface parking areas; and

(f) short-term or permanent high density residential accommodation, is predominant in the central and western part of the precinct. Where adjoining the future marina, uses at the ground floor include local dining and shops.

Click here to view high resolution PDF.

Figure 6.138 – Breakwater precinct

King Street quarter precinct:

(a) the precinct provides for a revitalised tourism and education based destination in proximity to the principal centre (CBD), and functions as a focus point of activity between the CBD and the Breakwater precinct;

(b) development facilitates the establishment of allied educational uses such as a centre of excellence for marine studies;

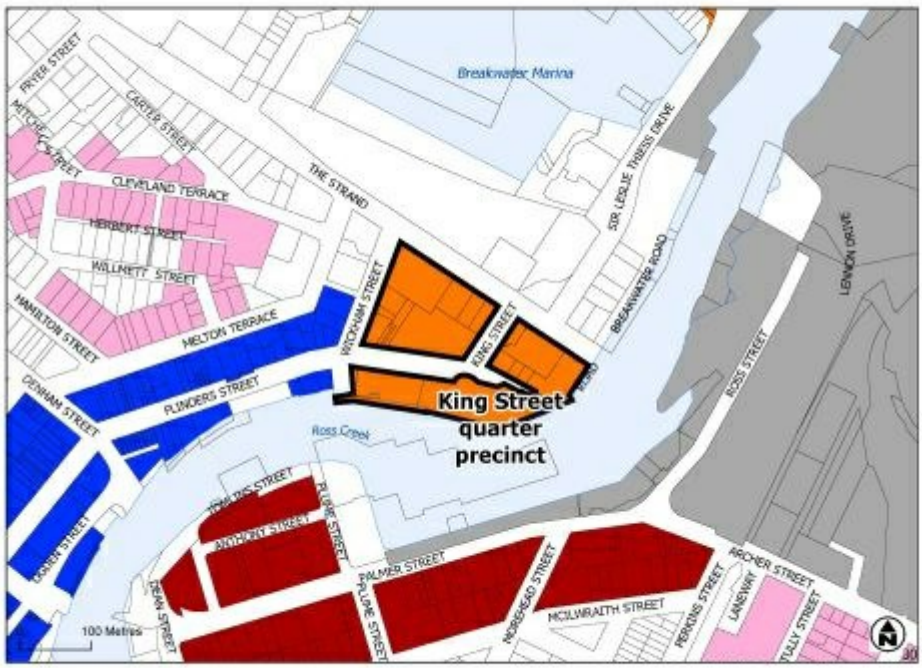
(c) the precinct also includes high quality accommodation, dining and entertainment facilities. Residential uses are focused in the pocket of land bounded by Wickham and King Streets;

(d) development protects and respects the values of heritage buildings in the precinct, including the Queens Hotel;

(e) pedestrian permeability is improved through the provision of linkages through and between development sites, and through the continuation of a waterfront pathway along Ross Creek;

(f) improved vehicle circulation and visual links between the CBD, the King Street quarter precinct and the Breakwater precinct are created; and

(g) new parkland is established at the southern end of Anzac Park, and a new pedestrian and visual link across Ross Creek is created in line with the southern end of The Strand.



Click here to view online PDF.

Figure 6.139 – King Street quarter precinct

Kings Road precinct:

(a) redevelopment facilitates a change in focus for the area to include medium density residential uses and a range of smaller scale retail, dining and entertainment activities that contribute to the area's day and night-time vibrancy;

(b) the precinct plays a support role to the Hyde Park major centre in accommodating non-residential uses;

(c) development creates a medium-rise built form, with variation in built form to create visual interest across the precinct;

(d) the interface with the lake is enhanced through building frontages which orientate towards the lake and contain active uses at street level; and

(e) impacts on residential amenity from the rail corridor and showgrounds are minimised.

Figure 6.140 – Kings Road precinct

6.3.7.3 Assessment benchmarks

Table 6.3.7.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
PO1 Where provided, outdoor lighting does not adversely affect the amenity of adjoining properties or create a traffic hazard on adjacent roads.	**AO1.1** Light emanating from any source complies with *Australian Standard AS 4282 Control of the Obtrusive Effects of Outdoor Lighting*.
	AO1.2 Outdoor lighting is provided in accordance with *Australian Standard AS 1158.1.1 –Road Lighting – Vehicular Traffic (Category V)* *Lighting – Performance and Installation Design Requirements*.
PO2 Residential uses within the centre do not interrupt the continuity of the streetscape or the active, pedestrian focus of the street frontage.	**AO2** Any residential uses are located above or behind ground storey retail, commercial or community uses.
PO3 Residential uses within the centre are provided with a reasonable level of privacy.	**AO3.1** Windows, balconies, and terraces of a dwelling unit are screened where overlooking a habitable room or private open space of another dwelling within 9m.
	AO3.2 Screening is a solid translucent screen or perforated panels or trellises which have a maximum of 50% openings.
PO4 Residential uses within the centre are provided with a reasonable level of private outdoor living space.	**AO4** Dwellings are provided with private open space or a balcony directly accessible from a habitable room with: (a) a minimum area of 9m^2; (b) a minimum dimension of 3m; and (c) clear of any utilities such as gas, water tanks and air conditioning units.

Table 6.3.7.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Role and function	
PO5 The type and scale of retail and other commercial development does not compromise the intended role or successful functioning of other centres.	No acceptable outcome is nominated. **Editor's note—**Applicants should have regard to Economic impact assessment planning scheme policy SC6.5 for guidance on how to demonstrate compliance with this performance outcome.

Table 6.3.7.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Built form	
PO6 Built form is generally low to medium rise.	**AO6** All buildings and structures do not exceed 3 storeys in building height, except where stated otherwise for a particular precinct.
PO7 Built form provides for a sensitive transitioning in height and scale from surrounding land uses.	No acceptable outcome is nominated.
PO8 Development contributes to an attractive, coherent and integrated streetscape, by: (a) ensuring buildings assist in defining and enclosing the street frontage; (b) improving the continuity of built form; and (c) using complementary landscaping and streetscape treatments.	No acceptable outcome is nominated.
PO9 Built form is designed to: (a) create a pedestrian rather than car oriented street frontage; (b) break down the facade into finer scaled components; and (c) avoid large expanses of blank walls oriented to the street.	**AO9.1** Buildings are built to the street frontage and provide an awning over the full width of the footpath, except where stated otherwise for a particular precinct.
	AO9.2 Parking is provided to the side or the rear of buildings or below ground level, and is not located along the street frontage.
	AO9.3 Entrances to buildings face the street and any public space to which the building has frontage.
	AO9.4 The maximum length of any unarticulated wall is 15m, without a change in plane of at least 0.75m.
	AO9.5 At the ground storey, a minimum of 65% of building frontage is provided as predominantly transparent windows or glazed doors and a maximum of 35% as solid facade.
PO10 Building caps and rooftops create an attractive roofscape and screen plant and equipment.	No acceptable outcome is nominated.
PO11 Built form maximises use of natural ventilation, solar heating and cooling and water conservation through building orientation and design, landscaping, building materials and on-site infrastructure.	No acceptable outcome is nominated.

Table 6.3.7.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Crime prevention through environmental design	
PO12 Development facilitates the security of people and property having regard to: (a) opportunities for casual surveillance and sight lines; (b) exterior building design that promotes safety; (c) adequate lighting; (d) appropriate signage and way finding; (e) minimisation of entrapment locations; and (f) building entrances, loading and storage areas that are well lit and lockable after hours. **Editor's note—**Applicants should have regard to Crime Prevention through Environmental Design Guidelines for Queensland.	No acceptable outcome is nominated.

Table 6.3.7.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Accessibility	
PO13 Wherever practicable, vehicular access is provided from rear or side streets or facilitates the amalgamation of access points.	No acceptable outcome is nominated.
PO14 Convenient and legible connections are provided for pedestrians and cyclists to the site, particularly having regard to linkages with existing and proposed public transport infrastructure, the open space network, centres and other community-related activities.	No acceptable outcome is nominated.
PO15 New development provides for safe vehicular and pedestrian access and efficient operation of surrounding roads.	**AO15** Either: (a) development provides no net increase in driveway crossovers; or (b) lots are consolidated to gain access from a minor or lower-order road, except where stated otherwise for a particular precinct.

Table 6.3.7.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Amenity	
PO16 Development minimises impacts on surrounding land and provides for an appropriate level of amenity within the site, having regard to: (a) noise; (b) hours of operation; (c) traffic; (d) visual impact; (e) signage; (f) odour and emissions; (g) lighting; (h) access to sunlight; (i) privacy; and (j) outlook.	No acceptable outcome is nominated.
PO17 Development is located, designed and operated so that adverse impacts on privacy and amenity on nearby land in a residential zone are minimised.	**AO17.1** Buildings are set back 3m from any boundary shared with a residential zone, or half the height of the part of the building, whichever is the greater.
	AO17.2.1 A 1.8m high solid screen fence is provided along all boundaries shared with a residential zone. AND **AO17.2.2** A landscaped buffer with a minimum width of 3m and consisting of dense screen planting is provided along all boundaries shared with a residential zone.
	AO17.3 Windows that have a direct view into an adjoining residential use are provided with fixed screening that is a maximum of 50% transparent to obscure views and maintain privacy for residents.
PO18 Refuse storage areas, loading/unloading and other service or storage areas are screened from view from the street and adjoining land.	**AO18** Refuse storage areas loading/unloading and other service or storage areas are located to the rear or side of a building and are screened from view by a 1.8m high solid fence.
PO19 On-site landscaping is provided to: (a) enhance the appearance of the development, particularly in parking and service areas and in public spaces; (b) contribute to pedestrian comfort through shade; and (c) screen servicing components.	No acceptable outcome is nominated.

PO20 Streetscape treatments are provided to enhance amenity to contribute positively to the city image, particularly along major roads and streets.	No acceptable outcome is nominated.

Table 6.3.7.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Magnetic Island villages precinct	
PO21 Convenient and legible connections are provided for pedestrians and cyclists to the precinct, particularly having regard to linkages to the bay foreshore, residential areas in the community and the open space network.	No acceptable outcome is nominated.
PO22 Building design and massing is consistent with the low-density scale of the Magnetic Island character and articulates individual buildings.	**AO22** Building height does not exceed 2 storeys, or when in the Picnic Bay sub-precinct 3 storeys.
PO23 Design and articulation of buildings contribute to the creation of the local Magnetic Island character through: (a) climate-responsive design; (b) natural setting of buildings within the landscape; and (c) maximising views to the bay.	No acceptable outcome is nominated.
PO24 The design of buildings in this precinct provides for pedestrian-friendly and visually interesting frontages.	No acceptable outcome is nominated.
PO25 Suitable vegetation screening and treatments are provided within the building setback, to minimise the visual impact of the buildings.	No acceptable outcome is nominated.

Table 6.3.7.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Arcadia Central precinct	
PO26 Development supports the creation of a new community node for Arcadia in accordance with Figure 6.141 — Arcadia Central precinct concept plan.	No acceptable outcome is nominated.

PO27 Frontages shown on Figure 6.141 — Arcadia Central precinct concept plan as having active edges, contain: (a) primary building entrances; (b) awnings to provide shade for pedestrians; (c) significant use of glazing or transparent materials; and (d) uses which promote a high level of pedestrian movement and interaction.	No acceptable outcome is nominated.
PO28 Development on the corner of Marine Parade and Armand Way creates a gateway to Arcadia. Built form, landscape and streetscape treatment at this corner reinforces a gateway statement.	No acceptable outcome is nominated.
PO29 Building height is of a low to medium-rise scale and building massing is consistent with the low density character of Magnetic Island.	**AO29** Building height does not exceed 4 storeys.
PO30 Design and articulation of buildings contribute to the creation of the local Magnetic Island character through: (a) climate-responsive design; (b) natural setting of buildings within the landscape; and (c) maximising views to the bay.	No acceptable outcome is nominated.
PO31 Convenient and legible connections are provided for pedestrians and cyclists to the site, particularly having regard to linkages to the foreshore and the open space network.	No acceptable outcome is nominated.
PO32 Access points are minimised along Marine Parade.	No acceptable outcome is nominated.
PO33 New pedestrian connnections consistent with Figure 6.141 — Arcadia Central precinct concept plan are provided.	No acceptable outcome is nominated.
PO34 Increased public open space and improvements to the public domain are provided throughout the precinct.	No acceptable outcome is nominated.

Figure 6.141 – Arcadia Central precinct concept plan

Table 6.3.7.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Nelly Bay gateway precinct	
PO35 Development in this precinct supports the creation of a high quality activity hub for Nelly Bay and Magnetic Island, in accordance with Figure 6.142 — Nelly Bay gateway precinct concept plan.	No acceptable outcome is nominated.
PO36 Development creates a gateway to Nelly Bay and Magnetic Island. Built form, landscape and streetscape treatment reinforces a key entry point to the village.	No acceptable outcome is nominated.
PO37 Frontages shown on Figure 6.142 — Nelly Bay gateway precinct concept plan as having active edges, contain: (a) primary building entrances; (b) awnings to provide shade for pedestrians; (c) significant use of glazing or transparent materials; and (d) uses which promote a high level of pedestrian movement and interaction.	No acceptable outcome is nominated.
PO38 Streetscaping and landscaping provides increased shade and amenity for pedestrians along roads indicated as having local streetscape treatment on Figure 6.142 — Nelly Bay gateway precinct concept plan.	No acceptable outcome is nominated.
PO39 Building design and massing is consistent with the low density scale and character of Magnetic Island.	**AO39** Building height does not exceed 3 storeys.
PO40 Design and articulation of buildings contribute to the creation of the local Magnetic Island character through: (a) climate-responsive design; (b) natural setting of buildings within the landscape; and (c) maximising views to the bay.	No acceptable outcome is nominated.
PO41 Access arrangements are appropriate for the volume, frequency and type of vehicle usage.	**AO41** Access points are limited to Sooning Street, Mandalay Avenue and The Cove with minimal crossovers.
PO42 Convenient and legible connections are provided for pedestrians and cyclists to the site, particularly having regard to linkages to the ferry terminal, foreshore and the open space network.	No acceptable outcome is nominated.

PO43 Mixed use development contributes to the creation of a waterfront promenade. Figure 6.142 — Nelly Bay gateway precinct concept plan.	No acceptable outcome is nominated.

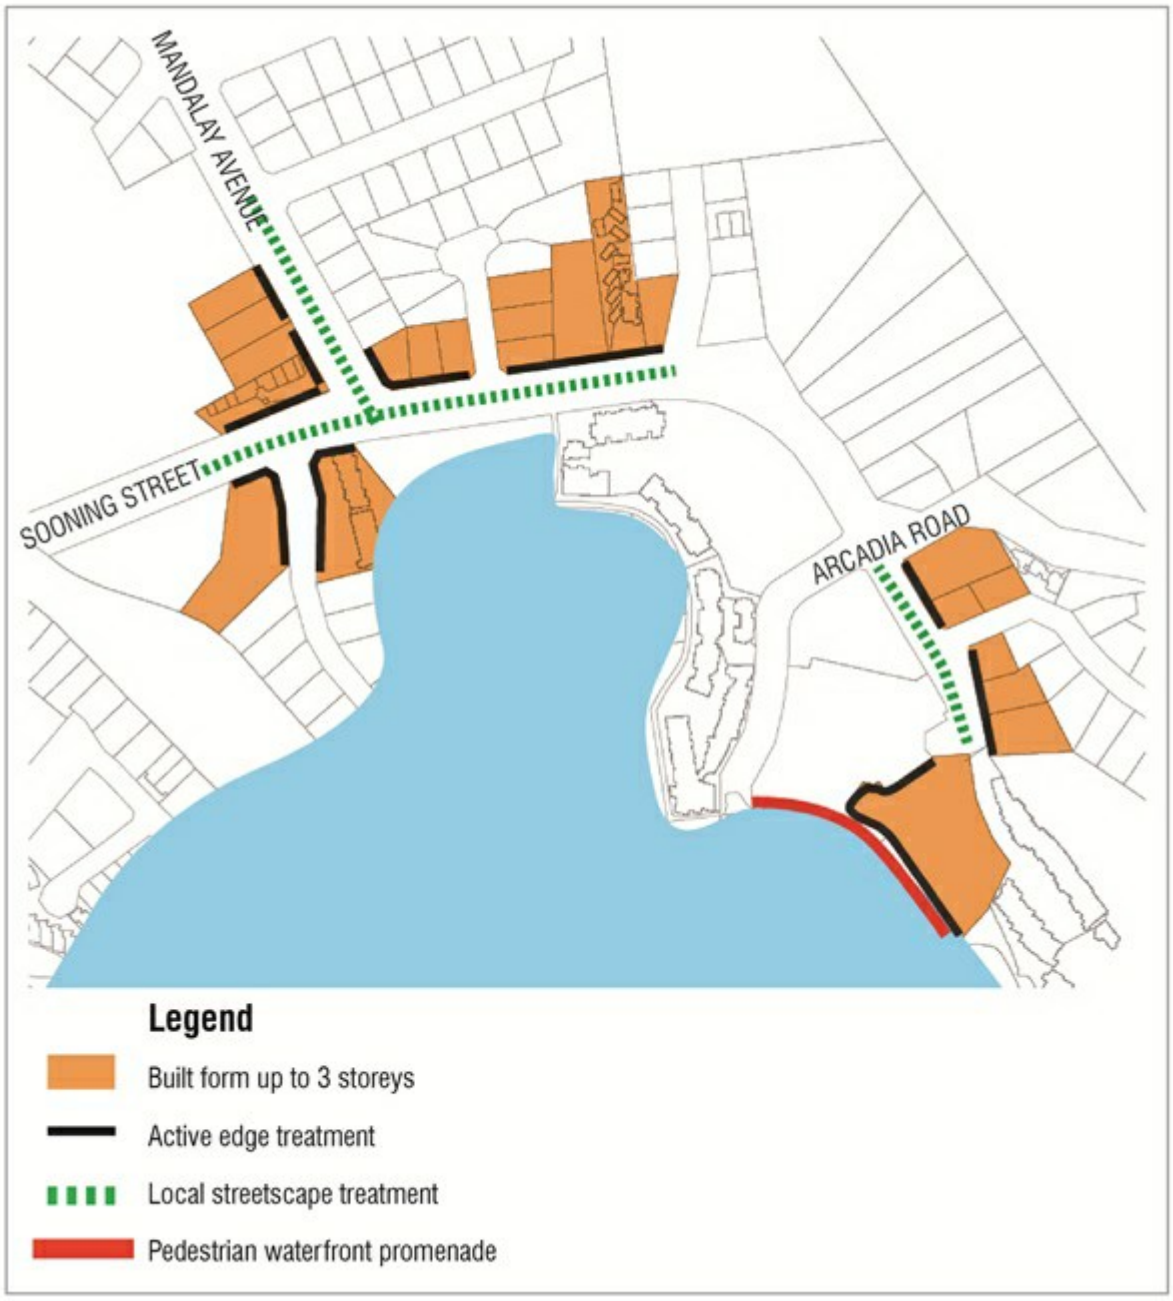

Figure 6.142 – Nelly Bay gateway precinct concept plan

Table 6.3.7.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Kirwan Traders precinct	
PO44 Built form, landscape and streetscape treatment along Thuringowa Drive reinforces the precinct identity as a place for business.	No acceptable outcome is nominated.
PO45 Landscape and streetscape treatments are provided along Tavern Street, Carlton Street, and Laguna Avenue which reflect the intended character of the precinct.	No acceptable outcome is nominated.
PO46 Building size and bulk are consistent with the scale and character of the Kirwan Traders precinct, and retain an appropriate relationship with the established streetscape.	**AO46** Development involves reuse of existing buildings that contribute to the built form character and context of the immediate area.
PO47 Wherever practicable, vehicular access is provided from rear or side streets or facilitates the amalgamation of access points.	**AO47** Access to on-site parking is provided through the rear access lanes connecting to Toohey Street.
PO48 Development on the corner of Thuringowa Road and Burnda Street, and Burnda Street and Toohey Street, creates a gateway to Kirwan Traders precinct. Built form, landscape and streetscape treatment at these corners reinforces a gateway statement.	No acceptable outcome is nominated.
PO49 Development provides mid-block linkages and increased open space for the public on private land, particularly on larger sites and those sites with two street frontages.	No acceptable outcome is nominated.

Table 6.3.7.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note**—Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Charters Towers Road business precinct	
PO50 Development in this precinct supports the transition of the precinct from a predominantly low impact industry area to a mixed business focus.	No acceptable outcome is nominated.
PO51 Development along Woolcock Street contributes positively to the city image.	**AO51** Buildings are setback 4m from Woolcock Street, and incorporate a landscaped buffer along that road frontage.
PO52 Wherever practicable, vehicular access is provided from rear or side streets or facilitates the amalgamation of access points.	**AO52** Access to on-site parking is provided through the rear access lanes connecting to Yeatman Street.
PO53 Development on the corner of Woolcock Street and Charters Towers Road, creates a gateway to Charters Towers Road business area. Built form, landscape and streetscape treatment at these corners reinforces a gateway statement. Figure 6.143 – Charters Towers Road business precinct concept plan	No acceptable outcome is nominated.
PO54 Development provides mid-block linkages and increased open space for the public on private land, particularly on larger sites and those sites with two street frontages.	No acceptable outcome is nominated.
PO55 Development contributes to the boulevard treatment of Ross River Road and Woolcock Street through landscaping and streetscape treatments along the road frontages.	No acceptable outcome is nominated.

Figure 6.143 – Charters Towers Road business precinct concept plan

Table 6.3.7.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
CBD gateway precinct	
PO56 Along Flinders Street (West), development responds to the role of the street as a key entrance to the principal centre (CBD), and presents high quality built form, landscape and streetscape treatment.	No acceptable outcome is nominated.
PO57 Shops primarily service workers within the precinct and are located only at key nodes formed by the intersections of Flinders Street (West) and Knapp and Fletcher Streets.	**AO57** Shops are located at the nominated intersections and include only convenience stores, newsagents and café/takeaway food premises limited to less than 250m^2 gross floor area per tenancy.

PO58 Buildings are generally low to medium rise and ensure the protection of the visual primacy of the principal centre (CBD).	**AO58** Building height does not exceed 6 storeys on the frontage of Flinders Street (West), and transition to 4 storeys where situated to the north of Sturt Street. In accordance with Figure 6.144 — CBD gateway precinct concept plan.
PO59 Development contributes to an attractive, coherent and integrated streetscape, by: (a) ensuring buildings assist in defining and enhancing the Flinders Street (West) frontage; (b) improving the quality and continuity of built form; and (c) using complementary landscaping and streetscape treatments.	No acceptable outcome is nominated.
PO60 Pedestrian links are provided and reinforced in accordance with Figure 6.144 — CBD gateway precinct concept plan.	No acceptable outcome is nominated.

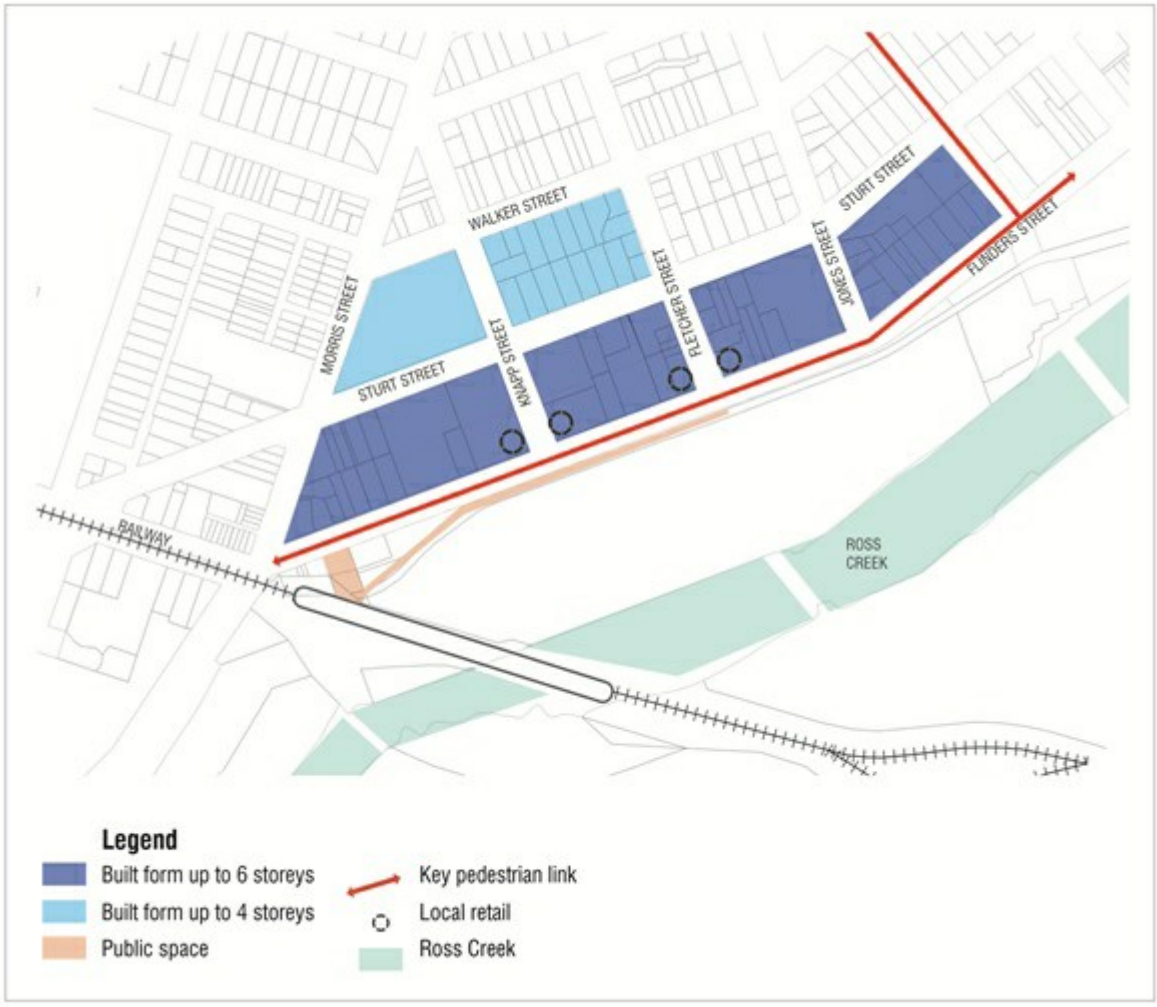

Figure 6.144 – CBD gateway precinct concept plan

Table 6.3.7.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
South Townsville Railyards and Dean Park precinct	
PO61 Development is generally in accordance with Figure 6.145 — South Townsville Railyards and Dean Park precinct concept plan.	No acceptable outcome is nominated.
PO62 Development in the precinct: (a) integrates all aspects of the land use elements through good built form and public realm treatments; and (b) appropriately stages development and particularly the sequencing of supporting infrastructure including transport and access, parking and services.	No acceptable outcome is nominated.
PO63 A new entertainment centre and a range of allied uses are established on the Dean Park site, in accordance with Figure 6.145 — South Townsville Railyards and Dean Park precinct concept plan. The development: (a) incorporates leading tropical design; (b) is oriented to both the Saunders Street and Rooney Street frontages; (c) establishes uses which promote a high level of pedestrian movement and interaction along Saunders Street and Rooney Street, creating an active edge; (d) provides a new public plaza at the Saunders and Rooney Street corner, integrating with the future plaza area for the stadium opposite; and (e) has its primary vehicular and public transport access via a new road alignment extending from Barlow Street. A new bus terminus and driver facilities are provided in this location.	No acceptable outcome is nominated.

PO64 A stadium is established on the northern corner of the existing railyards land, in accordance with Figure 6.145 — South Townsville Railyards and Dean Park precinct concept plan. The development: (a) is capable of being used for multiple events; (b) incorporates leading tropical design; (c) provides extensive public space surrounding the stadium structure; (d) is oriented to both the Saunders Street and Rooney Street frontages; (e) establishes uses which promote a high level of pedestrian movement and interaction along Saunders Street and Rooney Street, creating an active edge; (f) provides a new public plaza at the Saunders and Rooney Street corner, integrating with the future plaza area for the stadium opposite; and (g) facilitates vehicle access by construction of a new public road around the stadium.	No acceptable outcome is nominated.
PO65 Land to the south of the stadium site and backing onto the rail line predominantly consists of service and low impact industry and commercial uses.	No acceptable outcome is nominated.
PO66 Access to and permeability within the precinct are facilitated including: (a) the extension of Barlow Street to provide a new road extension from South Townsville to Saunders Street; (b) an upgrade of the Saunders Street and Rooney Street intersection, with a focus on ensuring pedestrian access and amenity and sense of arrival to the precinct; and (c) improved pedestrian priority and accessibility in street profile and streetscaping for all streets surrounding the stadium site, including Saunders, Rooney, and Morehead Streets and Perkins Street West.	No acceptable outcome is nominated.
PO67 Parking for the entertainment centre and stadium is established sequentially as key components of the precinct occur, and may include a staged program of parking solutions at grade and in various areas of the precinct over time. Ultimately, parking for both facilities is to be incorporated within the built form.	No acceptable outcome is nominated.

Figure 6.145 – South Townsville Railyards and Dean Park precinct concept plan

Table 6.3.7.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Wotton Street precinct	
PO68 The ongoing activities of the low impact industrial area to the north are not compromised.	**AO68** Development provides the following along the common boundary with adjacent industrial uses: (a) a minimum 3m wide landscaped buffer; and (b) a solid 1.8m fence along the full length of the boundary.

Table 6.3.7.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Breakwater precinct	
PO69 Development is generally in accordance with Figure 6.146 — Breakwater precinct concept plan.	No acceptable outcome is nominated.
PO70 A new marina is established on the seaward side of the precinct, and includes a new boat launch facility as shown on Figure 6.146 — Breakwater precinct concept plan.	No acceptable outcome is nominated.
PO71 An open space and pedestrian network is provided as identified on Figure 6.146 — Breakwater precinct concept plan, and includes the provision of a boardwalk adjoining the future marina, pedestrian links along all waterfront areas, and a new park at the north eastern point of the precinct.	No acceptable outcome is nominated.
PO72 Where shown as an 'active frontage' on Figure 6.146 — Breakwater precinct concept plan, new buildings contribute to the creation of an attractive and activated edge to the waterfront by having facades which contain windows, doors, materials and features which generate visual interest and engagement with the water frontage.	No acceptable outcome is nominated.
PO73 Dining, entertainment and tourist-oriented uses occur at the ground storey.	No acceptable outcome is nominated.
PO74 Development within the Breakwater entertainment area shown on Figure 6.146 — Breakwater precinct concept plan supports the consolidation of the casino and allied uses, including short-term accommodation, boat club and market.	No acceptable outcome is nominated.

PO75 Development within the Breakwater living area shown on Figure 6.146 — Breakwater precinct concept plan primarily facilitates high density short or long-term accommodation uses, with local dining and shops at the ground floor where adjoining the future marina.	No acceptable outcome is nominated.
PO76 Building heights ensure the protection of the visual primacy of the principal centre (CBD), the retention of key views to Castle Hill and Melton Hill, and to the sea and Magnetic Island.	**AO76** Building heights are in accordance with Figure 6.146 — Breakwater precinct concept plan.

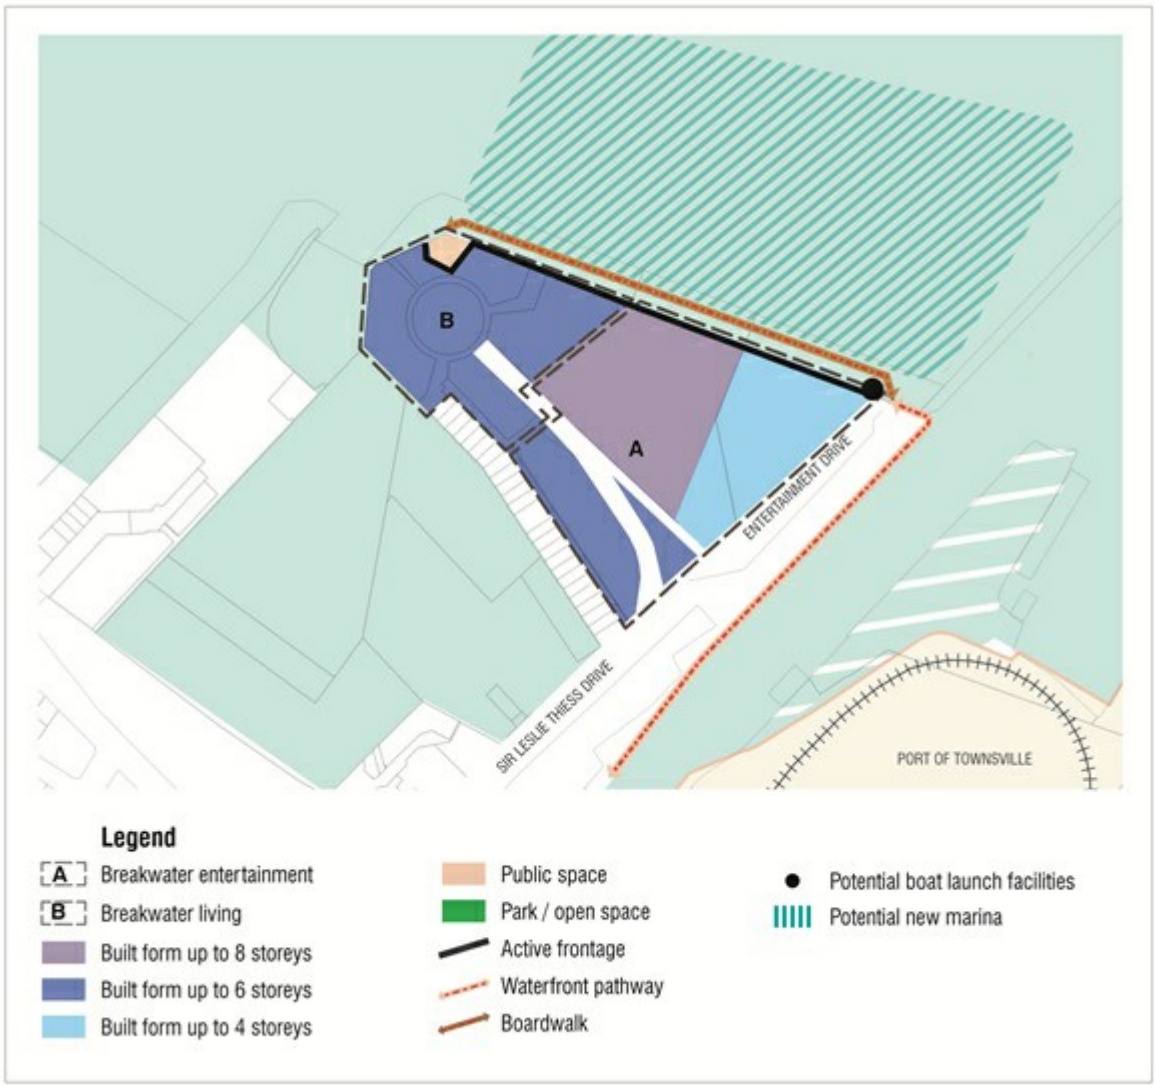

Figure 6.146 – Breakwater precinct concept plan

Table 6.3.7.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
King Street quarter precinct	
PO77 Development is generally in accordance with Figure 6.147 — King Street quarter precinct concept plan.	No acceptable outcome is nominated.
PO78 Development supports a mix of uses, including day and night-time activity.	No acceptable outcome is nominated.
PO79 Café and restaurant uses establish predominantly at the ground floor along the street frontages to Wickham Street, King Street and Flinders Street, and also to Ross Creek frontages.	No acceptable outcome is nominated.
PO80 Residential uses including long and short-term accommodation are predominantly located in the area bounded by Flinders Street, King Street and Wickham Street and The Strand.	No acceptable outcome is nominated.
PO81 Building height is medium rise, and ensures the protection of the visual primacy of the principal centre (CBD). The tallest buildings occur in the centre of the Wickham Street/King Street/Flinders Street/The Strand block.	**AO81** Building heights are in accordance with Figure 6.147 — King Street quarter precinct concept plan.
PO82 An open space and pedestrian network is provided as identified on Figure 6.147 — King Street quarter precinct concept plan, and includes: (a) the provision of, pedestrian links along all waterfront areas; (b) an extension to Anzac Park (following realignment of Sir Leslie Thiess Drive and King Street); (c) a new open space and pedestrian link to the southern end of The Strand linking to a future pedestrian creek crossing; and (d) pedestrian through block links.	No acceptable outcome is nominated.

PO83 Where shown as 'active frontage' on Figure 6.147 — King Street quarter precinct concept plan, new buildings contribute to the creation of an attractive and activated edge to the street frontage by; (a) being built to the street frontage; (b) having facades which contain windows, doors, materials and features which generate visual interest and engagement with the street frontage; (c) providing awnings to all street frontages; and (d) providing a continuous building alignment.	No acceptable outcome is nominated.

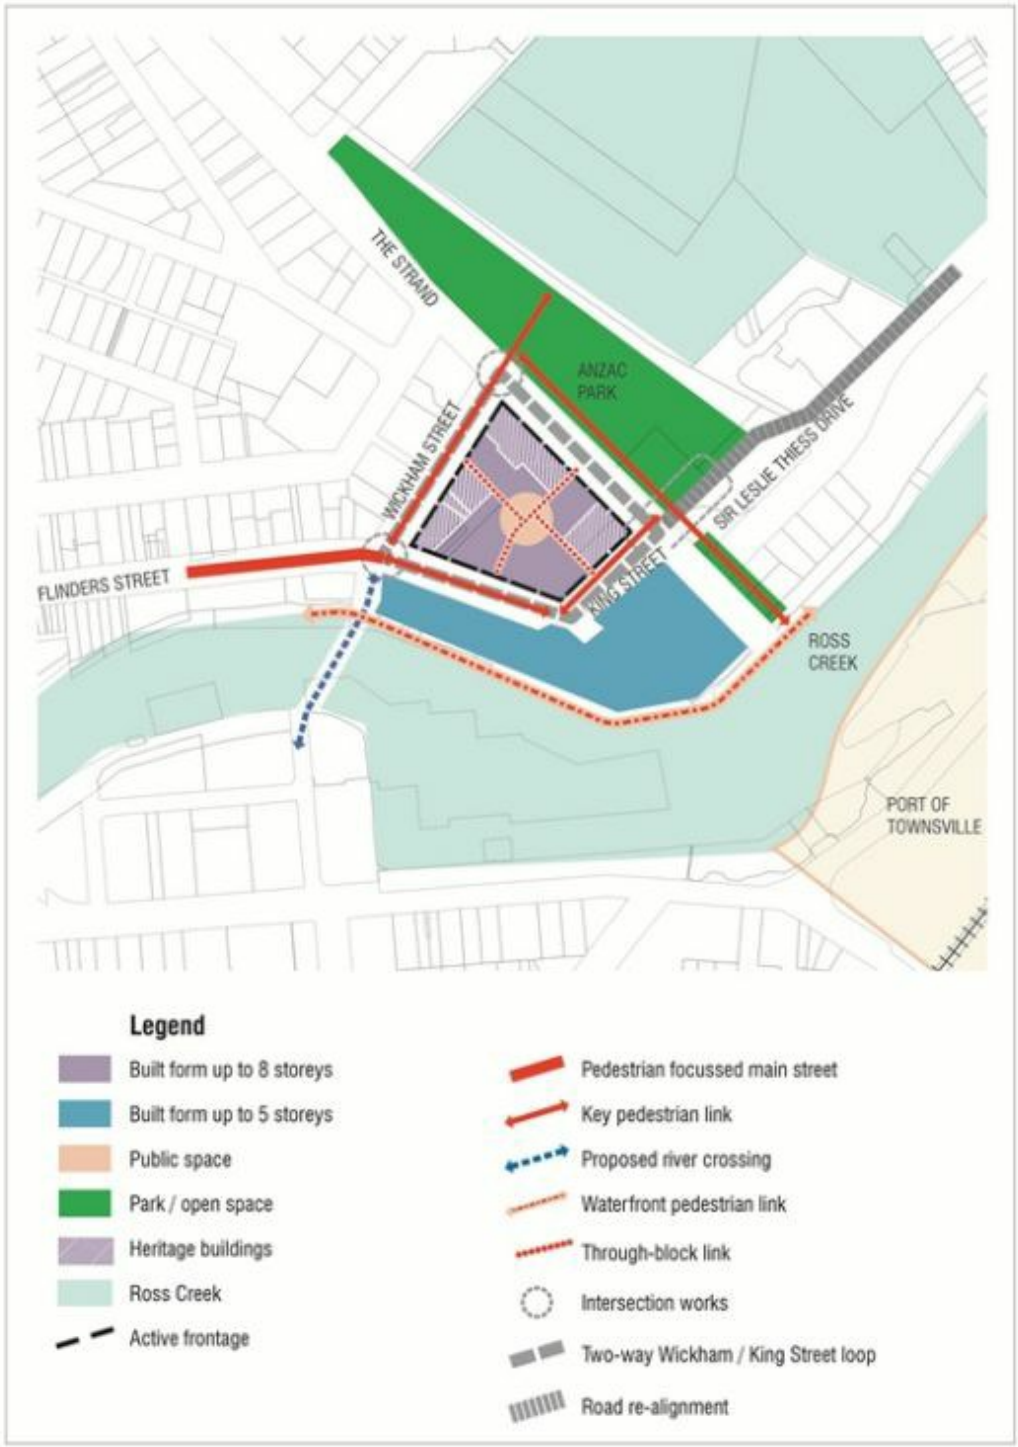

Figure 6.147 – King Street quarter precinct concept plan

Table 6.3.7.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Kings Road precinct	
PO84 Building height creates a medium-rise environment.	**AO84** Building height does not exceed 5 storeys.
PO85 Development provides for enhanced public realm and pedestrian connectivity, in accordance with Figure 6.148 — Kings Road precinct concept plan, including: (a) enhanced north south and east west links through the precinct; (b) a civic node on the lake frontage; (c) enhanced pedestrian access to and along the lake; and (d) a primary pedestrian and cycle pathway along Kings Road.	No acceptable outcome is nominated.
PO86 The civic node at the lake frontage is sleeved by active street level uses.	No acceptable outcome is nominated.
PO87 Residential uses are appropriately buffered from the railway corridor.	No acceptable outcome is nominated.

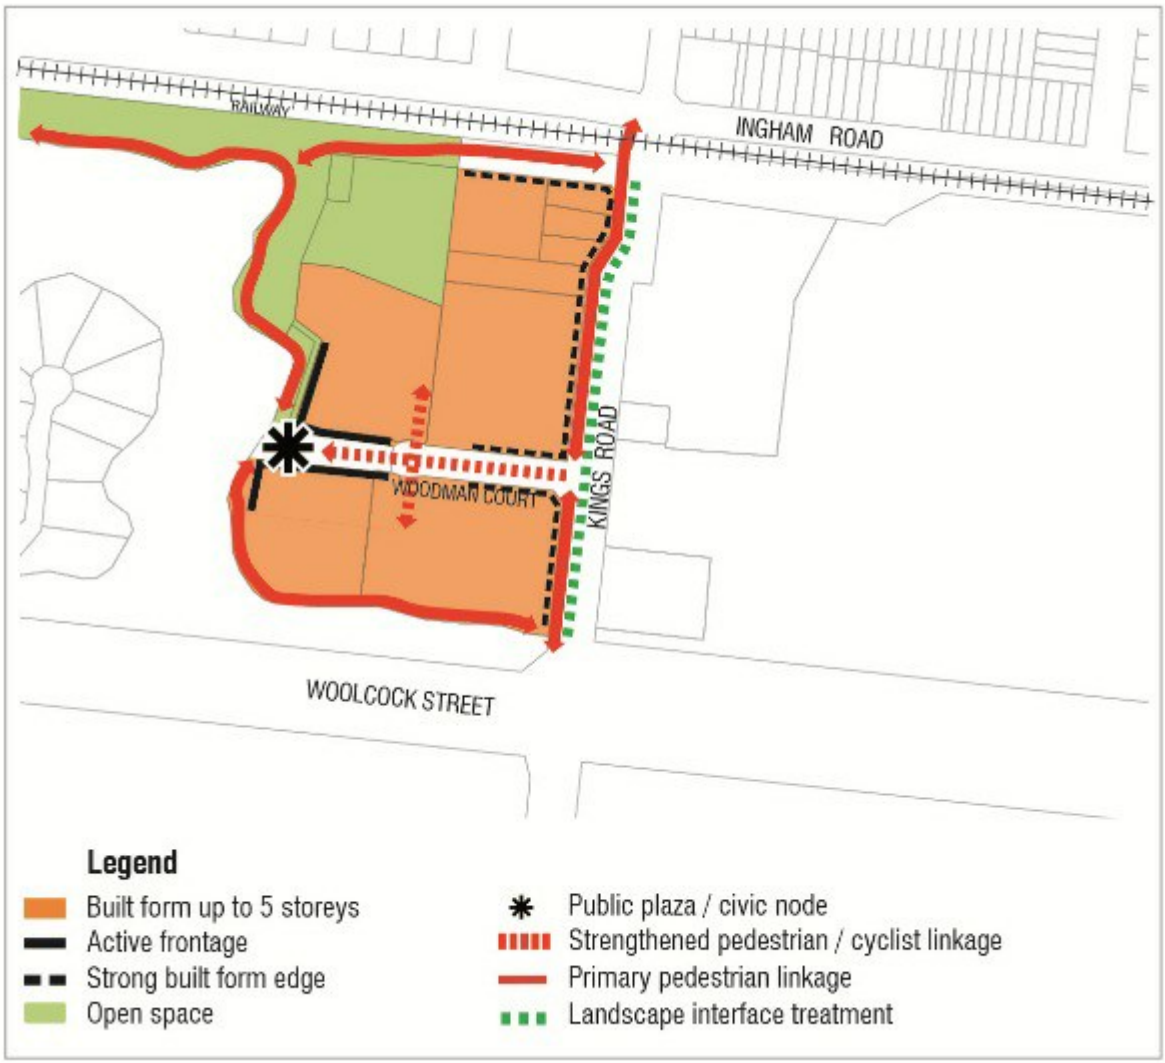

Figure 6.148 – Kings Road precinct concept plan

6.4 Community facilities and open space zone category

6.4.1 Sport and recreation zone code

6.4.1.1 Application

This code applies to development where the code is identified as applicable in the categories of development and assessment.

When using this code, reference should be made to section 5.3.2 and where applicable, section 5.3.3 located in Part 5.

6.4.1.2 Purpose

(1) The purpose of the Sport and recreation zone code is to provide for a range of organised activities that include sport, cultural and educational activities where the uses require a level of built infrastructure.

It includes built structures, such as clubhouses, gymnasiums, public swimming pools and tennis courts, and infrastructure to support the activities, safe access and essential management, where required to meet community needs.

(2) The particular purpose of the code is to ensure:

- (a) residents have convenient access to sport and recreation activities which are safe, attractive and appropriate for the community's needs; and
- (b) development minimises impacts on surrounding land.

(3) The purpose of the zone will be achieved through the following overall outcomes:

- (a) local, district, regional and specialised sports parks provide for a variety of formal sporting activities and a range of training and competition infrastructure;
- (b) development directly supports the primary recreational function of the site or provides for the co-location of a complementary and compatible community-related activity;
- (c) development does not restrict public access and does not detract from the primary function of the site for sport and recreation activities;
- (d) development provides for safe and convenient internal pedestrian and cyclist pathways and external connections to existing and proposed public transport infrastructure and surrounding activities wherever possible;
- (e) design of built form and public spaces facilitates safe and secure environments and discourages antisocial behaviour;
- (f) facilities are sited, designed and operated to minimise adverse impacts on surrounding land; and
- (g) adverse impacts on any ecological values are avoided where land includes or adjoin natural habitats such as bushland, wetlands or waterways, or act as a buffer between natural and developed areas.

(4) The purpose of the zone will also be achieved by the following additional outcomes for particular precincts:

Balgal Beach golf course precinct:

(a) development of the precinct maintains the golf course and other outdoor recreational facilities and provides an integrated mix of residential and small-scale tourist accommodation;

(b) reconfiguration facilitates a range of lot sizes to accommodate dwelling houses typically on lots with an average size of 600m^2;

(c) the ultimate development of the entire precinct does not result in more than 590 residential lots for dwelling house purposes;

(d) tourist-oriented development may also occur in the form of small-scale, low-rise accommodation and support facilities;

(e) building scale and massing limits the impact on the natural character of Balgal Beach; and

(f) development of the precinct does not compromise the efficient and orderly provision of infrastructure.

Click here to view high resolution PDF.

Figure 6.149 – Balgal Beach golf course precinct

Cluden precinct:

(a) Development facilitates the ongoing operation of the Cluden racecourse and is directly associated with or ancillary to horse racing.

Click here to view high resolution PDF.

Figure 6.150 – Cluden precinct

6.4.1.3 Assessment benchmarks

Table 6.4.1.3 - Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
Built form	
PO1 Development does not substantially exceed the height of existing buildings in the area or is designed to sympathetically transition from lower rise neighbouring buildings.	**AO1** Building height does not exceed 3 storeys.
PO2 Building setbacks and orientation provide for an attractive streetscape that is compatible with existing characteristics of the local area.	**AO2** Buildings are set back from street and road frontages: (a) within 20% of the average front setback of adjoining buildings; or (b) where there are no adjoining buildings, 6m.
PO3 Development minimises the bulk of buildings to assist integration with surrounding development.	**AO3** Walls are articulated so that they do not exceed a length of 15m without a change in plane of at least 0.75m depth.

Table 6.4.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
Amenity	
PO4 Development provides adequate separation, buffering and screening from residential uses and land within a residential zone so that adverse impacts on privacy and amenity are minimised.	**AO4.1** Buildings and structures are set back 6m or half of the building height, whichever is greater from any boundary shared with a residential use or land within a residential zone.
	AO4.2 Site access and parking, servicing or outdoor storage areas are setback 6m from any boundary shared with a residential use or land within a residential zone.
	AO4.3 Where buildings, parking, servicing or outdoor storage areas are located within 15m of any boundary shared with an residential use or land within a residential zone, the following is provided: (a) a minimum 1.8m high solid screen fence; or (b) a landscaped buffer area consisting of dense screen planting of a minimum 3m width. **Editor's note—**Landscaping is to be provided to a standard specified in the Landscape code.
	AO4.4 Windows that have a direct view into an adjoining residential use are provided with fixed screening that is a maximum of 50% transparent to obscure views and maintain privacy for residents.
PO5 Refuse storage areas and storage of goods or materials in open areas is presented in a manner that does not detract from the visual amenity of the local area.	**AO5** The open area used for the storage of refuse, vehicles, machinery, goods and materials on the site is: (a) located no closer than 3m from any boundary; and (b) are screened from view by a 1.8m high solid screen fence.

Table 6.4.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
Caretaker's accommodation	
PO6 Development does not compromise the effective operation of the primary use.	**AO6** No more than one (1) caretaker's accommodation unit is provided on the site.

Table 6.4.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
Community use and club	
PO7 Adequate lockable storage space is provided on-site to meet the needs of users.	**AO7** At least one (1) lockable storage space of a minimum of 4m^2 is provided for each room or area that can be hired out or used by community organisations or the public.

Table 6.4.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Uses	
PO8 The site predominantly accommodates sport and recreational activities and facilitates optimum use of the land for the intended sport or recreational purpose.	No acceptable outcome is nominated.
PO9 Non-recreation uses occur only where they: (a) directly support the primary function of the site; or (b) are a compatible community-related activity.	No acceptable outcome is nominated.
PO10 Development does not impede public access to and use of facilities.	No acceptable outcome is nominated.
PO11 Buildings, structures and use areas are designed to ensure efficient use of buildings and facilities, and provide for multiple or shared use of facilities where practicable.	No acceptable outcome is nominated.

Table 6.4.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Amenity	
PO12 Development maintains a high level of general amenity within the site and for surrounding areas, having regard to: (a) noise; (b) hours of operation; (c) traffic; (d) visual impact; (e) signage; (f) odour and emissions; (g) lighting; (h) access to sunlight; (i) privacy; and (j) outlook. **Editor's note—**Applicants may be required to engage specialists to provide detailed investigations into the above matters in order to demonstrate compliance with this performance criterion.	No acceptable outcome is nominated.
PO13 Landscaping is provided to enhance the appearance of the development, screen unsightly components, create an attractive on-site environment and provide shading.	No acceptable outcome is nominated.

Table 6.4.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Crime prevention through environmental design	
PO14 Development facilitates the security of people and property having regard to: (a) opportunities for casual surveillance and sight lines; (b) exterior building design that promotes safety; (c) adequate lighting; (d) appropriate signage and wayfinding; (e) minimisation of entrapment locations; and (f) building entrances, loading and storage areas that are well lit and lockable after hours. **Editor's note—**Applicants should have regard to Crime Prevention through Environmental Design Guidelines for Queensland.	No acceptable outcome is nominated.

Table 6.4.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Accessibility	
PO15 Convenient and legible connections are provided for pedestrians and cyclists to and from the site, particularly having regard to linkages with existing and proposed public transport infrastructure, the open space network, centres and other community-related activities.	No acceptable outcome is nominated.
PO16 Safe and convenient pedestrian and cyclist circulation is provided for as an integrated component of the site layout.	No acceptable outcome is nominated.

Table 6.4.2.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Protection of natural values	
PO17 The site layout and design responds sensitively to on-site and surrounding topography, drainage patterns, ecological values by: (a) minimising earthworks; (b) maximising retention of natural drainage patterns; (c) ensuring existing drainage capacity is not reduced; (d) maximising the retention or enhancement of existing vegetation and ecological corridors; and (e) providing buffers to protect the ecological functions of waterways.	No acceptable outcome is nominated.

Table 6.4.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note-**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Balgal Beach golf course precinct	
PO18 Development does not reduce the area dedicated to the golf course and other outdoor recreational uses or reduce its amenity or functionality.	No acceptable outcome is nominated.
PO19 Reconfiguration of a lot does not result in more than 590 lots or detached dwelling house purposes across the entire precinct.	No acceptable outcome is nominated.
PO20 Reconfiguration creates lots that have sufficient area and dimension to facilitate residential development.	**AO20** Lots have an average size of 600m^2.
PO21 Tourist-oriented development is small-scale and low rise.	**AO21** Building height does not exceed 2 storeys.
PO22 Design and articulation for tourism-oriented development contributes to the natural character of the locality through tropical architectural design elements and the natural setting of buildings within the landscape.	No acceptable outcome is nominated.
PO23 Development is within the capacity of available infrastructure and is supported by adequate infrastructure, including: (a) connection to reticulated water and sewage networks; (b) connection to stormwater drainage system; and (c) constructed roads.	No acceptable outcome is nominated. **Editor's note-**Council will request an overall area/precinct-scale structure plan - comprising land use, infrastructure, staging, urban design for the entire precinct before development takes place.

6.4.2 Open Space zone code

6.4.2.1 Application

This code applies to development where the code is identified as applicable in the categories of development and assessment.

When using this code, reference should be made to section 5.3.2 and where applicable, section 5.3.3 located in Part 5.

6.4.2.2 Purpose

(1) The purpose of the Open space zone code provides for informal recreation where the built form is not essential to the enjoyment of the space.

It may provide for local, district and regional scale parks which serve the recreational needs of a wide range of residents and visitors.

Where required to meet community needs, development may include shelters, amenity facilities, picnic tables, and playgrounds and infrastructure to support safe access and essential management.

(2) The particular purpose of the code is to ensure:

- (a) residents have convenient access to parks and opportunities for informal outdoor recreation that are safe, attractive and appropriate for the community's needs; and
- (b) places that contribute to the visual amenity and character of the city are protected; and
- (c) the environmental and drainage functions of open space are protected.

(3) The purpose of the zone will be achieved through the following overall outcomes:

- (a) open space is accessible to the general public for a range of informal outdoor recreation activities at local, district and regional levels;
- (b) development directly supports the primary recreational function of the site or provides for the co-location of a complementary and compatible community-related activity;
- (c) development does not restrict public access and does not detract from the site's primary open space function, visual quality or cultural values;
- (d) land within the zone is generally free from buildings other than ancillary structures which enhance the utility and enjoyment of the open space and buildings required for small-scale clubs and community facilities;
- (e) development provides for safe and convenient internal pedestrian and cyclist pathways and external connections to existing and proposed public transport infrastructure and surrounding activities wherever possible;
- (f) facilities are sited, designed and operated to minimise adverse impacts on surrounding land;
- (g) design of built form and public spaces facilitates safe and secure environments and discourages antisocial behaviour;
- (h) the drainage functions of open space are protected and development is compatible with these functions; and
- (i) adverse impacts on any ecological values are avoided where land includes or adjoin natural habitats such as bushland, wetlands or waterways, or act as a buffer between natural and developed areas;

(4) The purpose of the zone will also be achieved through the following additional overall outcomes for particular precincts:

Riverway precinct:

(a) development in Pioneer Park and Riverway is subordinate to, and does not compromise, its primary role and function as a pedestrian-focussed recreational and open space area; and

(b) connections between Pioneer Park and Riverway and Thuringowa central major centre are reinforced, including the creation of an active entry precinct along Village Boulevard.

Click here to view high resolution PDF.

Figure 6.151 – Riverway precinct

6.4.2.3 Assessment benchmarks

Table 6.4.2.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
Built form	
PO1 Built form: (a) is limited in scale and extent; (b) is visually unobtrusive and maintains the open, parkland character; and (c) does not restrict access to utility or enjoyment of the open space.	**AO1.1** Building height does not exceed 1 storey.
	AO1.2 Buildings do not exceed a site cover of 5%.
	AO1.3 Buildings are set back 10m from any site boundary.

Table 6.4.2.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
Community use and club	
PO2 Adequate lockable storage space is provided on-site to meet the needs of users.	**AO2** At least one (1) lockable storage space of a minimum of 4m^2 is provided for each room or area that can be hired out or used by community organisations or the public.

Table 6.4.2.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Uses	
PO3 Land predominantly accommodates parks and any development facilitates optimum enjoyment and use of the land for informal recreation purposes.	No acceptable outcome is nominated.
PO4 Other than at Riverway precinct, non-recreational uses occur only where: (a) they directly support the primary function of the site or are a compatible community-related activity; and (b) have a built form that is limited in scale and extent.	No acceptable outcome is nominated.
PO5 Development does not impede public access to and use of facilities.	No acceptable outcome is nominated.
PO6 Development does not detract from the site's visual quality or cultural values.	No acceptable outcome is nominated.
PO7 Development is compatible with any drainage function of the land and does not interfere with that function.	No acceptable outcome is nominated.

Table 6.4.2.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Amenity	
PO8 Development maintains a high level of amenity within the site and for surrounding areas, having regard to: (a) noise; (b) hours of operation; (c) traffic; (d) visual impact; (e) signage; (f) odour and emissions; (g) lighting; (h) access to sunlight; (i) privacy; and (j) outlook. **Editor's note—**Applicants may be required to engage specialists to provide detailed investigations into the above matters in order to demonstrate compliance with this performance criterion.	No acceptable outcome is nominated.
PO9 Landscaping is provided to enhance the appearance of the development and assist in its integration with the open space setting.	No acceptable outcome is nominated.

Table 6.4.2.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Crime prevention through environmental design	
PO10 Development facilitates the security of people and property having regard to: (a) opportunities for casual surveillance and sight lines; (b) exterior building design that promotes safety; (c) adequate lighting; (d) appropriate signage and wayfinding; (e) minimisation of entrapment locations; and (f) building entrances, loading and storage areas that are well lit and lockable after hours. **Editor's note—**Applicants should have regard to Crime Prevention through Environmental Design Guidelines for Queensland.	No acceptable outcome is nominated.

Table 6.4.2.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Accessibility	
PO11 Convenient and legible connections are provided for pedestrians and cyclists to and from the site, particularly having regard to linkages with existing and proposed public transport infrastructure, other parts of the open space network, sport and recreational activities, centres and community-related activities.	No acceptable outcome is nominated.

Table 6.4.2.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Protection of natural values	
PO12 The site layout and design responds sensitively to on-site and surrounding topography, drainage patterns and ecological values by: (a) minimising earthworks; (b) maximising retention of natural drainage patterns; (c) ensuring existing drainage capacity is not reduced; (d) maximising the retention or enhancement of existing vegetation and ecological corridors; and (e) providing buffers to protect the ecological functions of waterways.	No acceptable outcome is nominated.

Table 6.4.2.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Riverway precinct	
PO13 Leisure focussed shops and dining uses are established along Village Boulevard opposite High Range Drive, creating an active link to the town centre heart precinct and a gateway feature for Riverway. This gateway area may incorporate a residential component in the form of shop top housing.	No acceptable outcome is nominated.

6.4.3 Community facilities zone code

6.4.3.1 Application

This code applies to development where the code is identified as applicable in the categories of development and assessment.

When using this code, reference should be made to section 5.3.2 and where applicable, section 5.3.3 located in Part 5.

6.4.3.2 Purpose

(1) The purpose of the Community facilities zone code is to provide for community-related activities and facilities whether under public or private ownership.

These may include the provision of municipal services, public utilities, government installations, hospitals and schools, transport and telecommunication networks and community infrastructure of an artistic, social or cultural nature.

(2) The particular purpose of the code is to ensure:

(a) the effective location, design and operation of a wide variety of community-related activities and facilities so that these facilities adequately meet the needs of current and future users; and

(b) community-related activities and facilities are provided in a safe, accessible and attractive environment, and minimise impacts on surrounding land uses.

(3) The purpose of the zone will be achieved through the following overall outcomes:

(a) the zone primarily accommodates a variety of community-related activities and facilities such as community uses, educational establishments, emergency services, places of worship and utility installations in a manner that best meets community needs;

(b) other complementary uses may occur within the zone, where community-related activities and facilities remain the dominant use and continue to effectively meet community needs;

(c) development does not prejudice the ongoing operation and expansion of community activities and facilities;

(d) where appropriate, development enables the co-location of community-related activities and facilities;

(e) development facilitates improved accessibility by walking, cycling and public transport, and facilitates easy access by all members of the community, including older and less mobile people and people with disabilities;

(f) unless separation is required due to safety and operational requirements of the use, integration with surrounding areas is strengthened through built form and site layout;

(g) buildings provide for an attractive, pedestrian friendly environment at street level;

(h) design of built form and public spaces facilitates safe and secure environments and discourages antisocial behaviour; and

(i) development is sited, designed and operated to minimise adverse impacts on surrounding land.

(4) The purpose of the zone will also be achieved through the following additional overall outcomes for particular precincts:

Picnic Bay community facilities precinct:

(a) the intersection of Birt Street and Nelly Bay Road creates a gateway to Picnic Bay. Built form and streetscape treatments at this intersection reinforces this gateway function;

(b) development of this precinct supports a transition from the existing landfill uses to form a more community-focussed hub including uses such as education, open space, recreation and other community facilities; and

(c) design of built form and public spaces is of high quality and is consistent with the low density Magnetic Island character.

Click here to view high resolution PDF.

Figure 6.152 – Picnic Bay community facilities precinct

6.4.3.3 Assessment benchmarks

Table 6.4.3.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development – where involving a new building or expansion to an existing building	
Built form	
PO1 Development does not substantially exceed the height of existing buildings in the area.	**AO1** Building height does not exceed 3 storeys.
PO2 Building setbacks and orientation provide for an attractive streetscape that is compatible with existing characteristics of the local area.	**AO2** Buildings have their main face to the street and are set back from that frontage: (a) within 20% of the average front setback of adjoining buildings; or (b) where there are no adjoining buildings, 6m.
PO3 Development minimises the bulk of buildings to assist integration with surrounding development.	**AO3** Walls are articulated so that they do not exceed in length of 15m without a change in plane of at least 0.75m depth.

Table 6.4.3.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development — where involving a new building or expansion to an existing building	
Amenity	
PO4 Development provides adequate separation, buffering and screening from residential uses and land within a residential zone so that adverse impacts on privacy and amenity are minimised.	**AO4.1** Buildings are set back 6m or half the height of that part of the building, whichever is the greater, from any boundary shared with a residential use or land within a residential zone.
	AO4.2.1 A 1.8m high solid screen fence is provided along all boundaries shared with a residential use or land within a residential zone. OR **AO4.2.2** A landscaped buffer with a minimum width of 3m and consisting of dense screen planting is provided along all boundaries shared with a residential use or land within a residential zone. **Editor's note–**landscaping is to be provided to a standard specified in Section 9.3.3 Landscape code.
	AO4.3 Windows that have a direct view into an adjoining residential use are provided with fixed screening that is a maximum of 50% transparent to obscure views and maintain privacy for residents.

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
General	
PO5 Where provided, outdoor lighting does not adversely affect the amenity of adjoining properties or create a traffic hazard on adjacent roads.	**AO5.1** Light emanating from any source complies with *Australian Standard AS 4282 Control of the Obtrusive Effects of Outdoor Lighting.*
	AO5.2 Outdoor lighting is provided in accordance with *Australian Standard AS1158.1.1 – Road Lighting – Vehicular Traffic (Category V) Lighting – Performance and Installation Design Requirements*.
PO6 Refuse storage areas and storage of goods or materials in open areas is presented in a manner that does not detract from the visual amenity of the local area.	**AO6** The open area used for the storage of refuse, vehicles, machinery, goods and materials used on the site is: (a) located no closer than 3m from any boundary; and (b) are screened from view by a 1.8m high solid screen fence.

Table 6.4.3.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
Caretaker's accommodation	
PO7 Development does not compromise the effective operation of the primary use.	**AO7** No more than one (1) caretaker's accommodation unit is provided on the site.

Table 6.4.3.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
Community uses and clubs	
PO8 Adequate lockable storage space is provided on-site to meet the needs of users.	**AO8** At least one (1) lockable storage space of a minimum of $4m^2$ is provided for each room or area that can be hired out or used by community organisations or the public.

Table 6.4.3.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Uses	
PO9 The site accommodates community-related activities or facilities in a manner that safely and efficiently meet community needs.	No acceptable outcome is nominated.
PO10 Other uses occur on a site where they: (a) support or are otherwise complementary to the community-related activities or facilities on the site; and (b) are subordinate to those activities or facilities.	No acceptable outcome is nominated.
PO11 Development does not prejudice the ongoing operation and expansion of existing uses on the site.	No acceptable outcome is nominated.
PO12 Development facilitates opportunities for appropriate co-location of community-related activities or facilities.	No acceptable outcome is nominated.

Table 6.4.3.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Amenity	
PO13 Development maintains a level of amenity appropriate to the use and minimises impacts on surrounding land, having regard to: (a) noise; (b) hours of operation; (c) traffic; (d) visual impact; (e) signage; (f) odour and emissions; (g) lighting; (h) access to sunlight; (i) privacy; and (j) outlook. **Editor's note—**Applicants may be required to engage specialists to provide detailed investigations into the above matters in order to demonstrate compliance with this performance outcome.	No acceptable outcome is nominated.
PO14 Landscaping is provided to enhance the appearance of the development, screen unsightly components, create an attractive on-site environment and provide shading.	No acceptable outcome is nominated.

Table 6.4.3.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Crime prevention through environmental design	
PO15 Development facilitates the security of people and property having regard to: (a) opportunities for casual surveillance and sight lines; (b) exterior building design that promotes safety; (c) adequate lighting; (d) appropriate signage and wayfinding; (e) minimisation of entrapment locations; and (f) building entrances, loading and storage areas that are well lit and lockable after hours. **Editor's note—**Applicants should have regard to Crime Prevention through Environmental Design Guidelines for Queensland.	No acceptable outcome is nominated.

Table 6.4.3.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Accessibility	
PO16 Convenient and legible connections are provided for pedestrians and cyclists to and from the site, particularly having regard to linkages with existing and proposed public transport infrastructure, the open space network, centres and other community-related activities.	No acceptable outcome is nominated.

Table 6.4.3.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Protection of natural values	
PO17 The site layout and design responds sensitively to on-site and surrounding topography, drainage patterns, ecological values by: (a) minimising earthworks; (b) maximising retention of natural drainage patterns; (c) ensuring existing drainage capacity is not reduced; (d) maximising the retention or enhancement of existing vegetation and ecological corridors; and (e) providing buffers to protect the ecological functions of waterways.	No acceptable outcome is nominated.

Table 6.4.3.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Picnic Bay community facilities precinct	
PO18 Development in this precinct supports a transition from the existing use as a waste facility to uses which present as a gateway feature and key community node for Picnic Bay.	No acceptable outcome is nominated.
PO19 The existing land fill site is rehabilitated to a standard that is suitable to accommodate a range of community activities.	No acceptable outcome is nominated.
PO20 Building height and massing is consistent with the low density scale of the Magnetic Island character and articulates individual buildings.	**AO20** Building height does not exceed 2 storeys.
PO21 Design of buildings contribute to the creation of the local Magnetic Island character through: (a) climate-responsive design; (b) the natural setting of buildings within the landscape; and-Accepted development subject to requirements (c) maximising views to the bay.	No acceptable outcome is nominated.
PO22 Built form, landscape and streetscape treatment at the intersection of Birt Street and Nelly Bay Road reinforces a gateway statement.	No acceptable outcome is nominated.
PO23 Vehicle access points along Birt Street are minimised.	**AO23** Access points are limited to only one either side of Birt Street within this precinct.

6.4.4 Environmental management and conservation zone code

6.4.4.1 Application

This code applies to development where the code is identified as applicable in the categories of development and assessment.

When using this code, reference should be made to section 5.3.2 and where applicable, section 5.3.3 located in Part 5.

6.4.4.2 Purpose

(1) The purpose of the Environmental management and conservation zone code is to provide for the protection, restoration and maintenance of areas identified as supporting significant biological diversity and ecological integrity.

(2) The particular purpose of the code is to ensure that areas of conservation value, including land in the protected estate (including council owned or controlled land held for conservation) and some privately owned land are maintained and protected from the impacts of development.

(3) The purpose of the zone will be achieved through the following overall outcomes:

- (a) the conservation values of the land are maintained or enhanced;
- (b) these areas remain undeveloped apart from small-scale facilities that support conservation, low impact nature-based recreational activities on the land and essential infrastructure; and
- (c) adverse impacts on ecological features and processes are avoided.

6.4.4.3 Assessment benchmarks

Table 6.4.4.3—Assessable development

Performance outcomes	Acceptable outcomes
For assessable development only	
PO1 Development is limited to: (a) development that facilitates conservation activities on the land; or (b) development that provides information or education of visitors directly connected to the values of the land; or (c) development that is ancillary to and directly supports visitation to the land for conservation or recreation purposes consistent with (a) or (b), for example through the provision of light refreshments; or (d) the establishment of infrastructure that cannot practicably be located elsewhere; or (e) the establishment of a single dwelling house or caretaker's accommodation unit.	No acceptable outcome is nominated.
PO2 Tourist accommodation is not established.	**AO2** No acceptable outcome is nominated.
PO3 The footprint of any development is minimal and built form is of a low key, low-rise scale.	**AO3.1** Development occurs within existing buildings.
	AO3.2 Development does not involve any clearing of vegetation.

PO4 The land is not further subdivided.	**AO4** No new lots are created.
PO5 Environmental values on the site are maintained or enhanced.	No acceptable outcome is nominated.

6.5 Industry zones category

6.5.1 Low impact industry zone code

6.5.1.1 Application

This code applies to development where the code is identified as applicable in the categories of development and assessment.

When using this code, reference should be made to section 5.3.2 and where applicable, section 5.3.3 located in Part 5.

6.5.1.2 Purpose

(1) The purpose of the Low impact industry zone code is to provide for service industry and low impact industry uses.

It may include non-industrial and business uses that support the industrial activities where they do not compromise the long-term use of the land for industrial purposes.

Activities considered appropriate in this zone are defined as Low impact industry or Service industry in the schedule of definitions.

(2) The particular purpose of the code is to:

- (a) facilitate the safe, efficient and attractive use of land for smaller scale and lower impacting industries; and
- (b) ensure development does not detract from the function and viability of centres, and minimises impacts on the amenity of nearby sensitive uses.

(3) The purpose of the code will be achieved through the following overall outcomes:

- (a) the zone primarily accommodates a range of generally smaller scale industrial uses which have low levels of potential impacts on surrounding areas and often provide services to the general public;
- (b) the zone also accommodates storage, wholesale and trade supplies, uses requiring significant outdoor sales areas and indoor sport and recreation uses which are difficult to locate elsewhere, where these have low levels of potential impacts on the surrounding area;
- (c) other non-industrial uses occur where they are ancillary to or directly support the industrial functions of the area, and are limited in extent;
- (d) the zone does not accommodate uses which are primarily oriented to retail sales and which are more appropriately located in centres, such as shops, shopping centres, showrooms or retail based hardware supplies;
- (e) the intrusion of incompatible uses, or uses which are more appropriately accommodated in other zones, is avoided to protect the availability of land for industrial purposes and the viability and efficient operation of existing and future industry uses;
- (f) any interface between industrial uses and sensitive land uses is designed and managed to minimise adverse impacts;
- (g) development makes a positive contribution to the public domain, particularly along major roads and near centres; and
- (h) development avoids significant adverse effects on water quality and the natural environment.

(4) The purpose of the zone will also be achieved through the following additional overall outcomes for particular precincts:

Nelly Bay low impact industry precinct:

(a) design of built form is of high quality and consistent with the low density Magnetic Island character.

Click here to view high resolution PDF.

Figure 6.153 – Nelly Bay low impact industry precinct

6.5.1.3 Assessment benchmarks

Table 6.5.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development — where involving a new building or expansion to an existing building **Note—**The following acceptable outcomes will not apply where the development is a change of use in an existing building that does not involve any expansion of that building.	
Built form	
PO1 Development is consistent with the height and scale of surrounding buildings and includes features that contribute to an attractive streetscape.	**AO1.1** Site cover does not exceed 80%.
	AO1.2 Walls that have frontage to a street or road are articulated so that they do not exceed a length of 15m without a change in plane of at least 0.75m depth.
	AO1.3 New building and structure height does not exceed 12m.
	AO1.4 Buildings are set back from street and road frontages: (a) within 20% of the average front set back of adjoining buildings; or (b) where there are no adjoining buildings, 4m.
	AO1.5 Vehicle manoeuvring and loading and unloading areas are located to the side or behind of the building, and are not located in front of the building.
PO2 Building entrances are legible and safe.	**AO2.1** Pedestrian entries to buildings are visible from the street and visitor parking areas, and are separate to vehicle access points.
	AO2.2 Doorway recesses in building facades are not of a size or configuration that would conceal a person, unless lighting, mirrors, transparent materials or angled approaches are included to offset the potential for impacts on safety.
	AO2.3 Each building or tenancy is provided with a highly visible street and unit number respectively.
	AO2.4 Premises are provided with external lighting sufficient to provide safe ingress and egress for site users.

Table 6.5.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development — where involving a new building or expansion to an existing building **Note—**The following acceptable outcomes will not apply where the development is a change of use in an existing building that does not involve any expansion of that building.	
Amenity	
PO3 Where adjoining a residential zone, development provides adequate buffering and screening so that adverse impacts on privacy and amenity are minimised.	**AO3.1** New buildings, plant and equipment, active outdoor use areas, site access and parking, servicing or outdoor storage areas are set back a minimum of 5m from any boundary adjoining a residential zone.
	AO3.2 Within the setback area adjoining a residential zone, the following are provided: (a) a minimum 1.8m high solid boundary fence; or (b) a densely planted landscape strip, having a minimum depth of 2m and the balance setback area turfed.
	AO3.3 Windows or openings that have direct views into adjoining residential buildings are provided with fixed screening that is a maximum of 50% transparent to obscure views into the adjoining residential building and maintain privacy for those residents.
PO4 Utility elements (including refuse areas, outdoor storage, plant and equipment, loading and unloading areas) are screened from view from the street and land within other zones.	**AO4** Utility elements are: (a) located within or behind the building; or (b) screened by a 1.8m high solid wall or fence; or (c) behind landscaping having the same screening effect as a 1.8m screen fence. **Editor's note—**Screening can be provided by any combination of the above treatments to meet the acceptable outcome.
PO5 Landscaping is provided to create streetscapes which contribute positively to the city image, particularly along major roads and streets.	**AO5** Landscaping is provided along all road frontages of the site for a minimum depth of: (a) 4m along an arterial or sub-arterial road; or (b) 2m along any other road or street frontage.

Table 6.5.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
General	
PO6 Development minimises impacts on surrounding land having regard to noise, vibration, odour, dust, light or other emissions. Adverse impacts on the health, safety or amenity of nearby residential zoned land or other sensitive land uses are minimised. **Editor's note—**Applicants should have regard to relevant legislative, industry and licensing requirements.	**AO6.1** Development achieves the noise generation levels set out in the Environmental Protection (Noise) Policy 2008.
	AO6.2 Development achieves the air quality objectives set out in the Environmental Protection (Air) Policy 2008.
	AO6.3 Materials that are capable of generating air contaminants are wholly enclosed in storage bins.
	AO6.4 All external areas are sealed, turfed or landscaped.
	AO6.5 Light emanating from any source complies with *Australian Standard AS4282 Control of the Obtrusive Effects of Outdoor Lighting*.
	AO6.6 Outdoor lighting is provided in accordance with *Australian Standard AS 1158.1.1 — Road Lighting — Vehicular Traffic (Category V) Lighting — Performance and Installation Design Requirements*.
PO7 Development provides for the collection, treatment and disposal of liquid wastes or sources of contamination such that off-site releases of contaminants do not occur. **Editor's note—**Applicants should also have regard to Section 9.3.7 Works code, Section 9.3.2 Healthy waters code and other relevant legislative, industry and licensing requirements.	**AO7.1** Areas where potentially contaminating substances are stored or used, are roofed and sealed with concrete, asphalt or similar impervious substance and bunded.
	AO7.2 Roof water is piped away from areas of potential contamination.
PO8 The site layout and design: (a) minimises earthworks; (b) maximises retention of natural drainage patterns; and (c) ensures existing drainage capacity is not reduced.	**AO8** Development does not involve earthworks involving more than $100m^3$.

Table 6.5.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
Caretaker's accommodation	
PO9 Development does not compromise the viability of the primary use of the site.	**AO9** No more than one (1) caretaker's accommodation dwelling is established on the site.

Table 6.5.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
Ancillary office uses	
PO10 Offices are accommodated within the zone where they are ancillary to the primary use.	**AO10** The area used for an office use does not exceed 250m^2 or 10% of the gross floor area, whichever is the lesser.

Table 6.5.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Uses	
PO11 Development within the zone is of a low impact nature and is either: (a) an industrial activity; or (b) trade related; or (c) difficult to locate in other zones due to land area or operational requirements (such as outdoor sales areas and indoor sport and recreation uses); or (d) small in scale and ancillary to or directly support the industrial functions of the area.	No acceptable outcome is nominated.
PO12 Development is not primarily oriented to retail sales, other than where involving an outdoor sales activity.	No acceptable outcome is nominated.
PO13 Development does not compromise the use of land for industrial purposes.	No acceptable outcome is nominated.
PO14 The zone does not accommodate uses that attract high volumes of heavy vehicle movement or generally involve 24-hour operation.	No acceptable outcome is nominated.

Table 6.5.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Crime prevention through environmental design	
PO15 Site layout facilitates the security of people and property having regard to: (a) opportunities for casual surveillance and sight lines; (b) exterior building designs which promote safety and deter graffiti; (c) adequate definition of uses and ownership; (d) adequate lighting; (e) appropriate signage and wayfinding; (f) minimisation of entrapment locations; and (g) building entrances, loading and storage areas being well lit and lockable after hours. **Editor's note—**Applicants should have regard to Crime Prevention through Environmental Design Guidelines for Queensland.	No acceptable outcome is nominated.

Table 6.5.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Community and environmental risk	
PO16 Development is designed and managed so that it provides appropriate protection for community health and safety, and avoids unacceptable risk to life and property.	No acceptable outcome is nominated.
PO17 The site layout and design responds sensitively to on-site and surrounding drainage patterns and ecological values by: (a) maximising retention of natural drainage patterns; (b) ensuring existing drainage capacity is not reduced; (c) maximising the retention or enhancement of existing vegetation and ecological corridors; and (d) providing buffers to protect the ecological functions of waterways.	No acceptable outcome is nominated.

Table 6.5.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Nelly Bay low impact industry precinct	
PO18 Building design and massing is consistent with the low density scale of the Magnetic Island character and articulates individual buildings.	No acceptable outcome is nominated.
PO19 Design and articulation of buildings contribute to the creation of the local Magnetic Island character through: (a) climate-responsive design; and (b) natural setting of buildings within the landscape.	No acceptable outcome is nominated.
PO20 Streetscape and landscape treatments contribute to the creation of the local Magnetic Island character.	No acceptable outcome is nominated.

6.5.2 Medium impact industry zone code

6.5.2.1 Application

This code applies to development where the code is identified as applicable in the categories of development and assessment.

When using this code, reference should be made to section 5.3.2 and where applicable, section 5.3.3 located in Part 5.

6.5.2.2 Purpose

(1) The purpose of the Medium impact industry zone code is to provide for medium impact industry uses.

It may include non-industrial and business uses that support the industrial activities where they do not compromise the long-term use of the land for industrial purposes.
Activities considered appropriate in this zone are defined as Medium impact industry in the schedule of definitions.

(2) The particular purpose of the code is to:

(a) facilitate the safe and efficient use of land for a range of industrial activities; and

(b) ensure development does not detract from the function and viability of centres, and minimises impacts on the amenity of nearby sensitive uses.

(3) The purpose of the code will be achieved through the following overall outcomes:

(a) the zone accommodates a wide range of industrial uses that are likely to have some potential for off-site impacts, including manufacturing, transport, storage, outdoor sales and other uses which require larger sites in locations separated from sensitive land uses;

(b) other non-industrial uses are those which are ancillary to or directly support the industrial functions of the area, and are limited in extent;

(c) the zone does not accommodate uses which are primarily oriented to retail sales and which are more appropriately located in centres, such as shops, shopping centres, showrooms, or retail based hardware supplies;

(d) the intrusion of incompatible uses, or uses which may be more appropriately accommodated in other zones, is avoided to protect the availability of land for industrial purposes and the viability and efficient operation of existing and future industry uses;

(e) the impacts of development are managed to ensure public health and safety and achieve acceptable levels of amenity for nearby sensitive land uses;

(f) development avoids significant adverse effects on water quality and the natural environment;

(g) development does not adversely affect the safe and efficient operation of nearby Department of Defence landholdings;

(h) development is safe and legible, and designed to establish safe and efficient movement systems;

(i) lot sizes provide for a range of large format industrial uses and discourage take up of land for smaller scale activities better suited to the Low impact industry zone; and

(j) development makes a positive contribution to the public domain, particularly along major roads.

(4) The purpose of the zone will also be achieved through the following additional overall outcomes for particular precincts:

Roseneath medium impact industry precinct:

(a) medium impact industries, including those with a transport and logistics focus, occurs in the precinct;

(b) development provides adequate new infrastructure to support new uses, including roads, stormwater, water and sewer infrastructure;

Editor's note—Conditions of approval or infrastructure agreements will be used (as appropriate) to ensure that infrastructure is provided.

(c) development minimises impacts on surrounding land uses, including existing residential uses as far as practicable; and

(d) development protects the hydraulic capacity and environmental qualities of waterways, including Stuart and Stoney Creeks, and unnamed tributaries.

6.5.2.3 Assessment benchmarks

Table 6.5.2.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development — where involving a new building or expansion to an existing building **Note—**The following acceptable outcomes will not apply where the development is a change of use in an existing building that does not involve any expansion of that building.	
Built form	
PO1 Development is consistent with the scale of surrounding buildings.	**AO1.1** Site cover does not exceed 80%.
	AO1.2 Buildings are set back from street and road frontages: (a) within 20% of the average front setback of adjoining buildings; or (b) where there are no adjoining buildings, 6m.
PO2 Building entrances are legible and safe.	**AO2.1** Pedestrian entries are visible from the primary street frontage and visitor car parking areas, and are separate to vehicle access points.
	AO2.2 Doorway recesses in building facades are not of a size or configuration that would conceal a person, unless lighting, mirrors, transparent materials or angled approaches are included to offset the potential for impacts on safety.
	AO2.3 Each building or tenancy is provided with a highly visible street and unit number respectively.
	AO2.4 Premises are provided with external lighting sufficient to provide safe ingress and egress for site users.

Table 6.5.2.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development — where involving a new building or expansion to an existing building **Note—**The following acceptable outcomes will not apply where the development is a change of use in an existing building that does not involve any expansion of that building.	
Amenity	
PO3 Utility elements (including refuse areas, outdoor storage, plant and equipment, loading and unloading areas) are screened from view from the street and sensitive land uses.	**AO3** Utility elements are: (a) located within or behind the building; or (b) screened by a 1.8m high solid wall or fence; or (c) behind landscaping having the same screening effect as a 1.8m screen fence. **Editor's note—**Screening can be provided by any combination of the above treatments to meet the acceptable outcome.
PO4 Landscaping is provided to create streetscapes which contribute positively to the city image, particularly along major roads and streets.	**AO4** Landscaping is provided for a minimum depth of: (a) 4m along an arterial or sub-arterial road; or (b) 2m along any other road or street frontage.

Table 6.5.2.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
General	
PO5 Development minimises impacts on sensitive land uses having regard to noise, vibration, odour, dust, light or other emissions. Adverse impacts on the health, safety or amenity of nearby residential zoned land or other sensitive land uses are minimised. **Editor's note—**Applicants should have regard to relevant legislative, industry and licensing requirements.	**AO5.1** Development achieves the noise generation levels set out in the Environmental Protection (Noise) Policy 2008.
	AO5.2 Development achieves the air quality objectives set out in the Environmental Protection (Air) Policy 2008.
	AO5.3 Materials that are capable of generating air contaminants are wholly enclosed in storage bins.
	AO5.4 All external areas are sealed, turfed or landscaped.
	AO5.5 Light emanating from any source complies with A*ustralian Standard AS4282 Control of the Obtrusive Effects of Outdoor Lighting*.
	AO5.6 Outdoor lighting is provided in accordance with *Australian Standard AS 1158.1.1 — Road Lighting — Vehicular Traffic (Category V) Lighting — Performance and Installation Design Requirements*.

PO6 Development provides for the collection, treatment and disposal of liquid wastes or sources of contamination such that off-site releases of contaminants do not occur. **Editor's note—**Applicants should also have regard to Section 9.3.7 Works code, Section 9.3.2 Healthy waters code and other relevant legislative, industry and licensing requirements.	**AO6.1** Areas where potentially contaminating substances are stored or used, are roofed and sealed with concrete, asphalt or similar impervious substance and bunded.
	AO6.2 Roof water is piped away from areas of potential contamination.
PO7 The site layout and design: (a) minimises earthworks; (b) maximises retention of natural drainage patterns; and (c) ensures existing drainage capacity is not reduced.	**AO7** Development does not involve earthworks involving more than 100m^3.

Table 6.5.2.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
Defence land	
PO8 Development does not adversely affect the safe and efficient operation of nearby Department of Defence land.	**AO8** All buildings and operational components of a use are setback not less than 100m from the closest boundary of land in the control of or used by the Department of Defence.

Table 6.5.2.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
Caretaker's accommodation	
PO9 Development does not compromise the viability of the primary use of the site.	**AO9** No more than one (1) caretaker's accommodation dwelling is established on the site.

Table 6.5.2.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
Ancillary office uses	
PO10 Offices are accommodated where they are ancillary to the primary industrial use on the site.	**AO10** The area used for an office use does not exceed 250m^2 or 10% of the gross floor area, whichever is the lesser.

Table 6.5.2.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Uses	
PO11 Development within the zone facilitates: (a) industrial activities whose impacts on sensitive land uses and the natural environment can be appropriately managed; or (b) uses which require larger sites in locations that are separated from sensitive land uses, and are not more appropriately accommodated in other zones; or (c) non-industrial uses which are small in scale and ancillary to or directly support the industrial functions of the area.	No acceptable outcome is nominated.
PO12 Development is not primarily oriented to retail sales, other than where involving an outdoor sales activity.	No acceptable outcome is nominated.
PO13 Development does not significantly detract from the availability or utility of land for industry purposes.	No acceptable outcome is nominated.

Table 6.5.2.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Crime prevention through environmental design	
PO14 Site layout facilitates the security of people and property having regard to: (a) opportunities for casual surveillance and sight lines; (b) exterior building designs which promote safety and deter graffiti; (c) adequate definition of uses and ownership; (d) adequate lighting; (e) appropriate signage and wayfinding; (f) minimisation of entrapment locations; and (g) building entrances, loading and storage areas being well lit and lockable after hours. **Editor's note—**Applicants should have regard to Crime Prevention through Environmental Design Guidelines for Queensland.	No acceptable outcome is nominated.

Table 6.5.2.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Community and environmental risk	
PO15 Development is designed and managed so that it provides appropriate protection for community health and safety, and avoids unacceptable risk to life and property.	No acceptable outcome is nominated.
PO16 The site layout and design responds sensitively to on-site and surrounding drainage patterns and ecological values by: (a) maximising retention of natural drainage patterns; (b) ensuring existing drainage capacity is not reduced; (c) maximising the retention or enhancement of existing vegetation and ecological corridors; and (d) providing buffers to protect the ecological functions of waterways.	No acceptable outcome is nominated.

Table 6.5.2.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts	
Roseneath medium impact industry precinct	
PO17 Development is supported by adequate infrastructure, including: (a) connection to reticulated water and sewage networks; (b) connection to a stormwater drainage system; and (c) constructed roads.	No acceptable outcome is nominated. **Editor's note—**In accordance with the Act, council may seek to secure the necessary infrastructure through conditions of approval or infrastructure agreements.
PO18 Development protects the environmental quality, existing riparian vegetation and hydraulic capacity of waterways including Stuart and Stoney Creeks.	No acceptable outcome is nominated.
PO19 Development does not compromise the safe use of the nearby magazine reserve.	**AO19** The development does not compromise the protective works safety distance from explosive storage stipulated in *AS2187-1 Explosives — Storage, transport and use* and is otherwise consistent with that standard. **Editor's note—**The magazine reserve is located on the following property descriptions, Lot 103 Plan EP2187 and Lot 220 Plan SP138418.
PO20 Impacts on nearby residential uses are minimised as far as practicable. **Editor's note—**Applicants should have regard to relevant legislative, industry and licensing requirements.	No acceptable outcome is nominated.

6.5.3 High impact industry zone code

6.5.3.1 Application

This code applies to development where the code is identified as applicable in the categories of development and assessment.

When using this code, reference should be made to section 5.3.2 and where applicable, section 5.3.3 located in Part 5.

6.5.3.2 Purpose

(1) The purpose of the High impact industry zone code is to provide for high impact industry uses.

It may include non-industrial and business uses that support the industrial activities where they do not compromise the long-term use of the land for industrial purposes.

Activities considered appropriate in this zone are defined as High impact industry in the schedule of definitions.

(2) The particular purpose of the code is to:

(a) facilitate the safe and efficient use of land for a range of higher impacting industrial activities; and

(b) ensure development does not detract from the function and viability of centres, and minimises impacts on the amenity of nearby sensitive uses.

(3) The purpose of the code will be achieved through the following overall outcomes:

(a) the zone accommodates industrial uses that are likely to have a higher potential for off-site impacts and other uses that are of a similar nature or scale and are compatible with the impacts and risks associated with the zone;

(b) the zone does not accommodate uses which attract visitation by members of the public.

(c) the intrusion of incompatible uses, or uses which may be more appropriately accommodated in other zones, is avoided to protect the availability of land for industrial purposes and the viability and efficient operation of existing and future industry uses;

(d) the impacts of development are managed to ensure public health and safety;

(e) development avoids significant adverse effects on water quality and the natural environment;

(f) development does not adversely affect the safe and efficient operation of Department of Defence landholdings;

(g) development is safe and legible and designed to facilitate large format industrial uses.

(h) development makes a positive contribution to the public domain, particularly along major roads.

6.5.3.3 Assessment benchmarks

Table 6.5.3.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development — where involving a new building or expansion of an existing building **Note—**The following acceptable outcomes will not apply where the development is a change of use in an existing building that does not involve any expansion of that building.	
Built form	
PO1 Development is consistent with the scale of surrounding buildings.	**AO1.1** Site cover does not exceed 80%.
	AO1.2 Buildings are set back from street frontages: (a) within 20% of the average front setback of adjoining buildings; or (b) where there are no adjoining buildings, 6m.
PO2 Building entrances are legible and safe.	**AO2.1** Pedestrian entries are visible from the primary street frontage and visitor parking areas, and are separate to vehicle access points.
	AO2.2 Doorway recesses in building facades are not of a size or configuration that would conceal a person, unless lighting, mirrors, transparent materials or angled approaches are included to offset the potential for impacts on safety.
	AO2.3 Each building or tenancy is provided with a highly visible street and unit number respectively.
	AO2.4 Premises are provided with external lighting sufficient to provide safe ingress and egress for site users.

Table 6.5.3.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development — where involving a new building or expansion of an existing building **Note—**The following acceptable outcomes will not apply where the development is a change of use in an existing building that does not involve any expansion of that building.	
Amenity	
PO3 Utility elements (including refuse areas, outdoor storage, plant and equipment, loading and unloading areas) are screened from view from major roads.	**AO3** Utility elements are: (a) located within or behind the building; or (b) screened by a 1.8m high solid wall or fence; or (c) behind landscaping having the same screening effect as a 1.8m screen fence. **Editor's note—**Screening can be provided by any combination of the above treatments to meet the acceptable outcome.

PO4 Landscaping is provided to create streetscapes which contribute positively to the city image, particularly along major roads and streets.	**AO4** Landscaping is provided along all road frontages of the site for a minimum depth of: (a) 4m along an arterial or sub-arterial road; or (b) 2m along any other road or street frontage.

Table 6.5.3.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
General	
PO5 Development minimises impacts on sensitive land uses having regard to noise, vibration, odour, dust, light or other emissions. Adverse impacts on the health, safety or amenity of nearby residential zoned land or other sensitive land uses are minimised. **Editor's note—**Applicants should have regard to relevant legislative, industry and licensing requirements.	**AO5.1** Development achieves the noise generation levels set out in the Environmental Protection (Noise) Policy 2008.
	AO5.2 Development achieves the air quality objectives set out in the Environmental Protection (Air) Policy 2008.
	AO5.3 Materials that are capable of generating air contaminants are wholly enclosed in storage bins.
	AO5.4 All external areas are sealed, turfed or landscaped.
	AO5.5 Light emanating from any source complies with *Australian Standard AS 4282 Control of the Obtrusive Effects of Outdoor Lighting*.
	AO5.6 Outdoor lighting is provided in accordance with Australian Standard *AS 1158.1.1 — Road Lighting — Vehicular Traffic (Category V) Lighting — Performance and Installation Design Requirements*.
PO6 Development provides for the collection, treatment and disposal of liquid wastes or sources of contamination such that off- site releases of contaminants do not occur. **Editor's note—**Applicants should also have regard to Section 9.3.7 Works Code, Section 9.3.2 Healthy waters code and other relevant legislative, industry and licensing requirements.	**AO6.1** Areas where potentially contaminating substances are stored or used, are roofed and sealed with concrete, asphalt or similar impervious substance and bunded.
	AO6.2 Roof water is piped away from areas of potential contamination.
PO7 The site layout and design: (a) minimises earthworks; (b) maximises retention of natural drainage patterns; and (c) ensures existing drainage capacity is not reduced.	**AO7** Development does not involve earthworks involving more than $100m^3$.

Table 6.5.3.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
Defence land	
PO8 Development does not adversely affect the safe and efficient operation of Department of Defence land.	**AO8** All buildings and operational components of a use are setback not less than 100m from the closest boundary of land in the control of or used by the Department of Defence.

Table 6.5.3.3 - Self-assessable and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
Caretaker's accommodation	
PO9 Development does not compromise the viability of the primary use of the site.	**AO9** No more than one caretaker's accommodation dwelling is established on the site.

Table 6.5.3.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Uses	
PO10 The zone predominantly accommodates industrial uses with potential for higher impacts.	No acceptable outcome is nominated.
PO11 Other uses are accommodated where they: (a) are uses which: (i) require larger sites in locations that are separated from sensitive land uses; (ii) are not more appropriately accommodated in other zones; and (iii) are compatible with the impacts and risks associated with the zone; or (b) are small in scale and ancillary to or directly support the industrial functions of the area.	No acceptable outcome is nominated.
PO12 The zone does not accommodate uses that attract members of the public who are not employed in the zone.	No acceptable outcome is nominated.
PO13 Development does not significantly detract from the availability or utility of land for industrial purposes.	No acceptable outcome is nominated.

Table 6.5.3.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Crime prevention through environmental design	
PO14 Site layout facilitates the security of people and property having regard to: (a) opportunities for casual surveillance and sight lines; (b) exterior building designs which promote safety and deter graffiti; (c) adequate definition of uses and ownership; (d) adequate lighting; (e) appropriate wayfinding mechanisms; (f) minimisation of entrapment locations; and (g) building entrances, loading and storage areas being well lit and lockable after hours. **Editor's note—**Applicants should have regard to Crime Prevention through Environmental Design Guidelines for Queensland.	No acceptable outcome is nominated.

Table 6.5.3.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Community and environmental risk	
PO15 Development is designed and managed so that it provides appropriate protection for community health and safety, and avoids unacceptable risk to life and property.	No acceptable outcome is nominated.
PO16 The site layout and design minimises impacts of on-site and surrounding drainage patterns and ecological values by: (a) maximising retention of natural drainage patterns; (b) ensuring existing drainage capacity is not reduced; (c) maximising the retention or enhancement of existing vegetation and ecological corridors; and (d) providing buffers to protect the ecological functions of waterways.	No acceptable outcome is nominated.

6.6 Rural zones category

6.6.1 Rural zone code

6.6.1.1 Application

This code applies to development where the code is identified as applicable in the categories of development and assessment.

When using this code, reference should be made to section 5.3.2 and where applicable, section 5.3.3 located in Part 5.

6.6.1.2 Purpose

(1) The purpose of the Rural zone code is to:

(a) provide for a wide range of rural uses including cropping, intensive horticulture, intensive animal industries, animal husbandry, animal keeping and other primary production activities;

(b) provide opportunities for non-rural uses that are compatible with agriculture, the environment, and the landscape character of the rural area where they do not compromise the long-term use of the land for rural purposes; and

(c) protect or manage significant natural features, resources, and processes, including the capacity for primary production.

(2) The particular purpose of the code is to ensure:

(a) the productive capacity of all rural land and opportunities to diversify and add value to rural production are maximised, within the ecological constraints of the land;

(b) the character and landscape values of non-urban land are maintained; and

(c) urban or rural residential development does not expand into rural zoned land.

(3) The purpose of the code will be achieved through the following overall outcomes:

(a) the zone primarily accommodates cropping or animal husbandry and ancillary detached houses;

(b) all rural land is protected from further fragmentation. A lack of viability for existing farm units and small holdings does not justify their further subdivision or use for non-rural purposes;

(c) housing in the rural zone only occurs to the extent that it supports the productive use of the land. Urban and rural residential development is contained within designated growth areas and does not expand into the rural zone;

(d) other new enterprises, including rural industries and tourism activities, are accommodated where:

(i) they are directly associated with rural production, a natural resource or the natural environment or need to be remote from urban uses as a result of their impacts;

(ii) the productive capacity of the land is not diminished and conflicts with existing and intended activities in the surrounding area are avoided;

(iii) the existing landscape and natural resource values of the land are maintained; and

(iv) the development is not more appropriately located in another zone;

(e) extractive resources and existing extractive operations on rural land are protected from encroachment by incompatible uses;

(f) the environmental, character and landscape values of all rural land are maintained; and

(g) adequate separation and buffering is provided by new development in nearby urban or rural residential zoned land to ensure the encroachment by more intensive residential and other sensitive uses is avoided.

(4) The purpose of the zone will also be achieved through the following additional overall outcomes for particular precincts:

Horticulture precinct:

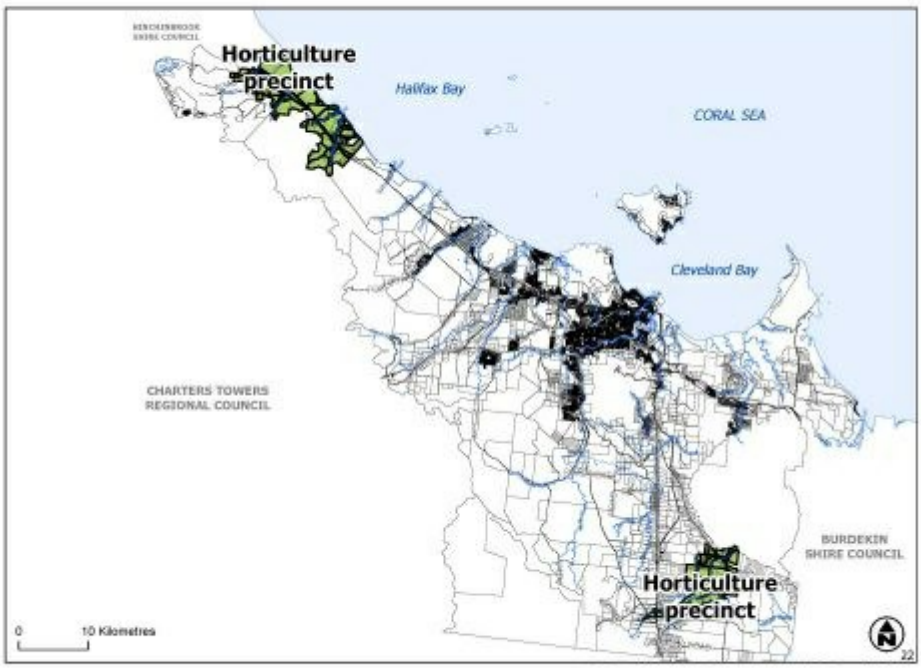
(a) this precinct contains the most productive areas in the Townsville region, in which cropping is the predominant land use. The productive capacity of this land is maximised;

(b) rural industries which have a direct nexus with the rural production in the immediate locality and only small-scale farm stay or bed and breakfast accommodation are established in this precinct;

(c) forestry does not adversely affect horticultural production, natural or scenic values on nearby land;

(d) permanent plantations, animal keeping (being kennels and catteries), intensive animal industries and aquaculture are not established in this precinct; and

(e) subdivision of lots below 40ha generally does not occur.



Click here to view online PDF.

Figure 6.155 – Horticulture precinct

Mixed farming precinct:

(a) this precinct contains low intensity animal husbandry with some potential for cropping.

(b) animal keeping (being kennels and catteries), intensive animal industries, aquaculture and rural industries establish where they:

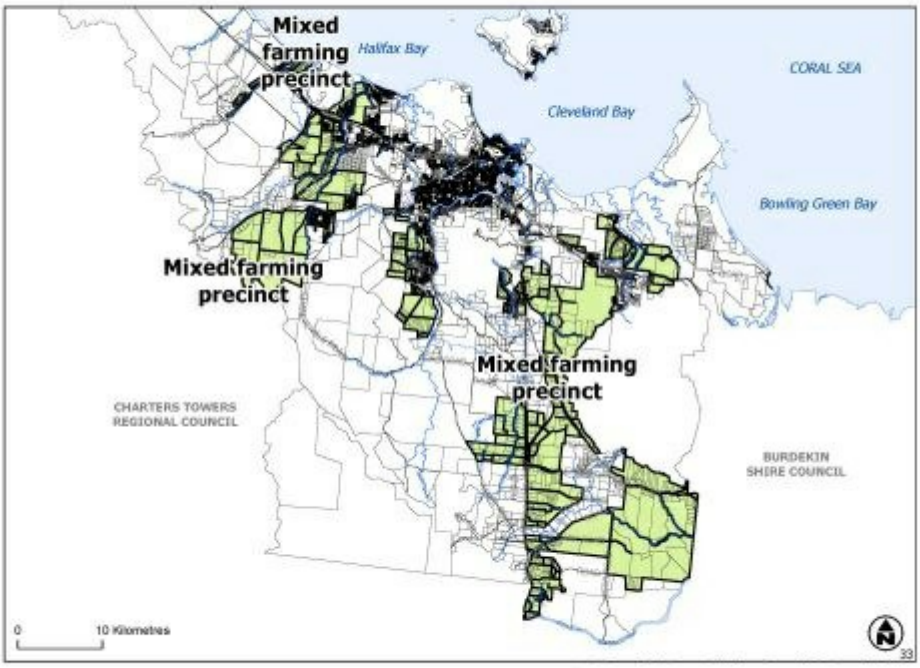
  (i) are able to be located on less productive land within the precinct;

  (ii) are adequately separated from rural dwellings and other sensitive land uses;

  (iii) do not diminish the productive capacity of other land nearby; and

  (iv) do not diminish water quality, natural, scenic or environmental values, including remnant vegetation;

(c) subdivision of lots below 400ha in the Ross River Dam catchment and 40ha elsewhere generally does not occur.



Click here to view online PDF.

Figure 6.156 – Mixed farming precinct

Grazing precinct:

(a) this precinct predominantly contains broad hectare grazing;

(b) the landscape character of elevated areas with high landscape significance is protected;

(c) animal keeping (being kennels and catteries), intensive animal industries, aquaculture and rural industries establish where they:

  (i) are able to be located on less productive land within the precinct;

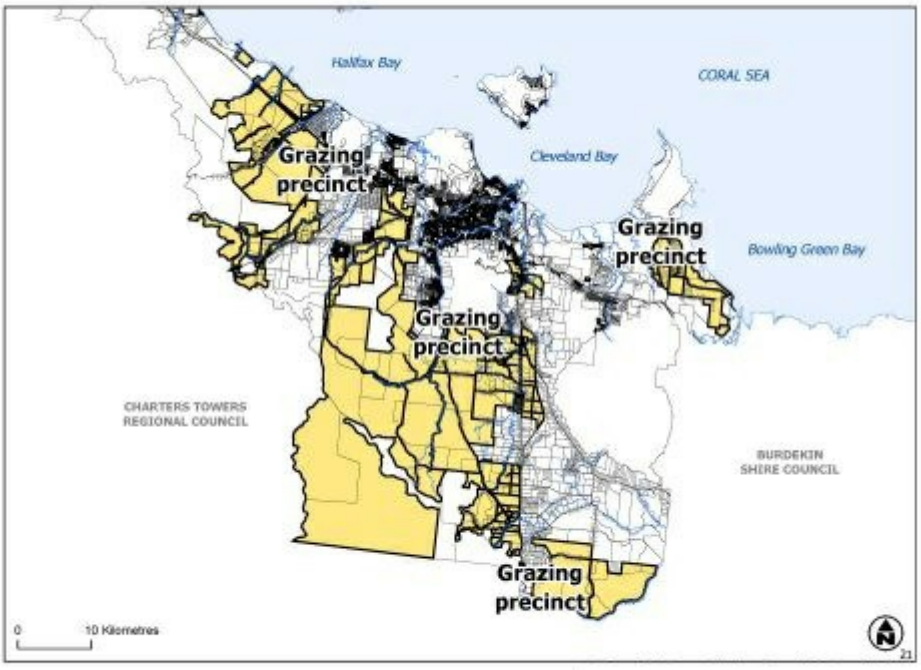
  (ii) are adequately separated from rural dwellings and other sensitive land uses;

  (iii) do not diminish the productive capacity of other land nearby; and

  (iv) do not diminish water quality, natural, scenic or environmental values, including remnant vegetation;

(d) development does not prejudice the long-term potential of the Woodstock area for accommodating high impact, noxious or hazardous industries; and

(e) subdivision of lots below 400ha generally does not occur.



Click here to view online PDF.

Figure 6.157 – Grazing precinct

Cungulla precinct:

(a) rural land in the Cungulla precinct includes smaller lots used for primarily residential purposes. Agricultural uses are of lesser importance at Cungulla;

(b) houses are established on rural zoned land at Cungulla, providing that appropriate residential amenity and safety can be maintained, with particular regard to nearby extractive industry activities;

(c) houses are provided with adequate water supply and sewage treatment and disposal can be provided; and

(d) subdivision of lots below 10ha generally does not occur.

Click here to view high resolution PDF.

Figure 6.158 – Cungulla precinct

Jensen precinct:

(a) this precinct contains smaller rural living lots with some potential for cropping;

(b) houses are provided with reticulated water supply, and on-site sewerage treatment and disposal; and

(c) subdivision of lots below 10ha generally does not occur.

Click here to view high resolution PDF.

Figure 6.159 – Jensen precinct

6.6.1.3 Assessment benchmarks

Table 6.6.1.3-Accepted development subject to requirements and assessable development (Part)

Editor's note—Dwelling houses may also be accepted development subject to requirements against the Water resources catchment overlay code.

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
Caretaker's accommodation, community residence or dwelling house	
PO1 Development does not detract from the effective operation of the primary use or the rural landscape character and amenity of site.	**AO1.1** Dwellings are not established on lots less than 1ha in size, other than in the Cungulla precinct.
	AO1.2.1 Where on a lot less than 1ha (in accordance with AO1.1), no more than 1 dwelling is established. OR **AO1.2.2** On lots greater than 1ha, no more than 2 dwellings are established.
PO2 Dwellings have adequate access to basic services to ensure the safety and wellbeing of residents and the protection of water quality and other environmental values.	**AO2** A dwelling: (a) has a legal access to a constructed road; (b) has a legal connection to either: (i) reticulated water supply; or (ii) a water tank with a minimum capacity of 45,000 liters; and (c) if in the Cungulla precinct, does not rely on bore water.
PO3 Dwellings are sufficiently separated from existing lawful activities in the locality in order to protect the safety and amenity of residents and to ensure the ongoing operation of those activities is not prejudiced.	**AO3.1** Dwellings are separated from: (a) an existing or approved intensive animal industry use by at least 1km; (b) an existing or approved extractive industry operation or a resource/processing area shown on overlay map OM-05 by: (i) 500m from a hard rock extractive industry; (ii) 200m from a sand and gravel extractive industry; and (iii) 100m from a haul route used by any existing operation.
	AO3.2 Dwellings are set back from all site boundaries by 20m, other than in the Cungulla precinct where dwellings and ancillary structures are set back a minimum of 6m from front boundaries, 3m from side boundaries where adjoining a road or 1.5m otherwise for side and rear boundaries.

Table 6.6.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
Home based business	
PO4 Development does not detract from the effective operation of the primary use or the rural landscape character and amenity of site. **Editor's note—**A heavy vehicle is a vehicle with more than 4.5 tonnes GVM (gross vehicle mass), GCM (gross combination mass) or more than 2 tonnes ATM (aggregate trailer mass).	**AO4.1** The home based business does not: (a) require more than the owner and 2 employees on-site at any one time; (b) does not generate more than 14 visitor trips per day, where one trip includes arriving and departing the site. These trips are additional to normal trips associated with the dwelling or rural use; (c) include an area exceeding 20m^2 used for the sale of the goods made on the site; (d) involve hiring out of materials, goods, appliances or vehicles; and (e) involve the repair or maintenance of vehicles, other than minor maintenance of vehicles used in conjunction of the home business or rural use on the site.
	AO4.2 Bed and breakfast or farm stay accommodation does not exceed three bedrooms or three cabins.
PO5 Heavy vehicle parking: (a) has a direct nexus with a home based business or rural use carried out on the site; and (b) does not adversely affect the amenity of neighbouring properties.	**AO5.1** Not more than two heavy vehicles are parked on the site.
	AO5.2 While on-site, vehicles: (a) are not operated between the hours of 10pm and 6am; (b) are not left idling for more than 5 minutes at any one time; and (c) do not have a refrigeration unit running.

Table 6.6.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
Roadside stall	
PO6 Roadside stalls are small in scale and do not impact negatively upon the amenity, character or safety of rural areas and the safety and efficiency of roads.	**AO6.1** Any structure used for the sale of goods or produce is limited to 20m^2 gross floor area.
	AO6.2 Access to the structure is via the primary property access point.
	AO6.3 Produce or goods sold is grown, made or produced on the land on which the road side stall is erected.

Table 6.6.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
Rural industry, community use, wholesale nursery	
PO7 Development does not impact negatively upon the amenity, character or safety of surrounding areas.	**AO7.1** Non-residential buildings, animal enclosures storage facilities and waste disposal areas are set back: (a) 100m from the boundary of any land included in residential zone or the rural residential zone; or (b) 50m from other site boundaries.
	AO7.2 Buildings are set back 20m from any road frontage.
	AO7.3 Building height does not exceed 2 storeys.

Table 6.6.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
General benchmarks	
PO8 Development: (a) is located on the least productive parts of a site; (b) does not restrict the ongoing safe and efficient use of nearby rural uses; and (c) is adequately separated or buffered where it is likely to be sensitive to the operational characteristics associated with rural uses, rural industries, extractive industries or other lawful use.	No acceptable outcome is nominated.
PO9 Tourism-related uses are established only where they are directly associated and compatible with rural production, natural resources or landscape amenity in the immediate vicinity.	No acceptable outcome is nominated.

PO10 Uses that require isolation from urban areas are accommodated only where: (a) they cannot be more appropriately located in an industrial or other relevant zone; (b) they can be adequately separated from sensitive uses (whether or not in the rural zone); (c) they can be adequately separated from land in the Horticulture precinct; and (d) potential impacts can be appropriately managed. **Editor's note—**Applicants seeking approval for intensive animal industries should refer to the *'National Guidelines for Beef Cattle Feedlots in Australia, National Beef Cattle Feedlot Environmental Code of Practice'*, 'Queensland Dairy Farming Environmental Code of Practice', *'National Environmental Guidelines for Piggeries'* and *'Queensland Guidelines Meat Chicken Farms* and that applicants consult with the relevant State government department prior to the lodgement of a development application. For other uses council may require a study that, amongst other matters, identifies how the development is in accordance with Environmental Protection (Air) Policy 1997 or Environmental Protection (Noise) Policy 1997.	No acceptable outcome is nominated.
PO11 Development is designed and managed so that it provides appropriate protection for community health and safety, and avoids unacceptable risk to life and property.	No acceptable outcome is nominated.
PO12 Development does not adversely impact on the character, amenity or scenic values of the locality, having regard to: (a) the scale, siting and design of buildings; (b) the visibility of buildings, structures and infrastructure; (c) likely emissions including water-borne contaminants, noise, dust, lighting and odour; and (d) the nature or volume of traffic generated.	No acceptable outcome is nominated.
PO13 Ecological values, habitat corridors and soil and water quality are protected, having regard to: (a) maximisation of vegetation retention and protection of vegetation from the impacts of development; (b) avoidance of potential for erosion and minimisation of earthworks; (c) retention and protection of natural drainage lines and hydrological regimes; and (d) avoidance of leeching by nutrients, pesticides or other contaminants, or potential for salinity.	No acceptable outcome is nominated.

Table 6.6.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Horticulture precinct	
PO14 Productive land within this precinct is maintained.	No acceptable outcome is nominated.
PO15 Rural industries are established only where associated with rural production in the immediate vicinity.	No acceptable outcome is nominated.
PO16 Tourist related uses are limited to small-scale bed and breakfast and farm stay which do not detract from the ongoing productive use of the site.	No acceptable outcome is nominated.
PO17 Reconfiguration is limited to protect the ongoing viability of existing and potential horticulture.	**AO17** The minimum lot size in the precinct is 40ha.

Table 6.6.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Mixed farming precinct	
PO18 Reconfiguration is limited to protect the ongoing viability of existing and potential horticulture uses, water quality and ecological and landscape values.	**AO18** The minimum lot size in the precinct is 40ha, except in the Ross River Dam Catchment area where the minimum lot size is 400ha. **Editor's note—**The Ross River Dam catchment area is depicted on the Water resource catchment overlay map OM-09.

Table 6.6.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Grazing precinct	
PO19 Development in the vicinity of the Woodstock industry investigation area does not prejudice its future potential for industry.	No acceptable outcome is nominated.
PO20 Reconfiguration is limited to reflect the suitability of the land for primarily grazing purposes and to protect water quality and ecological and landscape values.	**AO20** The minimum lot size in the precinct is 400ha.

Table 6.6.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional benchmarks for assessable development in precincts **Note—**Where acceptable outcomes in this section vary from those provided earlier in this code, the precinct-based acceptable outcomes take precedence.	
Cungulla precinct	
PO21 Development is compatible with the residential amenity of the locality and avoids adverse impacts on surrounding dwellings.	No acceptable outcome is nominated.

6.7 Other zones category

6.7.1 Emerging community zone code

6.7.1.1 Application

This code applies to development where the code is identified as applicable in the categories of development and assessment.

When using this code, reference should be made to section 5.3.2 and where applicable, section 5.3.3 located in Part 5.

6.7.1.2 Purpose

(1) The purpose of the Emerging community zone code is to:

- (a) identify land that is suitable for urban purposes and conserve land that may be suitable for urban development in the future;
- (b) manage the timely conversion of non-urban land to urban purposes; and
- (c) prevent or discourage development that is likely to compromise appropriate longer term land use.

(2) The particular purpose of the code is:

- (a) to ensure that future development:
  - (i) creates an integrated and compact urban form;
  - (ii) establishes safe, attractive and walkable communities;
  - (iii) provides for a wide choice of housing, employment and accessible community services; and
  - (iv) avoids areas within the Emerging community zone that are unsuited to urban development because of their natural, scenic or cultural values; and
- (b) to ensure that any development which occurs prior to urbanisation of an area maintains the suitability and capacity for future urban development.

(3) The purpose of the zone will be achieved through the following overall outcomes:

- (a) structure planning of areas within the zone is undertaken in advance of development of the land for urban purposes;
- (b) land is developed in a logical pattern that facilitates the efficient provision of infrastructure;
- (c) a high level of integration with existing and future urban development is achieved having regard to movement networks, open space and recreational facilities, centres and community infrastructure;
- (d) development facilitates the establishment of new residential communities together with an appropriate level of supporting land uses such as centres, industry and community activities;
- (e) residential development provides for a range of housing types and achieves a minimum dwelling yield of 15 dwellings per hectare net;
- (f) movement networks are established to promote active transport (walking and cycling) and public transport;
- (g) development retains and protects significant environmental, topographic, scenic and cultural features and values;
- (h) development provides for sufficient buffering to existing or intended non-urban or incompatible uses in surrounding areas; and
- (i) development which is, or has the potential to become, incompatible with future urban development of the area does not occur.

(4) The purpose of the zone will also be achieved through the following additional overall outcomes for particular precincts.

Burdell precinct:

- (a) creates an identifiable community, which is developed through detailed subdivision design, focused land use provision and clear building requirements;
- (b) provides housing diversity to meet the evolving needs of various household types and lifestyles;

(c) development is integrated and respects the site's character and provides access to open space and community facilities;

(d) provides a defined open space system that protects wetland and riparian environmental values and provides various recreational opportunities;

(e) development facilitates safe and functional access within the precinct and to external connections;

(f) is designed to achieve tropical urban design outcomes;

(g) is developed for community and commercial facilities to:

(A) service the residents of the precinct, residents of the region, and the travelling public; and

(B) ensure that residential amenity is not detrimentally affected;

(h) provides for an integrated linear open space system along the major drainage paths with linkages to the Bohle River; and

(i) provides for innovative development over the life of the development of the precinct area, to account for technological development and changing patterns in the community.

Click here to view high resolution PDF.

6.7.1.3 Assessment benchmarks

Table 6.7.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
Home based business	
PO1 The use does not adversely impact on the amenity of the surrounding residential land uses and local character.	**AO1.1** The home based business: (a) is carried out in an existing building or structure; (b) does not use more than 60m² of the gross floor area of the building or structure; (c) involves at least one or more residents of the dwelling house; (d) involves not more than one non-resident employee; (e) where bed and breakfast or farm stay accommodation does not exceed three bedrooms or cabins; (f) does not generate more than 1 heavy vehicle trip per week; **Editor's note—**A heavy vehicle is a vehicle with more than 4.5 tonnes gross vehicle mass. (g) does not generate more than 14 vehicle trips per day by other vehicles, where one trip includes arriving and departing the site. These trips are additional to normal domestic trips associated with the dwelling; (h) contains visitor parking within the site; (i) does not involve hiring out of materials, goods, appliances or vehicles; and (j) does not involve the repair or maintenance of vehicles, other than minor maintenance of vehicles used in conjunction of the home business on the site. **Editor's note—**home based business operators should also refer to signage requirements under Table 5.8.2 -Operational work being placing an advertising device on a premises and Section 9.3.1-Advertising devices code.
	AO1.2 Functional aspects of the use such as service areas, material storage or use activities are not visible from the street.
	AO1.3 Other than where a bed and breakfast, farm stay or home based childcare, the business use does not operate outside the hours of 8am to 5pm Monday to Friday, 8am to 2pm Saturday and does not operate on Sunday.
	AO1.4 Noise levels do not exceed acoustic quality objectives under the Environmental Protection (Noise) Policy 2008.

Table 6.7.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
Sales office	
PO2 The use does not adversely impact on the amenity of the surrounding land uses and local character.	**AO2** Development of the sales office is in place for no more than five years.

Table 6.7.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Interim land uses	
PO3 Development does not reduce or preclude the long-term use of the site or nearby land for urban purposes, having regard to the scale and nature of the activity and its likely impacts, and would not compromise the implementation of a future structure plan over the site.	No acceptable outcome is nominated.

Table 6.7.1.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Creating new communities	
PO4 New development of an urban nature: (a) contributes to a logical pattern and sequence of development; (b) facilitates efficient use of land and infrastructure; (c) facilitates integration with existing and future urban development, having regard to movement networks, open space networks and accessibility to community infrastructure; (d) provides accessibility for all modes of transport including pedestrian, cyclist, public transport and private car; (e) creates clear, direct pedestrian and cycle access to centres, local parks and public transport stops; (f) achieves an average net residential density of at least 15 dwellings per hectare; (g) locates higher density residential development in and around centres, along connector streets and close to transit nodes; (h) locates community facilities requiring high levels of accessibility within or adjoining centres; (i) responds to constraints and natural values on the site and avoids or minimises any impacts on areas of environmental significance; (j) facilitates integrated water cycle management; (k) orients major streets and vistas to landmarks; (l) provides a road network with a capacity adequate for current and future demand; (m) does not increase hazard or risk to existing or future residents; and (n) provides an open space network suitable for current and future needs.	No acceptable outcome is nominated. **Editor's note—**Emerging community planning scheme policy no. SC6.6 provides guidance to applicants on expected structure planning processes to facilitate development that complies with this code and Section 9.3.4 Reconfiguring a lot code.
PO5 Emerging communities are provided with the range of supporting services and uses, including those that provide local employment opportunities, that: (a) are commensurate to the size of the relevant emerging community; (b) do not detract from planning scheme intentions for other parts of the city; and (c) are planned as an integrated and compatible component of the emerging community they serve.	No acceptable outcome is nominated. **Editor's note—**Emerging community planning scheme policy no. SC6.6 provides guidance to applicants on expected structure planning processes to facilitate development that complies with this code and Section 9.3.4 Reconfiguring a lot code.

PO6 New centres are designed to create: (a) a coherent and integrated built form, public realm and circulation networks; (b) central, accessible and attractive public spaces for people to congregate and interact; (c) continuity of streetscape and landscape characteristics; (d) pedestrian friendly and visually interesting frontages to streets and public spaces; (e) active primary frontages with parking areas sleeved by buildings; (f) optimum energy efficiency; (g) a well-integrated mix of uses; (h) connectivity of pedestrian and cyclist paths and spaces internal and external to the centre; (i) connectivity to public transport services; and (j) sensitive transitioning to surrounding land and uses.	No acceptable outcome is nominated. **Editor's note—** Emerging community planning scheme policy no. SC6.6 provides guidance to applicants on expected structure planning processes to facilitate development that complies with this code and Section 9.3.4 Reconfiguring a lot code.
PO7 Where centre development is proposed, development is consistent with the centres hierarchy and does not compromise the intended role or successful functioning of other centres in the network. The growth of floor space within centres is balanced with anticipated growth within their primary catchment and does not substantively impact on the trading of other centres for an extended period of time or unduly undermine the potential for another centre to expand into its intended role.	No acceptable outcome is nominated. **Editor's note—**Emerging community planning scheme policy no. SC6.6 provides guidance to applicants on expected structure planning processes to facilitate development that complies with this code and Section 9.3.4 Reconfiguring a lot code. **Editor's note—** Applicants should have regard to Economic impact assessment planning scheme policy SC6.5 for guidance on how to demonstrate compliance with this performance outcome.

Table 6.7.1.3 - Accepted development subject to requirements and assessable development (Part)

Performance outcomes	**Acceptable outcomes**
For assessable development	
Crime prevention through environmental design	
PO8 Development facilitates the security of people and property having regard to: (a) opportunities for casual surveillance and sight lines; (b) exterior building design that promotes safety; (c) adequate lighting; (d) appropriate signage and wayfinding; (e) minimisation of entrapment locations; and (f) building entrances, loading and storage areas that are well lit and lockable after hours. **Editor's note—**Applicants should have regard to Crime Prevention through Environmental Design Guidelines for Queensland.	No acceptable outcome is nominated.

Table 6.7.1.3 - Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Burdell precinct	
PO9 A site is to be suitable in size and configuration for the intended use.	**AO9** A variety of lot sizes and configurations are provided to facilitate a well-connected master planned community.

6.7.2 Special purpose zone code

6.7.2.1 Application

This code applies to development where the code is identified as applicable in the categories of development and assessment.

When using this code, reference should be made to section 5.3.2 and where applicable, section 5.3.3 located in Part 5.

6.7.2.2 Purpose

(1) The purpose of the Special purpose zone code is to facilitate industrial development that is of regional, state and national significance.

(2) The particular purpose of the code is to:

- (a) recognise and facilitate reconfiguration of land in the Townsville State Development Area;
- (b) protect the area's suitability for industrial development and the expansion of existing industrial uses;
- (c) facilitate and maintain linkages to the Port of Townsville and major freight routes;
- (d) protect environmental values in the Townsville State Development Area; and
- (e) ensure development minimises impacts on the amenity of nearby sensitive land uses.

Editor's note—Material change of use applications in the Townsville State Development Area are administered by the Coordinator-General through the Development Scheme for the Townsville State Development Area. In this area, only development applications for reconfiguration of a lot and operational works will be assessed by Townsville City Council.

(3) The purpose of the code will be achieved through the following overall outcomes:

- (a) the Townsville State Development Area accommodates a wide range of large-scale industry uses, particularly those which support or have a nexus with the Port of Townsville and minerals processing;
- (b) other non-industrial uses are those which are ancillary to or directly support the industrial functions of the area, and are limited in extent;
- (c) the intrusion of incompatible uses, or uses which may be more appropriately accommodated in other zones, is avoided to protect the availability of land for industrial purposes and the viability and efficient operation of existing and future industry uses;
- (d) the impacts of development are managed to ensure public health and safety;
- (e) development avoids significant adverse effects on water quality and the natural environment;
- (f) development does not adversely affect the safe and efficient operation of Department of Defence landholdings;
- (g) development is safe and legible, and designed to establish safe and efficient movement systems;
- (h) lot sizes provide for a range of large format industrial uses and discourage take up of land for smaller scale activities better suited to other zones;
- (i) development makes a positive contribution to the public domain, particularly along major roads;
- (j) opportunities for energy efficiency through groupings and relationships between industries are accommodated where possible; and
- (k) development is adequately serviced by infrastructure and maximises the efficient use of existing and planned infrastructure.

6.7.2.3 Assessment benchmarks

Table 6.7.2.3 - Assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
General	
PO1 The site layout and design: (a) minimises earthworks; (b) maximises retention of natural drainage patterns; and (c) ensures existing drainage capacity is not reduced.	**AO1** Development does not involve: (a) earthworks involving more than 100m^3; and (b) any changes to existing drainage lines and wetlands.

Table 6.7.2.3 - Assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Defence land	
PO2 Development does not adversely affect the safe and efficient operation of nearby Department of Defence land.	**AO2** All buildings and operational components of a use are setback not less than 100m from the closest boundary of land in the control of or used by the Department of Defence.

Table 6.7.2.3 - Assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Uses	
PO3 Development does not significantly detract from the availability or utility of land for industrial purposes.	No acceptable outcome is nominated.

Table 6.7.2.3 - Assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Community and environmental risk	
PO4 Development is designed and managed so that it provides protection for community health and safety, and avoids unacceptable risk to life and property.	No acceptable outcome is nominated.
PO5 The site layout and design minimises impacts of on-site and surrounding drainage patterns and ecological values by: (a) maximising retention of natural drainage patterns; (b) ensuring existing drainage capacity is not reduced; (c) maximising the retention or enhancement of existing vegetation and ecological corridors; and (d) providing buffers to protect the ecological functions of waterways.	No acceptable outcome is nominated.

Part 7 Local plans

Left intentionally blank.

Part 8 Overlays

8.1 Preliminary

(1) Overlays identify areas in the planning scheme that reflect state or local level interests and that have one or more of the following characteristics:

(a) there is a particular sensitivity to the effects of development;

(b) there is a constraint on land use or development outcomes;

(c) there is the presence of valuable resources; and

(d) there are particular opportunities for development.

(2) Overlays are mapped and included in Schedule 2.

(3) The changed category of development and assessment, if applicable, for development affected by an overlay are stated in Part 5.

(4) Some overlays may be included for information purposes only. This will not result in a change to the category of development and assessment or any additional assessment benchmarks.

(5) Assessment benchmarks for an overlay may be contained in one or more of the following:

(a) a map for an overlay;

(b) a code for an overlay;

(c) a zone code; and

(d) a development code.

Editor's note—In this planning scheme all assessment benchmarks for an overlay are contained in an overlay code.

(6) Where development is proposed on premises partly affected by an overlay, the assessment benchmarks for the overlay only relate to the part of the premises affected by the overlay.

(7) The overlays for the planning scheme are:

(a) Airport environs overlay;

(b) Bushfire hazard overlay;

(c) Coastal environment overlay;

(d) Cultural heritage overlay;

(e) Extractive resources overlay;

(f) Flood hazard overlay;

(g) Landslide hazard overlay;

(h) Natural assets overlay; and

(i) Water resource catchment overlay.

(8) The following overlays for the planning scheme are for information purposes only:

(a) Infrastructure noise corridors overlay.

Editor's note—The Infrastructure noise corridors identify land affected by transport noise in accordance with Chapter 8B of the *Building Act 1975*. In these areas building work will be assessable against the Queensland Development Code Part 4.4 – Buildings in a Transport Noise Corridor.

8.2 Overlay codes

8.2.1 Airport environs overlay code

8.2.1.1 Application

This code applies to development where the code is identified as applicable in the categories of development and assessment for the Airport environs overlay. When using this code, reference should be made to section 5.3.2 and where applicable, section 5.3.3 located in Part 5.

8.2.1.2 Purpose

(1) The purpose of the Airport environs overlay code is to ensure the safe and efficient operations of the airport, RAAF base and aviation facilities are protected.

(2) The purpose of the code will be achieved through the following overall outcomes:

(a) development avoids adversely affecting the safety and efficiency of an airport's operational airspace or the functioning of aviation facilities;

(b) large increases in the numbers of people adversely affected by significant aircraft noise are avoided; and

(c) development does not increase the risk to public safety near airport runways.

8.2.1.3 Assessment benchmarks

Table 8.2.1.3 - Accepted development subject to requirements and assessable development (Part)

Editor's note—This code will apply to accepted development subject to requirements as well as assessable development.

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
Operational airspace (overlay map OM-01.1)	
PO1 Development does not involve permanent or temporary physical obstructions that will adversely affect the airport's operational airspace area identified on overlay map OM-01.1. **Editor's note—**The *Defence (Areas Control) Regulation* (DACR) is a Commonwealth regulation under the *Defence Act 1903*. Development in the area covered by this regulation which exceeds certain heights will require a separate assessment process under Regulation 8 of the DACR by the Department of Defence. The Department of Defence also requires that all tall structures (30m high within 30km of the airport and 45m high elsewhere) are registered by forwarding "as constructed" information to Airservices Australia at the following email address: vod@airservices.com.	**AO1.1** Development involving a permanent or temporary building, structure or landscaping does not enter operational airspace areas identified on overlay map OM-01.1. **Editor's note-**Alternative heights which enter the operational airspace areas may be possible. In particular, building heights which meet the acceptable outcomes for a particular zone or precinct under this planning scheme. However, applicants should note the requirement for assessment under the Defence (Areas Control) Regulation (DACR) for development which exceed AO1 above.
	AO1.2 Development on land within the area identified on overlay map OM-01.1 as operational airspace areas does not involve transient intrusions within the operational airspace.
PO2 Emissions do not significantly affect air turbulence, visibility or aircraft engine operation in the airport's operational airspace area identified on overlay map OM-01.1.	**AO2** Development does not generate: (a) a gaseous plume with a velocity exceeding 4.3m per second; or (b) smoke, dust, ash or steam that will penetrate operational airspace areas identified on overlay map OM-01.1.

Table 8.2.1.3 - Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
Wildlife hazard buffer zones (overlay map OM-01.2)	
PO3 Development does not attract a significant number of flying vertebrates, such as birds and bats, into areas identified on overlay map OM-01.2.	**AO3.1** Within 13km of airport runways, development does not involve a putrescible waste disposal facility.
	AO3.2 Within 8km of airport runways, development does not involve: (a) aquaculture; or (b) food handling or processing of an industrial nature; or (c) stock handling or slaughtering; or (d) pig production; or (e) fruit production; or (f) turf production; or (g) the keeping or protection of wildlife outside enclosures.
	AO3.3 Within 3km of airport runways, development does not involve: (a) the keeping, handling or racing of horses; or (b) outdoor dining, food handling or food consumption.

Table 8.2.1.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
Public safety areas (overlay map OM-01.2)	
PO4 A significant increase in the numbers of people living, working or congregating in public safety areas identified on overlay map OM-01.2 is avoided.	**AO4** Within a public safety area identified on overlay map OM-01.2, development does not involve the following: (a) residential uses; or (b) a new building or an increase in the gross floor area of an existing building accommodating a non-residential use, other than an industrial use; or (c) any activities involving the manufacture or bulk storage of hazardous or flammable materials.

Table 8.2.1.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
Aviation facilities (overlay map OM-01.3)	
PO5 Development within the area identified on overlay map OM-01.3 is located and designed to protect the function of aviation facilities from physical obstructions, electrical or electromagnetic interference and deflection of signals.	**AO5.1** No building, structures or other works which exceed 7.9m in height are located between 150m and 500m of non-directional beacon (NDB) site (as depicted on overlay map OM-01.3).
	AO5.2 Within the buffer area of the Townsville Airport distance measuring equipment (DME) site (as depicted on overlay map OM-01.3), no building, structure or other works involving a change to, or a physical projection above, the ground level are located: (a) within 115m of the DME site; or (b) between 115m and 230m of the DME site if exceeding 1m in height; or (c) between 230m and 500m of the DME site if exceeding 2m in height; or (d) between 500m and 1,000m of the DME site if exceeding 4m in height; or (e) between 1,000m and 1,500m of the DME site if exceeding 8.5m in height.
	AO5.3 Within the buffer area of the Townsville Airport VHF omni-directional radio range (VOR) site (as depicted on overlay map OM-01.3): (a) no building, structures or other works involving a change to, or a physical projection above, the ground level are located within 300m of the site; and (b) the following are not located between 300m and 1,000m of the site: (i) fences exceeding 2.5m in height; or (ii) overhead lines exceeding 5m in height; or (iii) metallic structures exceeding 8m in height; or (iv) trees and open lattice towers exceeding 10m in height; or (v) wooden structures exceeding 13m in height.

	AO5.4 Within the buffer area of the Townsville Airport Glidepath site (as depicted on overlay map OM-01.3), no building, structures or other works involving a change to, or a physical projection above, the ground level are located between: (a) 700m and 1,000m of the site if exceeding 6m in height; or (b) 1,000m and 1,500m of the site if exceeding 8.7m in height.
	AO5.5 Within the buffer area of the Townsville Airport middle marker site (as depicted on overlay map OM-01.3, no buildings, structures or other works involving a change to, or a physical projection above, the ground level occurs that exceed 20m in height.
	AO5.6 No buildings, fences or landscaping are established within the buffer area of the Townsville Airport localiser (as depicted on overlay map OM-01.3).

Table 8.2.1.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	**Acceptable outcomes**
For accepted development subject to requirements and assessable development	
Australian noise exposure forecast contours (overlay map OM-01.4)	
PO6 Development within the area identified on overlay map OM-01.4 is compatible with forecast levels of aircraft noise unless there is an overriding need in the public interest and there is no reasonable alternative site available for the use. **Editor's note—**Where the acceptable outcomes cannot be met, an appropriately qualified acoustic practitioner may be required to be engaged in order to demonstrate compliance with this performance outcome.	**AO6.1** Above the 25 ANEF contour (as depicted on overlay map OM-01.4), development does not involve the following: (a) child care centre; (b) educational establishment; or (c) hospital.
	AO6.2 Above the 30 ANEF contour (as depicted on overlay map OM-01.4), development does not involve a community use or community care centre.
	AO6.3 Above the 35 ANEF contour areas (as depicted on overlay map OM-01.4), development does not involve residential uses.
	AO6.4 The siting and design of any building is in accordance with Australian Standard AS2021 and Australian Standard AS/NZS2107.

Table 8.2.1.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
Lighting area buffer zones (overlay map OM-01.5)	
PO7 Development within the area identified on overlay map OM-01.5 does not involve external lighting or reflective surfaces that could distract or confuse pilots. **Editor's note—**The standards specified in CASA Guidelines: Lighting in the vicinity of aerodromes: Advice to lighting designers, may be used to demonstrate compliance with this performance outcome.	**AO7.1** Development within the 6km radius shown on overlay map OM-01.5 does not involve: (a) straight parallel lines of lighting 500m to 1000m long; or (b) lighting which extends more than 3 degrees above the horizon; or (c) flare plumes; or (d) buildings with reflective cladding; or (e) upward-shining lights; or (f) flashing lights; or (g) sodium lights.
	AO7.2 In zone A shown on overlay map OM-01.5, lighting does not exceed 0 candela.
	AO7.3 In zone B shown on overlay map OM-01.5, lighting does not exceed 50 candela.
	AO7.4 In zone C shown on overlay map OM-01.5, lighting does not exceed 150 candela.
	AO7.5 In zone D shown on overlay map OM-01.5, lighting does not exceed 450 candela.

8.2.2 Bushfire hazard overlay code

8.2.2.1 Application

This code applies to development where the code is identified as applicable in the categories of development and assessment for the Bushfire hazard overlay. When using this code, reference should be made to section 5.3.2 and where applicable, section 5.3.3 located in Part 5.

8.2.2.2 Purpose

(1) The purpose of the Bushfire hazard overlay code is to ensure that development does not:

- (a) increase the extent or the severity of bushfire hazard; or
- (b) increase the risk to life, property, community and the environment.

(2) The purpose of the code will be achieved through the following overall outcomes:

- (a) development is compatible with the nature of the bushfire hazard except where there is an overriding need for the development in the public interest and no other site is suitable and reasonably available for the proposal;
- (b) where development is not compatible with the nature of the bushfire hazard and there is an overriding need for the development in the public interest and no other site is suitable and reasonably available for the proposal; and
- (c) wherever practicable, facilities with a role in emergency management and vulnerable community services are located and designed to function effectively during and immediately after bushfire hazard events.

8.2.2.3 Assessment benchmarks

Table 8.2.2.3 - Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
General — all development **Editor's note —** Applicants should also refer to the Mitigating bushfire hazard planning scheme policy no. SC6.8 for additional information.	
PO1 Development maintains the safety of people and property.	No acceptable outcome is nominated.
PO2 Highly vulnerable development does not occur in high hazard areas unless there is an overriding need for the development in the public interest and no other site is suitable and reasonably available for the proposal.	**AO2** The following uses are not located in a high bushfire hazard area: (a) child care centre; or (b) detention facility; or (c) educational establishment; or (d) emergency services; or (e) hospital; or (f) industry activities involving manufacture or storage of hazardous materials in bulk; or (g) multiple dwelling; or (h) residential care facility; or (i) retirement facility; or (j) relocatable home park; or (k) rooming accommodation; or (l) shopping centre; or (m) short-term accommodation; or (n) telecommunications facility; or (o) tourist park; or (p) tourist attraction; or (q) transport depot; or (r) utility installation.
PO3 Development mitigates the risk of bushfire hazard through the siting and design of the development. **Editor's note—**In demonstrating compliance with this performance outcome, applicants should be aware that setbacks and buffers for fire management purposes are in addition to any buffers or setbacks required for ecological purposes and are located outside of areas of ecological significance to the greatest extent possible.	No acceptable outcome is nominated.
PO4 Development provides for an adequate and accessible water supply for firefighting purposes.	**AO4.1.1** The development is connected to a reticulated water supply where within a water supply area. OR **AO4.1.2** Where outside a water supply area a tank water supply is provided, at least one tank is within 100m of a class 1, 2, 3 or 4 building which has fire brigade fittings. **Editor's note -** Applicant should also refer to the Development manual planning scheme policy SC6.4 - SC6.4.3.11 On site water supply for additional information.

PO5 Public safety and the environment are not adversely affected by the detrimental impacts of bushfire on hazardous materials manufactured or stored in bulk.	**AO5** Development does not involve the manufacture or storage of hazardous materials within a high or medium bushfire hazard area as identified on overlay map OM-02.
PO6 Facilities with a role in emergency management and vulnerable community services are able to function effectively during and immediately after bushfire events.	No acceptable outcome is nominated.
PO7 Additional lots are not created in bushfire hazard areas.	**AO7** Development does not involve the creation of additional lots in areas mapped as high or medium hazard on overlay map OM-02.
PO8 Development is designed to allow for efficient emergency access to buildings for firefighting appliances, including by avoiding long, narrow access arrangements.	No acceptable outcome is nominated.
PO9 Development provides a fire break which also facilitates adequate access for firefighting and emergency vehicles, and safe evacuation.	**AO9.1** Lot boundaries and development sites are separated from hazardous vegetation by a distance of 20m where adjacent to high hazard areas and 10m where adjacent to medium hazard.
	AO9.2 The separation area mentioned in AO9.1 contains a fire access trail that: (a) has a minimum cleared and formed width of 6m; (b) has vehicular access at each end; (c) provides passing bays and turning areas for fire-fighting appliances; and (d) are either located on public land, or within an access easement that is granted in favour of council and QFRS.
	AO9.3 Roads and trails: (a) have a maximum gradient of 12.5%; and (b) do not involve a cul-de-sac. **Editor's note—**Applicants should also be aware that Part 9 of the planning scheme sets out additional requirements for the construction of roads and other operational works associated with reconfiguration.

8.2.3 Coastal environment overlay code

8.2.3.1 Application

This code applies to development where the code is identified as applicable in the categories of development and assessment for the Coastal environment overlay. When using this code, reference should be made to section 5.3.2 and where applicable, section 5.3.3 located in Part 5.

8.2.3.2 Purpose

(1) The purpose of the Coastal environment overlay code is to ensure development in the coastal zone is planned, designed, constructed and operated to:

(a) avoid risk to people and property from coastal hazards, including storm tide inundation and coastal erosion, and taking into account the predicted effects of climate change; and

(b) manage the coast to protect coastal resources and allow for the natural fluctuations of coastal processes as far as possible.

(2) The purpose of the code will be achieved through the following overall outcomes:

(a) the foreshore and foreshore ecosystems are protected and managed to maintain their protective functions and allow for natural fluctuations to continue as far as possible;

(b) the exposure of communities and development to coastal hazards is minimised;

(c) urban and rural residential development does not expand into coastal hazard areas beyond areas zoned for urban and rural residential purposes;

Editor's note—To remove any doubt areas zoned for urban purposes includes the Emerging community zone.

(d) in areas zoned for urban and rural residential purposes and located in a coastal hazard area, the risks of storm tide inundation and erosion are avoided, or are mitigated and managed;

(e) opportunities for sustainable coastal-dependent development are protected;

(f) coastal-dependent development is undertaken in a manner that minimises impacts on coastal resources;

(g) public access to the foreshore is maintained and enhanced for current and future generations; and

(h) wherever practicable, facilities with a role in emergency management and vulnerable community services are located and designed to function effectively during and immediately after coastal hazard events.

8.2.3.3 Assessment benchmarks

Table 8.2.3.3(a) -Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements	
Development in coastal hazard areas	
PO1 Development is designed and located to minimise susceptibility to, and the potential impacts of, storm tide inundation and erosion. **Editor's note—**Applicants must be aware that in some areas flood hazard areas will also co-exist with storm tide hazard areas. In these instances, the floor levels and other design responses will need to be sufficient to comply with both this code and the *Building Regulation 2006*.	**AO1.1** Floor levels of all habitable rooms are above the defined storm tide event level. **Editor's note—**For Townsville the defined storm tide event level can be taken as RL 4.5m AHD, within 100m of the coastline or RL 3.9m AHD in other areas.
	AO1.2 Underground parking is designed to prevent the intrusion of storm tide waters by the incorporation of a bund above the defined storm tide event level.
	AO1.3 Buildings have open ground floors that allow for the flow through of storm tide water and buildings are not designed as slab on ground.

	AO1.4 Buildings are located outside the erosion prone area or where this would be impractical, do not extend any further seaward than existing immediately adjacent buildings.

Table 8.2.3.3(a) -Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Development in coastal hazard areas - erosion prone area	
PO2 Development locates outside erosion-prone areas identified on overlay map OM-03.3, apart from: (a) temporary or relocatable structures for safety and recreational purposes; or (b) development that does not intensify the extent of existing development within the erosion prone area; or (c) development that does not extend any further seaward than the existing adjacent buildings.	No acceptable outcome is nominated.
PO3 Development mitigates any increase in risk to people and property from adverse coastal-erosion impacts, avoiding the need for coastal protection works as far as practicable, having regard to: (a) minimising the footprint of the development of the part within the erosion prone area and locating the development as far landward as possible; (b) the practical design life of the development in the context of future erosion threat; (c) the ability for buildings or structures to be decommissioned, dis-assembled or relocated either on the site or to another site; and (d) use of appropriate foundations for the building or structure.	No acceptable outcome is nominated.
PO4 Where used, coastal protection works are: (a) consistent with a shoreline erosion management plan that has been prepared for the area; or (b) in response to a demonstrated need to protect existing permanent structures from an imminent threat of coastal erosion, if abandonment or relocation of the structures is not feasible, and a relevant shoreline erosion management plan has not been prepared.	No acceptable outcome is nominated.

PO5 Coastal erosion is mitigated by: (a) beach nourishment undertaken in accordance with a program of nourishment works; or (b) the construction of an erosion control structure where it is demonstrated that installing an erosion control structure is the only feasible option for protecting existing permanent structures from an imminent threat of coastal erosion at the location. **Editor's note—**Where a shoreline erosion management plan has not been prepared and coastal protection work is required to protect existing structures from coastal erosion threats, beach nourishment is favoured in preference to erosion control structures, such as seawalls and groynes. The location and materials for beach nourishment works are to ensure the natural characteristics and landform of the beach or foreshore is maintained. Applications involving erosion control structures must demonstrate the consideration of beach nourishment techniques and include a statement of why nourishment (in whole or part) has not been adopted as the preferred means of controlling the erosion risk.	No acceptable outcome is nominated.
PO6 Any development using erosion control structures to protect private property from threat of coastal erosion ensures: (a) erosion control structures are located wholly on private land; and (b) physical coastal processes outside the area subject to the coastal protection work are maintained. **Editor's note—**Applications for coastal protection work must be supported by a report certified by a registered professional engineer with coastal engineering experience that demonstrates how the engineering solution sought by the work will be achieved.	No acceptable outcome is nominated.

Table 8.2.3.3(a) - Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Development in coastal hazard areas — storm tide inundation areas	
PO7 Development is located outside high or medium storm tide inundation areas and erosion areas from sea level rise identified on overlay maps OM-03.1 and OM-03.2 unless it: (a) does not result in an increase in the intensity of development on the site; or (b) is located within the inner city area shown on Figure 8.1 — Coastal hazard areas: storm tide inundation areas and provides measures to ensure critical services remain operational up to the defined storm tide event; or (c) avoids any increase in risk to people or property from coastal hazard impacts (including impacts on the development's ongoing operation).	No acceptable outcome is nominated.
PO8 Development in storm tide inundation areas and erosion areas from sea level rise identified on overlay maps OM-03.1-OM-03.2 is located, designed, constructed and operated to: (a) ensure structures can sustain flooding from a defined storm tide event; and (b) maintain the safety of people living and working on the premises from a defined storm tide event.	**AO8.1** Development within a high or medium storm tide inundation area identified on overlay maps OM-03.1-OM-03.2 ensures: (a) habitable rooms of built structures are located above the defined storm tide event level; (b) underground parking is designed to prevent the intrusion of flood waters by the incorporation of a bund above the defined storm tide event level; and (c) where reconfiguring a lot, at least one evacuation route remains passable for emergency evacuations during a defined storm tide event. **Editor's note—**For Townsville the defined storm tide event level can be taken as RL 4.5m AHD, within 100m of the coastline or RL 3.9m AHD in other areas.
	AO8.2 Structures used for the manufacture or storage of hazardous materials in bulk are designed to prevent the intrusion of waters from a defined storm tide event.
PO9 Facilities with a role in emergency management and vulnerable community services are located, designed and constructed to ensure it is able to function during and after a storm tide inundation event.	**AO9.1** Development is either: (a) located in an area that is above the storm tide event level specified for that activity in table 8.2.3.3(b); or (b) designed to ensure any components of the infrastructure that are likely to fail to function or may result in contamination when inundated by storm tide inundation are above the storm tide event level for that activity in table 8.2.3.3(b).

	AO9.2 Emergency services and shelters, police facilities and hospitals, and associated facilities have an emergency rescue area above the storm tide event level specified for that infrastructure in table 8.2.3.3(b).

Performance outcomes	Acceptable outcomes
For assessable development	
Public access	
PO10 Development maintains or enhances safe and convenient public access to the foreshore.	No acceptable outcome is nominated.

Table 8.2.3.3(a) -Accepted subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Canals and artificial waterways	
PO11 Development that involves the construction of canals or artificial waterways connected to tidal water (either directly or indirectly) does not adversely affect coastal resources and their values.	No acceptable outcome is nominated.
PO12 The design, location, construction and operation of artificial tidal waterways are to maintain the tidal prism volume of the natural waterway to which it is connected.	No acceptable outcome is nominated.

Development	Level of immunity annual exceedance probability (AEP)
Development involving: (a) hospitals and associated facilities; or (b) major electricity infrastructure.	0.2% AEP event
Development involving: • emergency/evacuation shelters; or • fire and police stations; or • the storage of valuable records or items of historic or cultural significance (e.g. libraries, galleries); or • aeronautical facilities; or • telecommunication facilities; or • substations; or • water treatment plants; or • regional fuel storage; or • food storage warehouse; or • retirement facility and residential care facility.	0.5% AEP event
Development involving sewerage treatment plants requiring licensing as an environmentally relevant activity.	1% AEP event

8.2.4 Cultural heritage overlay code

8.2.4.1 Application

This code applies to development where the code is identified as applicable in the categories of development and assessment for the Cultural heritage overlay. When using this code, reference should be made to section 5.3.2 and where applicable, section 5.3.3 located in Part 5.

Editor's note—Places of cultural heritage significance are identified in Schedule 7, as well as on overlay maps OM-04.1, OM-04.2. OM-04.3 and OM-04.4.

8.2.4.2 Purpose

(1) The purpose of the Cultural heritage overlay code is to ensure:

- (a) the cultural heritage of Townsville continues to be a major contributor to the identity of the city and local communities;
- (b) the cultural heritage of Townsville is conserved for present and future communities;
- (c) development is consistent with the Burra Charter;
- (d) new development reflects and respects cultural heritage significance; and
- (e) places of cultural heritage significance are appropriately re-used.

(2) The purpose of the code will be achieved through the following overall outcomes:

- (a) places having cultural heritage significance in Townsville are conserved;
- (b) change is managed to ensure significant heritage features and values of a place are retained;
- (c) any demolition, removal or relocation of a heritage place does not have an adverse impact on the heritage significance of that place;
- (d) development on or adjoining a heritage place does not detract from the cultural heritage significance of the heritage place and its cultural heritage values;
- (e) development on or adjoining a heritage place is visually subservient to the heritage place and does not cause adverse impacts on significant views or the visual setting of the heritage place;
- (f) development on or adjoining a place of cultural heritage significance incorporates features which complement rather than replicate the heritage place;
- (g) restoration or reconstruction of known earlier states of heritage places is encouraged where practical; and
- (h) places of Aboriginal and Torres Strait Islander cultural heritage significance are conserved and managed in a culturally appropriate way.

Editor's note—Cultural heritage planning scheme policy no. SC6.3 will provide applicants with guidance in meeting the requirements of this code.

Editor's note—Council's process for adding or removing a place within Schedule 7 Places of cultural heritage value is stated in the Cultural heritage planning scheme policy SC6.3.

8.2.4.3 Assessment benchmarks

Table 8.2.4.3—Assessable development (Part)

Performance outcomes	Acceptable outcomes
Demolition or removal of, or within, a heritage place	
PO1 The removal or partial or total demolition, or relocation of a building or structure that is a heritage place only occurs if it can be demonstrated that the: (a) loss of the building or structure will not contribute to the loss of cultural heritage values; and (b) building or structure is not capable of structural repair.	No acceptable outcome is nominated. **Editor's note—**A heritage impact statement produced by a suitably qualified professional will be required to demonstrate there is no adverse impact on the cultural heritage significance of the place, and a suitably qualified professional provides a report on the building's condition, demonstrating that the place is not capable of repair. **Editor's note—** Refer to the Cultural heritage planning scheme policy no. SC6.3 for guidance on writing a Heritage Impact Statement.
PO2 When demolition or relocation of a heritage place occurs, appropriate archival recording is undertaken.	No acceptable outcome is nominated. **Editor's note—**Refer to the Cultural heritage planning scheme policy no. SC6.3 for guidance on the archival recording of heritage places, with which the action should be consistent.

Table 8.2.4.3—Assessable development (Part)

Performance outcomes	Acceptable outcomes
Development within a heritage place	
PO3 Development is sympathetic to, and consistent with the significant features and values of the heritage place, including: (a) maintaining significant views to and from the heritage place; (b) built form and setback; (c) scale; and (d) open space and landscaping features.	No acceptable outcome is nominated. **Editor's note—**A heritage impact statement produced by a suitably qualified professional will be required to demonstrate there is no adverse impact on the cultural heritage significance of the place, and any change will be effectively managed. **Editor's note—**Refer to the Cultural heritage planning scheme policy no. SC6.3 for guidance on writing a Heritage Impact Statement.
PO4 New buildings within a heritage place are visually subservient to the cultural heritage significance of the heritage place.	No acceptable outcome is nominated. **Editor's note—**A heritage impact statement produced by a suitably qualified professional may be required to demonstrate compliance with this performance outcome. Cultural heritage planning scheme policy no. SC6.3 provides guidance on how to write a heritage impact statement. It also sets out relevant parts of the Burra Charter. **Editor's note—**A proposed development should be designed by a suitably qualified architect or a building designer with demonstrated relevant experience.
PO5 Development incorporates compatible elements which complement rather than reproduce traditional building forms and details in terms of: (a) architecture; (b) scale; (c) external materials; and (d) finishes and colours.	No acceptable outcome is nominated. **Editor's note—**Refer to the Cultural heritage planning scheme policy no. SC6.3 for guidance on achieving performance outcomes.
PO6 Development does not alter, remove or conceal the significant features or values of the heritage place.	No acceptable outcome is nominated. **Editor's note—**Refer to the Cultural heritage planning scheme policy no. SC6.3 for guidance on achieving performance outcomes.

PO7 Development being a reconfiguration of a lot reflects the pattern and lot layout of the original subdivision in the locality and does not: (a) reduce public access to the place; or (b) obscure or destroy the historical context, the landscape settings or the scale and consistency of the built environment.	No acceptable outcome is nominated. **Editor's note—**Refer to the Cultural heritage planning scheme policy no. SC6.3 for guidance on writing a Heritage Impact Statement.
PO8 Any new fencing, landscaping, advertising device, access or parking arrangements are designed and sited in a manner that: (a) does not have a detrimental impact on the significant values or view of the place; (b) enhances the overall appearance of the heritage place; and (c) is sensitive to materials, colours, scale, placement and layout of the place.	No acceptable outcome is nominated. **Editor's note—**Refer to the Cultural heritage planning scheme policy no. SC6.3 for guidance on achieving performance outcomes.

Table 8.2.4.3—Assessable development (Part)

Performance outcomes	Acceptable outcomes
Signage	
PO9 Signage on Flinders Street East does not adversely affect the fabric and setting of the heritage place.	**AO9** For heritage places on Flinders Street East, signage is in accordance with the Cultural heritage planning scheme policy no. SC6.3.
PO10 If the loss of a heritage place occurs, interpretive signage is erected.	No acceptable outcome is nominated. **Editor's note—**Refer to the Cultural heritage planning scheme policy no. SC6.3 for guidance on how such signage should be established.

Table 8.2.4.3—Assessable development (Part)

Performance outcomes	Acceptable outcomes
Archaeology	
PO11 Development does not adversely impact on known or potential archaeological deposits.	No acceptable outcome is nominated. **Editor's note—**The Cultural heritage planning scheme policy no. SC6.3 provides guidance on how this may be achieved to council's satisfaction. Earthworks, including those associated with demolition, should be monitored by a suitably qualified archaeologist and archaeological deposits should be managed in accordance with the policy.

Table 8.2.4.3—Assessable development (Part)

Performance outcomes	Acceptable outcomes
Indigenous heritage significance	
PO12 There are no adverse impacts on any place that has cultural heritage significance to Aboriginal or Torres Strait Islander people.	No acceptable outcome is nominated. **Editor's note—**All proposed development on or adjacent to identified sites of indigenous cultural heritage significance is required to be carried out in accordance with the latest version of the *Aboriginal Cultural Heritage Act 2003 - Duty of Care Provisions.*

Table 8.2.4.3—Assessable development (Part)

Performance outcomes	Acceptable outcomes
Development adjoining a heritage place	
PO13 Development is sympathetic to and consistent with the features and values of the heritage place, including: (a) maintaining views to and from the heritage place where significant; (b) consistency of built form and setback; (c) potential for overshadowing; and (d) consistency with open space and landscaping features.	No acceptable outcome is nominated. **Editor's note—**Refer to the Cultural heritage planning scheme policy no. SC6.3 for guidance on achieving performance outcomes.
PO14 Reconfiguring a lot does not: (a) reduce public access to the heritage place; or (b) create the potential to adversely affect significant views to and from the heritage place; or (c) obscure, destroy or disrupt any pattern of historic subdivision, the historical context, the landscape settings or the scale and consistency of the built environment relevant to the heritage place.	No acceptable outcome is nominated.

Table 8.2.4.3—Assessable development (Part)

Performance outcomes	Acceptable outcomes
Elements in the road reserve	
PO15 Elements in the road reserve make a positive contribution to cultural heritage values of a place. Introduced features are compatible with significant features of the place.	No acceptable outcome is nominated.

8.2.5 Extractive resources overlay code

8.2.5.1 Application

This code applies to development where the code is identified as applicable in the categories of development and assessment for the Extractive resources overlay. When using this code, reference should be made to section 5.3.2 and where applicable, section 5.3.3 located in Part 5.

8.2.5.2 Purpose

(1) The purpose of the Extractive resources overlay code is to ensure:

- (a) extractive resources are protected from development that might prevent or constrain current or future extraction or mining when the need for the resource arises; and
- (b) extractive industry uses are operated in a way that minimises impacts on surrounding land uses and environmental values.

(2) The purpose of the code will be achieved through the following overall outcomes:

- (a) development not associated with extractive industry is not located where likely to have an adverse impact upon existing and future extraction, processing and transportation of extractive resources;
- (b) development is compatible with the existing and future mining within mining tenements granted or renewed under the *Mineral Resources Act 1989*;
- (c) development does not increase the number of people living within a separation area for a resource/processing area or transport route; and
- (d) development for the purpose of extractive industry
  - (i) protects personal health and safety;
  - (ii) minimises impacts to the amenity of surrounding land uses;
  - (iii) avoids impacts to environmental values on external premises; and
  - (iv) minimises impacts to environmental values on the premises.

8.2.5.3 Assessment benchmarks

Table 8.2.5.3—Assessable development (Part)

Performance outcomes	Acceptable outcomes
Development other than extractive industry	
PO1 Development located within a resource/processing area maintains the long-term availability and efficient winning of the extractive resource for extraction and processing, except where the following can be demonstrated: (a) there is an overriding benefit to the community; and (b) the development cannot reasonably be located elsewhere.	No acceptable outcome is nominated.

PO2 Development located in a separation area for a resource/processing area: (a) does not increase the number of people living in the separation area; and (b) minimises impacts from existing and future extractive industries on people working or congregating in the separation area; and does not compromise the function of the separation area as a buffer from incompatible uses outside the buffer area.	No acceptable outcome is nominated.
PO3 Development in a separation area for a transport route does not increase the number of people living in the separation area and is compatible with the safe and efficient operation of the transport route.	No acceptable outcome is nominated.
PO4 Development in the vicinity of mining-related leases: (a) does not compromise current or future utilisation of mineral resources; and (b) is not located where likely to be adversely impacted upon by existing and future mining activities.	No acceptable outcome is nominated.
PO5 Development with direct vehicle access to a transport route does not adversely impact the safety and efficiency of transport route.	No acceptable outcome is nominated.

Table 8.2.5.3—Assessable development (Part)

Performance outcomes	**Acceptable outcomes**
Extractive industry	
PO6 Extractive industry is operated such that: (a) blasting activities do not create a public safety risk; and (b) on-site workers and the public are adequately warned of the activities and safety hazards.	No acceptable outcome is nominated.
PO7 Measures are taken to avoid or minimise adverse impacts from dust, sand, or soil on nearby properties.	No acceptable outcome is nominated.
PO8 Premises are secured to ensure that a person not involved in the operation is unable to gain entry to the premises.	No acceptable outcome is nominated.
PO9 The development maintains the extractive industry transport route to a standard commensurate with the volume, type, and nature of vehicular traffic utilising the transport route.	No acceptable outcome is nominated.

PO10 Development avoids adverse impacts on land uses, having regard to: (a) noise; (b) vibration; (c) airblast overpressure; (d) dust; (e) flyrock; (f) visual amenity; and (g) safety.	No acceptable outcome is nominated.
PO11 The extractive industry use is screened from any adjoining major road.	No acceptable outcome is nominated.
PO12 Development avoids or minimises impact on areas of ecological significance, ecological processes or biodiversity values external to the site.	No acceptable outcome is nominated.
PO13 Surface and groundwater quality external to the site is protected.	No acceptable outcome is nominated.
PO14 Development provides for the rehabilitation of the premises to restore the nature conservation values of the premises prior to the extractive industry as far as is reasonably practicable. **Editor's note—**A rehabilitation plan and expert ecological advice may be required to demonstrate achievement of this performance outcome.	No acceptable outcome is nominated.

8.2.6 Flood hazard overlay code

8.2.6.1 Application

This code applies to development where the code is identified as applicable in the categories of development and assessment for the Flood hazard overlay. When using this code, reference should be made to section 5.3.2 and where applicable, section 5.3.3 located in Part 5.

8.2.6.2 Purpose

(1) The purpose of the Flood hazard overlay code is to manage development outcomes in flood hazard areas so that risk to life, property, community, economic activity and the environment during future flood events is minimised, and to ensure that development does not increase the potential for flood damage on-site or to other property.

(2) The purpose of the code will be achieved through the following overall outcomes:

- (a) development is compatible with the nature of the flood hazard except where there is an overriding need for the development in the public interest and no other site is suitable and reasonably available for the proposal;
- (b) where development is not compatible with the nature of the flood hazard and there is an overriding need for the development in the public interest and no other site is suitable and reasonably available for the proposal:
  - (i) development minimises as far as practicable the adverse impacts from the hazard; and
  - (ii) does not result in unacceptable risk to people or property;
- (c) wherever practicable, facilities with a role in emergency management and vulnerable community services are located and designed to function effectively during and immediately after flood hazard event;
- (d) development maintains the safety of people and minimises the potential damage to property from flood events on the development site; and
- (e) development does not result in adverse impacts on people's safety, the environment or the capacity to use land within the floodplain.

8.2.6.3 Assessment benchmarks

Note—To avoid any doubt, the term medium hazard area used in this code includes areas shown on the overlay maps as medium hazard – further investigation areas.

Editor's note—Areas shown on the overlay maps as medium hazard — further investigation areas are based on Queensland Reconstruction Authority mapping. Limited information is available on flood characteristics in these areas. Further investigation may be required as a result. Flood hazard planning scheme policy no. SC6.7 will provide applicants with guidance in meeting the requirements of this code in these and other identified hazard areas.

Table 8.2.6.3(a)-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
PO1 Development in medium and high hazard areas is designed and located to minimise susceptibility to and potential impacts of flooding. **Editor's note—**The *Building Regulation 2006* may also establish requirements with which development will need to comply. The defined flood event is identified in this planning scheme as the 1% annual exceedance probability (AEP) flood and is mapped as the combined extent of the high and medium flood hazard areas identified on overlay map OM-06.1 and 06.2. Other than in the medium hazard — further investigation area, council will be able to make available the height of the flood level for any particular location upon request. Applicants must be aware that in some areas storm tide hazard areas will also co-exist with flood hazard areas. In these instances, the floor levels and other design responses will need to be sufficient to comply with this code, the Coastal environment overlay code and the *Building Regulation 2006*.	**AO1.1** Where the development is located within an area shown on overlay map OM-06.1 or 06.2 as medium hazard — further investigation area, new buildings containing habitable rooms: (a) are sited on a part of the site which is outside the medium hazard — further investigation area; or (b) are sited on the highest part of the site. OR **AO1.2** Where development is located within another hazard area shown on overlay map OM-06.1 or 06.2: (a) floor levels of all habitable rooms are a minimum of 300mm above the defined flood level; (b) floor levels of all non-habitable rooms (other than class 10 buildings) are above the defined flood event; (c) parking spaces associated with non-residential development are located outside the high hazard areas identified on overlay map OM-06.1 or 06.2; and **Editor's note—**Class 10 buildings are identified under the Building Code of Australia and includes carports and outbuildings. (d) underground parking is designed to prevent the intrusion of flood waters by the incorporation of a bund or similar barrier with a minimum height of 300mm above the defined flood level.
PO2 Development in high hazard areas does not significantly impede the flow of flood waters through the site or worsen flood flows external to the site.	**AO2.1** Development in high hazard areas do not involve: (a) filling with a height greater than 150mm; or (b) block or solid walls or solid fences; or (c) garden beds or other structures with a height more than 150mm; or (d) the planting of dense shrub hedges.

Table 8.2.6.3(a)-Self-assessable and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
PO3 Development does not intensify use in high hazard areas, in order to avoid risks to people and property. **Editor's note—**High hazard areas are those likely to experience deep and/or fast moving water in a defined flood event.	**AO3.1** New buildings are located outside high hazard areas identified on overlay map OM-06.1 or 06.2.
	AO3.2 New lots or roads are not created within high hazard areas identified on overlay map OM-06.1 or 06.2.
	AO3.3 Sites for non-permanent accommodation such as tents, cabins or caravans (whether intended for short or long-term accommodation) are located outside the high hazard areas identified on overlay map OM-06.1 or 06.2.
PO4 Siting and layout of development maintains the safety of people and property in medium hazard areas. **Editor's note—**The *Building Regulation 2006* establishes requirements with which development will need to comply. The defined flood event is identified in this planning scheme as the 1% annual exceedance probability (AEP) flood and is mapped as the combined extent of the high and medium flood hazard areas identified on overlay map OM-06.1 and 06.2. Other than in the medium hazard — further investigation area, council will be able to make available the height of the flood level for any particular location upon request. Applicants must be aware that in some areas storm tide hazard areas will also co-exist with flood hazard areas. In these instances, the floor levels and other design responses will need to be sufficient to comply with this code, the Coastal environment overlay code and the *Building Regulation 2006*.	**On existing lots** **AO4.1** Floor levels for residential buildings are 300mm above the defined flood level. **Editor's note—**In medium hazard — further investigation area, a flood assessment in accordance with the Flood hazard planning scheme policy no. SC6.7 may be needed to establish the defined flood level.
	AO4.2 Floor levels of non-residential buildings (other than class 10 buildings) are above the defined flood level. **Editor's note—**Class 10 buildings are identified under the *Building Code of Australia* and includes carports and outbuildings.
	AO4.3 Underground parking is designed to prevent the intrusion of flood waters by the incorporation of a bund or similar barrier with a minimum height of 300mm above the defined flood level.
	AO4.4 Development for non-permanent accommodation such as tents, cabins or caravans (whether intended for short or long-term accommodation) are located outside the medium hazard areas identified on overlay map OM-06.1 or 06.2.
	Where reconfiguring a lot **AO4.5** Where reconfiguring a lot, new lots contain designated building envelopes (whether or not for residential purposes) outside the medium hazard areas identified on overlay map OM-06.1 or 06.2 and those building envelopes are of a sufficient size to accommodate buildings associated with the development.
	AO4.6 In new subdivisions, arterial, sub-arterial or major collector roads are located above the 2% AEP flood level.

	AO4.7 Reconfiguration of lots does not involve cul-de-sacs or dead end streets within medium hazard areas identified on overlay map OM-06.1 or 06.2.
PO5 Signage is provided within high and medium hazard areas to alert residents and visitors to the flood hazard.	**AO5** Signage is provided on-site (regardless of whether land will be public or private ownership) to indicate depth at key hazard points, such as at floodway crossings, entrances to low-lying reserves or parking areas.
PO6 Development within high and medium hazard areas ensures any changes to the depth, duration, velocity of flood waters are contained within the site. **Editor's note—**Impacts on a range of floods may need to be assessed and in most instances can be evaluated by analysing the minor drainage system capacity event and the defined flood event for the catchment wide critical duration, unless the site is located in an area noted in the Flood hazard planning scheme policy SC6.7.	No acceptable outcome is nominated.
PO7 Development within high and medium hazard areas does not directly, indirectly or cumulatively worsen flood characteristics outside the development site, having regard to: (a) increased scour and erosion; or (b) loss of flood storage; or (c) loss of or changes to flow paths; or (d) flow acceleration or retardation; or (e) reduction in flood warning times. **Editor's note—**To adequately assess the impacts of development on flooding regimes, applicants may need to have a hydrological and hydraulic assessment carried out by a suitably qualified and experienced hydrologist or engineer.	No acceptable outcome is nominated.
PO8 Facilities with a role in emergency management and vulnerable community services are able to function effectively during and immediately after flood events. **Editor's note—**This provision applies to high, medium and low flood hazard areas.	**AO8** The development is provided with the level of flood immunity set out in Table 8.2.6.3(b).
PO9 Public safety and the environment are not adversely affected by the detrimental impacts of flooding on hazardous materials manufactured or stored in bulk.	**AO9.1** Development does not involve the manufacture or storage of hazardous materials within a high flood hazard area identified on overlay map OM-06.1 or 06.2.
	AO9.2 Within the low or medium flood hazard area identified on overlay map OM-06.1 or 06.2, structures used for the manufacture or storage of hazardous materials in bulk are designed to prevent the intrusion of flood waters up to at least a 0.2% AEP flood event.

Table 8.2.6.3(b)-Flood immunity for community services and facilities

Development	**Level of flood immunity annual exceedance probability (AEP)**
Development involving: (a) emergency services; (b) hospitals and associated facilities; (c) major electricity infrastructure.	0.2% AEP flood event
Development involving: (a) emergency/evacuation shelters; (b) the storage of valuable records or items of historic/cultural significance (e.g. libraries, galleries); (c) aeronautical facilities; (d) telecommunication facilities; (e) substations; (f) water treatment plants; (g) regional fuel storage; (h) food storage warehouse; (i) retirement facility and residential care facility.	0.5% AEP flood event
Sewerage treatment plants (requiring licensing as an environmentally relevant activity).	1% AEP flood event

8.2.7 Landslide hazard overlay code

8.2.7.1 Application

This code applies to development where the code is identified as applicable in the categories of development and assessment for the Landslide hazard overlay. When using this code, reference should be made to section 5.3.2 and where applicable, section 5.3.3 located in Part 5.

8.2.7.2 Purpose

(1) The purpose of the Landslide hazard overlay code is to manage development so that there is no increase to the extent or the severity of a landslide hazard and risk to life, property, community and the environment during landslide events is avoided.

(2) The purpose of the code will be achieved through the following overall outcomes:

(a) development is compatible with the nature of the landslide hazard except where there is an overriding need for the development in the public interest and no other site is suitable and reasonably available for the proposal;

(b) where development is not compatible with the nature of the landslide hazard and there is an overriding need for the development in the public interest and no other site is suitable and reasonably available for the proposal:

(i) development minimises as far as practicable the adverse impacts from landslide hazards; and

(ii) does not result in unacceptable risk to people or property.

(c) wherever practicable, facilities with a role in emergency management and vulnerable community services are located and designed to function effectively during and immediately after landslide hazard events.

8.2.7.3 Assessment benchmarks

Table 8.2.7.3-Assessable development

Editor's note—The Development manual planning scheme policy no. SC6.4 - SC6.4.3.7 Steep land development design guidelines will provide applicants with guidance in meeting requirements of this code.

Performance outcomes	Acceptable outcomes
PO1 Development is not subject to potential debris flow hazard.	**AO1** Development does not occur within the potential debris flow areas identified on OM-07.1.
PO2 People and property within the development site are protected from landslide hazard originating from inside or external to the site.	No acceptable outcome is nominated. **Editor's note—**The Development manual planning scheme policy no. SC6.4 - SC6.4.3.18 Geotechnical investigations will provide applicants with guidance in meeting requirements of this code.
PO3 Development does not increase the risk of landslide to adjoining properties.	No acceptable outcome is nominated. **Editor's note—**The Development manual planning scheme policy no. SC6.4 - SC6.4.3.18 Geotechnical investigations will provide applicants with guidance in meeting requirements of this code.
PO4 The development ensures the long-term stability of the development site.	No acceptable outcome is nominated. **Editor's note—**The Development manual planning scheme policy no. SC6.4 - SC6.4.3.18 Geotechnical investigations will provide applicants with guidance in meeting requirements of this code.
PO5 Site access is not at risk from being permanently impeded by a landslide event.	No acceptable outcome is nominated. **Editor's note—**The Development manual planning scheme policy no. SC6.4 - SC6.4.3.18 Geotechnical investigations will provide applicants with guidance in meeting requirements of this code.

PO6 The siting, design and construction works of development minimises the impacts on the natural landform and do not have a detrimental impact on slope stability or erosion potential.	No acceptable outcome is nominated. **Editor's note—**The Development manual planning scheme policy no. SC6.4 - SC6.4.3.18 Geotechnical investigations will provide applicants with guidance in meeting requirements of this code.
PO7 Development maintains the safety of hazardous materials manufactured or stored in bulk. **Editor's note—** The term "hazardous material" is defined in the State Planning Policy.	**AO7** The manufacture or storage of hazardous materials in bulk does not occur: (a) within the medium, high or potential debris flow areas identified on overlay map OM-07.1; or (b) on land with a slope angle >23 degrees identified on overlay map OM-07.2.
PO8 Facilities with a role in emergency management and vulnerable community services are able to function effectively during and immediately after landslide events.	**AO8.1** Facilities with a role in emergency management and vulnerable community services are not located on land: (a) within the medium, high or potential debris flow areas identified on overlay map OM-07.1; or (b) on land with a slope angle >23 degrees identified on overlay map OM-07.2. OR **AO8.2** The development does not: (a) result in any new building work other than an addition to an existing building; (b) involve vegetation clearing; or (c) alter site levels or stormwater conditions.

8.2.8 Natural assets overlay code

8.2.8.1 Application

This code applies to development where the code is identified as applicable in the categories of development and assessment for the Natural assets overlay. When using this code, reference should be made to section 5.3.2 and where applicable, section 5.3.3 located in Part 5.

8.2.8.2 Purpose

(1) The purpose of the Natural assets overlay code is to:

(a) protect areas of environmental significance, and the ecological processes and biodiversity values of terrestrial and aquatic ecosystems;

(b) maintain ecosystem services and other functions performed by Townsville's natural areas; and

(c) protect water quality, ecosystem health and the natural hydrological functioning of waterways, wetlands and their riparian areas.

(2) The purpose of the code will be achieved through the following overall outcomes:

(a) development avoids or minimises direct and indirect impacts on areas of environmental significance and their associated ecological functions and biophysical processes;

(b) development provides for the protection or enhancement of a linked network of habitat areas, including maximising opportunities for rehabilitation and restoration of degraded ecosystems, ecological communities, remnant vegetation and connecting corridors wherever possible;

(c) development, including infrastructure, is located and designed to maintain or enhance ecological functions including facilitation of wildlife movement for native terrestrial and aquatic species and native and migratory avian species;

(d) the water quality values and ecological functions of wetlands, waterways and their riparian areas and buffers are protected or enhanced;

(e) development maintains, protects or enhances the natural hydrological regime and functioning of waterways and wetlands, including surface and ground waters and their interaction;

(f) fragmentation of remnant vegetation and habitat areas is avoided to maintain ecological function and biodiversity values, and to maintain or increase the resilience of natural assets to threatening processes, including climate change; and

(g) development incorporates appropriate buffering and mitigation strategies to avoid or minimise potential damage to natural areas and other environmental assets.

Editor's note—Natural assets planning scheme policy no. SC6.9 will provide applicants with guidance in meeting the requirements of this code.

8.2.8.3 Assessment benchmarks

Table 8.2.8.3—Assessable development (Part)

Performance outcomes	Acceptable outcomes
Protection of biodiversity values and ecological processes	
PO1 In areas identified as having high or very high environmental importance, significant values are protected and associated ecological functions and biophysical processes are maintained to ensure long term viability. **Editor's note—**Applicants should also refer to other state and federal legislation which may also require applicants to obtain additional approvals.	No acceptable outcome is nominated. **Editor's note**—Natural assets planning scheme policy no. SC6.9 provides information on the primary attributes included in very high, high and medium environmental importance areas. The overlay map has been produced using local government area wide data. Site-specific investigation will be required to confirm the extent and nature of values indicated on the overlay map or otherwise identify site-specific natural assets and ecological functions.
PO2 In areas identified as having medium environmental importance, development is located, designed and operated to: (a) retain and protect significant values; and (b) maintain the underlying ecological functions and biophysical processes. **Editor's note—**Applicants should also refer to other state and federal legislation which may also require applicants to obtain additional approvals.	No acceptable outcome is nominated. **Editor's note—**This category of environmental importance will also require a high level of investigation as part of any development application, to determine on the ground values and priority for protection. A detailed environmental assessment is to be undertaken by applicants in accordance with the guidance provided in the Natural assets planning scheme policy no. SC6.9.
PO3 Degraded areas with significant ecological and environmental values or important to the maintenance of underlying ecological functions and biophysical processes required to maintain biodiversity and ecosystem services are rehabilitated as near as is practical to the naturally occurring suite of native plant species and ecological communities.	No acceptable outcome is nominated. **Editor's note—**A rehabilitation plan supported by expert ecological advice prepared in accordance with Natural assets planning scheme policy no. SC6.9 will assist in demonstrating achievement of this performance outcome.

Table 8.2.8.3—Assessable development (Part)

Performance outcomes	Acceptable outcomes
Significant species and ecological communities	
PO4 Development avoids direct and indirect impacts on significant ecological communities and significant species and their habitats, including disturbance from the presence of vehicles, pedestrian use, increased exposure to domestic animals and noise and lighting impacts. **Editor's note—**Significant species and ecological communities include those identified in the Natural assets planning scheme policy no. SC6.9.	No acceptable outcome is nominated. **Editor's note—**Applications for development should identify any significant species or communities that may be affected by the proposal. A detailed environmental assessment is to be undertaken by applicants in accordance with the guidance provided in the Natural assets planning scheme policy no. SC6.9.
PO5 Areas of habitat that support a critical life cycle stage such as feeding, breeding or roosting or ecological function for threatened species, ecological communities or migratory species are not impacted by development.	No acceptable outcome is nominated.

Table 8.2.8.3—Assessable development (Part)

Performance outcomes	Acceptable outcomes
Buffering and edge impacts	
PO6 Development provides a vegetated buffer to an area of significant ecological or environmental value, in order to: (a) protect core habitat areas from threatening processes; (b) maintain connectivity or support linkages; (c) reduce threats to the environmental values from non-native or pest fauna or flora; and (d) avoid undesirable microclimate effects. Any setbacks or other areas required for bushfire management, safety, recreation, maintenance or any other purpose, are provided in addition to a vegetated buffer provided for ecological and environmental protection purposes.	**AO6** A buffer extending from the outside edge of a declared fish habitat area (measured from highest astronomical tide (HAT)) has a minimum width of 100m. For other areas, no acceptable outcome is nominated. **Editor's note—**Areas which are expected to constitute core habitat as well as declared fish habitat areas are identified on maps contained in the Natural assets planning scheme policy no. SC6.9. Declared fish habitat areas may also be obtained from the relevant state agency. Buffers for significant species and ecological communities, including areas of habitat for listed threatened and migratory species, should be based on best practice and current scientific knowledge of individual species requirements and supported by an environmental assessment prepared in accordance with the Natural assets planning scheme policy no. SC6.9. Other legislation, including the *Nature Conservation Act* and *Environment Protection and Biodiversity Conservation Act* may establish other requirements with which applicants must comply.
PO7 Buffering, rehabilitation or restoration: (a) uses site appropriate or endemic native vegetation; (b) replicates as far as practicable, the species composition and structural components of healthy remnant native vegetation and associated habitats, including understorey vegetation; and (c) excludes declared plants, environmental weeds and other non-native plants likely to displace native flora species or degrade habitat.	No acceptable outcome is nominated. **Editor's note—**A site-based management and rehabilitation plan prepared in accordance with the Natural assets planning scheme policy no. SC6.9 will assist in demonstrating achievement of this performance outcome.
PO8 Pest species are prevented from encroaching into ecologically significant areas.	No acceptable outcome is nominated. **Editor's note—**A site-based management and rehabilitation plan prepared in accordance with the Natural assets planning scheme policy no. SC6.9 will assist in demonstrating achievement of this performance outcome.
PO9 During construction and operation of development, measures are implemented to prevent light, noise, visual and other disturbances.	No acceptable outcome is nominated. **Editor's note—**A site-based management and rehabilitation plan prepared in accordance with the Natural assets planning scheme policy no. SC6.9 will assist in demonstrating achievement of this performance outcome.

Table 8.2.8.3—Assessable development (Part)

Performance outcomes	Acceptable outcomes
Ecological corridors and habitat connectivity	
PO10 Significant ecological corridors and habitat linkages are protected and have dimensions and characteristics to support: (a) ecological processes and functions that enable the natural change in distributions of species and provide connectivity between populations of species over long periods of time; (b) ecological responses to climate change; (c) connectivity between large tracts and patches of remnant vegetation and habitat areas; and (d) effective and unhindered day-to-day and seasonal movement of avian, terrestrial and aquatic fauna.	No acceptable outcome is nominated where in an urban residential zone or centre zone. In all other zones (including the Emerging community zone, Rural residential zone or industry zones): **AO10** Major ecological corridors identified on Figure SC6.9.3 in the Natural assets planning scheme policy no. SC6.9 are maintained and restored to achieve a minimum width of 350m, consisting of: (a) a 250m wide core corridor to support avian species and most arboreal mammals; and (b) a 50m wide vegetated buffer extending from the outside edges on both sides of the core corridor. No acceptable outcome is nominated for the great eastern ranges conservation corridor identified on Figure SC6.9.3 in the Natural assets planning scheme policy no SC6.9.
PO11 Corridors and linkages are provided to supplement and create additional ecological corridors and habitat linkages along waterways, drainage lines, ridgelines, coastlines and other areas where possible.	No acceptable outcome is nominated.
PO12 Development facilitates unimpeded use and movement of terrestrial and aquatic fauna that are associated with or are likely to use an ecological corridor as part of their normal life cycle by: (a) ensuring development, including roads, pedestrian access and in-stream structures, does not create barriers to the movement of fauna along or within ecological corridors; (b) providing effective wildlife management infrastructure to direct fauna to locations where wildlife movement infrastructure has been provided to enable fauna to safely negotiate a development area; and (c) separating fauna from potential hazards through the use of appropriate barriers and buffers.	No acceptable outcome is nominated.

Table 8.2.8.3—Assessable development (Part)

Performance outcomes	Acceptable outcomes
Riparian and buffer area management for wetlands and waterways	
PO13 Development locates outside of, and does not impact on wetlands, to ensure long-term ecological function.	**AO13** Development, including any associated filling or excavation (other than restorative works) is located outside of any mapped, defined or identified boundary of a wetland and its associated buffer. **Editor's Note—**Natural assets planning scheme policy no. SC6.9 contains Figure SC6.9.2 which identifies wetland areas. This information may also be obtained from the relevant state agency.
PO14 Development provides a buffer to a wetland area to: (a) protect or enhance habitat values, connectivity and other ecological functions and values; (b) protect water quality and aquatic conditions; (c) maintain natural micro-climatic conditions; (d) maintain natural hydrological processes; (e) prevent mass movement, gully erosion, rill erosion, sheet erosion, tunnel erosion, stream bank erosion, wind erosion, or scalding; and (f) avoid loss or modification of chemical, physical or biological properties or functions of soil. Any setbacks or other areas required for bushfire management, safety, recreation, maintenance or any other purpose, are provided in addition to a vegetated buffer provided for ecological purposes.	**AO14** A development-free buffer is provided and maintained with a minimum width of: (a) for wetlands designated as high ecological significance (HES) by the Queensland Government: (i) 50m from the outermost part of the wetland where located in an urban area; or (ii) 200m from the outermost part of the wetland where located in a non-urban area; or (b) for other wetlands: 50m from the outermost part of the wetland in either urban or non-urban areas. **Editor's note—**Natural assets planning scheme policy no. SC6.9 contains Figure SC6.9.2 which identifies wetland areas. This information may also be obtained from the relevant state agency. **Editor's note—**To avoid conflict, where a development requires multiple buffers to be established by this code to protect watercourses, corridors, wetlands or core habitat, the greatest distances required by this code will prevail to the extent of any inconsistency.
PO15 Development (including operation) and construction maintains or enhances the natural hydrological regime of wetlands, including surface and ground waters. **Editor's note—**The hydrological regime of surface waters includes: (i) peak flows; (ii) volume of flows; (iii) duration of flows; (iv) frequency of flows; (v) seasonability of flows; (vi) water depth (seasonal average); and (vii) wetting and drying cycle.	**AO15.1** Development does not change the existing surface hydrological regime of a wetland including through channelisation, redirection or interruption of flows. **AO15.2** There is no change to the reference duration high-flow and low-flow duration frequency curves, low-flow spells frequency curve and mean annual flow to and from the wetland. **AO15.3** Any relevant stream flows into the wetland comply with relevant environmental flow objectives. **AO15.4** The water table and hydrostatic pressure in the wetland is either: (a) returned to its natural state; or (b) not lowered or raised outside the bounds of variability under existing pre-development conditions.

	AO15.5 Development does not result in the ingress of saline water into freshwater aquifers.
PO16 Development provides a buffer to a waterway, in order to: (a) protect or enhance habitat values, connectivity and other ecological processes and values; (b) protect water quality and aquatic conditions; (c) maintain natural micro-climatic conditions; (d) maintain natural hydrological processes; (e) prevent mass movement, gully erosion, rill erosion, sheet erosion, tunnel erosion, stream bank erosion, wind erosion, or scalding; and (f) prevent loss or modification of chemical, physical or biological properties or functions of soil. Any setbacks or other areas required for bushfire management, safety, recreation, maintenance or any other purpose, are provided in addition to a vegetated buffer provided for ecological purposes.	No acceptable outcome is nominated where in an urban residential zone or centre zone. Elsewhere (including the Emerging community zone, Rural residential zone or industry zones): **AO16** Other than where cropping for forestry for wood production, a development-free buffer is provided and maintained, extending from top of the bank of a waterway and with a minimum width of: (a) where in the Wet Tropics bioregion: (i) stream order 1 to 4: 25m; or (ii) stream order 5 and above: 50m; OR (b) in all other regions (Brigalow Belt North Bioregion or the Einasleigh Uplands Bioregion): (i) stream order 1 or 2: 25m; or (ii) stream order 3 or 4: 50m; or (iii) stream order 5 and above: 100m; **Editor's note—**Natural assets planning scheme policy no. SC6.9 contains Figure SC6.9.1 which identifies stream orders and bioregions. This information may also be obtained from the relevant state agency. **Editor's note—** Where a development requires multiple buffers to be established by this code to protect watercourses, corridors, wetlands or core habitat, the greatest distances required by this code will prevail to the extent of any inconsistency.

Table 8.2.8.3—Assessable development (Part)

Performance outcomes	Acceptable outcomes
Ongoing management, construction and operation	
PO17 During construction and operation of development, ongoing management, monitoring and maintenance is undertaken to ensure impacts on significant ecological areas, underlying ecological functions and biophysical processes and environmental values are avoided or minimised.	No acceptable outcome is nominated. **Editor's note**–Applicants will be asked to prepare an site based management plan to guide construction and operation.
PO18 Management arrangements facilitate the effective conservation and protection of significant ecological areas and underlying ecological functions and biophysical processes.	**AO18** Significant ecological areas are: (a) transferred into public ownership where the land is required for public access or for some other public purpose consistent with its values; or (b) incorporated within private open space and included within a voluntary statutory covenant by registration under the *Land Title Act 1994.*

8.2.9 Water resource catchment overlay code

8.2.9.1 Application

This code applies to development where the code is identified as applicable in the categories of development and assessment for the Water resource catchment overlay. When using this code, reference should be made to section 5.3.2 and where applicable, section 5.3.3 located in Part 5.

8.2.9.2 Purpose

(1) The purpose of the Water resource catchment overlay code is to ensure:

(a) the quality of surface and ground waters and the ecological values and hydrological processes of water resource catchments are protected;

(b) natural environment values and the ecological processes of terrestrial and aquatic ecosystems within the catchment area are protected;

(c) the water resource catchment area is maintained predominantly in a natural state and is protected from development and activities that would have unacceptable impacts on water quality, either directly or indirectly.

(2) The purpose of the code will be achieved through the following overall outcomes:

(a) the establishment, expansion or intensification of development is avoided in a water resource catchment area;

(b) rural residential development is contained within the zoned Oak Valley community and development densities minimise the potential for impact on the catchment;

Editor's note—Applicants should refer to the Rural residential zone code.

(c) the ecological values, hydrological processes and water quality values of ground and surface waters in water resource catchment areas are protected from direct and indirect development impacts;

(d) development does not adversely affect the physical integrity of waterways, wetlands, lakes, springs, riparian areas and natural ecosystems that support water quality; and

(e) vegetated buffers to the full supply level of a water storage area are provided and maintained.

8.2.9.3 Assessment benchmarks

For accepted development subject to requirements

Table 8.2.9.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
PO1 Development is set back from features contributing to catchment waters and incorporates a buffer to protect and enhance water quality values of ground and surface waters for ecosystem health and human consumption.	**AO1** Development, including all buildings and supporting infrastructure, is set back from the top of the bank of a waterway as shown on Figure 8.2 – Waterways within the Ross Dam Catchment with a minimum width of: (a) for stream order 3 or 4: 50m; or (b) for stream order 5 and above: 100m.

Table 8.2.9.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Nature of development	
PO2 The intensification of activities within catchments is avoided, including any: (a) development, land use and management practices with the potential to degrade or contribute to the degradation of water quality in the water resource catchment area; and (b) development, use or activity that adversely affects the physical integrity of waterways, lakes, springs, riparian areas, wetlands and natural ecosystems.	No acceptable outcome is nominated.
PO3 Reconfiguration of lots does not increase the number of lots within the catchment, other than within the zoned Oak Valley rural residential area.	No acceptable outcome is nominated.
PO4 Within Oak Valley, the creation of additional lots is minimised.	**AO4** The minimum lot size in the rural residential zone within the catchment is 4ha.
PO5 Development in a water resource catchment area minimises land disturbance through appropriate siting, design and construction of buildings, structures, roadways and other work, and does not result in land degradation.	**AO5.1** Development does not involve earthworks.
	AO5.2 Development locates on slopes that do not exceed a 6% gradient.
PO6 Development in a water resource catchment area is managed in a way that maintains the structure and function of remnant vegetation and including erosion and associated loss to the soil fertility.	**AO6** Development does not involve vegetation clearing.

Table 8.2.9.3-Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Buffers	
PO7 Development adjoining the water storage area identified on overlay map OM-09 protects and restores a vegetated buffer to avoid sediment, nutrients and pollutants from entering a waterway, wetland, lake, spring, riparian area or water storage area.	**AO7.1** Development including buildings, infrastructure, structures, enclosures and ancillary activities are not carried out within 500m of the water storage area identified on overlay map OM-09 and all existing vegetation is retained within the buffer.
	AO7.2 A vegetated buffer having a minimum width of 100m is established and maintained from the water storage area identified on overlay map OM-09.

PO8 Riparian vegetation within the water resource catchment area is protected.	**AO8** Development does not result in the clearing of any native riparian vegetation.
PO9 Development is set back from features contributing to catchment waters and incorporates a buffer to protect and enhance water quality values of ground and surface waters for ecosystem health and human consumption.	**AO9** Development, including all buildings and supporting infrastructure, is set back from the top of the bank of a waterway as shown on Figure 8.2 – Waterways within the Ross Dam Catchment with a minimum width of: (a) for stream order 3 or 4: 50m; or (b) for stream order 5 and above: 100m.

Figure 8.2 - Waterways within the Ross Dam Catchment

Part 9 Development codes

9.1 Preliminary

(1) Development codes are assessment benchmarks where identified as an applicable code in Part 5.

(2) Use codes and other development codes are specific to each planning scheme area.

Editor's note–the Planning Regulation may establish requirements for development it prescribes to be accepted (for example, community residences and forestry) and assessment benchmarks that it prescribes to be assessable (for example, reconfiguration of 1 lot into 2).

(3) The following are the use codes for the planning scheme:

(a) Telecommunications facilities and utilities code.

(4) The following are the other development codes for the planning scheme:

(a) Advertising devices code;

(b) Healthy waters code;

(c) Landscape code;

(d) Reconfiguring a lot code;

(e) Transport impact, access and parking code;

(f) Works code.

9.2 Use codes

9.2.1 Telecommunications facilities and utilities code

9.2.1.1 Application

This code applies to a material change of use for telecommunications facilities, utilities, substations and major electricity infrastructure where the code is identified as applicable in the categories of development and assessment. When using this code, reference should be made to section 5.3.2 and where applicable, section 5.3.3 located in Part 5.

Editor's note—Low impact telecommunications facilities and minor electricity infrastructure are not regulated by the planning scheme. The *Telecommunications (Low Impact Facilities) Determination 1997* provides a full list of low impact facilities. Low impact facilities remain the responsibility of the Commonwealth Government.

9.2.1.2 Purpose

(1) The purpose of the Telecommunications facilities and utilities code is to ensure that facilities are located, designed and managed to be compatible with the locality in which they are established.

(2) The purpose of the code will be achieved through the following overall outcomes:

(a) development avoids or minimises adverse impacts on the natural environment;

(b) development does not unreasonably impact on the character and amenity of the locality;

(c) risks to public health and safety are minimised and contained to acceptable levels; and

(d) development facilitates co-location of infrastructure wherever possible.

9.2.1.3 Assessment benchmarks

Table 9.2.1.3—Accepted development subject to requirements and assessable development (Part)

Editor's note—Applicants must also comply with the relevant zone code and any applicable overlay code or development code.

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements development	
PO1 Aerial cabling and associated works for broadband telecommunications purposes is located and constructed in a manner that minimises visual impacts on the locality.	**AO1.1** The cables are co-located with operating works for a transmission entity or a distribution entity under the *Electricity Act 1994* wherever practicable.
	AO1.2 Any new cable has substantially the same appearance as existing cables.
	AO1.3 The average width of cabling for the facility is 25mm or less (excluding overmoulds).
	AO1.4 Any new cable is located: (a) above any existing street lighting cable; or (b) if there is no existing street cable lighting — no further than 600mm below any existing cable.
	AO1.5 In all other respects, the development complies with ACIF C524:2013 — External telecommunication cable networks.
PO2 Development does not unduly detract from the continued use and enjoyment of land included in a residential zone or of any other existing sensitive land use.	**AO2** The development is separated by a minimum of 50m to any land in a residential zone.

Table 9.2.1.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Visual integration, character and amenity	
PO3 The building height and the height of structures do not significantly detract from the scenic amenity and character of the locality.	No acceptable outcome is nominated.

PO4 Development is: (a) of high quality design and construction; (b) integrated with the surrounding area so as not to be visually dominant or intrusive, having regard to: (i) scale; (ii) height; (iii) bulk; (iv) materials and colour; and (v) aesthetic appearance; and (c) treated to eliminate glare and reflectivity.	No acceptable outcome is nominated.
PO5 Development in the Rural zone is not visually obtrusive when viewed from highways or significant public vantage points.	**AO5** Development in the Rural zone is setback from highway frontages by a minimum of 50m.
PO6 Where development is attached to an existing structure, it does not: (a) increase the visual prominence of the structure; or (b) detract from the design and architectural qualities of the structure.	No acceptable outcome is nominated.
PO7 Development does not unduly detract from the continued use and enjoyment of land included in a residential zone or of any other existing sensitive land use.	No acceptable outcome is nominated.
PO8 Development is setback from the site boundaries, to minimise impacts on adjoining land as a result of noise, glare, overshadowing, loss of privacy or visual obtrusiveness.	**AO8.1** The following minimum setbacks to all site boundaries are achieved: (a) 10m, where the height of the structure is less than 20m; (b) 15m, where the height of the structure is between 20m and 30m; (c) 20m, where the height of the structure is greater than 30m; and (d) 50m where adjoining a residential zone. OR **AO8.2** Where development reuses, extends or is attached to an existing structure, existing setbacks are not reduced.
PO9 Screening is provided to reduce the visual impacts of the facility and to enhance the character of the local area.	**AO9** A minimum 3m deep landscaped strip of dense planting is provided along all site boundaries.

PO10 Development prevents or minimises the generation of any noise such that: (a) nuisance is not caused; and (b) ambient noise levels are maintained.	**AO10** Development provides that: (a) noise levels measured as the adjusted maximum sound pressure level LAmax, adj. T at a noise sensitive place do not exceed: (i) background noise level plus 5dB(A) between the hours of 7am and 10pm; and (ii) background noise level plus 3dB(A) between the hours of 10pm and 7am; and (b) noise levels measured as the adjusted maximum sound pressure level LAmax, adj. T at a business place do not exceed: (i) background noise level plus 10dB(A) between the hours of 7am and 10pm; and (ii) background noise level plus 8dB(A) between the hours of 10pm and 7am.

Table 9.2.1.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Public health and safety	
PO11 Facilities are established, operated and maintained in a way to minimise the risk to public health and safety from electromagnetic emissions.	**AO11** For telecommunications facilities, development is designed and operated to restrict electromagnetic emissions in accordance with: (a) Radiocommunications (Electromagnetic Radiation — Human Exposure) Standard 2014; and (b) Radio Protection Standard for Maximum Exposure Levels to Radiofrequency Fields — 3KHz to 300GHz; or (c) other standards as specified by the Commonwealth Government Minister responsible for communications. For other development, no acceptable outcome is nominated.
PO12 Security fencing encloses the outermost boundaries of the land on which the facility is built in order to: (a) prevent unauthorised access; and (b) protect ease of maintenance access to the property.	**AO12** The site is securely fenced along all boundaries, including areas used for vehicle parking and storage.

PO13 Development incorporating access control arrangements includes: (a) providing warning information signs on all boundaries to prevent unauthorised entry; (b) the minimisation of the number and width of entry points; and (c) safe vehicular access to the site.	No acceptable outcome is nominated.

Table 9.2.1.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Environmental impact	
PO14 Development does not adversely impact on the natural environment.	**AO14** Development does not involve vegetation clearing or earthworks.

Table 9.2.1.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
For upgrading an existing substation or bulk supply substation only	
PO15 When the proposal involves the upgrade of an existing substation to a bulk supply substation, the existing substation is: (a) in a location where viable corridors are accessible to connect powerline infrastructure to the site; and (b) in proximity to existing powerline infrastructure, to ensure that the need for additional powerline infrastructure is minimised.	No acceptable outcome is nominated.

Table 9.2.1.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
For major electricity infrastructure	
PO16 The proposed major electricity infrastructure: (a) maximise co-location with other existing powerlines and easements; and (b) avoid, where possible, location near residential uses.	No acceptable outcome is nominated.
PO17 The proposed overhead powerline infrastructure is positioned with safe clearances to land uses and vegetation.	**AO17** The proposed powerline infrastructure maintains mandatory clearances from any existing or proposed buildings, structures and operational equipment to existing powerlines in accordance with Schedules 4 and 5 of the *Electrical Safety Regulation 2013.*

Table 9.2.1.3—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
For major electricity infrastructure (underground powerline infrastructure) only	
PO18 Powerline infrastructure minimises any potential impact on transport, access and utilities infrastructure in an area.	No acceptable outcome is nominated.

9.3 Other development codes

9.3.1 Advertising devices code

9.3.1.1 Application

This code applies to assessing operational work for placing an advertising device on premises where the code is identified as applicable in the categories of development and assessment for operational works.
When using this code, reference should be made to section 5.3.2 and where applicable, section 5.3.3 located in Part 5.

9.3.1.2 Purpose

(1) The purpose of the advertising devices code is to facilitate economic activity through the advertising of business, products and/or services, while ensuring high levels of visual amenity, public safety and maintaining the character of the locality.

(2) The purpose of the code will be achieved through the following overall outcomes:

(a) advertising devices are compatible with the character of the local area and do not diminish visual amenity; and

(b) advertising devices do not create a hazard to people or property, in particular pedestrians, cyclists and vehicular traffic.

9.3.1.3 Assessment benchmarks

Table 9.3.1.3(a)—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
Character and amenity	
PO1 The type, location and design of advertising devices do not diminish the character and amenity of the zone or precinct in which they are located.	**AO1.1** The following types of advertising device are not located in the Community facilities zone: (a) in any circumstance any advertising device defined in Table 9.3.1.3(b) as a higher impact advertising device, other than: (i) a pole sign not exceeding 1.5m in any dimension; or (ii) a wall sign not exceeding 4m^2; or (iii) an inflatable sign.
	AO1.2 No advertising devices are located within the Environmental management and conservation zone.
	AO1.3 Any advertising device defined in Table 9.3.1.3(b) as either an intermediate impact advertising device or a higher impact advertising device is not located in the Open space zone.

AO1.4
Advertising devices are not located in the residential zones other than where:

(a) in the High density residential zone; or

(b) in the Medium density residential zone (Picnic Bay, Nelly Bay tourist, North Ward villages, Hyde Park medium density, Aitkenvale village or The Strand precincts only); or

(c) comprising of a fence sign or a wall sign for a home based business, and:

  (i) limited to a maximum of one advertising device per premises; and

  (ii) limited to a maximum sign face area of 1m²; or

(d) comprising of an advertising device defined in Table 9.3.1.3(b) as a lower impact or intermediate impact advertising device for short-term accommodation and rooming accommodation.

AO1.5
Advertising devices in the High and Medium density residential zone are associated with the residential use or non-residential use located on the same site.

AO1.6
The following types of advertising devices are not located in the Rural zone:

(a) any advertising device not part of a business activity, roadside stall, short-term accommodation, outdoor sport and recreation or winery located on the same site; and

(b) a wall sign greater than 4m²; and

(c) in any circumstances, an animated sign.

AO1.7
The following types of advertising devices are not located in the Sport and recreation zone:

(a) in any circumstances any advertising device defined in Table 9.3.1.3(b) as a higher impact advertising device other than:

  (i) a billboard; or

  (ii) a pole sign; or

  (iii) a wall sign less than 4m².

	AO1.8 Bunting is only located on premises used for any of the following purposes: (a) Bulk landscape supplies; or (b) Garden centre; or (c) Market; or (d) Outdoor sales; or (e) Service station; or (f) Outdoor sport and recreation; or (g) Roadside stall.
	AO1.9 Advertising devices are illuminated only in the following circumstances: (a) if located within a centres zone, the Community facilities zone or an industry zone; (b) not in the Flinders Street East precinct; (c) not located within 50m of a sensitive land use located within a residential zone, the Rural zone or the Community facilities zone; and (d) not exceeding the following night time luminance values: (i) 500 candella/m² in an industry zone; or (ii) 400 candella/m² in a centre zone; or (iii) 300 candella/m² in the community facilities zone.
	AO1.10 Advertising devices comply with the design parameters set out in Table 9.3.1.3(c).
	AO1.11 Advertising devices are produced or manufactured and installed by a commercial painting or signwriting business or professional advertising business and are not constructed of cardboard, paper or similar product.
PO2 Development avoids a visually cluttered and confusing proliferation of advertising devices.	**AO2** Advertising devices, other than billboards, advertise the business or premises on, or in front of, which they are located, or a product or service offered by such business or premises.
PO3 Advertising devices in the Flinders Street East precinct do not adversely affect the fabric and setting of the heritage place.	**AO3** Advertising devices for heritage places in the Flinders Street East precinct are in accordance with the Cultural heritage planning scheme policy no. SC6.3.

Table 9.3.1.3(a)—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For accepted development subject to requirements and assessable development	
Safety	
PO4 Advertising devices do not obstruct or endanger pedestrian or vehicular traffic.	**AO4.1** Advertising devices, other than those listed below, are entirely contained within the lot and do not encroach into a road reserve or other public place: (a) awning sign (above-awning, awning fascia or under-awning sign); (b) blind/canopy sign; (c) footway sign; (d) inflatable sign; (e) projecting sign; (f) hamper sign, stallboard sign, fence sign or wall sign, subject to the provisions of AO4.9; and (g) animated sign of a type mentioned in (a) to (e) above.
	AO4.2 Animated signs involving changing content are not located within 100m of a road with a speed limit exceeding 60km/hr.
	AO4.3 Advertising devices are not located on or over a public road carriageway.
	AO4.4 Advertising devices do not obscure any road signs, traffic signals, direction signs, information signs, street numbers or street lighting.
	AO4.5 Advertising content does not include or resemble any official road signs.
	AO4.6 Advertising devices, other than a footway sign, are not located on a footpath. A footway sign is not located on a footpath less than 2.5m in width, or within 250mm of a kerb.
	AO4.7 Footway signs are only displayed during the business hours of the advertised business.

	AO4.8 Advertising devices do not project into or over a driveway, vehicle access, parking area, cycleway or pedestrian footpath unless maintaining a minimum vertical clearance of: (a) 4.5m where intended for use by buses or commercial vehicles comprising small rigid vehicles and above; or (b) 2.5m for any other driveway, vehicle access, parking area, cycleway or pedestrian footpath. **Editor's note—**As defined in AS/NZS 2890.2 – 2002.
	AO4.9 Advertising devices attached flat to a wall, fence or other structure adjacent to a road, driveway, vehicle access, parking area, cycleway or pedestrian footpath have a maximum thickness of 30mm, unless maintaining a minimum vertical clearance of: (a) 4.5m where intended for use by buses or commercial vehicles comprising small rigid vehicles and above; or (b) 2.5m for any other driveway, vehicle access, parking area, cycleway or pedestrian footpath. **Editor's note—**As defined in AS/NZS 2890.2 – 2002.
	AO4.10 An inflatable sign is: (a) securely tethered to purpose-made anchor points on a building or permanent structure, and by means of a minimum of two safety-tested tether lines; (b) located and tethered so as to remain contained at all times within an envelope formed by the vertical projection of the lot boundaries; and (c) inflated only by cold air or helium.
PO5 Advertising devices are structurally sound and durable.	**AO5.1** Advertising devices, other than a commercial flag, banner sign, bunting or footway sign are permanently attached to a building, structure or the ground.
	AO5.2 Advertising devices being a commercial flag, banner sign or bunting are securely attached to a pole or structure that is permanently attached to a building, structure or the ground.
PO6 Advertising devices do not impact on the safe and efficient operation of infrastructure.	**AO6.1** Advertising devices maintain a minimum clearance of 1.5m to any installation or object relating to telecommunications (excluding a public telephone booth or kiosk), water supply, sewerage or stormwater drainage infrastructure. **Editor's note—**Additional separation distances to infrastructure may be required by other legislation or utility providers.

	AO6.2 Advertising devices maintain a separation distance from power supply and electrical infrastructure in accordance with the distances prescribed by the Electrical Safety Regulation 2013.

Table 9.3.1.3(a)—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Character and amenity	
PO7 Advertising devices do not adversely impact on the visual amenity of the locality, having regard to the following: (a) significant and unreasonable loss of views; (b) overshadowing; (c) loss of access to breezes; (d) illumination effects; (e) impact on sight lines for vehicular access and egress; (f) significant and unreasonable loss of landscaping; and (g) the creation of visual clutter or proliferation of advertising devices.	No acceptable outcome is nominated.
PO8 Advertising devices are subservient to, and not dominant over, a building's appearance and are reasonably integrated with architectural features.	No acceptable outcome is nominated.

Table 9.3.1.3(a)—Accepted development subject to requirements and assessable development (Part)

Performance outcomes	Acceptable outcomes
For assessable development	
Safety	
PO9 Advertising devices do not pose a safety hazard.	No acceptable outcome is nominated.

Table 9.3.1.3(b)—Types of advertising devices (Part)

Device name and definition	Example of device
Lower impact advertising devices	
Blind/canopy sign A sign that is printed, painted or otherwise affixed to a solid or flexible material suspended from an awning, veranda or wall.	

Commercial flag A cloth or similar non-rigid fabric hung from, or attached to, a pole for the purpose of advertising a business, product or service.	
Footway sign A portable, free-standing sign normally supported by an 'A-frame' or inverted 'T-frame' and typically displayed on a footway.	
Hamper sign A sign painted or otherwise affixed in the area between a door head and the underside of an awning, or at equivalent level.	
Stallboard sign A sign painted or otherwise affixed to the base of a shopfront, normally below a shop window.	

Street furniture sign A sign attached to an item of street furniture, such as alfresco dining demarcation, telephone booths/kiosks, bus shelters, garbage bins, public seating and the like.	
Under-awning sign A sign affixed underneath, or suspended from, an awning or veranda.	
Window sign A sign affixed to or printed on the glass of a display window, or displayed behind the glass of the display window and facing outside. The term does not include products displayed in a window.	

Table 9.3.1.3(b)—Types of advertising devices (Part)

Device name and definition	Example of device
Intermediate impact advertising devices	
Above-awning sign A sign located on top of an awning or veranda of a building.	
Awning Fascia sign A sign painted or otherwise affixed flat to the fascia of an awning, or the balustrade of a veranda.	
Banner sign A removable advertising device attached or tethered to, or suspended from, a fixed object and displaying signage applied to, or printed or painted on, fabric or similar material.	
Bunting Decorative flags, pennants or streamers displayed for the purposes of advertising a business.	
Fence sign A sign that is painted or otherwise affixed to a fence or wall, usually located on a boundary of a site.	

Ground sign A sign that is painted on, or affixed to, a free-standing, low-level wall or similar freestanding structure located on the ground.	
Panel sign A free-standing sign that is typically similar in proportions to, but significantly smaller than, a billboard. The term does not include any sign otherwise defined herein.	
Projecting sign A sign: (a) directly attached to, and projecting horizontally from, and perpendicular to, a wall or building façade; or (b) suspended from a pole or similar device projecting horizontally from, and perpendicular to, a wall or building facade.	

Table 9.3.1.3(b)—Types of advertising devices (Part)

Device name and definition	Example of device
Higher impact advertising devices	
Animated sign A sign with a moving or changing display, such as moving, flashing, changing or chasing lights or scrolling, changing or projected images.	
Billboard A free-standing display surface which may be positioned on the ground or a building or structure, or mounted on one or multiple vertical supports.	
Inflatable sign An advertising device in the form of a fixed or tethered balloon, or similar lighter than air device.	
Pole sign A free-standing sign on one vertical support.	

Pylon sign A free-standing advertising device, the height of which is greater than the width, that is attached to the ground and either self-supporting or attached to one or more vertical supports.	
Roof sign A sign painted onto or otherwise affixed to the roof of a building. The term does not include an above-awning sign.	
Three-dimensional object sign A sign in the form of a three-dimensional object attached to a building, structure or the ground. The term does not include an inflatable sign.	

Wall sign A sign painted or otherwise affixed flat to the wall or façade of a building or structure. The term includes a parapet sign and a building name sign where advertising the name and/or logo of a business.	

Table 9.3.1.3(c)—Design parameters for advertising devices (Part)

Notes—

* Sign face area is measured as the total surface area of any face of an advertising device, excluding any supporting structure or, where applicable, as the surface area encompassing the outer extent of the advertising material contained on that face.

** Unless otherwise specified, height is measured from the highest point on any sign face to ground level below.

Device type	Maximum number of devices	Maximum dimensions (m) or sign face area (m^2)*	Maximum number of sign face per advertising device	Maximum height**	Minimum separation distance to another device of the same type	Other
Lower impact advertising devices						
Blind/canopy sign		A maximum of 50% of the external surface area of the blind or canopy.				
Commercial flag		5m²		6.5m		
Footway sign	One per business, tenant or occupant.	1m²	2	1m		
Hamper sign or Stallboard sign						Contained within the limits of the hamper or stallboard to which it is attached.
Under-awning sign	One per business, tenant or occupant.	Length: • the lesser of 2m or 75% of awning/veranda width; • height - 0.5m; • thickness - 60mm.	2		3m	• Contains advertising material on both sign faces. • Sign faces are oriented either perpendcular or parallel to the building facade.
Window sign		A maximum of 25% of the window surface area.				

Table 9.3.1.3(c)—Design parameters for advertising devices (Part)

Notes—

* Sign face area is measured as the total surface area of any face of an advertising device, excluding any supporting structure or, where applicable, as the surface area encompassing the outer extent of the advertising material contained on that face.

** Unless otherwise specified, height is measured from the highest point on any sign face to ground level below.

Device type	Maximum number of devices	Maximum dimensions (m) or sign face area (m^2)*	Maximum number of sign face per advertising device	Maximum height**	Minimum separation distance to another device of the same type	Other
Intermediate impact advertising device						
Above-awning sign	One per business, tenant or occupant.	2.5m^2.	2	1.5m measured to the awning surface below.	3m	• The horizontal dimension exceeds the vertical dimension. • Sign faces are back-to-back and perpendicular to the building façade.
Awning fascia sign	One per business, tenant or occupant.					• Contained within the limits of the fascia to which it is attached; or • Exceeds only the upper and/or lower limits of the fascia by a maximum of 500mm in each case.
Banner sign	One per business, tenant or occupant.	5m^2 if in a Centre zone or an Industry zone. Otherwise 2.5m^2 .		5m		• Contains advertising material on all visible sign faces. • Not attached at both ends to the same building. • Not erected above the eave or parapet line of a building.
Bunting				6m		Does not extend beyond the boundaries of the subject premises.
Fence sign	One per lot.	Maximum thickness of 30mm.				Is contained within the outer limits of the fence on which it is located.
Ground sign	One per lot.	10m^2.		2m		Advertising material covers a maximum of 75% of each side of the advertising device.
Panel sign	One per business, tenant or occupant.	Horizontal – 2.5m; Vertical – 1.5m; Thickness – 60mm.	2	2.5m	3m	• Sign faces are back-to-back. • Contains advertising material on any sign face visible from a road or public place.

Projecting sign	One per business, tenant or occupant.	2m², with a maximum projection from the façade of 2m.	2	4.5m	3m	• Sign faces are back-to-back and perpendicular to the building façade. • Not erected above the eave or parapet line of a building.

Table 9.3.1.3(c)—Design parameters for advertising devices (Part)

Notes—

* Sign face area is measured as the total surface area of any face of an advertising device, excluding any supporting structure or, where applicable, as the surface area encompassing the outer extent of the advertising material contained on that face.

** Unless otherwise specified, height is measured from the highest point on any sign face to ground level below.

Device type	Maximum number of devices	Maximum dimensions (m) or sign face area (m²)*	Maximum number of sign face per advertising device	Maximum height**	Minimum separation distance to another device of the same type	Other
Higher impact advertising devices						
Animated sign	One per lot, if the lot area is less than 1,000m². Otherwise, one per 1,000m² of lot area, or part thereof exceeding 500m².	20m²		12m	50m if not in a Centre zone or an Industry zone.	
Billboard		48m², if located in the Rural zone, a Centre zone or an Industry zone. Otherwise, 18m².	2		500m if located in the Rural zone. Otherwise, 200m.	• Sign faces are back-to-back or may be oriented at an angle to each other for best viewing. • Contains advertising material on all sign faces visible from a road or public place. • Where a single-sided sign or the back of a sign structure is visible from a road or public space, the back of the sign structure must be attractively treated or screened with vegetation to minimise visual impact.

Inflatable sign	One per lot.				500m	• Is not located on a lot less than 1,000m² in extent. • Is not able to rise to a height of more than 25m above ground level below.
Pole sign	One per lot.	2.5m2.	2	5m	50m	• Sign faces are back-to-back. • Contains advertising material on all sign faces visible from a road or public place. • Is located only on a lot frontage.
Pylon sign	One per lot.	36m2.		12m	60m	• Is not located on a lot less than 1,000m² in extent. • Contains advertising material on all sign faces visible from a road or public place. • Is located only on a lot frontage.
Roof sign	One per roof surface.			2.5m above roof level below the advertising device.	3m	• Is contained entirely within the roof line/profile whether seen in plan view or elevation. • Contains advertising material on all sign faces visible from a road or public place.
Three-dimensional object sign	One per lot.	3m in any dimension.		6m		
Wall sign		• A maximum of 20% of the area of the applicable building elevation; and • If a parapet sign, a maximum of 50% of the parapet area.		9m		Does not project beyond the outer extremities of the wall to which it is affixed or on which it is painted.

9.3.2 Healthy waters code

9.3.2.1 Application

This code applies to development where the code is identified as applicable in the categories of development and assessment.

When using this code, reference should be made to section 5.3.2 and where applicable, section 5.3.3 located in Part 5.

9.3.2.2 Purpose

(1) The purpose of the code is to ensure development manages stormwater and wastewater as part of the integrated total water cycle and in ways that help protect the environmental values specified in the *Environmental Protection (Water) Policy 2009*.

(2) The purpose of the code will be achieved through the following overall outcomes:

(a) environmental values of receiving water are protected from adverse development impacts arising from altered stormwater quality and altered stormwater flow;

(b) environmental values of receiving water are protected from waste water impacts;

(c) environmental values of receiving water are protected from development impacts arising from the creation or expansion of non-tidal artificial waterways such as urban lakes;

(d) potential adverse impacts on the natural and built environment, including infrastructure and human health as a result of acid sulfate soils are avoided;

(e) public health and safety are protected and damage or nuisance caused by stormwater is avoided;

(f) stormwater is designed to maintain or recreate natural hydrological processes and minimise run-off;

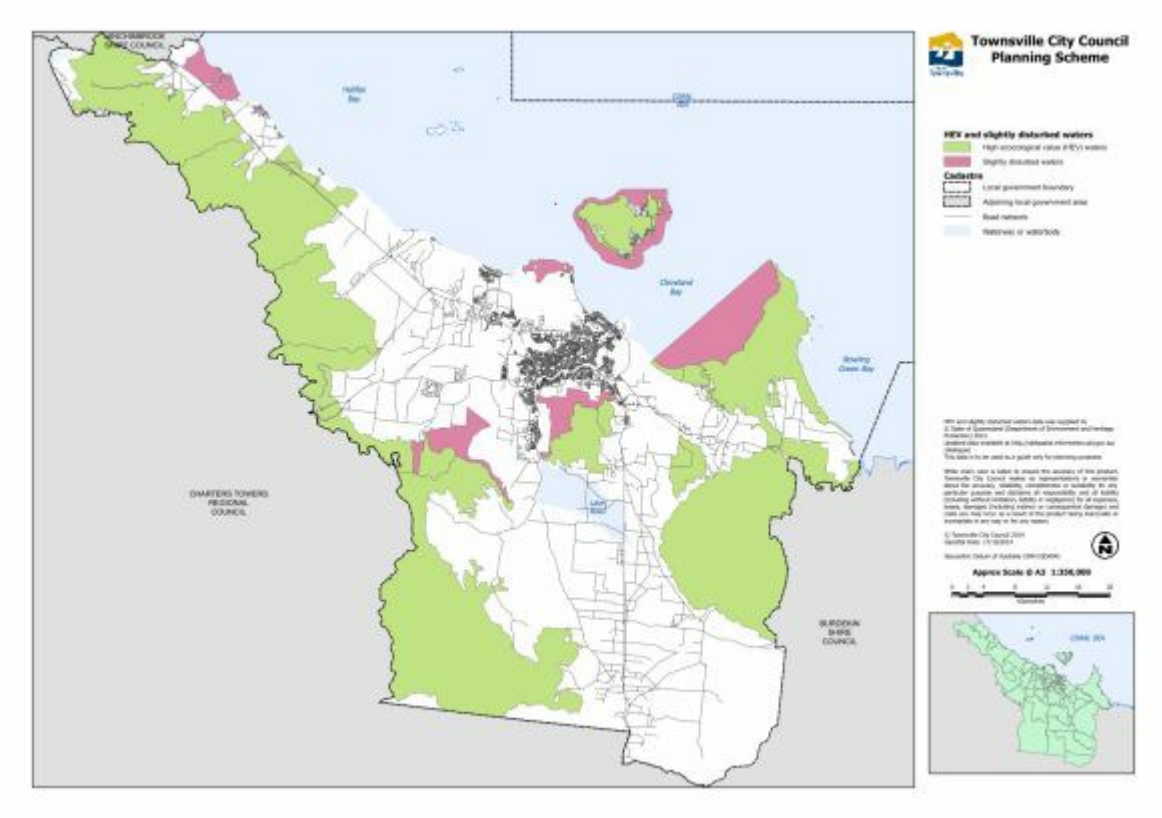
(g) whole of lifecycle costs of infrastructure are minimised; and

(h) well-designed developments are responsive to receiving water quality.

9.3.2.3 Assessment benchmarks

Table 9.3.2.3—Asessable development (Part)

Performance outcomes	Acceptable outcomes
Stormwater management - protecting water quality	
PO1 Development contributes to the protection of environmental values and water quality objectives of receiving waters to the extent practicable. **Editor's note—**The environmental values and water quality objectives are established under the *Environmental Protection (Water) Policy (2009)*. For Townsville, they are specified in the Ross River Basin Environmental Values and Water Quality Objectives 2012 and Black River Basin Environmental Values and Water Quality Objectives (2012).	No acceptable outcome is nominated. **Editor's note—**Applicants should refer to the Development manual planning scheme policy SC6.4 - SC6.4.3.8 Stormwater management plans for development, SC6.4.3.9 Water sensitive urban design guidelines; and SC6.4.6.1 Water sensitive urban design construction and establishment requirements.
PO2 High environmental value waters and slightly disturbed waters (shown on Figure 9.1 — High environmental value waters and slightly disturbed waters) are protected from the impacts of development within their catchments. Existing water quality, habitat and biota values, flow regimes and riparian areas are maintained or enhanced.	No acceptable outcome is nominated. **Editor's note—**Refer to the *Queensland Water Quality Guidelines (QWQG)* for details on how to establish a minimum water quality data set for these areas.



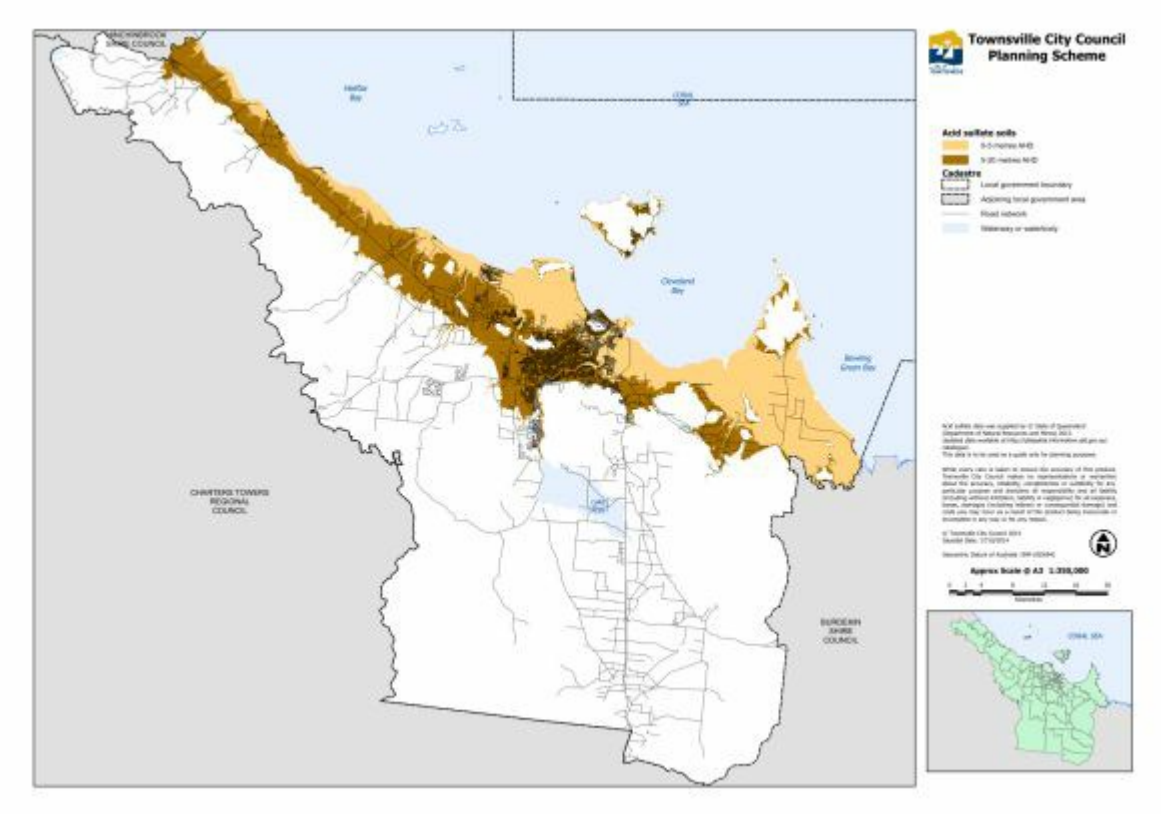
Click here to view PDF high resolution map.

Figure 9.1 - High environmental value waters and slightly disturbed waters

Table 9.3.2.3—Assessable development (Part)

PO3 The entry of contaminants into, and transport of contaminants in, stormwater is avoided or minimised.	No acceptable outcome is nominated. **Editor's note—**Applicants should refer to the Development manual planning scheme policy SC6.4 - SC6.4.3.8 Stormwater management plans for development, SC6.4.3.9 Water sensitive urban design guidelines; and SC6.4.6.1 Water sensitive urban design construction and establishment guidelines.

PO4 Within the areas identified as potential acid sulfate soils on Figure 9.2 — Acid sulfate soils, the generation or release of acid and metal contaminants into the environment from acid sulfate soils is avoided by: (a) not disturbing acid sulfate soils when excavating or otherwise removing soil or sediment, draining or extracting groundwater, excluding tidal water or filling land; or (b) where disturbance of acid sulfate soils cannot be avoided, development: (i) neutralises existing acidity and prevents the generation of acid and metal contaminants; and (ii) prevents the release of surface or groundwater flows containing acid and metal contaminants into the environment.	**AO4.1** Development does not: (a) involve excavating or removing 100m^3 or more of soil and sediment at or below 5m AHD; or (b) permanently or temporarily drain or extract groundwater or exclude tidal water resulting in the aeration of previously saturated acid sulfate soils; or (c) involve filling with 500m^3 or more with an average depth of 0.5m or greater that results in: (i) actual acid sulfate soils being moved below the water table; or (ii) previously saturated acid sulfate soils being aerated. OR **AO4.2** Development manages waters so that: (a) all disturbed acid sulfate soils are adequately treated and/or managed so that they can no longer release acid or heavy metals; (b) the pH of all site any water including discharges and seepage to groundwater, is maintained between 6.5 and 8.5 (or an agreed pH in line with natural background); (c) waters on the site, including discharges and seepage to groundwater, do not contain elevated levels of soluble metals; (d) there are no visible iron stains, flocs or sums in discharge water; (e) all reasonable preparations and actions are undertaken to ensure that aquatic health is safeguarded; and (f) infrastructure such as buried services, pipes, culverts and bridges are protected from acid attack. **Editor's note—**Where works are proposed within the areas identified as potential acid sulfate soils on Figure 9.2 - Acid sulfate soils, the applicant is required to undertake an on-site acid sulfate investigation. The reason for undertaking an acid sulfate soils investigation is to determine the presence of acid sulfate soil in order to avoid disturbance. Where acid sulfate soils cannot reasonably be avoided, investigation results assist in the planning of treatment and remedial activities and must be undertaken in accordance with the *Queensland Acid Sulfate Soil Technical Manual* and relevant State Planning Policy. Applicants should also refer to the *Guidelines for Sampling Analysis of Lowland Acid Sulfate Soils in Queensland*, Acid Sulfate Soils Laboratory Methods Guidelines or Australian Standard 4969. It is highly recommended that the applicant develop a practical Acid Sulfate Soil Management Plan for use in monitoring and treating acid sulfate soils.



Click here to view PDF high resolution map.

Figure 9.2 - Acid sulfate soils

Table 9.3.2.3—Assessable development (Part)

PO5 Construction activities for the development avoid or minimise adverse impacts on stormwater quality or hydrological processes.	No acceptable outcome is nominated. **Editor's note—**Applicants should refer to the Development manual planning scheme policy SC6.4 - SC6.4.3.8 Stormwater management plans for development, SC6.4.5 Construction management; and SC6.4.6.1 - Water sensitive urban design construction and establishment requirements.

Table 9.3.2.3—Assessable development (Part)

Performance outcomes	Acceptable outcomes
Hydrological processes	
PO6 The stormwater management system: (a) retains natural waterway corridors and drainage paths; and (b) maximises the use of natural channel design in constructed components.	**AO6.1** All existing waterways and overland flow paths are retained.
	AO6.2 The stormwater management system is designed in accordance with the Development manual planning scheme policy no. SC6.4 — SC6.4.3.9 Water sensitive urban design guidelines.
PO7 The development is designed to minimise run-off and peak flows by: (a) minimising large areas of impervious material; and (b) maximising opportunities for capture and reuse.	No acceptable outcome is nominated. **Editor's note—**Applicants should refer to the Development manual planning scheme policy SC6.4 - SC6.4.3.8 Stormwater management plans for development, SC6.4.3.9 Water sensitive urban design guidelines; and SC6.4.6.1 Water sensitive urban design construction and establishment requirements.

PO8 Stormwater management is designed to: (a) protect in-stream ecosystems from the significant effects of increased run-off frequency by capturing the initial portion of run-off from impervious areas; and (b) create conditions such that the frequency of hydraulic disturbance to in-stream ecosystems in developed catchments is similar to pre-development conditions. **Editor's note—**Frequent flow management is distinct from flood management purposes, which is concerned with the management of less frequent, more extreme stormwater flows. The latter is an important part of integrated stormwater management and should in no way be compromised in pursuit of the management of more frequent flows for waterway health enhancement.	**AO8** The stormwater management system is designed in accordance with the Development manual planning scheme policy no. SC6.4 - SC6.4.3.8 Stormwater management plans for development.
PO9 Stormwater management is designed to prevent exacerbated in-stream erosion downstream of a development site by controlling the magnitude and duration of sediment-transporting, erosion-causing flows.	**AO9** The stormwater management system is designed in accordance with the Development manual planning scheme policy no. SC6.4 — SC6.4.3.9 Water sensitive urban design guidelines and SC6.4.3.8 Stormwater management plans for development.

Table 9.3.2.3—Assessable development (Part)

Performance outcomes	Acceptable outcomes
Stormwater drainage generally	
PO10 The proposed stormwater management system or site works does not adversely affect flooding or drainage characteristics of properties that are upstream, downstream or adjacent to the development site.	**AO10.1** The development does not result in an increase in flood level or flood duration on upstream, downstream or adjacent properties.
	AO10.2 The stormwater management system is designed and constructed in accordance with the Development manual planning scheme policy SC6.4 – SC6.4.4.4 Stormwater drainage design, SC6.4.3.9 Water sensitive urban design guidelines; and SC6.4.6.4 Stormwater drainage.
PO11 Development does not cause ponding, or changes in flows and velocities such that the safety, use and enjoyment of nearby properties are adversely affected.	**AO11** The stormwater management system is designed and constructed in accordance with the Development manual planning scheme policy SC6.4 – SC6.4.4.4 Stormwater drainage design; SC6.4.3.9 Water sensitive urban design guidelines; and SC6.4.6.4 Stormwater drainage.
PO12 The drainage network has sufficient capacity to safely convey stormwater run-off from the site.	**AO12** Development is undertaken in accordance with the Development manual planning scheme policy SC6.4 – SC6.4.4.4 Stormwater drainage design; SC6.4.6.5 Drainage structures and SC6.4.6.4 Stormwater drainage.

PO13 The stormwater management system: (a) provides for safe access and maintenance; and (b) where relevant, provides for safe recreational use of stormwater management features.	No acceptable outcome is nominated. **Editor's note—**Applicants should refer to the Development manual planning scheme policy SC6.4 - SC6.4.3.8 Stormwater management plans for development and SC6.4.4.4 Stormwater drainage design, SC6.4.3.9 Water sensitive urban design guidelines; SC6.4.3.6 Landscape policy; SC6.4.6.1 Water sensitive urban design construction and establishment requirements; and SC6.4.6.4 Stormwater drainage

Table 9.3.2.3—Assessable development (Part)

Performance outcomes	Acceptable outcomes
Point source waste water management (other than contaminated stormwater and sewage)	
PO14 Waste water is managed in accordance with a waste management hierarchy that: (a) avoids waste water discharge to waterways; or (b) if waste water discharge to waterways cannot practicably be avoided, minimises waste water discharge to waterways by re-use, recycling, recovery and treatment for disposal to sewer, surface water and groundwater. **Editor's note—**To meet this outcome, a waste water management plan (WWMP) should be prepared by a suitably qualified person. The WWMP is to account for the waste water type, climatic conditions, Water Quality Objective (WQOs) and best practice environmental management.	No acceptable outcome is nominated.
PO15 Any treatment and disposal of waste water to a waterway: (a) protects the applicable water quality objectives for the receiving waters; and (b) avoids adverse impact on ecosystem health of receiving waters.	No acceptable outcome is nominated.
PO16 Development avoids or minimises and appropriately manages soil disturbance or altering natural hydrology in nutrient hazardous areas.	No acceptable outcome is nominated.
PO17 Waste water discharge to waterways is managed to avoid or minimise the release of nutrients of concern so as to minimise the occurrence, frequency and intensity of coastal algal blooms. **Editor's note—**Compliance with this outcome can be demonstrated by following the management advice in the Implementing Policies and Plans for Managing Nutrients of Concern for Coastal Algal Blooms in Queensland and associated technical guideline.	No acceptable outcome is nominated.

Table 9.3.2.3—Assessable development (Part)

Performance outcomes	Acceptable outcomes
Constructed lakes and artificial waterways	
PO18 Where established, a constructed lake or artificial waterway is designed to maintain a reasonable standard of water quality, having regard to factors affecting lake health, including: (a) nutrients and eutrophication; (b) gross pollutants, including organic material; (c) light and turbidity; (d) organic carbon loads; (e) lake stormwater detention time; (f) salinity; (g) temperature; (h) water depth and seasonal variations; (i) water column mixing temperature; and (j) pesticides and other chemicals.	No acceptable outcome is nominated. **Editor's note—**Applicants should refer to the Development manual planning scheme policy no. SC 6.4 - SC6.4.3.12 Constructed Lakes.
PO19 Stormwater run-off entering and leaving a constructed lake or artificial waterway maintains receiving water quality.	No acceptable outcome is nominated. **Editor's note—**Applicants should refer to the Development manual planning scheme policy no. SC 6.4 - SC6.4.3.12 Constructed Lakes.
PO20 The location, design and operation of a constructed lake or artificial waterway: (a) protects environmental values in downstream and upstream waterways; (b) protects any groundwater recharge areas; (c) incorporates low lying areas of a catchment connected to an existing waterway; (d) does not disrupt natural wetlands and any associated buffer areas; (e) avoids disturbing soils or sediments; and (f) avoids altering the natural hydrologic regime in acid sulfate soil and nutrient hazardous areas. **Editor's Note—**Monitoring and maintenance programs will be required to adaptively manage water quality and to achieve relevant water quality objectives.	No acceptable outcome is nominated. **Editor's note—**Applicants should refer to the Development manual planning scheme policy no. SC 6.4 - SC6.4.3.12 Constructed Lakes.

PO21 The constructed lake or artificial waterway is located in a way that is compatible with existing tidal waterways.	For constructed lakes — No acceptable solution is nominated. **AO21** For an artificial waterway: Where an artificial waterway is located adjacent to, or connected to, a tidal waterway by means of a weir, lock, pumping system or similar: (a) there is sufficent flushing or tidal flushing with water level variation >0.3m; (b) any tidal flow alteration does not adversely impact on the tidal waterway; and (c) there is no introduction of salt water into freshwater environments. **Editor's note—**Applicants should refer to the Development manual planning scheme policy no. SC 6.4 - SC6.4.3.12 Constructed Lakes.
PO22 The construction phase for the constructed lake or artificial waterway is compatible with protecting aquatic environmental values in existing natural waterways and wetlands.	No acceptable outcome is nominated. **Editor's note—**Applicants should refer to the Development manual planning scheme policy no. SC 6.4 - SC6.4.3.12 Constructed Lakes.
PO23 A constructed lake or artificial waterway is designed to avoid terrestrial and aquatic weeds, vectors and concentrations of populations.	No acceptable outcome is nominated. **Editor's note—**Applicants should refer to the Development manual planning scheme policy no. SC 6.4 - SC6.4.3.12 Constructed Lakes.
PO24 The lake design provides for suitable machinery access to enable maintenance of the lake, including the removal of terrestrial and aquatic weeds.	No acceptable outcome is nominated. **Editor's note—**Applicants should refer to the Development manual planning scheme policy no. SC 6.4 - SC6.4.3.12 Constructed Lakes.
PO25 A constructed lake or artificial waterway has no adverse impact on flood capacity, including the capacity of upstream catchments and floodplain areas.	No acceptable outcome is nominated. **Editor's note—**Applicants should refer to the Development manual planning scheme policy no. SC 6.4 - SC6.4.3.12 Constructed Lakes.
PO26 A constructed lake or artificial waterway is designed to minimise hazards to ensure public safety is maintained.	No acceptable outcome is nominated. **Editor's note—**Applicants should refer to the Development manual planning scheme policy no. SC 6.4 - SC6.4.3.12 Constructed Lakes.
PO27 A constructed lake or artificial waterway is designed to provide a high level of amenity for surrounding residents.	No acceptable outcome is nominated. **Editor's note—**Applicants should refer to the Development manual planning scheme policy no. SC 6.4 - SC6.4.3.12 Constructed Lakes.
PO28 Opportunities for incorporation of accessible passive and active recreation facilities into the design of the constructed lake or artificial waterway are facilitated.	No acceptable outcome is nominated. **Editor's note—**Applicants should refer to the Development manual planning scheme policy no. SC 6.4 - SC6.4.3.12 Constructed Lakes.

Table 9.3.2.3—Assessable development (Part)

Performance outcomes	Acceptable outcomes
Efficiency and whole of life cycle cost	
PO29 Life cycle costs are minimised, taking into account acquisition, construction, establishment, operation, monitoring, maintenance, replacement and disposal costs.	No acceptable outcome is nominated. **Editor's note—**Applicants should refer to the Development manual planning scheme policy SC6.4 for assistance in demonstrating this outcome.
PO30 The design of the development allows for sufficient site area to accommodate an effective stormwater management system.	No acceptable outcome is nominated. **Editor's note—**Applicants should refer to the Development manual planning scheme policy SC6.4 for assistance in demonstrating this outcome.
PO31 The proposal provides for the orderly development of stormwater infrastructure within a catchment, having regard to: (a) existing capacity of stormwater infrastructure and ultimate catchment conditions; (b) discharge for existing and future upstream development; and (c) protecting the integrity of adjacent and downstream development.	No acceptable outcome is nominated. **Editor's note—**Applicants should refer to the Development manual planning scheme policy SC6.4 for assistance in demonstrating this outcome.
PO32 Proposed stormwater infrastructure remains fit for purpose for the life of the development.	No acceptable outcome is nominated. **Editor's note—**Applicants should refer to the Development manual planning scheme policy SC6.4 for assistance in demonstrating this outcome.
PO33 Proposed stormwater infrastructure can be easily accessed and can be maintained in a safe and cost effective way.	**AO33** The stormwater management system is designed in accordance with the Development manual planning scheme policy SC6.4 – SC6.4.3.9 Water sensitive urban design guidelines and SC6.4.4.4 Stormwater drainage design.

Table 9.3.2.3—Assessable development (Part)

Performance outcomes	Acceptable outcomes
Water management in reconfiguring a lot	
PO34 Reconfiguration of lots includes water management measures in the design of any road reserve, streetscape or drainage networks to: (a) minimise impacts on the water cycle; (b) protect waterway health by improving stormwater quality and reducing site run-off; and (c) avoid large areas of impervious surfaces.	No acceptable outcome is nominated. **Editor's note—**Applicants should refer to the Development manual planning scheme policy SC6.4 for assistance in demonstrating this outcome.

Table 9.3.2.3—Assessable development (Part)

Performance outcomes	Acceptable outcomes
Ship-sourced pollutants	
PO35 Common user facilities for the handling and disposal of ship-sourced pollutants including oil, garbage and sewage are provided at a suitable location in any development involving a marina or berthing facilities. **Editor's note—**Refer to: *Australian and New Zealand Environment and Conservation Council (ANZECC)*, 1997, *Best Practice Guidelines for Waste Reception Facilities at Ports*, *Marinas and Boat Harbours in Australia and New Zealand.*	No acceptable outcome is nominated.
PO36 Marinas or berthing facilities are designed and operated to ensure the risk of spillage from operations is minimised.	No acceptable outcome is nominated.
PO37 Equipment to contain and remove spillages is stored in a convenient position near marina or berthing facilities and is available for immediate use.	No acceptable outcome is nominated.
PO38 Where practical, the marina pollutant reception facility is connected to a sewerage or other waste reception infrastructure. **Editor's note—**Reception facilities require compliance assessment under the *Plumbing and Drainage Act 2002*. The plumbing compliance assessment process will ensure that the proposed facilities address 'peak load'.	No acceptable outcome is nominated.

9.3.3 Landscape code

9.3.3.1 Application

This code applies to development where the code is identified as applicable in the categories of development and assessment.

When using this code, reference should be made to section 5.3.2 and where applicable, section 5.3.3 located in Part 5.

9.3.3.2 Purpose

(1) The purpose of the Landscape code is to ensure landscaping in both the private and public domains is designed and constructed to a high standard, provides a strong contribution to the city image, is responsive to the local character, site and climatic conditions and remains fit for purpose over the long-term.

(2) The purpose of the code will be achieved by the following overall outcomes:

- (a) a high quality streetscape and on-site landscape enhances the character of the city;
- (b) landscape design is used to integrate the natural and built form elements of the site and the locality;
- (c) landscape elements create a legible and attractive street frontage, and enhance the continuity of the streetscape;
- (d) screening is used to soften built form, mitigate adverse aesthetic impacts and provide privacy and character;
- (e) plant species and landscaping materials are suited to the Dry Tropics' cyclone prone climate;
- (f) plant species, landscape materials and surface treatments are suited to their intended function and user requirements;
- (g) plant species, landscaping materials and surface treatments are designed to remain attractive, fit for purpose and be cost effective to maintain over the long-term;
- (h) landscape design facilitates an accessible, safe and comfortable environment for all users; and
- (i) significant on-site vegetation is retained, protected and integrated into the site design wherever practicable.

9.3.3.3 Assessment benchmarks

Table 9.3.3.3—Assessable development (Part)

Performance outcomes	Acceptable outcomes
Landscape design and character	
PO1 The overall landscape design of both public and private spaces: (a) creates a sense of place that is consistent with the intended character of the streetscape, city or locality; and (b) is functional and designed to be visually appealing in the long-term as well as when first constructed.	**AO1** When the development is in an identified locality in the Development manual planning scheme policy no. SC6.4 - SC6.4.3.6 Landscape policy, landscape design is in accordance with the requirements for that area. Otherwise, no acceptable outcome is nominated. **Editor's note—**Applicants should refer to the Development manual planning scheme policy no. SC6.4 - SC6.4.3.6 Landscape policy.

PO2 Tree and plant selection ensures: (a) climatically appropriate landscaping; (b) creation of a diverse palette: in form, texture and seasonal colour; (c) longevity of plants and the form and function of landscaped areas; and (d) cost effective and convenient maintenance over the long-term.	**AO2.1** Species are selected from those listed in the Development manual planning scheme policy no. SC6.4 - SC6.4.3.6 Landscape policy.
	AO2.2 Plant species do not include undesirable species as listed in the Development manual planning scheme policy no. SC6.4 - SC6.4.3.6 Landscape policy.
PO3 Where appropriate, provision is made for on-street planting that: (a) complements the local streetscape; (b) ensures visibility is maintained from entrances and exits to properties and at intersections; (c) establishes healthy vegetation of suitable species; (d) minimises the potential for vegetation to cause damage to persons, property or infrastructure; and (e) does not limit or hinder pedestrian or vehicular flow and movement.	**AO3** Street planting is provided that is consistent with the standards set out in the Development manual planning scheme policy no. SC6.4 - SC6.4.3.6 Landscape policy. **Editor's note—**Applicants may also have reference to the Development manual planning scheme policy no. SC6.4 - SC6.4.4.1 Geometric road design.
PO4 Streetscape treatments and paving form a functional and attractive component of the overall landscape scheme.	**AO4.1** All general streetscape elements are provided in accordance with the standards set out in the Development manual planning scheme policy no. SC6.4 - SC6.4.3.6 Landscape policy.
	AO4.2 Streetscape pavements are provided in accordance with the standards set out in the Development manual planning scheme policy no. SC6.4 - SC6.4.3.6 Landscape policy.
	AO4.3 Streetscape furniture is provided in accordance with the standards set out in the Development manual planning scheme policy no. SC6.4 - SC6.4.3.6 Landscape policy.
PO5 Landscaping within on-site open space areas is well-designed, having regard to its purpose and the provision of shading, climatic response, and the proportion of soft and hard elements.	**AO5.1** Selected tree species within communal recreation areas are to provide at least 30% shade coverage within 5 — 10 years of planting.
	AO5.2 A minimum of 50% of landscaped areas are to be covered in soft landscaping (turf areas and planting beds), with at least 25% of that area being planting.
PO6 Landscaping and embellishments in local recreational parks is fit for purpose and well-designed, having regard to shading, climatic response, and the proportion of soft and hard elements. Landscaping softens edges and creates an attractive interface with adjoining land.	**AO6** Landscaping and embellishments are provided that are consistent with the standards set out in the Development manual planning scheme policy no. SC6.4 - SC6.4.3.6 Landscape policy. **Editor's note—**Applicants should also have regard to requirements for local recreational parks in the Reconfiguring of a lot code.

PO7 The use of hard surface treatments within private and public spaces do not detract from a high standard of amenity, and large unbroken areas of hardstand material is avoided.	**AO7** Surface treatments are provided that are consistent with the standards set out in the Development manual planning scheme policy no. SC6.4 - SC6.4.3.6 Landscape policy.

Table 9.3.3.3—Assessable development (Part)

Performance outcomes	Acceptable outcomes
Edge treatments	
PO8 Where provided, landscape design along site frontages is used to mitigate adverse aesthetic elements, provide privacy and reduce illumination impacts, while maintaining a safe environment for users.	**AO8** Landscaped areas along the frontage of a site consists of: (a) shade or rounded canopy trees that will provide a minimum of 50% shade to the frontage of the site within 5 years of planting; (b) shrubs that provide screening to blank walls and privacy as required; and (c) low shrubs and ground covers that reach a maximum height of 750mm at maturity.
PO9 Where appropriate, acoustic barriers and long fences along road frontages and within the development are screened or softened by landscaping or architectural embellishment to improve visual amenity of the development.	No acceptable outcome is nominated. **Editor's note—**Guidance on desirable treatments in particular circumstances is provided in the Development manual planning scheme policy no. SC6.4 - SC6.4.3.6 Landscape policy.
PO10 Where provided, landscaping along a side or rear boundary assists in maintaining privacy, screening unsightly or service elements and enhancing the appearance of the development from nearby premises.	**AO10.1** Screen planting is provided along the side or rear boundary of a site, which consists of: (a) either trees with a maximum spacing of 3m (measured from centres) and capable of providing a dense screen within 3 years of planting or screening shrubs capable of growing to a height of 3m within 2 years of planting; and (b) low shrubs and ground covers, where appropriate, to allow for complete covering of planting area.
	AO10.2 A minimum of 25% of all trees are to grow above the height of the eaves of the equivalent second storey of the building.
PO11 Landscaped areas along or near retaining walls, long unbroken walls, service areas and parking areas consist of an appropriate combination and species of trees, shrubs and groundcovers to minimise the visual impact of these elements.	No acceptable outcome is nominated. **Editor's note—**Guidance on desirable treatments in particular circumstances is provided in the Development manual planning scheme policy no. SC6.4 - SC6.4.3.6 Landscape policy.
PO12 Screening trees, shrubs, low shrubs, ground covers and vertical accent plants are appropriate for the space available, orientation and functional requirements of the area.	No acceptable outcome is nominated. **Editor's note—**Guidance on desirable treatments in particular circumstances is provided in the Development manual planning scheme policy no. SC6.4 - SC6.4.3.6 Landscape policy.

Table 9.3.3.3—Assessable development (Part)

Performance outcomes	Acceptable outcomes
Maintenance, drainage, utilities, services and construction	
PO13 Plant selection and location protects the integrity and function of overhead and underground services.	**AO13** Plant selection and location complies with the Development manual planning scheme policy no. SC6.4 - SC6.4.3.6 Landscape policy.
PO14 Landscape elements do not adversely affect stormwater quantity or quality by ensuring: (a) the flow of water along overland flow paths is not restricted; (b) opportunities for water infiltration are maximised; and (c) areas of pavement, turf and mulched garden beds are appropriately located and adequately drained.	No acceptable outcome is nominated. **Editor's note—**Applicants should also refer to Section 9.3.6 Works code and Section 9.3.2 Healthy waters code and the Development manual planning scheme policy no. SC6.4 to assist in demonstrating the outcome.
PO15 Landscaping works, design and materials used minimise maintenance costs and whole of life cycle costs. **Editor's note—**Council may request a lifecycle cost analysis and maintenance cost plan for developments that create new public landscape embellishment to determine the appropriateness of landscaping treatment lifecycle costs to the community.	No acceptable outcome is nominated. **Editor's note—**Applicants should refer to the Development manual planning scheme policy no. SC6.4 to assist in demonstrating the outcome, including SC6.4.3.6 Landscape policy and SC6.4.6. Construction standards.
PO16 All turf areas on-site are accessible externally by standard lawn maintenance equipment and receive adequate sunlight for the turf species used.	No acceptable outcome is nominated. **Editor's note—**Applicants should refer to the Development manual planning scheme policy no. SC6.4 including SC6.4.3.6 Landscape policy to assist in demonstrating the outcome.
PO17 Drainage of podium planters allows for flush out in future and are adequately drained.	No acceptable outcome is nominated.
PO18 Irrigation is installed within private and public spaces to ensure the long-term viability and integrity of landscaped areas. Where provided, irrigation is designed to facilitate the efficient supply of water in accordance with micro-climatic conditions.	**AO18** Irrigation is provided accordance with the Development manual planning scheme policy no. SC6.4 including - SC6.4.3.6 Landscape policy. **Editor's note—**Irrigation systems should be minimized where practical, such as in natural areas or areas where landscaping is likely to endure due to landform and microclimate, for example.
PO19 Limited on-site maintenance is achieved for private and public landscaping, by selecting plant species having regard to long life expectancy and minimal leaf litter drop, pruning, watering and fertilising requirements.	No acceptable outcome is nominated. **Editor's note—**Applicants should refer to the Development manual planning scheme policy SC6.4.3.6 Landscape policy to assist in demonstrating the outcome.
PO20 Container sizes and planting stock maturity is consistent with the intended role of the landscaping.	**AO20** Landscaping is undertaken in accordance with the Development manual planning scheme policy no. SC6.4 - SC6.4.3.6 Landscape policy.
PO21 Planting stocks are of a quality to ensure vigorous growth.	**AO21** Landscaping is undertaken in accordance with the Development manual planning scheme policy no. SC6.4 - SC6.4.3.6 Landscape policy and SC6.4.6.26 Landscaping.

PO22 Plants are protected and maintained to facilitate in-situ growth, vigour and quality form.	**AO22** Landscaping is undertaken in accordance with the Development manual planning scheme policy no. SC6.4 - SC6.4.3.6 Landscape policy and SC6.4.6.26 Landscaping.
PO23 Site preparation works ensure a stable and enhanced landscape form.	**AO23** Landscaping is undertaken in accordance with the Development manual planning scheme policy no. SC6.4 - SC6.4.3.6 Landscape policy and SC6.4.6.26 Landscaping.

Table 9.3.3.3—Assessable development (Part)

Performance outcomes	Acceptable outcomes
Sustainability	
PO24 Wherever possible, landscape design facilitates the retention of significant existing vegetation, both within and external to the site.	**AO24.1** Site design integrates and incorporates retained and significant trees and vegetation within and external to the site.
	AO24.2 Removed or damaged significant vegetation is replaced with mature vegetation of a comparable quantity and species.
PO25 Appropriate site planning and construction management is undertaken to ensure the longevity and health of retained and significant trees and vegetation.	**AO25.1** Retained trees are protected by a tree protection zone (TPZ) and fenced along the canopy/drip line to comply with AS4970- 2009 Protection of Trees on Development Sites.
	AO25.2 Any required pruning or trimming work is undertaken in accordance with AS4373 — Pruning of Amenity Trees and is carried out by a qualified aborist.
	AO25.3 Retained and significant vegetation damaged during development or construction is treated to repair any damage to the extent practicable by a qualified aborist.
	AO25.4 Protective measures and practices are employed for work adjacent to trees in accordance with the Development manual planning scheme policy no. SC6.4 - SC6.4.5 Construction management.
PO26 Landscape design optimises water and energy efficiency and responds appropriately to local conditions, by: (a) maximising the exposure to the prevailing summer breezes and the north-east winter morning sun; (b) minimising exposure to the prevailing winter winds and western summer sun; and (c) optimising shade to create useable and comfortable areas; (d) hydro-zoning planting.	No acceptable outcome is nominated. **Editor's note—**Applicants should refer to Development manual planning scheme policy no. SC6.4 - SC6.4.3.6 Landscape policy.

PO27 Planting bed profiles and edging encourage plant viability, reduce erosion, control weed invasion, provide adequate water infiltration and ease of maintenance to support long-term plant viability and vigorous growth.	**AO27** Planting beds are designed in accordance with the Development manual planning scheme policy no. 6.4 - SC6.4.3.6 Landscape policy.
PO28 Landscape buffering and species selection is consistent and compatible with any ecological values on or adjoining the site.	No acceptable outcome is nominated. **Editor's note—**Applicants should refer to Development manual planning scheme policy no. SC6.4 - SC6.4.3.6 Landscape policy.
PO29 Landscaping elements are provided within parking areas, along driveways and internal roadways to provide adequate shading, and safe and legible parking areas.	**AO29** Landscaping is provided in accordance with the Development manual planning scheme policy no. SC6.4 - SC6.4.3.6 Landscape policy.

Table 9.3.3.3—Assessable development (Part)

Performance outcomes	Acceptable outcomes
Safety	
PO30 Landscape design enhances community safety and reduces the potential for crime and antisocial behaviour. **Editor's note—**Applicants may find useful guidance in the Queensland Government's Crime Prevention through Environmental Design Guidelines for Queensland.	**AO30.1** Access to a site, parking area, buildings or public open space is well lit, free from obstructions and clearly defined by landscape treatments.
	AO30.2 Trees with a minimum 1.8m of clear trunk (at maturity) are located along pathways, at building entries, within parking areas, on street corners, adjacent to street lighting and along driveways. Garden beds within the aforementioned areas consist of low shrubs and groundcovers that do not exceed 750mm in height.
	AO30.3 Any solid wall or semi permeable fence is protected from graffiti through means of vertical landscaping or vandal resistant paint or artwork.
PO31 Where appropriate and practicable, all elements of the landscape design are safe and provide accessibility for all abilities.	**AO31.1** Paving material, tactile indicators and construction complies with AS1428 - Design for Access and Mobility.
	AO31.2 Pavement material or treatment clearly delineates between pedestrian and vehicular movement systems through contrasting materials, colours or level changes.
	AO31.3 Hard landscaping materials are not highly reflective, or likely to create glare, slipperiness or other hazardous conditions.

9.3.4 Reconfiguring a lot code

9.3.4.1 Application

This code applies to development where the code is identified as applicable in the categories of development and assessment for reconfiguring a lot.

When using this code, reference should be made to section 5.3.2 and where applicable, section 5.3.3 located in Part 5.

9.3.4.2 Purpose

(1) The purpose of the reconfiguring a lot code is to:

(a) facilitate the creation of attractive, accessible and functional neighbourhoods and districts, and a well-integrated, compact and sustainable city form; and

(b) protect the productive capacity, landscape character and ecological and physical functions of Townsville's diverse natural resources.

(2) The purpose of the code will be achieved through the following overall outcomes:

(a) lot reconfiguration creates safe, convenient, functionally efficient and attractive neighbourhoods and districts that are consistent with the intended character of the area;

(b) lot reconfiguration creates walkable residential neighbourhoods and centres, and accessible community facilities and employment opportunities;

(c) lot reconfiguration is responsive to the local environment, including topography, natural drainage systems, vegetation and habitat, cultural heritage features, streetscape character, landmarks, views and vistas;

(d) lot reconfiguration near infrastructure corridors and other major facilities ensures that sensitive land uses are protected from activities generating amenity impacts;

Editor's note—Applicants will also need to have regard to the relevant overlays dealing with natural hazards, including bushfire, landslide, storm surge, coastal erosion and flooding.

(e) lot reconfiguration assists in protecting areas containing important ecological values or providing important environmental services;

(f) lot reconfiguration does not facilitate fragmentation or alienation of land that would prejudice the productive use of rural land resources;

(g) lot reconfiguration facilitates compatible relationships between different land uses and with the natural environment;

(h) lot design and lot sizes are suited to the intended use of the land having regard to the ability to accommodate buildings, vehicle access, parking, on-site services and open space;

(i) lot orientation facilitates the conservation of non-renewable energy sources and the siting of buildings that is appropriate for the local climatic conditions;

(j) infrastructure is supplied to all lots in a safe, efficient, coordinated and sequenced manner, which minimises whole of life cycle costs and is sensitive to the environment in which they are provided;

(k) the street system provides for high levels of permeability and safety for all users and in particular, facilitates high levels of accessibility by public transport, walking and cycling; and

(l) public open space is attractive and accessible and equitably meets user requirements for recreational, social and cultural activities.

9.3.4.3 Assessment benchmarks

Table 9.3.4.3(a)-Assessable development (Part)

Editor's note—In order to demonstrate compliance with this code, council may request the preparation of a structure plan for the locality, which may include land external to the site. This is likely where the proposed development involves more than 5 lots or the construction of a new road. The structure plan should be prepared in accordance with the guidance provided in the Emerging community planning scheme policy no. SC6.6. Such a plan may form the basis of a preliminary approval for development in an area.

Editor's note—Applicants should also have regard to Crime Prevention through Environmental Design Guidelines for Queensland when addressing relevant sections of the code.

Performance outcomes	Acceptable outcomes
General design elements	
PO1 The layout of roads, streets, lots and infrastructure avoids or minimises impacts on environmental features of the locality by: (a) following the natural topography and minimising earthworks; (b) avoiding crossing or otherwise fragmenting waterways, wetlands, habitat areas or ecological corridors; (c) maintaining natural drainage features and hydrological regimes; and (d) maintaining important ecological corridors and habitat areas.	No acceptable outcome is nominated.
PO2 The development is well integrated with the surrounding locality, having regard to: (a) the layout of, and connections to, surrounding roads, streets, pedestrian and cycle networks and other infrastructure networks; (b) open space networks, habitat areas or corridors; (c) connections to centres and employment areas; (d) opportunities for shared use of public facilities; (e) surrounding landscaping and streetscape treatments; and (f) the interface between incompatible land uses.	No acceptable outcome is nominated. **Editor's note—**The Development manual planning scheme policy no. SC6.4 provides applicants with guidance and additional information.
PO3 The design of urban street blocks encourages walking.	No acceptable outcome is nominated. **Editor's note—**Applicants may refer to Figure 16-3 in Complete Streets: Guidelines for urban street design to assist in compliance with this performance outcome. **Editor's note—**The Development manual planning scheme policy no. SC6.4 provides applicants with guidance and additional information.
PO4 Street blocks and lot types are generally in a grid pattern and arranged to provide: (a) an efficient development pattern that supports walking, cycling and public transport use; (b) regular shaped lots; and (c) development that is consistent with the intent of the zone.	No acceptable outcome is nominated. **Editor's note—**The Development manual planning scheme policy no. SC6.4 provides applicants with guidance and additional information.
PO5 New development optimises views and physical connections to important landscape features to enhance legibility and sense of place.	No acceptable outcome is nominated.

PO6 Reconfiguring a lot does not facilitate development that would be visually obtrusive on ridgelines and prominent landscape features, or does not intensify development where already occurring on such features.	No acceptable outcome is nominated. **Editor's note—**The Development manual planning scheme policy no. SC6.4 - SC6.4.3.7 Steep land development design guidelines provides applicants with guidance and additional information.
PO7 Development maintains or rehabilitates vegetated buffers to coastal waters where practicable.	No acceptable outcome is nominated.
PO8 Where a reconfiguration involves the creation of a new road or street (other than in the Rural zone), streetscape and landscape treatments are provided that: (a) create an attractive and legible environment which establishes character and identity; (b) enhance safety and comfort, and meet user needs; (c) complement the function of the street in which they are located by reinforcing desired traffic speed and behaviour; (d) support safe pedestrian and cycling movement; (e) maximise infiltration of stormwater runoff wherever practicable; and (f) minimise maintenance and whole of lifecycle costs.	No acceptable outcome is nominated. **Editor's note—**The Development manual planning scheme policy no. SC6.4 provides applicants with guidance and additional information.

Table 9.3.4.3(a)-Assessable development (Part)

Performance outcomes	Acceptable outcomes
Parks and open space **Editor's note—**Where acceptable outcomes are set out in this section, it is acknowledged that they may primarily be practicable in greenfield developments. Alternative outcomes are likely to be appropriate in existing developed areas. This may include works and embellishment to existing parks or recreational corridors to meet the development's demand, or as part of an infrastructure partnership agreement. **Editor's note—**The Development manual planning scheme policy SC6.4 - SC6.4.3.6 Landscape policy provides applicants with guidance and additional information regarding parks and open space.	
PO9 Reconfiguration facilitates the provision of a hierarchy of open space at local, district and regional levels that: (a) contributes to the legibility and character of the neighbourhood; (b) is linked to existing parkland or open space networks wherever possible; (c) meets the community's needs and is designed to maximise use by the community it serves; and (d) offer a broad range of informal and formal experiences to the community.	No acceptable outcome is nominated. **Editor's note—**The Local government infrastructure plan identifies desired standards of service for trunk open space infrastructure. Trunk infrastructure does not include local recreational parks.

PO10 Within residential areas, local recreation parks are created which provide informal recreational opportunities to supplement private open space of the neighbourhood.	**AO10.1** Local recreational parks are provided at a rate of 1ha per 1,000 people.
	AO10.2 Local recreational parks are provided at a maximum distance of 400m from the residents they serve.
PO11 Local recreational parks are of a sufficient size, shape and topography to accommodate a usable activity area, accommodating recreational facilities that meet local needs for a range of age cohorts, such as play equipment, kick-about areas, picnic areas, seating and the like. **Editor's note—**Applicants should refer to the Development manual planning scheme policy no. SC6.4 - SC6.4.3.6 Landscape policy to assist in complying with this outcome.	**AO11.1** Local recreational parks have a minimum usable activity area of 0.5ha.
	AO11.2 Parks are square to rectangular with the ratio of dimensions no greater than 2:1.
	AO11.3 At least 80% of the park has a grade of no more than 1:10.
PO12 Local recreational parks are located and designed to maximise accessibility and to ensure a majority of the park has good casual surveillance established through overlooking from adjacent land uses.	**AO12** At least 50% of the perimeter of the park has a direct road frontage.
PO13 Local recreational parks are provided with a reasonable level of flood immunity such that community space remains available during most flood events.	**AO13** At least 10% of the park area is above the 2% AEP and embellishments, including play equipment, shelters and shared pathways are constructed above the 2% AEP flood level.
PO14 Parkland is safe and secure, with a clear relationship between the public realm and adjoining land uses through treatment including alignment, fencing, public lighting and landscaping.	No acceptable outcome is nominated. **Editor's note—**Applicants should refer to the Development manual planning scheme policy no. SC6.4 - SC6.4.3.6 Landscape policy to assist in complying with this outcome.
PO15 Design and embellishments of local recreational parks: (a) reflect the likely demographic needs of the local community which the park services; (b) complement those in nearby parks, increasing the range of facilities available to the community; and (c) are fit for purpose.	**AO15** The design and embellishments of local recreational parks is undertaken in accordance with the Development manual planning scheme policy no. SC6.4 - SC6.4.3.6 Landscape policy.
PO16 Local recreational parks are to provide pathway connections to the on-street verge pathway network and pathways are provided to connect to activity areas within the park.	No acceptable outcome is nominated. **Editor's note—**Applicants should refer to the Development manual planning scheme policy SC6.4 - SC6.4.3.6 Landscape policy to assist in complying with this outcome.

Table 9.3.4.3(a)-Assessable development (Part)

Performance outcomes	Acceptable outcomes
Climatic response	
PO17 Road, street and lot orientation and lot size facilitate development that conserves non-renewable energy sources and enhances climate responsiveness by: (a) optimising a generally north-south orientation for the long axis of street blocks, or where east-west orientation is unavoidable, proportioning lots to allow for appropriate building orientation; and (b) creating lots that are generally rectangular in shape.	No acceptable outcome is nominated.
PO18 Road, street and lot orientation and lot size are responsive to north east prevailing winds and facilitates air permeability.	**AO18.1** Where practicable, parallel side boundaries are staggered. Figure 9.3 — Staggered parallel boundaries illustrates.
	AO18.2 The layout does not create more than three small lots, solid fencing or other barriers perpendicular to the target winds. OR **AO18.3** Where barriers exist perpendicular to target winds, the distance between a down-wind barrier or receptor and the up-wind barrier is not less than 7 times the height of the upwind barrier. Figure 9.4 — Airflow and barriers illustrates. **Editor's note—**Research has shown that long horizontal barriers perpendicular to airflow, such as solid fencing or continuous building lines, attenuates airflow for a horizontal distance of seven times the height of the barrier. Where a second barrier occurs airflow continues to 'skim' and does not return to the unimpeded pattern for the same seven-times height distance.
	AO18.4 Where they are proposed, built to boundary walls are located on the west-southwest boundary of lots, except where these boundaries are on the higher side of a sloping lot.

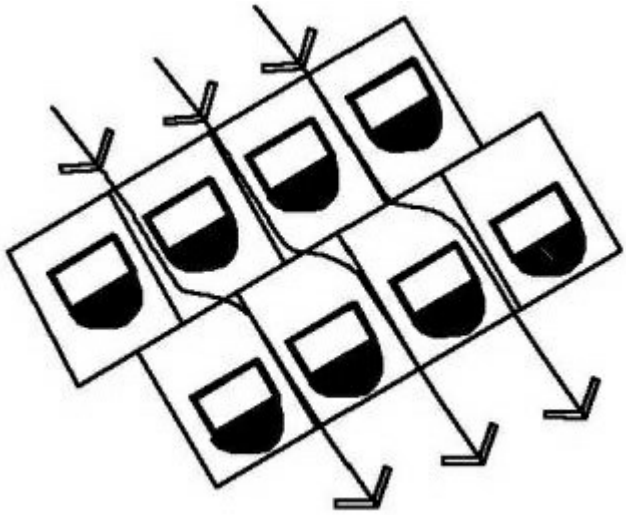


Figure 9.3 - Staggered parallel boundaries

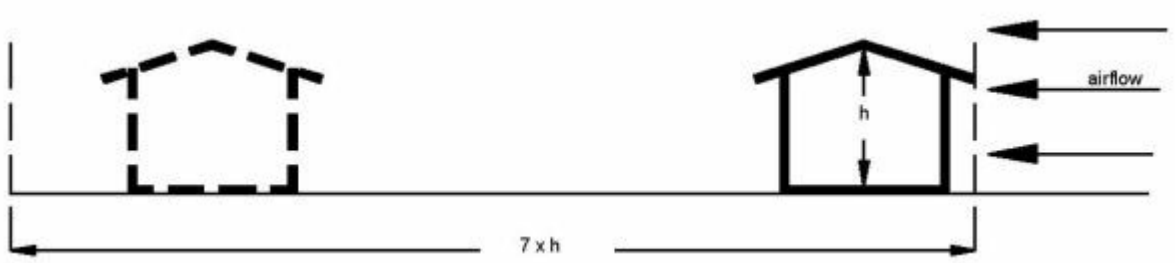

Figure 9.4 - Airflow and barriers

Table 9.3.4.3(a)-Assessable development (Part)

Performance outcomes	Acceptable outcomes
Development near infrastructure corridors and other major facilities	
PO19 Reconfiguration within 100m of any high pressure gas pipeline does not: (a) increase the number of lots; (b) affect the long-term operation of the pipeline; and (c) put at risk the safety and lives of people or the safety of property.	No acceptable outcome is nominated.
PO20 Lots are designed and oriented to: (a) minimise the visual exposure of electricity transmission lines; (b) facilitate a substantive vegetated buffer adjoining electricity transmission line easements; and (c) ensure habitable buildings and recreation areas are well separated from electricity transmission line easements.	**AO20.1** Where on land that includes or adjoins a high voltage electricity easement (above 33kV), lot design and layout incorporates: (a) a vegetated buffer within a distance of 20m from the boundary of the electricity transmission line easement; and (b) the orientation of the primary lot frontage away from transmission line easement.
	AO20.2 Lots are designed and oriented to ensure that a habitable building or primary open space areas on each lot can comply with the separation distance set out in Table 9.3.4.3(b).

PO21 Reconfiguration ensures an appropriate level of amenity and safety is achieved for residential and other sensitive land uses through appropriate separation and buffering from nearby incompatible uses, including Department of Defence landholdings, major hazard facilities, intensive animal industries, major sport, recreation and entertainment facilities, sewerage, water and waste treatment and disposal facilities and industrial areas. The continued safe and efficient operation of these types of facilities is protected. **Editor's note—**A report by a suitably qualified person may be required to allow an assessment to be made of the potential environmental impacts of or affecting the proposed reconfiguration. Council recommends that applicants seeking approval for lots potentially affected by intensive animal industries refer tothe *Reference Manual for the Establishment and Operation or Beef Cattle Feedlots in Queensland, Queensland Dairy Farming Environmental Code of Practice, Environmental Code of Practice for Queensland Piggeries* and *Best Practice Technical Guide for the Meat Chicken Industry* and that applicants consult with Primary Industries and Fisheries prior to the lodgment of a development application. For other uses council may require a study that, amongst other matters, identifies how the development is in accordance with *Environmental Protection (Air) Policy 2008* or *Environmental Protection (Noise) Policy 2008*. **Editor's note—**Applicants may be required to prepare a Noise impact assessment as outlined in the Development manual planning scheme policy no. SC6.4 - SC6.4.3.15 Noise and vibration assessment guidelines	No acceptable outcome is nominated.
PO22 Reconfiguration of land potentially affected by the impacts of a transport corridor or other noise generating activities ensures the development is designed to facilitate adequate noise management. **Editor's note—**Applicants may be required to prepare a Noise impact assessment in accordance with the Development manual planning scheme policy no. SC6.4 - SC6.4.3.15 Noise and vibration assessment guidelines.	No acceptable outcome is nominated.
PO23 Where they are used, noise attenuation measures are: (a) compatible with the local streetscape and do not preclude the creation of active street frontages where desired; (b) durable and easily maintained; and (c) are designed to discourage crime and antisocial behaviour, having regard to: (i) opportunities for graffiti; (ii) provision of casual surveillance of public open space and movement networks; and (iii) opportunities for concealments or vandalism.	No acceptable outcome is nominated.

PO24 Reconfiguration does not result in lots being subject to adverse air quality impacts. **Editor's note—**A report by a qualified air quality expert may be required to allow an assessment to be made of the air quality or impacts. The Queensland Odour Impact Assessment Guidelines provides a methodology for assessing impact.	No acceptable outcome is nominated.

Table 9.3.4.3(a)-Assessable development (Part)

Performance outcomes	Acceptable outcomes
Services	
PO25 Services, including water supply, stormwater drainage management, sewerage infrastructure, reticulated gas, public lighting, waste disposal, electricity and telecommunications, are provided in a manner that: (a) is efficient; (b) is adaptable to allow for future infrastructure upgrades; (c) minimises risk of adverse environmental or amenity-related impacts; (d) promotes total water cycle management, the efficient use of water resources and the protection of environmental values and water quality objectives of receiving waters; and (e) minimises whole of life cycle costs for that infrastructure. **Editor's note—**The environmental values and water quality objectives are established under the *Environment Protection Policy (2009)*. For Townsville, they are specified in the Ross River Basin Environmental Values and Water Quality Objectives 2012 and Black River Basin Environmental Values and Water Quality Objectives (2012).	No acceptable outcome is nominated. **Editor's note—**Section 9.3.2 Healthy waters code, Section 9.3.6 Works code and the Development manual planning scheme policy SC6.4, set out standards for the design and construction of services.

Table 9.3.4.3(a)-Assessable development (Part)

Performance outcomes	Acceptable outcomes
Lot sizes and design	
PO26 Reconfiguration creates lot sizes that: (a) are consistent with the intended character of the zone, precinct or sub-precinct in which the land is located; (b) do not compromise the future development potential of land in the Emerging community zone for urban purposes; (c) are sufficient to protect the productive capacity, environmental and landscape values of rural land resources; (d) are sufficient to protect ground and surface water quality in the Rural residential zone; and (e) are sufficient to protect areas with significant ecological values.	**AO26** Minimum lot size is in accordance with Table 9.3.4.3(c).
PO27 Lots have regular shape and dimensions to facilitate the efficient development of the land for its intended purpose, and have sufficient area to provide for: (a) buildings and structures appropriate to the zone, precinct or sub-precinct; (b) adequate usable open space and landscaping; (c) ventilation and sunlight; (d) privacy for residents; (e) suitable vehicle access and on-site parking where required; and (f) any required on-site services and infrastructure such as effluent disposal areas.	**AO27** The dimensions of lots are in accordance with Table 9.3.4.3(c).
PO28 Where rear lots are created, they: (a) provide for an appropriate level of amenity; (b) incorporate direct access of a sufficient width for the use of the lot; and (c) ensure infrastructure services to the lot can be easily constructed, monitored and maintained. **Editor's note—** Applicants should also address any performance outcomes of the relevant zone code which may affect whether rear lots are appropriate.	**AO28.1** Only one rear lot is provided behind each standard lot. **AO28.2** No more than two rear lot access strips directly adjoin each other. **AO28.3** No more than two rear lots gain access from the head of a cul-de-sac. **AO28.4** Where a rear lot is proposed in a residential zone, a square building envelope with sides of 17m is capable of being contained entirely within the lot.

	AO28.5 An access strip for a rear lot has a minimum width of: (a) 8m in a rural or rural residential zone for access lengths up to 50m and greater than 50m, 15m width; or (b) 3.5m in urban residential zones; or (c) 8m in an industry zone; or (d) in any other zone, no acceptable outcome is nominated.
	AO28.6 A passing bay is provided for access strips greater than 30m in length.
PO29 Realignment of boundaries in the Rural zone only occurs where this contributes to: (a) a reduction in the number of lots or level of fragmentation in the zone; or (b) potential for improved land management practices; or (c) improved protection and management of significant ecological values.	No acceptable outcome is nominated.

Table 9.3.4.3(a)-Assessable development (Part)

Performance outcomes	Acceptable outcomes
Movement network design **Editor's note**—The Transport impact, access and parking code and the Development manual planning scheme policy no. SC6.4 sets out other requirements relating to movement network design.	
PO30 The movement network has a legible structure, with roads and streets that conform to their function in the network, having regard to: (a) traffic volumes, vehicle speeds and driver behaviour; (b) on street parking; (c) sight distance; (d) provision for public transport routes and stops; (e) provision for pedestrian and cyclist movement, prioritising these where appropriate; (f) provision for waste collection and emergency vehicles; (g) lot access; (h) convenience; (i) public safety; (j) amenity; (k) the incorporation of public utilities and drainage; and (l) landscaping and street furniture.	No acceptable outcome is nominated. **Editor's note—**The outcomes of a Traffic impact assessment report undertaken as per the Development manual planning scheme policy no. SC6.4.3.14 Traffic impact assessment guidelines will assist in informing the movement network design. **Editor's note—**Applicants should refer to the Development manual planning scheme policy no. SC6.4-SC6.4.3.5 Car parking and public transport facilities guidelines, SC6.4.4.7 Bicycle, pedestrian and shared path design, SC6.4.3.22 Waste management guidelines, SC6.4.3.13 Townsville road hierarchy, SC6.4.4.1 Geometric road design, SC6.4.3.6 Landscape policy, SC6.4.3.9 Water sensitive urban design, SC6.4.3.20 Public lighting and utility services and SC6.4.4.4 Stormwater drainage design to assist in complying with this outcome.

PO31 The road and street network provides for convenient and safe movement between local streets and higher order roads.	No acceptable outcome is nominated. **Editor's note—**Applicants should refer to the Development manual planning scheme policy no. SC6.4 - SC6.4.3.13 Townsville road hierarchy, SC6.4.4.1 Geometric road design and SC6.4.3.14 Traffic impact assessment guidelines to assist and comply with this outcome.
PO32 A cul—de—sac is not included in the road and street design unless no other practical options exist.	No acceptable outcome is nominated.
PO33 Local streets do not operate as through traffic routes for externally generated traffic (other than for pedestrians, cyclists and public transport).	No acceptable outcome is nominated. **Editor's note—**Applicants should refer to the Development manual planning scheme policy no. SC6.4 - SC6.4.4.1 Geometric road design, SC6.4.3.13 Townsville road hierarchy and SC6.4.3.14 Traffic impact assessment guidelines to assist and comply with this outcome.
PO34 Safe, convenient and efficient intersections are provided for vehicles, pedestrians, cyclists and public transport.	No acceptable outcome is nominated. **Editor's note—**Applicants should refer to the Development manual planning scheme policy no. SC6.4 - SC6.4.4.1 Geometric road design, SC6.4.3.13 Townsville road hierarchy and SC6.4.3.14 Traffic impact assessment guidelines to assist and comply with this outcome.
PO35 Access arrangements for lots do not affect the function, vehicle speeds, safety, efficiency and capacity of streets and roads.	No acceptable outcome is nominated. **Editor's note—**Applicants should refer to the Development manual planning scheme policy no. SC6.4 - SC6.4.4.1 Geometric road design, SC6.4.3.13 Townsville road hierarchy and SC6.4.3.14 Traffic impact assessment guidelines to assist and comply with this outcome.
PO36 Rear lanes are designed to: (a) provide enough width to enable safe vehicle movement, including service vehicles; (b) connect to other streets at both ends; (c) enable safe access into and out of garages without using doors that open into the lane; (d) not create a more direct through-route alternative for vehicles, cyclists or pedestrians than the adjoining street network; (e) ensure rear yards of properties can be fenced for security; (f) ensure any rear boundary treatment or tree planting does not create concealed recesses, obstructed access or allow uninvited access opportunities into rear yards; and (g) not provide for visitor parking within the lane.	**AO36** Rear lanes are designed and provided in accordance with the Development manual planning scheme policy no. SC6.4 - SC6.4.3.16 Rear lane design.
PO37 Reconfigurations, where involving a frontage to an existing or historical rear lane are designed to not diminish the character of the rear lane.	**AO37.1** Lots have primary frontage to a street or road, other than rear lane.
	AO37.2 Development is undertaken in accordance with the Development manual planning scheme policy SC6.4 - SC6.4.3.16 Rear lane design.

Table 9.3.4.3(a)—Assessable development (Part)

Performance outcomes	Acceptable outcomes
Road design **Editor's note—**The Transport impact, access and parking code sets out other requirements relating to road design.	
PO38 The geometric design features of each type of road: (a) convey its primary function for all relevant design vehicle types; (b) have an adequate horizontal and vertical alignment that is not conducive to excessive speeds; (c) encourage traffic speeds and volumes to levels commensurate with road hierarchy function; (d) ensure unhindered access by emergency and waste collection vehicles and buses; (e) ensures safe access to lots; (f) ensure design has regard and includes treatment to address the function, the necessary legibility and place making to support adjoining land uses; and (g) accommodate appropriate bicycle, pedestrian and shared paths.	**AO38** Roads are designed in accordance with the standards identified in Development manual planning scheme policy no. SC6.4 — SC6.4.4.1 Geometric road design, SC6.4.3.13 Townsville road hierarchy, SC6.4.3.14 Traffic impact assessment guidelines, SC6.4.3.22 Waste management guidelines, SC6.4.4.7 Bicycle, pedestrian and shared path design and SC6.4.4.8 Standard drawings.

Table 9.3.4.3(a)—Assessable development (Part)

Performance outcomes	Acceptable outcomes
Pedestrian and cyclist facilities	
PO39 A network of bicycle, pedestrian and shared paths is provided which encourage pedestrian activites and cycling for transportation and recreational purposes and that links open space networks, employment areas and community facilities, including public transport stops, activity centres and schools, and is designed having regard to: (a) topography; (b) cyclist and pedestrian safety; (c) cost effectiveness and maintenance costs; (d) likely user volumes and types; (e) convenience, including end of trip facilities; and (f) accessibility, including public lighting, signage and pavement making.	No acceptable outcome is nominated. **Editor's note—**Applicants should refer to the Development manual planning scheme policy no. SC6.4-SC6.4.4.1 Geometric road design, SC6.4.3.13 Townsville road hierarchy, SC6.4.3.14 Traffic impact assessment guidelines and SC6.4.4.7 Bicycle, pedestrian and shared path design to assist in complying with this outcome.

PO40 The alignment of pedestrian paths and cycleways is designed so that they: (a) allow for the retention of trees and other significant features; (b) maximise the visual interest provided by views and landmarks where they exist; (c) do not compromise the operation of or access to other infrastructure services; and (d) minimise potential conflict points with vehicles.	No acceptable outcome is nominated. **Editor's note—**Applicants should refer to the Development manual planning scheme policy no. SC6.4 for additional information to assist in achieving this outcome.
PO41 Where possible, the bicycle, pedestrian and shared path design facilitates uninterrupted movement of users and safe street crossings are provided for pedestrians and cyclists across major roads.	No acceptable outcome is nominated. **Editor's note—**Applicants should refer to the Development manual planning scheme policy no. SC6.4-SC6.4.3.13 Townsville road hierarchy, SC6.4.4.1 — Geometric road design, SC6.4.4.7 Bicycle, pedestrian and shared path design and SC6.4.4.8 Standard drawings to assist in complying with this outcome.

Table 9.3.4.3(a)—Assessable development (Part)

Performance outcomes	Acceptable outcomes
Public transport	
PO42 The movement network caters for the extension of existing or future public transport routes to provide services that are convenient and accessible to the community.	**AO42** Except in the Rural zone and the Rural residential zone, at least 90% of proposed lots are within 400m walking distance from an existing or potential bus route or 500m walking distance of an identified bus stop. **Editor's note—**The outcomes of a Traffic impact assessment report undertaken as per the Development manual planning scheme policy no. SC6.4.3.14 — Traffic impact assessment guidelines will assist in informing the design outcomes and alignment for public transport routes. **Editor's note—**Applicants should refer to the Development manual planning scheme policy no.SC6.4-SC6.4.3.5 — Car parking and public transport facilities guidelines and SC6.4.4.7 — Bicycle, pedestrian and shared path design and SC6.4.4.1 Geometric road design to assist in complying with this outcome.
PO43 Residential densities are optimised within walking distance of existing and potential public transport stations, where this is consistent with the intended character of the zone or precinct in which the land is located.	No acceptable outcome is nominated.
PO44 Public transport stops are located and designed to: (a) ensure adequate sight distances are available to and for passing traffic; (b) be part of the pedestrian network and allow for safe pedestrian crossing; (c) provide shelter or shade, seats, adequate lighting and timetable information; (d) be in keeping with the character of the locality; (e) be able to be overlooked from nearby buildings where in urban areas; and (f) minimise adverse impacts on the amenity of nearby dwellings.	No acceptable outcome is nominated. **Editor's note—**The outcomes of a Traffic impact assessment report undertaken as per the Development manual planning scheme policy no.SC6.4 - SC6.4.3.14 — Traffic impact assessment guidelines will assist in informing the design outcomes and alignment for public transport routes. **Editor's note—**Applicants should refer to the Development manual planning scheme policy no.SC6.4 - SC6.4.3.5— Car parking and public transport facilities guidelines and SC6.4.4.7— Bicycle, pedestrian and shared path design and SC6.4.4.8 Standard drawings and SC6.4.4.1 Geometric road design to assist in complying with this outcome.

Table 9.3.4.3(a)—Assessable development (Part)

Performance outcomes	Acceptable outcomes
Additional requirements for volumetric subdivision	
PO45 The reconfiguration of the space above or below the surface of the land facilitates appropriate development in accordance with the intent of the zone or precinct in which the land is located or is consistent with a lawful approval that has not lapsed.	No acceptable outcome is nominated.

Table 9.3.4.3(b)-Separation distances to electricity transmission line easement for habitable building or primary open space areas

Column 1 Nominal operating voltage of the transmission line	Column 2 Separation distance – measured from the edge of the easement
Up to 132 kV	20m
275 kV and 330 kV	30m
500kV	40m

Table 9.3.4.3(c)-Minimum lot size dimensions

Zone	**Minimum Lot Size** (Exclusive of any accessway associated with a rear lot)	**Average Lot Size**	**Minimum Frontage** (other than for a rear lot)	**Minimum Depth**
Low density residential	1,000m² if in the Stables precinct	-	8m	25m
	If in the Marlow Street precinct, no acceptable outcome is nominated.	1,700m² if in the Marlow Street precinct	-	-
	400m² otherwise	-	8m	25m
Medium density residential	400m²	-	8m	25m
Character residential	500m² if In the Interwar to 1950s asymmetrical gable precinct or the Interwar gables and Queensland bungalows precinct or the Queenslanders precinct	-	8m	40m
	400m² otherwise	-	8m	25m
High density residential	800m²	-	15m	25m
Centres zones	450m²	-	8m	-

Any other zone	No acceptable outcome is nominated	-	-	-

9.3.5 Transport impact, access and parking code

9.3.5.1 Application

This code applies to development where the code is identified as applicable in the categories of development and assessment.

When using this code, reference should be made to section 5.3.2 and where applicable, section 5.3.3 located in Part 5.

9.3.5.2 Purpose

(1) The purpose of the Transport impact, access and parking code is to ensure appropriate provision for transport and end of trip facilities, and to facilitate, as far as practicable, an environmentally sustainable transport network.

(2) The purpose of the code will be achieved through the following overall outcomes:

- (a) the function, safety and efficiency of the transport network are optimised;
- (b) pedestrians (including people with a disability) and cyclists are provided with a high level of accessibility, safety, amenity and convenience within a development site and on-site facilities are integrated with external walking and cyclist networks and public transport nodes;
- (c) the use of public transport is facilitated wherever appropriate;
- (d) access, parking, servicing and associated manoeuvring areas are designed to be safe, functional and meet the reasonable demands generated by the development;
- (e) access, parking, servicing and associated manoeuvring areas do not detract from streetscape character, and are designed to discourage crime and antisocial behaviour; and
- (f) adverse impacts on the environment and the amenity of the locality are avoided.

9.3.5.3 Assessment benchmarks

Table 9.3.5.3—Assessable development (Part)

Performance outcomes	Acceptable outcomes
Transport impact **Editor's note—**Applicants should note that the Department of Transport and Main Roads may have additional requirements. **Editor's note—**Applicants should also note that a transport impact assessment may be required to demonstrate compliance with this code.	
PO1 The development is located on roads that are appropriate for the nature of traffic generated, having regard to the safety and efficiency of the transport network, and the functions and characteristics identified of the road hierarchy. The road hierarchy is shown on Figure 9.5 — Road hierarchy existing and Figure 9.6 Road Hierarchy Future	No acceptable outcome is nominated. **Editor's note—** Applicants should refer to the Development manual planning scheme policy no. SC6.4 - SC6.4.3.13 Townsville road hierarchy, SC6.4.4.1 Geometric road design and SC6.4.3.14 Traffic impact assessment guidelines.

Click here to view PDF high resolution map.

Figure 9.5 - Road hierarchy existing

Click here to view PDF high resolution map.

Figure 9.6 - Road hierarchy future

PO2 Development does not compromise the orderly provision or upgrading of the transport network.	No acceptable outcome is nominated. **Editor's note—** Applicants should refer to the Development manual planning scheme policy no. SC6.4 - SC6.4.3.13 Townsville road hierarchy, SC6.4.4.1 Geometric road design and SC6.4.3.14 Traffic impact assessment guidelines.
PO3 On-site transport network infrastructure (including roads, parking, access and public transport, pedestrian and cyclist facilities) appropriately integrates and connects with surrounding networks. **Editor's note—**To demonstrate compliance with this performance outcome with regard to pedestrian and cyclist elements, applicants may be requested to provide a walk and cycle network plan to show connections to internal and external attractions, existing and proposed walk and cycle facilities and which respond to desire lines of all users.	No acceptable outcome is nominated. **Editor's note—** Applicants should refer to the Development manual planning scheme policy no. SC6.4 - SC6.4.3.5 Carparking and transport facilities guidelines, SC6.4.3.14 Traffic impact assessment guidelines, SC6.4.4.7 bicycle, pedestrian and shared path design, SC6.4.4.1 Geometric road design and SC6.4.3.13 Townsville road hierarchy.
PO4 As far as practicable, development is designed to encourage travel by public transport, walking and cycling.	No acceptable outcome is nominated. **Editor's note—** Applicants should refer to the Development manual planning scheme policy no. SC6.4 - SC6.4.3.5 Carparking and transport facilities guidelines, SC6.4.3.14 Traffic impact assessment guidelines, SC6.4.4.7 bicycle, pedestrian and shared path design, SC6.4.4.1 Geometric road design and SC6.4.3.13 Townsville road hierarchy

Table 9.3.5.3—Assessable development (Part)

Performance outcomes	Acceptable outcomes
Site access **Editor's note—**Local government (or other service owner) approval must be obtained before interfering with any infrastructure or undertaking works in the road reserve. In addition, be aware that the location of a driveway may be influenced by an approved plan of development that applies to the site or by the location of existing infrastructure or existing vehicle crossovers.	
PO5 Access arrangements are appropriate for: (a) the capacity of the parking area; (b) the volume, frequency and type of vehicle usage; (c) the function and characteristics of the access road and adjoining road network; and (d) the safety and efficiency of the road network.	**AO5** Access is provided in accordance with the standards identified in the Development manual planning scheme policy SC6.4 — SC6.4.3.17 Driveways and SC6.4.3.5 Carparking and public transport facilities guidelines. **Editor's note—** Applicants should refer to the Development manual planning scheme policy no. SC6.4 - SC6.4.3.13 Townsville road hierarchy and SC6.4.3.14 Traffic impact assessment guidelines.
PO6 Where practical, access for cyclists and pedestrians is clearly distinguished from vehicle access.	No acceptable outcome is nominated. **Editor's note—** Applicants should refer to the Development manual planning scheme policy no. SC6.4 - SC6.4.3.5 Carparking and public transport facilities guidelines.
PO7 Access is located and designed to provide safe and easy access to the site, having regard to its position, width and gradient.	**AO7** Access is provided in accordance with the standards identified in the Development manual planning scheme policy no. SC6.4 — SC6.4.3.17 Driveways and SC6.4.4.8 Standard drawings **Editor's note—** Applicants should refer to the Development manual planning scheme policy no. SC6.4 - SC6.4.3.5 Carparking and public transport facilities guidelines, SC6.4.3.14 Traffic impact assessment guidelines and SC6.4.3.13 Townsville road hierarchy.
PO8 All vehicles reasonably expected to use the site are able to travel the length of the driveway or driveway access without damage to vehicle or the driveway surface.	**AO8** Access is provided in accordance with the standards identified in the Development manual planning scheme policy no. SC6.4 — SC6.4.3.17 Driveways and SC6.4.3.5 Carparking and public transport facilities guidelines.

PO9 A driveway does not cause change in the level of a footpath that is unsafe or inaccessible for people with mobility difficulties.	**AO9** Access is provided in accordance with the standards identified in the Development manual planning scheme policy no. SC6.4 — SC6.4.3.17 Driveways and SC6.4.4.8 Standard drawings.
PO10 Driveways are designed to withstand loadings from all vehicles reasonably expected to use the site.	**AO10** Access is provided in accordance with the standards identified in the Development manual planning scheme policy no. SC6.4 — SC6.4.3.17 Driveways.
PO11 A driveway does not allow water to pond on adjacent properties or adjacent buildings and does not allow water to enter a building or property.	**AO11** Access is provided in accordance with the standards identified in the Development manual planning scheme policy no. SC6.4 — SC6.4.3.17 Driveways.
PO12 Construction of a driveway does not damage or interfere with the location, function of or access to any services and infrastructure.	**AO12** Access is provided in accordance with the standards identified in the Development manual planning scheme policy no. SC6.4 — SC6.4.3.17 Driveways, SC6.4.3.5 Carparking and public transport facilities guidelines, and SC6.4.4.8 Standard drawings.
PO13 All vehicles reasonably expected to access the site can safely manoeuvre to allow vehicles to exit and enter in a forward motion.	**AO13** Access is provided in accordance with the standards identified in Development manual planning scheme policy no. SC6.4 - SC6.4.3.17 Driveways, SC6.4.3.5 Carparking and public transport facilities guidelines and SC6.4.4.8 Standard drawings such that all vehicles reasonably expected to access the site, can exit and enter in a forward motion with no more than a three-point turn.

Table 9.3.5.3—Assessable development (Part)

Performance outcomes	Acceptable outcomes
Pedestrian and cyclist facilities	
PO14 Provision is made for the safe and convenient movement of pedestrians on-site and connecting to the external network, having regard to desire lines, legibility, safety, topographical constraints, shading and other weather protection and equitable access arrangements.	No acceptable outcome is nominated. **Editor's note—** Applicants should refer to the Development manual planning scheme policy no. SC6.4 — SC6.4.3.5 Carparking and public transport facilities guidelines, SC6.4.4.7 Bicycle, pedestrian and shared path design, SC6.4.3.13 Townsville road hierarchy, SC6.4.4.1 Geometric road design and SC6.4.3.6 Landscape policy to assist in complying with this outcome.
PO15 Provision is made for safe and convenient cycle movement to the site and within the site and connecting to the external network having regard to desire lines, users' needs, safety, topographical constraints and legibility. **Editor's note—**End of trip bicycle facilities will need to be provided for major development in accordance with the Queensland Development Code Mandatory Part 4.1 — Sustainable Buildings. "Major development" is defined in MP4.1.	No acceptable outcome is nominated. **Editor's note—** Applicants should refer to the Development manual planning scheme policy no. SC6.4 — SC6.4.3.5 Carparking and public transport facilities guidelines, SC6.4.4.7 Bicycle, pedestrian and shared path design, SC6.4.3.13 Townsville road hierarchy, SC6.4.4.1 Geometric road design and SC6.4.3.6 Landscape policy to assist in complying with this outcome.

PO16 Parking areas, pathways and other elements of transport network infrastructure are designed to enhance public safety by discouraging crime and antisocial behaviour, having regard to: (a) provision of opportunities for casual surveillance; (b) provision of lighting; (c) the use of fencing to define public and private spaces, whilst allowing for appropriate sight lines; (d) minimising potential concealment points and assault locations; (e) minimising opportunities for graffiti and other vandalism; and (f) restricting unlawful access to buildings and between buildings. **Editor's note—**Crime Prevention through Environmental Design Guidelines for Queensland prepared by the State Government may provide applicants with guidance on these matters.	No acceptable outcome is nominated. **Editor's note—** Applicants should refer to the Development manual planning scheme policy no. SC6.4 — SC6.4.3.5 Carparking and public transport facilities guidelines, SC6.4.4.7 Bicycle, pedestrian and shared path design, SC6.4.3.13 Townsville road hierarchy, SC6.4.4.1 Geometric road design, SC6.4.3.20 Public lighting and utility services and SC6.4.3.6 Landscape policy to assist in complying with this outcome.

Table 9.3.5.3—Assessable development (Part)

Performance outcomes	Acceptable outcomes
Parking	
PO17 Provision is made for on-site vehicle parking to: (a) meet the demand likely to be generated by the development; and (b) avoid on street parking that would adversely impact on the safety or capacity of the road network or unduly impact on local amenity.	**AO17** Parking is provided in accordance with the standards identified in Parking rates planning scheme policy no. SC6.10. **Editor's note—** Applicants should refer to the Development manual planning scheme policy no. SC6.4 - SC6.4.3.5 Carparking and public transport facilities guidelines, SC6.4.3.14 Traffic impact assessment guidelines, SC6.4.4.1 Geometric road design and SC6.4.3.13 Townsville road hierarchy to assist in complying with this outcome.
PO18 Parking ensures access is provided for people with disabilities.	**AO18** Parking areas are designed in accordance with the standards identified in the Development manual planning scheme policy no. SC6.4 — SC6.4.3.5 Car parking and public transport facilities guidelines.
PO19 Where the nature of the proposed development creates a demand, provision is made for set-down and pick-up facilities by bus, taxis or private vehicle, which: (a) are safe for pedestrians and vehicles; (b) are conveniently connected to the main component of the development by pedestrian pathway; and (c) provide for pedestrian priority and clear sight lines.	No acceptable outcome is nominated. **Editor's note—**Applicants should refer to the Development manual planning scheme policy no. SC6.4 - SC6.4.3.5 Carparking and public transport facilities guidelines, SC6.4.3.14 Traffic impact assessment guidelines, SC6.4.4.1 Geometric road design, SC6.4.3.13 Townsville road hierarchy and SC6.4.3.6 Landscape policy to assist in complying with this outcome.

PO20 Parking and servicing areas are designed to: (a) be clearly defined, marked and signed; (b) be convenient and accessible; (c) minimise large unbroken areas of hardstand to the extent practicable; (d) be safe for vehicles, pedestrians and cyclists; (e) provide shading; (f) be located to encourage multi-purpose trip ends and minimise vehicle movements within the site; and (g) minimise any adverse impacts on the amenity of surrounding land.	No acceptable outcome is nominated. **Editor's note—**Applicants should refer to the Development manual planning scheme policy no. SC6.4 - SC6.4.3.5 Carparking and public transport facilities guidelines, SC6.4.3.17 Driveways, SC6.4.3.14 Traffic impact assessment guidelines, SC6.4.4.1 Geometric road design and SC6.4.3.6 Landscape policy.
PO21 Vehicle spaces have adequate dimensions to meet user requirements.	**AO21** Parking areas are designed in accordance with the standards identified in the Development manual planning scheme policy no. SC6.4 — SC6.4.3.5 Car parking and public transport facilities guidelines.
PO22 Pavement is constructed to an appropriate standard.	No acceptable outcome is nominated.
PO23 Parking and servicing areas are kept accessible and available for use as a parking area at all times during the normal business hours of the activity.	No acceptable outcome is nominated.
PO24 Visitor parking for accommodation activities remains accessible and useable to visitors at all times.	No acceptable outcome is nominated.
PO25 Multi-level parking areas are designed, articulated and finished to make a positive contribution to the local external streetscape character, as well as the internal user experience of the facility ensuring way finding technologies and aesthetic treatments are provided.	No acceptable outcome is nominated.

Table 9.3.5.3—Assessable development (Part)

Performance outcomes	Acceptable outcomes
Servicing	
PO26 Provision is made for the on-site loading, unloading, manoeuvring and access by service vehicles that: (a) are adequate to meet the demands generated by the development; (b) are able to accommodate the design service vehicle requirements; and (c) does not unduly impede vehicular, cyclist and pedestrian safety and convenience both within the site and external to the site.	**AO26** Servicing areas are provided and designed in accordance with the standards identified in the Development manual planning scheme policy no. SC6.4 – SC6.4.3.5 Car parking and public transport facilities guidelines.
PO27 Refuse collection vehicles are able to safely access on-site refuse collection facilities.	**AO27** Refuse collection areas are provided and designed in accordance with the standards identified in the Development manual planning scheme policy no. SC6.4 – SC6.4.3.22 Waste management guidelines and SC6.4.3.5 Car parking and public transport facilities guidelines.
PO28 Servicing arrangements minimise any adverse impact on the amenity of premises in the vicinity, having regard to operating hours, noise generation, proximity to sensitive uses, odour generation and dust.	No acceptable outcome is nominated.

9.3.6 Works code

9.3.6.1 Application

This code applies to development where the code is identified as applicable in the categories of development and assessment.

When using this code, reference should be made to section 5.3.2 and where applicable, section 5.3.3 located in Part 5.

9.3.6.2 Purpose

(1) The purpose of the Works code is to ensure development is provided with a level of infrastructure which maintains or enhances community health, safety and amenity and which avoids or minimises impacts on the natural environment.

(2) The purpose of the code will be achieved through the following overall outcomes:

- (a) premises are provided with a level of service which is appropriate to the intended character and function of the zone;
- (b) risk to life and property is avoided;
- (c) development does not detract from environmental values, including the quality of receiving waters;
- (d) development does not detract from the desired character and amenity of the locality;
- (e) the integrity and quality of existing infrastructure is maintained;
- (f) access, parking, streets and pedestrian and cycle paths are provided to standards that ensure safe, convenient and efficient operation of movement networks;
- (g) development facilitates an efficient provision of infrastructure and use of resources; and
- (h) whole of life cycle costs for infrastructure are minimised.

9.3.6.3 Assessment benchmarks

Accepted development subject to requirements-Access and parking

Table 9.3.6.3—Accepted development subject to requirements (Part)

Performance outcomes	Acceptable outcomes
Access and parking	
PO1 Access arrangements are appropriate for: (a) the capacity of the parking area; (b) the volume, frequency and type of vehicle usage; and (c) the function and characteristics of the access road and adjoining road network.	**AO1** Access is provided in accordance with Australian Standard AS2890.1.
PO2 Provision is made for on-site vehicle parking to meet the demand likely to be generated by the development and to avoid on street parking where that would adversely impact on the safety or capacity of the road network or unduly impact on local amenity.	**AO2.1** Parking is provided at the rates set out in Parking rates planning scheme policy no. SC6.10. OR **AO2.2** Where an existing lawful premises and involves not more than 5% or 50m^2 (whichever is the greater) of additional gross floor area, the existing number of on-site parking is retained or increased.

PO3 Parking areas are designed to: (a) be clearly defined, marked and signed; (b) be convenient and accessible; (c) be safe for vehicles, pedestrians and cyclists; and (d) provide spaces which meet the needs of people with disabilities.	**AO3.1** Parking areas are designed in accordance with Australian Standard AS2890.1. OR **AO3.2** Where an existing lawful premises and involves not more than 5% or 50m2 (whichever is the greater) of additional gross floor area, the existing standard of on-site parking is maintained or improved.
PO4 Landscaping is provided to soften the visual impact of parking areas and to provide shading.	**AO4.1** Shade trees within parking areas are provided at the following rate: (a) in single sided, angle or parallel bays - 1 tree per 3 parking spaces; and (b) in double sided, angle or parallel bays - 1 tree per 6 parking spaces. **Editor's note—**The Development manual planning scheme policy no. SC6.4 - SC6.4.3.6 Landscape policy sets out guidance on tree species and planting standards. OR **AO4.2** Where an existing lawful premises and involves not more than 5% or 50m2 (whichever is the greater) of additional gross floor area, the existing standard of landscaping is maintained or improved.
PO5 Provision is made for the onsite loading, unloading, manoeuvring and access by service vehicles that: (a) is adequate to meet the demands generated by the development; (b) is able to accommodate the design service vehicle requirements; (c) is wholly contained within the site; and (d) does not unduly impede vehicular, cyclist and pedestrian safety and convenience within the site.	**AO5.1** Servicing areas are provided and designed in accordance with Australian Standard AS2890.2. OR **AO5.2** Where an existing lawful premises and involves not more than 5% or 50m2 (whichever is the greater) of additional gross floor area, the existing provision for service vehicles is maintained or improved.

Table 9.3.6.3—Accepted development subject to requirements (Part)

Performance outcomes	Acceptable outcomes
Services and utilities	
PO6 A potable water supply is provided that is adequate for the needs of the intended use.	**AO6.1** The development is connected to council's reticulated water supply system in accordance with the Development manual planning scheme policy no. SC6.4-SC6.4.3.21 Townsville Water planning and design guidelines and SC6.4.4.8 Standard drawings. **Editor's note—**If a main exists, then an application for a water meter will be required.
	AO6.2 Water supply systems and connections are designed and constructed in accordance with Development manual planning scheme policy no. SC6.4-SC6.4.3.21 Townsville Water planning and design guidelines, SC6.4.6.2 Water supply and SC6.4.4.8 Standard drawings.

PO7 Wastewater treatment and disposal is provided that is appropriate for the level of demand generated, protects public health and avoids environmental harm.	**AO7.1** The development is connected to council's reticulated sewerage system via an existing sewer connection to the site.
	AO7.2 Waste water systems and connections are designed and constructed in accordance with Development manual planning scheme policy no. SC6.4-SC6.4.3.21 Townsville Water planning and design guidelines, SC6.4.6.3 Sewerage systems and SC6.4.4.8 Standard drawings.
PO8 Provision is made for waste management that is appropriate to the use, protects the health and safety of people and the environment. **Editor's note—**Applicants should also be aware that any provision for disposal of any trade waste is to be made in accordance council's Trade Waste Policy supporting the Water Act 2000, Plumbing and Drainage Act 2002 and the Standard Plumbing Regulation 2003	**AO8.1** The development provides a bin container storage area that has an imperviously sealed pad and is screened to the height of the bins.
	AO8.2 On sites in an industrial zone that are greater than 2,000m^2 in area, provision is made for refuse collection vehicles to access the collection area, undertake the collection activity and to enter and leave the site in a forward direction without having to make more than a 3 point turn.
PO9 The proposed stormwater management system or site works does not adversely affect flooding or drainage characteristics of properties that are upstream, downstream or adjacent to the development site.	**AO9.1** The development does not result in an increase in flood level or flood duration on upstream, downstream or adjacent properties.
	AO9.2 Roof and surface water is conveyed to the kerb and channel or an inter-allotment drainage system in accordance with Australian Standard AS/NZS3500.3:2003.
PO10 The drainage network has sufficient capacity to safely convey stormwater run-off from the site and development does not cause a drainage nuisance to a downstream or adjoining property.	**AO10** Post development discharge of stormwater from the subject land does not exceed predevelopment peak flows and no change to flows across a downstream or adjoining property is created.

Assessable development-Services and utilities

Table 9.3.6.3—Assessable development (Part)

Performance outcomes	Acceptable outcomes
Services and utilities	
PO11 A potable water supply is provided that is adequate for the needs of the intended use.	**AO11.1** Where within an area designated for urban or rural residential development, the development is connected to council's reticulated water supply system in accordance with the Development manual planning scheme policy no. SC6.4-SC6.4.3.21 Townsville Water planning and design guidelines. OR **AO11.2** Otherwise, the development is provided with an on-site water supply in accordance with the Development manual planning scheme policy no. SC6.4-SC6.4.3.11 On-site water supply.
	AO11.3 Water supply systems and connections are designed and constructed in accordance with the Development manual planning scheme policy no. SC6.4-SC6.4.3.21 Townsville Water planning and design guidelines, SC6.4.3.23 Water and sewer network modelling guidelines, SC6.4.6.2 Water supply and SC6.4.4.8 Standard drawings.
PO12 Wastewater treatment and disposal is provided that is appropriate for the level of demand generated, protects public health and avoids adverse impacts on environmental values.	**AO12.1** Where within an area designated for urban development, the development is connected to the council's reticulated sewerage system in accordance with the Development manual planning scheme policy no. SC6.4-SC6.4.3.21 Townsville Water planning and design guidelines. OR **AO12.2** Otherwise, on-site waste water treatment and disposal is provided which complies with the Development manual planning scheme policy no. SC6.4-SC6.4.3.10 On-site sewerage facilities.
	AO12.3 Waste water systems and connections are designed and constructed in accordance with the Development manual planning scheme policy no. SC6.4-SC6.4.3.21 Townsville Water planning and design guidelines, SC6.4.3.23 Water and sewer network modelling guidelines, SC6.4.6.3 Sewerage systems and SC6.4.4.8 Standard drawings.

PO13 The design and management of the development integrates water cycle elements having regard to: (a) reducing potable water demand; (b) minimising wastewater production; (c) minimising stormwater peak discharges and run-off volumes; (d) maintaining natural drainage lines and hydrological regimes as far as possible; (e) reusing stormwater and greywater is encouraged where public safety and amenity will not be compromised; and (f) efficient use of water.	**AO13** Integrated water management practices and infrastructure are implemented in accordance with Development manual planning scheme policy no. SC6.4 - SC6.4.3.8 Stormwater quality management plans for development and SC6.4.3.9 Water sensitive urban design guidelines.
PO14 The development is provided with an adequate energy supply which maintains acceptable standards of public health, safety, environmental quality and amenity.	**AO14** For other than the Rural zone, premises are serviced by: (a) an underground electricity supply approved by the relevant energy authority; or (b) an overhead supply approved by the relevant energy authority where in the Rural residential zone, Special purpose zone or High impact industry zone or where on a lot of less than 2,500m^2 within an area where the existing supply is overhead. **Editor's note—**Applicants should also have regard to the Development manual planning scheme policy no. SC6.4 - SC6.4.3.20 Public lighting and utility services.
PO15 Premises are connected to a telecommunications service approved by the relevant authority.	**AO15** The development is connected to telecommunications infrastructure in accordance with the standards of the relevant regulatory authority. **Editor's note—**The Development manual planning scheme policy no. SC6.4-SC6.4.3.20 Public lighting and utility services provides additional information regarding the supply of telecommunications.
PO16 Provision is made for future telecommunications services (for example fibre optic cable).	No acceptable outcome is nominated.
PO17 Where available, provision is made for reticulated gas.	**AO17** Design and provision of reticulated gas is undertaken in accordance with the Development manual planning scheme policy no. SC6.4-SC6.4.3.20 Public lighting and utility services. **Editor's note—**Applicants should also have regard to the metering requirements of other relevant authorities.
PO18 Adequate access is provided to public services and utilities for future maintenance.	No acceptable outcome is nominated. **Editor's note—**The Development manual planning scheme policy no. SC6.4 provides additional information and requirements for applicants, including when council will require easements over public services and utilities.

Table 9.3.6.3—Assessable development (Part)

Performance outcomes	Acceptable outcomes
Earthworks **Editor's note—**Applicants should be aware that some retaining walls constitute building works that are assessable under the *Building Regulation 2006*. No approval is required under the *Building Regulation 2006* for retaining walls if: (a) there is no surcharge loading; and (b) the height of wall or height of fill or excavation is not more than 1m; and (c) the wall is no closer than 1.5m to a building, structure (e.g. a swimming pool) or other retaining wall. In these cases, the "applicable code" for the purposes of the Act is the Building Code of Australia (refer to BCA Volume 2, Part 3.1.1). Retaining walls not more than 1m in height may be constructed in accordance with an accepted industry standard publication (e.g. timber, concrete masonry or similar). **Editor's note—**Applicants should note that council may request the submission of an engineering report undertaken by suitably qualified engineer to demonstrate compliance with the performance outcomes, particularly where alternative solutions are proposed.	
PO19 Filling and excavation does not result in contamination of land or pose a health and safety risk.	**AO19** Filling and excavation does not: (a) use contaminated materials as fill; (b) excavate contaminated material; and (c) use waste material as fill. **Editor's note—**Applicants should refer to the Development manual planning scheme policy no. SC6.4 - SC6.4.6.10 Earthworks (construction) and SC6.4.5 Construction management for additional information.
PO20 Earthworks result in stable landforms and structures.	**AO20** Earthworks and the construction of retaining walls and batters are undertaken in accordance with the Development manual planning scheme policy no. SC6.4 - SC6.4.4.5 Earthworks (design) and SC6.4.6.10 Earthworks (construction).
PO21 Earthworks are undertaken in a manner that: (a) maintains natural landforms as far as possible; and (b) minimises height of retaining walls and batter faces.	**AO21.1** Earthworks are undertaken in accordance with the Development manual planning scheme policy no. SC6.4 - SC6.4.4.5 Earthworks (design) and SC6.4.6.10 Earthworks (construction). **AO21.2** Retaining walls are designed and constructed: (a) certified as stable by a Registered Professional Engineer of Queensland; and (b) have a combined height of retaining wall and fence of not more than 2 metres.
PO22 Earthworks do not unduly impact on amenity or privacy for occupants of the site or on adjoining land.	No acceptable outcome is nominated.
PO23 Earthworks do not cause environmental harm.	No acceptable outcome is nominated.
PO24 Filling or excavation does not worsen any flooding or drainage problems on the site or on neighbouring properties.	**AO24** Earthworks are undertaken in accordance with the Development manual planning scheme policy no. SC6.4 - SC6.4.4.5 Earthworks (design) and SC6.4.6.10 Earthworks (construction).

PO25 Any structure used to restrain fill or excavation does not worsen drainage problems or cause surface water to be a nuisance to neighbouring properties.	**AO25** Earthworks are undertaken in accordance with the Development manual planning scheme policy no. SC6.4 - SC6.4.4.5 Earthworks (design) and SC6.4.6.10 Earthworks (construction).
PO26 Filling or excavation does not adversely affect sewer, stormwater or water utility infrastructure or access to them for maintenance purposes.	**AO26** Earthworks are undertaken in accordance with the Development manual planning scheme policy no. SC6.4 - SC6.4.4.5 Earthworks (design) and SC6.4.6.10 Earthworks (construction).
PO27 Filling or excavation does not prevent or create difficult access to any property.	**AO27** Earthworks are undertaken in accordance with the Development manual planning scheme policy no. SC6.4 - SC6.4.4.5 Earthworks (design) and SC6.4.6.10 Earthworks (construction).
PO28 Earthworks do not cause significant impacts through truck movements, dust or noise on the amenity of the locality in which the works are undertaken or along routes taken to transport the material and the transportation of materials minimises adverse impacts on the road network.	**AO28** Earthworks are undertaken in accordance with the Development manual planning scheme policy no. SC6.4 - SC6.4.6.10 Earthworks (construction) and SC6.4.5 Construction management.

Table 9.3.6.3—Assessable development (Part)

Performance outcomes	Acceptable outcomes
Movement networks	
PO29 The following are provided along the full extent of the road frontage and to a standard that is appropriate to the function of the road or street and the character of the locality: (a) paved roadway; (b) appropriate pavement edging (including kerb and channel); (c) pedestrian paths and cycleways; (d) streetscaping and street tree planting; (e) stormwater drainage; (f) street lighting systems; and (g) conduits to facilitate the provision of and other utility services.	**AO29** Design and construction of external road works are undertaken in accordance with the Development manual planning scheme policy no. SC6.4. **Editor's note—**Applicants should have regard to the following sub-sections of the Development manual planning scheme policy no. SC6.4 - SC6.4.3.20 Public lighting and utility services; SC6.4.4.4 Stormwater drainage design; SC6.4.4.2 Pavement design; SC6.4.4.7 Bicycle, pedestrian and shared path design; SC6.4.3.6 Landscape policy, SC6.4.4.1 Geometric road design, SC6.4.3.3 Footpath treatment policy and SC6.4.6 Construction standards.
PO30 Provision is made in the road reserve for streetscaping, pedestrians and cyclists in a manner consistent with: (a) the current and projected level of usage; (b) the desired streetscape character; and (c) activities which are anticipated to occur within the verge.	**AO30** Streetscaping works, footpaths and cycle paths are provided in accordance with Development manual planning scheme policy no. SC6.4. **Editor's note—**Applicants should have regard to the following sub-sections of the Development manual planning scheme policy no. SC6.4 - SC6.4.3.3 Footpath treatment policy; SC6.4.4.1 Geometric road design; SC6.4.3.13 Townsville road hierarchy, SC6.4.4.7 Bicycle, pedestrian and shared path design; SC6.4.3.6 Landscape policy and SC6.4.3.20 Public lighting and utility services in demonstrating compliance.

PO31 Parking areas are designed and constructed in a manner that is sufficiently durable for the intended function, maintains all weather access and ensures the safe passage of vehicles, pedestrians and cyclists.	**AO31** Parking area design and construction is undertaken in accordance with the Development manual planning scheme policy no. SC6.4 — SC6.4.3.5 Car parking and public transport facilities guidelines.
PO32 Movement networks can be easily and efficiently maintained.	**AO32** Infrastructure is provided in accordance with the Development manual planning scheme policy no. SC6.4 — SC6.4.4.1 Geometric road design, SC6.4.3.13 Townsville road hierarchy and SC6.4.3.14 Traffic impact assessment guidelines.

Table 9.3.6.3—Assessable development (Part)

Performance outcomes	Acceptable outcomes
Waste management	
PO33 Development provides adequate waste management facilities on site for the storage of waste and recyclable material in a manner which: (a) is of adequate size to accommodate the expected amount of refuse to be generated by the use; (b) is in a position that is conveniently accessible for collection at all times; (c) is able to be kept in a clean, safe and hygienic state at all times; and (d) minimises the potential for environmental harm, environmental nuisance and adverse amenity impacts.	**AO33** Waste management facilities are provided in accordance with the Development manual planning scheme policy no. SC6.4 – SC6.4.3.22 Waste management guidelines. **Editor's note—**Applicants may be requested to prepare a Waste management plan in accordance with the Development manual planning scheme policy no.SC6.4-SC6.4.3.22 Waste management guidelines.

Table 9.3.6.3—Assessable development (Part)

Performance outcomes	Acceptable outcomes
Construction management	
PO34 Work is undertaken in a manner which does not cause unacceptable impacts on surrounding areas as a result of dust, odour, noise or lighting.	No acceptable outcome is nominated. **Editor's note**—Applicants should refer to the Development manual planning scheme policy no.SC6.4 for assistance in complying with this outcome.
PO35 While undertaking development works, the site and adjoining road are maintained in a tidy, safe and hygienic manner.	No acceptable outcome is nominated. **Editor's note—**Applicants should refer to the Development manual planning scheme policy no.SC6.4 for assistance in complying with this outcome.
PO36 Traffic and parking generated during construction are managed to minimise impact on the amenity of the surrounding area.	No acceptable outcome is nominated. **Editor's note**—Applicants should refer to the Development manual planning scheme policy no.SC6.4 for assistance in complying with this outcome.
PO37 Council's infrastructure is not damaged by construction activities.	No acceptable outcome is nominated. **Editor's note—**Applicants should refer to the Development manual planning scheme policy no.SC6.4 for assistance in complying with this outcome

PO38 The integrity of new infrastructure is maintained.	No acceptable outcome in nominated. **Editor's note—**Applicants should have regard to the following sections of the Development manual planning scheme policy no. SC6.4 - SC6.4.5 Construction management; SC6.4.6 Construction standards and SC6.4.7 Acceptance of completed works in demonstrating compliance.
PO39 Construction activities and works are carried out in a manner which avoids damage to the environment, retained vegetation and impacts on fauna.	**AO39** Construction activities and works are undertaken in accordance with the Development manual planning scheme policy no. SC6.4 - SC6.4.5 Construction management.
PO40 Vegetation cleared from a site is disposed of in a manner that maximises reuse and recycling and minimises impacts on public health and safety.	**AO40** Construction activities and works are carried out in accordance with Development manual planning scheme policy no. SC6.4 - SC6.4.6.11 Clearing and grubbing. **Editor's note—**Applicants shall also refer to Development manual planning scheme policy no. SC6.4 for assistance in complying with this outcome.

Part 10 Other plans

10.1 Preliminary

(1) Other plans provide the planning framework for priority development areas (PDAs) under the Economic Development Act 2012.

(2) The following are the development schemes for the PDAs:

  (a) Oonoonba Urban Development Area Development Scheme; and

  (b) Townsville City Waterfront Priority Development Area Development Scheme.

(3) Priority development area maps are included in Schedule 2 Mapping, SC6.2 Other plans maps.

10.2 Oonoonba Urban Development Area Development Scheme

The Oonoonba Urban Development Area Development Scheme was approved by the state government on 15 April 2011.

The development scheme is the planning document which will assist in the planning, carrying out, promoting, coordinating and controlling of development within the Oonoonba PDA.

All development applications within the PDA are assessed against the development scheme.

In the Oonoonba PDA, development applications are assessed by staff within the Department of Infrastructure, Local Government State Development, Infrastructure and Planning.

10.3 Townsville City Waterfront Priority Development Area Development Scheme

The Townsville City Waterfront PDA Development Scheme was approved by the state government on 23 October 2015.

The Townsville City Waterfront PDA Development Scheme is the planning document that will assist in the planning, carrying out, promoting, coordinating and controlling of development within the Townsville City Waterfront PDA.

All development applications within the PDA are assessed against the development scheme.

Development assessment for land within the Townsville City Waterfront PDA, which is strategic port land, will be managed by the Minister for Economic Development Queensland (MEDQ). For the remainder of land within the PDA, development assessment powers have been delegated by the MEDQ to Townsville City Council.

Schedule 1 Definitions

SC1.1 Use definitions

(1) Use definitions have a particular meaning for the purpose of the planning scheme.

(2) Any use not listed in Table SC1.1.2 column 1 is an undefined use.

Note—Development comprising a combination of defined uses is not considered to be an undefined use.

(3) A use listed in Table SC1.1.2 column 1 has the meaning set out beside that term in column 2.

(4) The use definitions listed here are the definitions used in this planning scheme.

(5) Column 3 of Table SC1.1.2 identifies examples of the types of activities that are consistent with the use identified in column 1.

(6) Column 4 of Table SC1.1.2 identifies examples of activities that are not consistent with the use identified in column 1.

(7) Columns 3 and 4 of Table SC1.1.2 are not exhaustive lists.

(8) Uses listed in Table SC1.1.2 columns 3 and 4 that are not listed in column 1, do not form part of the definition.

Table SC1.1.1 - Index of use definitions

- Adult store
- Agricultural supplies store
- Air services
- Animal husbandry
- Animal keeping
- Aquaculture
- Bar
- Brothel
- Bulk landscape supplies
- Caretaker's accommodation
- Car wash
- Cemetery
- Child care centre
- Club
- Community care centre
- Community residence
- Community use
- Crematorium
- Cropping
- Detention facility
- Dual occupancy
- Dwelling house
- Dwelling unit
- Educational establishment
- Emergency services
- Environment facility
- Extractive industry
- Food and drink outlet
- Function facility
- Funeral parlour
- Garden centre
- Hardware and trade supplies
- Health care services
- High impact industry
- Home based business
- Hospital
- Hotel
- Indoor sport and recreation
- Intensive animal industry
- Intensive horticulture
- Landing
- Low impact industry
- Major electricity infrastructure
- Major sport, recreation and entertainment facility
- Marine industry
- Market
- Medium impact industry
- Motor sport facility
- Multiple dwelling
- Nature-based tourism
- Nightclub entertainment facility
- Non-resident workforce accommodation
- Office
- Outdoor sales
- Outdoor sport and recreation
- Park
- Parking station
- Permanent plantation
- Place of worship
- Port services
- Relocatable home park
- Renewable energy facility
- Research and technology industry
- Residential care facility
- Resort complex
- Retirement facility
- Roadside stall
- Rooming accommodation
- Rural industry
- Rural workers' accommodation
- Sales office
- Service industry
- Service station
- Shop
- Shopping centre
- Short-term accommodation
- Showroom
- Special industry
- Substation
- Telecommunications facility
- Theatre
- Tourist attraction
- Tourist park
- Transport depot
- Utility installation
- Veterinary services
- Warehouse
- Wholesale nursery
- Winery

Table SC1.1.2 - Use definitions

Column 1 Use	Column 2 Definition	Column 3 Examples include	Column 4 Does not include the following examples
Adult store	Premises used as a shop where the primary purpose is for the display or sale of sexually explicit materials, products and devices associated with or used in a sexual practice or activity.	Sex shop	Shop, newsagent, registered pharmacist or video hire, where the primary use of these are concerned with: • the sale, display or hire of printed or recorded matter (not of a sexually explicit nature); or • the sale or display of underwear or lingerie; or • the sale or display of an article or thing primarily concerned with or used in association with a medically recognised purpose.
Agricultural supplies store	Premises used for the sale of agricultural products and supplies including agricultural chemicals and fertilisers, seeds, bulk veterinary supplies, farm clothing, saddlery, animal feed and irrigation materials.		Bulk landscape supplies, garden centre, outdoor sales, wholesale nursery
Air services	Premises used for any of the following: • the arrival and departure of aircraft; • the housing, servicing, refuelling, maintenance and repair of aircraft; • the assembly and dispersal of passengers or goods on or from an aircraft; • any ancillary activities directly serving the needs of passengers and visitors to the use; • associated training and education facilities; • aviation facilities.	Airport, airstrip, helipad, public or private airfield	
Animal husbandry	Premises used for production of animals or animal products on either native or improved pastures or vegetation. The use includes ancillary yards, stables and temporary holding facilities and the repair and servicing of machinery.	Cattle studs, grazing of livestock, non-feedlot dairying	Animal keeping, intensive animal industry, aquaculture, feedlots, piggeries

Column 1 Use	Column 2 Definition	Column 3 Examples include	Column 4 Does not include the following examples
Animal keeping	Premises used for boarding, breeding or training of animals. The use may include ancillary temporary or permanent holding facilities on the same site and ancillary repair and servicing of machinery.	Aviaries, catteries, kennels, stables, wildlife refuge	Aquaculture, cattle studs, domestic pets, feedlots, grazing of livestock, non-feedlot dairying, piggeries, poultry meat and egg production, animal husbandry
Aquaculture	Premises used for the cultivation of aquatic animals or plants in a confined area that may require the provision of food either mechanically or by hand.	Pond farms, tank systems, hatcheries, raceway system, rack and line systems, sea cages	Intensive animal industry
Bar	Premises used primarily to sell liquor for consumption on the premises and that provides for a maximum capacity to seat sixty persons at any one time. The use may include ancillary sale of food consumption on the premises and entertainment activities.		Club, hotel, nightclub entertainment facility, tavern
Brothel	Premises made available for prostitution by two or more prostitutes at the premises.		Adult store, club, nightclub entertainment facility, shop
Bulk landscape supplies	Premises used for bulk storage and sale of landscaping and gardening supplies, which may include soil, gravel, potting mix and mulch, where the majority of materials sold from the premises are not in pre-packaged form.		Garden centre, outdoor sales, wholesale nursery
Caretaker's accommodation	A dwelling provided for a caretaker of a non-residential use on the same premises.		Dwelling house
Car wash	Premises primarily used for commercially cleaning motor vehicles by an automatic or partly automatic process.		Service station
Cemetery	Premises used for interment of bodies or ashes after death.	Burial ground, crypt, columbarium, lawn cemetery, pet cemetery, mausoleum	Crematorium, funeral parlour

Column 1 Use	Column 2 Definition	Column 3 Examples include	Column 4 Does not include the following examples
Child care centre	Premises used for minding, education and care, but not residence, of children.	Crèche, early childhood centre, kindergarten, outside hours school care	Educational establishment, home based child care, family day care
Club	Premises used by persons associated for social, literary, political, sporting, athletic or other similar purposes for social interaction or entertainment. The use may include the ancillary preparation and service of food and drink.	Club house, guide and scout clubs, surf lifesaving club, RSL, bowls club	Hotel, nightclub entertainment facility, place of worship, theatre
Community care centre	Premises used to provide social support where no accommodation is provided. Medical care may be provided but is ancillary to the primary use.	Disability support services, drop in centre, respite centre, integrated Indigenous support centre	Child care centre, family day care, home based child care, health care services, residential care facility
Community residence	Any dwelling used for accommodation for a maximum of six persons who require assistance or support with daily living needs, share communal spaces and who may be unrelated. The use may include a resident support worker engaged or employed in the management of the residence.	Hospice	Dwelling house, dwelling unit, residential care facility, rooming accommodation, short-term accommodation
Community use	Premises used for providing artistic, social or cultural facilities and community support services to the public and may include the ancillary preparation and provision of food and drink.	Art gallery, community centre, community hall, library, museum	Cinema, club, hotel, nightclub, entertainment facility, place of worship
Crematorium	Premises used for the cremation or aquamation of bodies.		Cemetery
Cropping	Premises used for growing plants or plant material for commercial purposes where dependent on the cultivation of soil. The use includes harvesting and the storage and packing of produce and plants grown on the site and the ancillary repair and servicing of machinery used on the site.	Fruit, nut, vegetable and grain production, forestry for wood production, fodder and pasture production, plant fibre production, sugar cane growing, vineyard	Permanent plantations, intensive horticulture, rural industry

Column 1 **Use**	**Column 2** **Definition**	**Column 3** **Examples include**	**Column 4** **Does not include the following examples**
Detention facility	Premises used for the confinement of persons committed by a process of law.	Prison, detention centre	
Dual occupancy	Premises containing two dwellings, each for a separate household, and consisting of: • a single lot, where neither dwelling is a secondary dwelling; or • two lots sharing common property where one dwelling is located on each lot.	Duplex, two dwellings on a single lot (whether attached or not attached), two dwellings within one single community title scheme under the *Body Corporate and Community Management Act 1997*, two dwellings within the one body corporate to which the *Building Units and Group Title Act 1980* continues to apply.	Dwelling house, multiple dwelling
Dwelling house	A residential use of premises for one household that contains a single dwelling. The use includes outbuildings and works normally associated with a dwelling and may include a secondary dwelling.		Caretaker's accommodation, dual occupancy, rooming accommodation, short-term accommodation, student accommodation, multiple dwelling
Dwelling unit	A single dwelling within a premises containing non-residential use(s).	'Shop-top' apartment	Caretaker's accommodation, dwelling house
Educational establishment	Premises used for training and instruction designed to impart knowledge and develop skills. The use may include outside hours school care for students or on-site student accommodation.	Pre-preparatory, preparatory and primary school, secondary school, special education, college, university, technical institute, outdoor education centres	Child care centre, home based child care, family day care

Column 1 Use	Column 2 Definition	Column 3 Examples include	Column 4 Does not include the following examples
Emergency services	Premises used by government bodies or community organisations to provide essential emergency services, disaster management services including management support facilities for the protection of persons, property and the environment.	State emergency service facility, ambulance station, rural fire brigade, auxiliary fire and rescue station, urban fire and rescue station, police station, emergency management support facility, evacuation centres	Community use, hospital, residential care facility
Environment facility	Facilities used for the conservation, interpretation and appreciation of areas of environmental, cultural or heritage value.	Nature-based attractions, walking tracks, seating, shelters, boardwalks, observation decks, bird hides	
Extractive industry	Premises used for the extraction and/or processing of extractive resources and associated activities, including their transportation to market.	Quarry	
Food and drink outlet	Premises used for preparation and sale of food and drink to the public for consumption on or off the site. The use may include the ancillary sale of liquor for consumption on site.	Bistro, café, coffee shop, drive-through facility, kiosk, milk bar, restaurant, snack bar, take-away, tea room	Bar, club, hotel, shop, theatre, nightclub entertainment facility
Function facility	Premises used for conducting receptions or functions that may include the preparation and provision of food and liquor for consumption on site.	Conference centre, reception centre	Community use, hotel
Funeral parlour	Premises used to arrange and conduct funerals, memorial services and the like, but do not include burial or cremation. The use includes a mortuary and the storage and preparation of bodies for burial or cremation.		Cemetery, crematorium, place of worship

Column 1 Use	Column 2 Definition	Column 3 Examples include	Column 4 Does not include the following examples
Garden centre	Premises used primarily for the sale of plants and may include sale of gardening and landscape products and supplies where these are sold mainly in pre-packaged form. The use may include an ancillary food and drink outlet.	Retail plant nursery	Bulk landscape supplies, wholesale nursery, outdoor sales
Hardware and trade supplies	Premises used for the sale, display or hire of hardware and trade supplies including household fixtures, timber, tools, paint, wallpaper, plumbing supplies and the like.		Shop, showroom, outdoor sales and warehouse
Health care services	Premises for medical, paramedical, alternative therapies and general health care and treatment of persons that involves no overnight accommodation.	Dental clinics, medical centres, natural medicine practices, nursing services, physiotherapy clinic	Community care centre, hospital
High impact industry	Premises used for industrial activities that include the manufacturing, producing, processing, repairing, altering, recycling, storing, distributing, transferring or treating of products and have one or more of the following attributes: • potential for significant impacts on sensitive land uses due to offsite emissions including aerosol, fume, particle, smoke, odour and noise; • potential for significant offsite impacts in the event of fire, explosion or toxic release; • generates high traffic flows in the context of the locality or the road network; • generates a significant demand on the local infrastructure network; • the use may involve night time and outdoor activities; • on-site controls are required for emissions and dangerous goods risks.	Abattoirs, asphalt plant, concrete batching plant, boiler making and engineering and metal foundry **Note**—Additional examples may be shown in SC1.1.2 industry thresholds.	Tanneries, rendering plants, oil refineries, waste incineration, manufacturing or storing explosives, power plants, manufacturing fertilisers, service industry, low impact industry, medium impact industry, special industry
Home based business	A dwelling used for a business activity where subordinate to the residential use.	Bed and breakfast, home office, home based child care	Hobby, office, shop, warehouse, transport depot

Column 1 Use	Column 2 Definition	Column 3 Examples include	Column 4 Does not include the following examples
Hospital	Premises used for medical or surgical care or treatment of patients whether or not involving overnight accommodation. The use may include ancillary accommodation for employees and ancillary activities directly serving the needs of patients and visitors.		Health care services, residential care facility
Hotel	Premises used primarily to sell liquor for consumption. The use may include short-term accommodation, dining and entertainment activities and facilities.	Pub, tavern	Nightclub entertainment facility
Indoor sport and recreation	Premises used for leisure, sport or recreation conducted wholly or mainly indoors.	Amusement parlour, bowling alley, gymnasium, squash courts, enclosed tennis courts	Cinema, hotel, nightclub entertainment facility, theatre
Intensive animal industry	Premises used for the intensive production of animals or animal products in an enclosure that requires the provision of food and water either mechanically or by hand. The use includes the ancillary storage and packing of feed and produce.	Feedlots, piggeries, poultry and egg production	Animal husbandry, aquaculture, drought feeding, milking sheds, shearing sheds, weaning pens
Intensive horticulture	Premises used for the intensive production of plants or plant material on imported media and located within a building or structure or where outdoors, artificial lights or containers are used. The use includes the storage and packing of produce and plants grown on the subject site.	Greenhouse and shade house plant production, hydroponic farms, mushroom farms	Wholesale nursery
Landing	A structure for mooring, launching, storage and retrieval of vessels where passengers embark and disembark.	Boat ramp, jetty, pontoon	Marina

Column 1 Use	Column 2 Definition	Column 3 Examples include	Column 4 Does not include the following examples
Low impact industry	Premises used for industrial activities that include the manufacturing, producing, processing, repairing, altering, recycling, storing, distributing, transferring or treating of products and have one or more of the following attributes: • negligible impacts on sensitive land uses due to offsite emissions including aerosol, fume, particle, smoke, odour and noise; • minimal traffic generation and heavy-vehicle usage; • demands imposed upon the local infrastructure network consistent with surrounding uses; • the use generally operates during the day (e.g. 7am to 6pm); • offsite impacts from storage of dangerous goods are negligible; • the use is primarily undertaken indoors.	Repairing motor vehicles, fitting and turning workshop **Note**—Additional examples may be shown in SC1.1.2 industry thresholds.	Panel beating, spray painting or surface coating, tyre recycling, drum re-conditioning, wooden and laminated product manufacturing, service industry, medium impact industry, high impact industry, special industry
Major electricity infrastructure	All aspects of development for either the transmission grid or electricity supply networks as defined under the *Electricity Act 1994*. The use may include ancillary telecommunication facilities.	Powerlines greater than 66kV	Minor electricity infrastructure, substation
Major sport, recreation and entertainment facility	Premises with large scale built facilities designed to cater for large scale events including major sporting, recreation, conference and entertainment events.	Convention and exhibition centres, entertainment centres, sports stadiums, horse racing	Indoor sport and recreation, local sporting field, motor sport, park, outdoor sport and recreation
Marine industry	Premises used for waterfront based marine industries involved in any activity relating to the manufacturing, storage, repair or servicing of vessels and maritime infrastructure. The use may include the provision of fuel and disposal of waste.	Boat building, boat storage, dry dock	Marina

Column 1 Use	Column 2 Definition	Column 3 Examples include	Column 4 Does not include the following examples
Market	Premises used for the sale of goods to the public on a regular basis, where goods are primarily sold from temporary structures such as stalls, booths or trestle tables. The use may include entertainment provided for the enjoyment of customers.	Flea market, farmers market, car boot sales	Shop, roadside stall
Medium impact industry	Premises used for industrial activities that include the manufacturing, producing, processing, repairing, altering, recycling, storing, distributing, transferring or treating of products and have one or more of the following attributes: • potential for noticeable impacts on sensitive land uses due to offsite emissions including aerosol, fume, particle, smoke, odour and noise; • potential for noticeable offsite impacts in the event of fire, explosion or toxic release; • generates high traffic flows in the context of the locality or the road network; • generates an elevated demand on the local infrastructure network; • onsite controls are required for emissions and dangerous goods risks; • the use is primarily undertaken indoors; • evening or night activities are undertaken indoors and not outdoors.	Spray painting and surface coating, wooden and laminated product manufacturing (including cabinet making, joining, timber truss making or wood working) **Note**—Additional examples may be shown in SC1.1.2 industry thresholds.	Concrete batching, tyre manufacturing and retreading, metal recovery (involving a fragmentiser), textile manufacture, chemically treating timber and plastic product manufacture, service industry, low impact industry, high impact industry, special industry
Motor sport facility	Premises used for organised or recreational motor sports whether on or off-road, which may include permanent, temporary or informal provision for spectators and other supporting uses.	Go-karting, lawn mower race tracks, trail bike parks, 4WD and all terrain parks, motocross tracks, off road motorcycle facility, motorcycle or car race tracks	Major sport, recreation and entertainment facility, outdoor sport and recreation
Multiple dwelling	Premises containing three or more dwellings for separate households.	Apartments, flats, units, townhouses, row housing, triplex	Rooming accommodation, dual occupancy, duplex, granny flat, residential care facility, retirement facility

Column 1 Use	Column 2 Definition	Column 3 Examples include	Column 4 Does not include the following examples
Nature-based tourism	The use of land or premises for a tourism activity, including tourist and visitor short-term accommodation, that is intended for the conservation, interpretation and appreciation of areas of environmental, cultural or heritage value, local ecosystem, and attributes of the natural environment. Nature-based tourism activities typically: • maintain a nature-based focus or product; • promote environmental awareness, education and conservation; • carry out sustainable practices.	Environmentally responsible accommodation facilities including lodges, cabins, huts and tented camps	Environment facility
Nightclub entertainment facility	Premises used to provide entertainment, which may include cabaret, dancing and music. The use generally includes the sale of liquor and food for consumption on site.		Club, hotel, tavern, pub, indoor sport and recreation, theatre, concert hall
Non-resident workforce accommodation	Premises used to provide accommodation for non-resident workers. The use may include provision of recreational and entertainment facilities for the exclusive use of residents and their visitors.	Contractor's camp, construction camp, single person's quarters, temporary workers' accommodation	Relocatable home park, short-term accommodation, tourist park.
Office	Premises used for an administrative, secretarial or management service or the practice of a profession, where no goods or materials are made, sold or hired and where the principal activity provides for one or more of the following: • business or professional advice; • service of goods that are not physically on the premises; • office based administrative functions of an organisation.	Bank, real estate agent, administration building	Home based business, home office, shop, outdoor sales

Column 1 Use	Column 2 Definition	Column 3 Examples include	Column 4 Does not include the following examples
Outdoor sales	Premises used for the display, sale, hire or lease of products where the use is conducted wholly or predominantly outdoors and may include construction, industrial or farm plant and equipment, vehicles, boats and caravans. The use may include ancillary repair or servicing activities and sale or fitting of accessories.	Agricultural machinery sales yard, motor vehicles sales yard	Bulk landscape supplies, market
Outdoor sport and recreation	Premises used for a recreation or sport activity that is carried on outside a building and requires areas of open space and may include ancillary works necessary for safety and sustainability. The use may include ancillary food and drink outlet(s) and the provision of ancillary facilities or amenities conducted indoors such as changing rooms and storage facilities.	Driving range, golf course, swimming pool, tennis courts, football ground, cricket oval	Major sport, recreation and entertainment facility, motor sport, park, community use
Park	Premises accessible to the public generally for free sport, recreation and leisure, and may be used for community events or other community activities. Facilities may include children's playground equipment, informal sports fields and ancillary vehicle parking and other public conveniences.	Urban common	Tourist attraction, outdoor sport and recreation
Parking station	Premises used for parking vehicles where the parking is not ancillary to another use.	Car park, 'park and ride', bicycle parking	
Permanent plantation	Premises used for growing plants not intended to be harvested.	Permanent plantations for carbon sequestration, biodiversity or natural resource management	Forestry for wood production, biofuel production
Place of worship	Premises used by an organised group for worship and religious activities. The use may include ancillary facilities for social, educational and associated charitable activities.	Church, chapel, mosque, synagogue, temple	Community use, child care centre, funeral parlour, crematorium

Column 1 Use	Column 2 Definition	Column 3 Examples include	Column 4 Does not include the following examples
Port services	Premises used for the following: • the arrival and departure of vessels; • the movement of passengers or goods on or off vessels; • any ancillary activities directly serving the needs of passengers and visitors or the housing, servicing, maintenance and repair of vessels.	Marina, ferry terminal	Landing
Relocatable home park	Premises used for relocatable dwellings (whether they are permanently located or not) that provides long-term residential accommodation. The use may include a manager's residence and office, ancillary food and drink outlet, kiosk, amenity buildings and the provision of recreation facilities for the exclusive use of residents.		Tourist park
Renewable energy facility	Premises used for the generation of electricity or energy from renewable (naturally reoccurring) sources.	Solar farm, wind farm, tidal power	Wind turbine or solar panels supplying energy to domestic or rural activities on the same site
Research and technology industry	Premises used for innovative and emerging technological industries involved in research design, manufacture, assembly, testing, maintenance and storage of machinery, equipment and components. The use may include emerging industries such as energy, aerospace, and biotechnology.	Aeronautical engineering, computer component manufacturing, medical laboratories, computer server facility	
Residential care facility	A residential use of premises for supervised accommodation where the use includes medical and other support facilities for residents who cannot live independently and require regular nursing or personal care.	Convalescent home, nursing home	Community residence, dwelling house, dual occupancy, hospital, multiple dwelling, retirement facility

Column 1 Use	Column 2 Definition	Column 3 Examples include	Column 4 Does not include the following examples
Resort complex	Premises used for tourist and visitor short-term accommodation that include integrated leisure facilities including: • restaurants and bars; • meeting and function facilities; • sporting and fitness facilities; • staff accommodation; • transport facilities directly associated with the tourist facility such as a ferry terminal and air services.	Island resort	
Retirement facility	A residential use of premises for an integrated community and specifically built and designed for older people. The use includes independent living units and may include serviced units where residents require some support with health care and daily living needs. The use may also include a manager's residence and office, food and drink outlet, amenity buildings, communal facilities and accommodation for staff.	Retirement village	Residential care facility
Roadside stall	Premises used for the roadside display and sale of goods in rural areas.	Produce stall	Market

Column 1 **Use**	**Column 2** **Definition**	**Column 3** **Examples include**	**Column 4** **Does not include the following examples**
Rooming accommodation	Premises used for the accommodation of one or more households where each resident: • has the right to occupy one or more rooms; • does not have a right to occupy the whole of the premises in which the rooms are situated; • may be provided with separate facilities for private use; • may share communal facilities or communal space with one or more of the residents; The use may include: • rooms not in the same building on site; • provision of a food or other service; • on-site management or staff and associated accommodation. Facilities includes furniture and equipment as defined in the *Residential Tenancies and Rooming Act 2008*	Boarding house, hostel, monastery, off-site student accommodation	Hospice, community residence, dwelling house, short-term accommodation, multiple dwelling
Rural industry	Premises used for storage, processing and packaging of products from a rural use. The use includes processing, packaging and sale of products produced as a result of a rural use where these activities are ancillary to a rural use on or adjacent to the site.	Packing shed	Intensive animal husbandry, intensive horticulture, roadside stall, wholesale nursery, winery, abattoir, agricultural supply store
Rural workers' accommodation	Any premises used as quarters for staff employed in the use of land for rural purposes, such as agriculture, intensive animal husbandry and forestry, conducted on a lot in the same ownership whether or not such quarters are self-contained.	Farm workers' accommodation	Short-term accommodation building, caretaker's accommodation, dual occupancy, dwelling house, nature or rural based tourist accommodation, non-resident workforce accommodation, multiple dwellings

Column 1 Use	Column 2 Definition	Column 3 Examples include	Column 4 Does not include the following examples
Sales office	The temporary use of premises for displaying a land parcel or buildings that can be built for sale or can be won as a prize. The use may include a caravan or relocatable dwelling or structure.	Display dwelling	Bank, office
Service industry	Premises used for industrial activities that have no external air, noise or odour emissions from the site and can be suitably located with other non-industrial uses.	Audio visual equipment repair, film processing bicycle repairs, clock and watch repairs, computer repairs, dry cleaning, hand engraving, jewellery making, laundromat, locksmith, picture framing, shoe repairs, tailor	Small engine mechanical repair workshop, cabinet making, shop fitting, sign writing, tyre depot, low impact industry, medium impact industry, high impact industry, special industry
Service station	Premises used for the sale of fuel including petrol, liquid petroleum gas, automotive distillate and alternative fuels. The use may include, where ancillary, a shop, food and drink outlet, maintenance, repair servicing and washing of vehicles, the hire of trailers, and supply of compressed air.		Car wash
Shop	Premises used for the display, sale or hire of goods or the provision of personal services or betting to the public.	Hairdresser, liquor store, department store, discount department store, discount variety stores, betting agencies, supermarket, corner store	Adult shop, food and drink outlet, showroom, market
Shopping centre	Premises comprising two or more individual tenancies that is comprised primarily of shops, and that function as an integrated complex.		

Column 1 Use	Column 2 Definition	Column 3 Examples include	Column 4 Does not include the following examples
Short-term accommodation	Premises used to provide short-term accommodation for tourists or travellers for a temporary period of time (typically not exceeding three consecutive months) and may be self-contained. The use may include a manager's residence and office and the provision of recreation facilities for the exclusive use of visitors.	Motel, backpackers accommodation, cabins, serviced apartments, hotel, farm stay	Hostel, rooming accommodation, tourist park
Showroom	Premises used primarily for the sale of goods of a related product line that are of a size, shape or weight that requires: • a large area for handling, display or storage; • direct vehicle access to the building by members of the public for loading and unloading items purchased or hired.	Bulky goods sales, motor vehicles sales showroom, bulk stationary supplies	Food and drink outlet, shop, outdoor sales
Special industry	Premises used for industrial activities that include the manufacturing, producing, processing, repairing, altering, recycling, storing, distributing, transferring or treating of products and have one or more of the following attributes: • potential for extreme impacts on sensitive land uses due to offsite emissions including aerosol, fume, particle, smoke, odour and noise; • potential for extreme offsite impacts in the event of fire, explosion or toxic release; • onsite controls are required for emissions and dangerous goods risks; • the use generally involves night time and outdoor activities; • the use may involve the storage and handling of large volumes of dangerous goods; • requires significant separation from non-industrial uses.	Tanneries, rendering plants, oil refineries, waste incineration, manufacturing or storing explosives, power plants, manufacturing fertilisers **Note**—Additional examples may be shown in SC1.1.2 industry thresholds.	Low impact industry, medium impact industry, high impact industry, service industry

Column 1 Use	Column 2 Definition	Column 3 Examples include	Column 4 Does not include the following examples
Substation	Premises forming part of a transmission grid or supply network under the *Electricity Act 1994*, and used for: • converting or transforming electrical energy from one voltage to another; • regulating voltage in an electrical circuit; • controlling electrical circuits; • switching electrical current between circuits; • a switchyard; or • communication facilities for 'operating works' as defined under the *Electricity Act 1994* or for workforce operational and safety communications.	Substations, switching yards	Major electricity infrastructure, minor electricity infrastructure
Telecommunications facility	Premises used for systems that carry communications and signals by means of radio, including guided or unguided electromagnetic energy, whether such facility is manned or remotely controlled.	Telecommunication tower, broadcasting station, television station	Aviation facility, 'low-impact telecommunications facility' as defined under the *Telecommunications Act 1997*
Theatre	Premises used for presenting movies, live entertainment or music to the public and may include provision of food and liquor for consumption on the premises. The use may include the production of film or music, including associated ancillary facilities, which are associated with the production, such as sound stages, wardrobe and laundry facilities, makeup facilities, set construction workshops, editing and post-production facilities.	Cinema, movie house, concert hall, dance hall, film studio, music recording studio	Community hall, hotel, indoor sport and recreation facility, temporary film studio
Tourist attraction	Premises used for providing on-site entertainment, recreation or similar facilities for the general public. The use may include provision of food and drink for consumption on site.	Theme park, zoo	Hotel, major sport, recreation and entertainment facility, nightclub entertainment facility

Column 1 **Use**	**Column 2** **Definition**	**Column 3** **Examples include**	**Column 4** **Does not include the following examples**
Tourist park	Premises used to provide for accommodation in caravans, self-contained cabins, tents and similar structures for the public for short term holiday purposes. The use may include, where ancillary, a manager's residence and office, kiosk, amenity buildings, food and drink outlet, or the provision of recreation facilities for the use of occupants of the tourist park and their visitors, and accommodation for staff.	Camping ground, caravan park, holiday cabins	Relocatable home park, tourist attraction, short term accommodation, non-resident workforce accommodation
Transport depot	Premises used for the storage, for commercial or public purposes, of more than one motor vehicle. The use includes premises for the storage of taxis, buses, trucks, heavy machinery and uses of a like nature. The term may include the ancillary servicing, repair and cleaning of vehicles stored on the premises.	Contractor's depot, bus depot, truck yard, heavy machinery yard	Home based business, warehouse, low impact industry, service industry
Utility installation	Premises used to provide the public with the following services: • supply or treatment of water, hydraulic power or gas; • sewerage, drainage or stormwater services; • transport services including road, rail or water; • waste management facilities; or • network infrastructure. The use includes maintenance and storage depots and other facilities for the operation of the use.	Sewerage treatment plant, mail depot, pumping station, water treatment plant	Telecommunications tower, major electricity infrastructure, minor electricity infrastructure, substation, renewable energy facility, transport depot
Veterinary services	Premises used for veterinary care, surgery and treatment of animals that may include provision for the short-term accommodation of the animals on the premises.		Animal keeping

Column 1 **Use**	**Column 2** **Definition**	**Column 3** **Examples include**	**Column 4** **Does not include the following examples**
Warehouse	Premises used for the storage and distribution of goods, whether or not in a building, including self-storage facilities or storage yards. The use may include sale of goods by wholesale where ancillary to storage. The use does not include retail sales from the premises or industrial uses.	Self-storage sheds	Hardware and trade supplies, outdoor sales, showroom, shop
Wholesale nursery	Premises used for the sale of plants, but not to the general public, where the plants are grown on or adjacent to the site. The use may include sale of gardening materials where these are ancillary to the primary use.		Bulk landscape supplies, garden centre
Winery	Premises used for manufacturing of wine, which may include the sale of wine manufactured on site.		Rural industry

SC1.1.1 Defined activity groups

There are no defined activity groups for the planning scheme.

SC1.1.2 Industry thresholds

(1) The industry thresholds listed below are to be used in conjunction with the defined uses listed in Table SC1.1.2- low impact industry, medium impact industry, high impact industry and special industry.

Table SC1.1.2.1 - Industry thresholds

Column 1 Use	Column 2 Additional examples include
Low impact industry	(1) Repairing and servicing motor vehicles, including mechanical components, radiators, electrical components, wheel alignments, exhausts, tyres, suspension or air conditioning, not including spray painting. (2) Repairing and servicing lawn mowers and outboard engines. (3) Fitting and turning workshop. (4) Assembling or fabricating products from sheet metal or welding steel, producing less than 10 tonnes a year and not including spray painting. (5) Assembling wood products not involving cutting, routing, sanding or spray painting. (6) Dismantling automotive or mechanical equipment, not including debonding brake or clutch components.
Medium impact industry	(1) Metal foundry producing less than 10 tonnes of metal castings per annum. (2) Boiler making or engineering works producing less than 10,000 tonnes of metal product per annum. (3) Facility, goods yard or warehouse for the storage or distribution of dangerous goods not involving manufacturing processes and not a major hazard facility under the *Work Health and Safety Act 2011.* (4) Abrasive blasting facility using less than 10 tonnes of abrasive material per annum. (5) Enamelling workshop using less than 15,000 litres of enamel per annum. (6) Galvanising works using less than 100 tonnes of zinc per annum. (7) Anodising or electroplating workshop where tank area is less than 400 square meters. (8) Powder coating workshop using less than 500 tonnes of coating per annum. (9) Spray painting workshop (including spray painting vehicles, plant, equipment or boats) using less than 20,000 litres of paint per annum. (10) Scrap metal yard (not including a fragmentiser), dismantling automotive or mechanical equipment including debonding brake or clutch components. (11) Manufacturing clay or ceramic products including bricks, tiles, pipes and pottery goods, less than 200 tonnes per annum. (12) Processing, smoking, drying, curing, milling, bottling or canning food, beverages or pet food, less than 200 tonnes per annum. (13) Vegetable oil or oilseed processing in works with a design production capacity of less than 1,000 tonnes per annum. (14) Manufacturing wooden products including cabinet making, joinery, wood working, producing less than 500 tonnes per annum. (15) Manufacturing medium density fibreboard, chipboard, particle board, plywood, laminated board or wood veneer products, less than 250 tonnes per annum.

	(16)	Sawmilling, wood chipping and kiln drying timber and logs, producing less than 500 tonnes per annum.
	(17)	Recycling and reprocessing batteries.
	(18)	Repairing or maintaining boats.
	(19)	Manufacturing substrate for mushroom growing.
	(20)	Manufacturing or processing plaster, producing less than 5,000 tonnes per annum.
	(21)	Recycling or reprocessing tyres including retreading.
	(22)	Printing advertising material, magazines, newspapers, packaging and stationery.
	(23)	Manufacturing fibreglass, foam plastic, composite plastic or rigid fibre-reinforced plastic or plastic products, less than 5 tonnes per annum (except fibreglass boats, tanks and swimming pools).
	(24)	Manufacturing PET, PETE, polypropylene and polystyrene plastic or plastic products, less than 10,000 tonnes per annum.
	(25)	Reconditioning metal or plastic drums.
	(26)	Glass fibre manufacture less than 200 tonnes per annum.
	(27)	Manufacturing glass or glass products, where not glass fibre, less than 250 tonnes per annum.
High impact industry	(1)	Metal foundry producing 10 tonnes or greater of metal castings per annum.
	(2)	Boiler making or engineering works producing 10,000 tonnes or greater of metal product per annum.
	(3)	Major hazard facility for the storage and distribution of dangerous goods not involving manufacturing processes.
	(4)	Scrap metal yard including a fragmentiser.
	(5)	Manufacturing clay or ceramic products including bricks, tiles, pipes and pottery goods, greater than 200 tonnes per annum.
	(6)	Processing, smoking, drying, curing, milling, bottling or canning food, beverages or pet food, greater than 200 tonnes per annum.
	(7)	Vegetable oil or oilseed processing in works with a design production capacity of greater than 1,000 tonnes per annum.
	(8)	Manufacturing wooden products including cabinet making, joinery, wood working, producing greater than 500 tonnes per annum.
	(9)	Manufacturing medium density fibreboard, chipboard, particle board, plywood, laminated board or wood veneer products, 250 tonnes or greater per annum.
	(10)	Sawmilling, wood chipping and kiln drying timber and logs, producing greater than 500 tonnes per annum.
	(11)	Manufacturing or processing plaster, producing greater than 5,000 tonnes per annum.
	(12)	Enamelling workshop using 15,000 litres or greater of enamel per annum.
	(13)	Galvanising works using 100 tonnes or greater of zinc per annum.
	(14)	Anodising or electroplating workshop where tank area is 400 square meters or greater.
	(15)	Powder coating workshop using 500 tonnes or greater of coating per annum.
	(16)	Spray painting workshop (including spray painting vehicles, plant, equipment or boats) using 20,000 litres or greater of paint per annum.
	(17)	Concrete batching and producing concrete products.
	(18)	Treating timber for preservation using chemicals including copper, chromium, arsenic, borax and creosote.
	(19)	Manufacturing soil conditioners by receiving, blending, storing, processing, drying or composting organic material or organic waste, including animal manures, sewage,

		septic sludges and domestic waste.
	(20)	Manufacturing fibreglass pools, tanks and boats.
	(21)	Manufacturing, fibreglass, foam plastic, composite plastic or rigid fibre-reinforced plastic or plastic products, 5 tonnes or greater per annum (except fibreglass boats, tanks and swimming pools).
	(22)	Manufacturing PET, PETE, polypropylene and polystyrene plastic or plastic products, 10,000 tonnes or greater per annum.
	(23)	Manufacturing tyres, asbestos products, asphalt, cement; glass or glass fibre, mineral wool or ceramic fibre.
	(24)	Abattoir.
	(25)	Recycling chemicals, oils or solvents.
	(26)	Waste disposal facility (other than waste incinerator).
	(27)	Recycling, storing or reprocessing regulated waste.
	(28)	Manufacturing batteries.
	(29)	Manufacturing wooden products including cabinet making, joinery, wood working, producing greater than 500 tonnes per annum.
	(30)	Abrasive blasting facility using 10 tonnes or greater of abrasive material per annum.
	(31)	Crematoria.
	(32)	Glass fibre manufacture producing 200 tonnes or greater per annum.
	(33)	Manufacturing glass or glass products, where not glass fibre, less than 250 tonnes per annum.
Special industry	(1)	Oil refining or processing.
	(2)	Producing, refining or processing gas or fuel gas.
	(3)	Distilling alcohol in works producing greater than 2500 litres per annum.
	(4)	Power station.
	(5)	Producing, quenching, cutting, crushing or grading coke.
	(6)	Waste incinerator.
	(7)	Sugar milling or refining.
	(8)	Pulp or paper manufacturing.
	(9)	Tobacco processing.
	(10)	Tannery or works for curing animal skins, hides or finishing leather.
	(11)	Textile manufacturing, including carpet manufacturing, wool scouring or carbonising, cotton milling, or textile bleaching, dyeing or finishing.
	(12)	Rendering plant.
	(13)	Manufacturing chemicals, poisons and explosives.
	(14)	Manufacturing fertilisers involving ammonia.
	(15)	Manufacturing polyvinyl chloride plastic.

SC1.2 Administrative definitions

(1) Administrative definitions assist with the interpretation of the planning scheme but do not have a meaning in relation to a use.

(2) A term listed in Table SC1.2.2 column 1 has the meaning set out beside that term in column 2 under the heading.

(3) The administrative definitions listed here are the definitions for the purpose of the planning scheme.

Table SC1.2.1-Index of administrative definitions

- Adjoining premises
- Advertising device
- Affordable housing
- Average width
- Base date
- Basement
- Boundary clearance
- Building height
- Contributing character building
- Defined flood event
- Defined flood level
- Defined storm tide event
- Defined storm tide event level
- Demand unit
- Development footprint
- Domestic outbuilding
- Dwelling
- Full time equivalent
- Gross floor area
- Ground level
- Household
- Major road
- Minor building work
- Minor electricity infrastructure
- Net developable area
- Net residential density
- Netserv plan
- Non-contributing property
- Non-resident workers
- Outermost projection
- Planning assumptions
- Plot ratio
- Projection area(s)
- Rear lot
- Secondary dwelling
- Setback
- Service catchment
- Site
- Site cover
- Storey
- Temporary use
- Total use area
- Ultimate development
- Urban purposes

Table SC1.2.2 Administrative definitions

Column 1 **Activity group**	**Column 2** **Uses**
Adjoining premises	Premises that share all or part of a common boundary. A common boundary might be a single point such as a corner point.
Advertising device	Any permanent structure, device, sign or the like intended for advertising purposes. It includes any framework, supporting structure or building feature that is provided exclusively or mainly as part of the advertisement.
Affordable housing	Housing that is appropriate to the needs of households with low to moderate incomes.
Average width	In regard to a lot, the distance between the midpoints of the side boundaries of the lot.
Base date	The date from which a local government has estimated its projected infrastructure demands and costs.
Basement	A space that is situated between one floor level and the floor level below where not part of the space projects more than one metre above ground level.

Column 1 Activity group	Column 2 Uses
Boundary clearance	The shortest distance from the outermost projection of a structural part of the building or structure to the property boundary, including: (a) if the projection is a roof and there is a fascia – the outside face of the fascia; or (b) if the projection is a roof and there is no fascia – the roof structure. The term does not include rainwater fittings or ornamental or architectural attachments.
Building height	If specified: (a) in metres, the vertical distance between the ground level and the highest point of the building roof (apex) or parapet at any point but not including load-bearing antenna, aerial, chimney, flagpole or the like; (b) in storeys, the number of storeys above ground level; or (c) in both metres and storeys, both (a) and (b) apply.
Contributing character building	A building within the Character residential zone that is not listed in the appendix of the Character residential planning scheme policy SC6.2.
Defined flood event	For this planning scheme, this is the 1% annual exceedance probability (AEP) flood and is mapped as the combined extent of the high and medium flood hazard areas identified on overlay map OM-06.1 and OM-06.2.
Defined flood level	The flood level relative to the Australian Height Datum (AHD) of the 1% AEP flood. **Editor's note—**This will vary between locations.
Defined storm tide event	For this planning scheme, this is the 1% annual exceedance probability (AEP) storm tide event with an allowance of 0.8m sea level rise and an increase in maximum cyclone intensity of 10% relative to present day conditions.
Defined storm tide event level	For this planning scheme, this is RL4.5m Australian Height Datum (AHD), within 100m of the coastline or RL3.9m AHD in other areas.
Demand unit	Demand units provide a standard of unit measurement to express demand on a trunk infrastructure network.
Development footprint	The location and extent of all development proposed on a site. This includes all buildings and structures, open space, all associated facilities, landscaping, on-site stormwater drainage, on-site wastewater treatment, all areas of disturbance, on-site parking, access and manoeuvring areas.
Domestic outbuilding	A Class 10a building, as defined in the Building Code of Australia, that is ancillary to a residential use on the same premises and is limited to non-habitable buildings for the purpose of a shed, garage and carport.
Dwelling	A building or part of a building used or capable of being used as a self-contained residence that must include the following: (a) food preparation facilities; (b) a bath or shower; (c) a toilet and wash basin; (d) clothes washing facilities. This term includes outbuildings, structures and works normally associated with a dwelling.

Column 1 Activity group	Column 2 Uses
Full time eqivalent	FTE – 'Full time equivalent', a measure of the total level of staff resources used. The FTE of a full-time staff member is equal to 1.0. The calculation of FTE for part-time staff is based on the proportion of time worked compared to that worked by full-time staff performing similar duties.
Gross floor area	The total floor area of all storeys of a building (measured from the outside of the external walls or the centre of a common wall), other than areas used for the following: (a) building services, plant and equipment; (b) access between levels; (c) ground floor public lobby; (d) a mall; (e) the parking, loading and manoeuvring of motor vehicles; (f) unenclosed private balconies whether roofed or not.
Ground level	The level of the natural ground or, where the level of the natural ground has been changed, the level as lawfully changed.
Household	An individual or a group of two or more related or unrelated people who reside in the dwelling, with the common intention to live together on a long-term basis and who make common provision for food or other essentials for living.
Major road	A road that operates as a major collector, sub arterial or arterial road or highway.
Minor building work	Building work that increases the gross floor area of a building by no more than the lesser of the following: (a) 50m² (b) an area equal to 5% of the gross floor area of the building.
Minor electricity infrastructure	All aspects of development for an electricity supply network as defined under the *Electricity Act 1994*, (or for private electricity works that form an extension of, or provide service connections to properties from the network), if the network operates at standard voltages up to and including 66kV. This includes: (a) augmentations/upgrades to existing powerlines where the voltage of the infrastructure does not increase; (b) augmentations to existing substations (including communication facilities for controlling works as defined under the *Electricity Act 1994*) where the voltage of the infrastructure does not increase, and where they are located on an existing substation lot.
Net developable area	The area of land available for development. It does not include land that cannot be developed due to constraints such as acid sulphate soils, conservation land, flood affected land or steep slope. **Note—**for the purpose of a Local government infrastructure plan, net developable area is usually measured in hectares, net developable hectares (net dev ha).
Net residential density	The total number of dwellings divided by the combined area of residential lots, local parks , internal local roads and half the width of local roads bordering the site.
Netserv Plan	A distributor-retailer's plan about its water and wastewater networks and provision of water service and wastewater service pursuant to section 99BJ of the *South East Queensland (Distributor retailer Restructure) Water Act 2009*.

Column 1 Activity group	Column 2 Uses
Non-contributing property	A property within the Character residential zone that is listed in Appendix 1 of the Character residential planning scheme policy SC6.2.
Non-residential workers	Workers who reside in areas for extended periods when employed on projects directly associated with resource extraction, major industry, major infrastructure or rural uses, but have a permanent place of residence in another area. This includes workers engaged in fly-in/fly-out or drive-in/drive-out arrangements.
Outermost projection	The outermost projection of any part of a building or structure including, in the case of a roof, the outside face of the fascia, or the roof structure where there is no fascia, or attached sunhoods or the like, but does not include retractable blinds, fixed screens, rainwater fittings, or ornamental attachments.
Planning assumption	Assumptions about the type, scale, location and timing of future growth.
Plot ratio	The ratio of gross floor area to the area of the site.
Projection area(s)	Area or areas within a local government area for which a local government carries out demand growth projections.
Rear lot	A lot that does not have frontage or access to a road other than by means of an access way that forms part of the lot, or by means of an easement over adjoining land.
Secondary dwelling	A dwelling used in conjunction with, and subordinate to, a dwelling house on the same lot. A secondary dwelling may be constructed under a dwelling house, be attached to a dwelling house or be free standing.
Service catchment	An area serviced by an infrastructure network. An infrastructure network is made up of one or more service catchments. Service catchments are determined by the network type and how it has been designed to operate and provide service to the urban areas. **Note—**for example: • stormwater network service catchments can be delineated to align with watershed boundaries • open space network service catchment can be determined using local government accessibility standards • water network service catchment can be established as the area serviced by a particular reservoir.
Setback	For a building or structure, the shortest distance measured horizontally from the outermost projection of a building or structure to the vertical projection of the boundary of the lot.
Site	Any land on which development is carried out or is proposed to be carried out whether such land comprises the whole or part of one lot or more than one lot if each of such lots is contiguous.
Site cover	The proportion of the site covered by a building(s), structure(s) attached to the building(s) and carport(s), calculated to the outermost projections of the building(s) and is expressed as a percentage. The term does not include: (a) any structure or part thereof included in a landscaped open space area such as a gazebo or shade structure; (b) basement car parking areas located wholly below ground level; (c) eaves and sun shading devices.

Column 1 **Activity group**	**Column 2** **Uses**
Storey	A space that is situated between one floor level and the floor level next above, or if there is no floor above, the ceiling or roof above, but not a space that contains only: (a) a lift shaft, stairway or meter room; (b) a bathroom, shower room laundry, water closet, or other sanitary compartment; (c) a combination of the above. A mezzanine is a storey. A roofed structure on or part of a rooftop that does not solely accommodate building plant and equipment is a storey. A basement is not a storey.
Temporary use	A use that is impermanent and may be irregular or infrequent that does not require the construction of a permanent building or the installation of permanent infrastructure or services. **Note—**provisions for temporary use timeframes for defined uses may be provided in section 1.7 Local government administrative matters.
Total use area	Total use area – the sum of all areas (exclusive of walls, columns and balconies whether roofed or not) of all storeys of a building which are used or intended for use for a particular purpose, plus any other areas of the site which is also used or intended for use for the same purpose, except for: (a) areas (inclusive of walls and columns) of any lift wells, lift motor rooms, air conditioning and (b) associated mechanical or electrical plant and equipment rooms; (c) areas of any staircases; (d) areas of any public lobby; (e) areas of any public toilets; (f) areas of any staff toilets, washrooms, recreation areas and associated facilities; and (g) areas used for the access, parking and associated manoeuvring of motor vehicles.
Ultimate development	The realistic extent of development anticipated to be achieved when a site (or projection area or infrastructure service catchment) is fully developed.
Urban purposes	For the purpose of Local government infrastructure plans, urban purposes includes residential (other than rural residential), retail, commercial, industrial, community and government related purposes.

Schedule 2 Mapping

SC2.1 Map index

The table(s) below list any strategic framework, zoning, local plan and overlay maps applicable to the planning scheme area.

Editor's note—Mapping for the LGIP is contained within Schedule 3 of the planning scheme.

Precinct Map Index

PRECINCT AND SUB-PRECINCT LEGEND				
Precinct Code	**Precinct**	**Sub-Precinct Code**	**Sub-Precinct**	**Zone Category**
A	Townsville Airport			Specialised centre
AC	Arcadia Central			Mixed use
ADC	Annandale district centre			District centre
AMC	Aitkenvale major centre	**ACC**	Aitkenvale centre core	Major centre
AMC	Aitkenvale major centre	**ACF**	Aitkenvale centre frame	Major centre
AMD	Aitkenvale medium density			Medium density residential
AV	Aitkenvale village			Medium density residential
B	Breakwater			Mixed use
BBGC	Balgal Beach golf course			Sport and recreation
BRM	Bayswater Road medical			Specialised centre
C	Cungulla			Rural
CA	Civic and administration			Principal centre
CD	Cluden			Sport and recreation
CBDG	CBD gateway			Mixed use
CS	Churchill Street			Character residential
CTR	Charters Towers Road business			Mixed use
D	Domain Central			Specialised centre

DDC	Deeragun district centre			District centre
DHHC	1960s Defence Housing and1960s Housing Commission			Character residential
FRM	Fulham Road medical			Specialised centre
FS	French Street			Character residential
FSE	Flinders Street East			Principal centre
FSR	Flinders Street retail			Principal centre
FSW	Flinders Street West			High density residential
G	Grazing			Rural
GQ	Grand Queenslanders			Character residential
H	Horticulture			Rural
HPMC	Hyde Park major centre			Major centre
HPMD	Hyde Park medium density			Medium density residential
IAG	Interwar to 1950s Asymmetrical Gables			Character residential
IDC	Idalia district centre			District centre
IGQB	Interwar Gables and Queensland Bungalows			Character residential
J	Jensen			Rural
JCUTH	James Cook University Townsville Hospital			Specialised centre
KR	Kings Road			Mixed use
KRM D	Kings Road medium density			Medium density residential
KSQ	King Street quarter			Mixed use
KT	Kirwan Traders			Mixed use
LB	Lavarack Barracks			Specialised centre
MF	Mixed farming			Rural
M FP	Mixed 1950s			Character residential
MIMD	Magnetic Island medium density			Medium density residential
MIV	Magnetic Island villages	**HB**	Horseshoe Bay	Mixed use
MIV	Magnetic Island villages	**N B**	Nelly Bay	Mixed use
MIV	Magnetic Island villages	**PB**	Picnic Bay	Mixed use
MS	Marlow Street			Low density residential
NBG	Nelly Bay gateway			Mixed use
NBI	Nelly Bay low impact industry			Low impact industry
NBT	Nelly Bay tourist			Medium density residential
NW	North Ward local centre			Local centre
NWG	North Ward gateway			Medium density residential
N WMD	North Ward medium density			Medium density residential
N WV	North Ward villages			Medium density residential

PB	Picnic Bay			Medium density residential
PBCF	Picnic Bay community facilities			Community facilities
PS	Palmer Street			High density residential
PSP	Park Street			Character residential
PT	Port of Townsville			Specialised centre
PWE	1950s Post War Expansion			Character residential
Q	Queenslanders			Character residential
R	Riverway			Open space
RDC	Rasmussen district centre			District centre
RE	Railway Estate			High density residential
RMII	Roseneath medium impact industry			Medium impact industry
RP	Rossiter Park			Medium density residential
RRRC	Ross River Road corridor			Low density residential
RSLC	Rising Sun local centre			Local centre
S	The Strand			Medium density residential
ST	Stables			Low density residential
STP	South Townsville			Character residential
STRD	South Townsville railyards and Dean Park			Mixed use
TCMC	Thuringowa Central major centre	**TCS**	Thuringowa centre support	Major centre
TCMC	Thuringowa Central major centre	**TD**	Thuringowa Drive	Major centre
TCMC	Thuringowa Central major centre	**TTCH**	Thuringowa town centre heart	Major centre
TCMC	Thuringowa Central major centre	**W**	Willows	Major centre
TE	Thuringowa East			Medium density residential
TS	Thuringowa South			Medium density residential
WC	Workers Cottages			Character residential
WLS	Wills Street			Medium Density Residential
WS	Wotton Street			Mixed use

SC3.2 Schedule of works

Editor's note - the schedules of future works are located immediately after the plans for trunk infrastructure for which they are cross referenced. These schedules, and those identifying the existing works, are also located in the extrinsic material.

These schedules only provide one map reference for any given infrastructure element. In some cases, the infrastructure element may span multiple maps, and care should be taken when cross-referencing the map and schedule in this manner. The maps are also loaded in a GIS environment, whereupon the information in the schedules are able to be interrogated directly from the infrastructure element, regardless of mapping references. TownsvilleMaps is the current in-service GIS platform for this purpose, which can be publicly viewed at council, or privately accessed via subscription.

The costs represented in these schedules are 'establishment cost', used for network valuation purposes, and do not necessarily represent the costs involved in the capital works program for acquiring land or embellishment. This information can be found in the Schedule of Works model. Where a negative value is evident, it represents a credit value of works that are being upgraded, and are to be deducted from the value of the upgraded profile associated with the new item (having the same LGIP ID and year of provision).

SC3.3 Local government infrastructure plan maps

SC3.3.1 - Reporting area map
SC3.3.2 - Developable area maps
SC3.3.3 - Service catchment maps
SC3.3.4 - Priority infrastructure area maps
SC3.3.5 - Plan for trunk water supply infrastructure
SC3.3.6 - Plan for trunk sewerage infrastructure
SC3.3.7 - Plan for trunk roads infrastructure
SC3.3.8 - Plan for trunk footpaths and cycleways infrastructure
SC3.3.9 - Plan for trunk parks and land for community facilities infrastructure

SC3.3.4 - Priority infrastructure area maps

Editor's note—This document is intended to function in an electronic environment whereupon hyperlinks to detailed PDF maps allow for closer examination of mapping information. The following images are true copies of such maps, but at a coarser scale. Notwithstanding this, the priority infrastructure area is also shown in finer detail on the plans for trunk infrastructure.

The maps are also loaded in a GIS environment. TownsvilleMaps is the current in-service GIS platform for this purpose, which can be publicly viewed at council, or privately accessed via subscription.

SC3.3.6 - Plans for trunk sewerage infrastructure

Editor's note— This document is intended to function in an electronic environment whereupon hyperlinks to detailed PDF maps allow for closer examination of mapping information. The following images are true copies of such maps, but at a coarser scale.

The maps are also loaded in a GIS environment. TownsvilleMaps is the current in-service GIS platform for this purpose, which can be publicly viewed at council, or privately accessed via subscription.

SC3.3.9 - Plans for trunk parks and land for community facilities

Editor's note—This document is intended to function in an electronic environment whereupon hyperlinks to detailed PDF maps allow for closer examination of mapping information. The following images are true copies of such maps, but at a coarser scale.

The maps are also loaded in a GIS environment. TownsvilleMaps is the current in-service GIS platform for this purpose, which can be publicly viewed at council, or privately accessed via subscription.

17 June 2011	Lot 2 SP202064		(11) operating works under the *Electricity Act 1994* (Townsville City Council – The 66kV/11kV Bohle Plains substation)
Designation matters Not applicable			

30 November 2012	Lot 1 SP232890	151 John Melton Black Drive, Garbutt QLD 4814	(4) community and cultural facilities, including facilities where a child care service under the *Child Care Act 2002* is conducted, community centres, meeting halls, galleries and libraries (6) educational facilities (9) hospitals and associated institutions (Salvation Army Recovery Services Facility for the purpose of providing support to community members who are seeking assistance to overcome their addictions to alcohol, drugs or gambling)
Designation matters Not applicable			
5 April 2013	Lot 41 SP116222 Lot 2 SP189854	450 University Drive, Douglas, QLD 4814	(9) hospitals and associated institutions (15) storage and works depots and the like including administrative facilities associated with the provision or maintenance of the community infrastructure mentioned in this part (Townsville Hospital)
Designation matters Not applicable			
20 June 2014	Lot 89 CWL 1621	53 Mount Spec Road Paluma QLD 4816	(4) community; cultural facilities, inc. where a service under the *Child Care Act 2002* is conducted... (6) educational facilities (15) storage and works depots, inc. admin facilities assoc. with provision or maint. of the CID in this part (Paluma Environmental Education Centre)
Designation matters Not applicable			

11 November 2016	Proposed Lot 951 SP263024	205 North Shore Boulevard, Burdell QLD 4818	(4) community and cultural facilities including facilities where an education and care service under the Education and Care Services National Law (Queensland) is operated or a child care service under the *Child Care Act 2002* is conducted, community centres, meeting halls, galleries and libraries; (6) educational facilities; (8) facilities for parks and recreation (11) sporting facilities; and (15) storage and works depots and similar facilities, including administrative facilities associated with the provision or maintenance of the community infrastructure mentioned in this part.
Designation matters Not applicable			
18 August 2017	Lot 543 on EP1747	64 Hudson Street, Kirwan	(4) community and cultural facilities, including facilities where an education and care service under the Education and Care Services National Law (Queensland) is operated or a child care service under the *Child Care Act 2002* is conducted, community centres, meeting halls, galleries and libraries; (6) educational facilities; (15) storage and works depots and similar facilities, including administrative facilities associated with the provision or maintenance of the community infrastructure mentioned in this part. Further to the above, the designation includes: sporting facilities and associated infrastructure, road, vehicle layby and car parking and including commercial activities that support its Educational program.
Designation matters Not applicable			
16 February 2018	Lot 2 on RP724653	Riverway Drive, Kelso	(7) emergency services facilities; (15) storage and works depots and similar facilities, including administrative facilities associated with the provision or maintenance of the community infrastructure mentioned in this part; (16) any other facility not mentioned in this part that is intended primarily to accommodate government functions.

Schedule 6 Planning scheme policies

SC6.1 Planning scheme policy index

The table below lists all the planning scheme policies applicable to the planning scheme area.

Table SC6.1.1 - Planning scheme policy index

Number	Planning scheme policy title
SC6.2	Character residential planning scheme policy
SC6.3	Cultural heritage planning scheme policy
SC6.4	Development manual planning scheme policy
SC6.5	Economic impact assessment planning scheme policy
SC6.6	Emerging community planning scheme policy
SC6.7	Flood hazard planning scheme policy
SC6.8	Mitigating bushfire hazards planning scheme policy
SC6.9	Natural assets planning scheme policy
SC6.10	Parking rates planning scheme policy

SC6.2 Character residential planning scheme policy

SC6.2.1 Introduction

Short Title -The planning scheme policy (PSP) may be cited as the Character residential PSP.

SC6.2.1.1 Purpose

The purpose of the planning scheme policy is to:

(1) provide advice about achieving outcomes in the Character residential zone code; and

(2) identify and provide guidance about information that may be required to support a development application where assessable against the Character residential zone code.

SC6.2.1.2 Legislative authority

This planning scheme policy is made under Chapter 2, Part 3 of the *Planning Act 2016*.

SC6.2.1.3 Relationship to the Townsville City Plan

This planning scheme policy is to be read in conjunction with the assessment provisions specified in the Townsville City Plan, specifically the Character residential zone code.

SC6.2.1.4 Terminology

Terms used in this planning scheme policy are defined in Schedule 1 – Definitions. A term used in the planning scheme policy which is not defined in Schedule 1 – Definitions, is to be interpreted in accordance with Part 1.3.1.

SC6.2.2 Planning scheme policy details

The Character residential zone identifies and defines parts of the city with a unique mixture of architecture and overall streetscape. The Character residential zone code regulates development within identified character precincts. This code ensures that the features of these neighbourhoods that make a positive contribution to each precinct's overall character are retained and appropriately managed.

There are twelve precincts in the Character residential zone code, each with its unique features (such as Workers Cottages, Grand Queenslanders and 1960s Defence Housing). The precincts provide for specific development outcomes over and above the general zone code outcomes. Individual properties are included within a precinct. The character features are described fully in the code.

The purpose of the Character residential PSP is to provide applicants with guidance in meeting the requirements of the Character residential zone code. Appendix 1 of this policy identifies non-contributing properties in the Character residential zone. Properties and buildings identified in the Character residential zone and not listed in Appendix 1 of this policy are considered to be contributing properties and buildings. Appendix 2 of this policy identifies contributing non-residential properties.

SC6.2.2.1 Understanding your precinct and your character building

Each character residential precinct is defined in the Character residential zone code. Townsville has defined character residential precincts; these precincts are rich in diversity, unique in character, and capture Townsville's history and North Queensland lifestyle.

(1) Your precinct

The buildings in your street create the character of your precinct. Properties are defined as either contributing character buildings or non-contributing properties. Non-contributing properties must still comply with certain provisions of the Character residential zone code, however; they are not to be used for comparative assessment.

Your street will provide the majority of the information you need to better understand the types of buildings, design, developments and architectural aspects that will be relevant to any new works on your property.

SC6.2.2.2 Finding your way around the policy

The policy is divided into the following eight sections:

(1) Key contributing character elements (SC6.2.3)

(2) Non-residential contributing character buildings (SC6.2.4)

(3) Reconfiguring a lot (SC6.2.5)

(4) Information that may support a development proposal (SC6.2.6)

(5) Preparing an assessment report (SC6.2.6.2)

(6) Preparing a condition report (SC6.2.6.3)

(7) SC6.2 Appendix 1: Non-contributing properties in the Character residential zone

(8) SC6.2 Appendix 2: Contributing non-residential properties

SC6.2.3 Key contributing character elements

SC6.2.3.1 Roofs

This section of the policy provides design principles and examples that may be considered when addressing the requirements of the Character residential zone code. Applicants may refer to this section for guidance on Character residential zone code outcomes regarding roof forms and pitch, material type and colour and depth of roof overhang.

(1) Figure SC6.2.3.1 below demonstrates acceptable roof pitch in relation to neighbouring properties. This may provide guidance in addressing roof pitch related outcomes of the Character residential zone code requirements in particular, in relationship to PO18, PO21, PO28, PO33, PO40, PO45, PO51, PO56, PO63, PO69, PO74 and PO80.

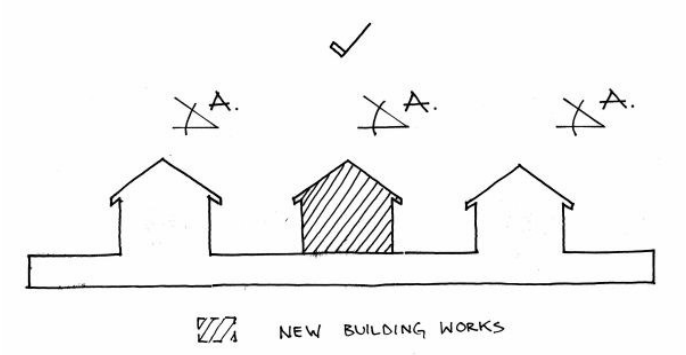

Figure SC6.2.3.1 Illustrates an example of acceptable roof pitch

(2) Figure SC6.2.3.2 below demonstrates an unacceptable roof pitch in relation to addressing roof pitch related outcomes of the Character residential zone code requirements in particular, in relation to PO18, PO21, PO28, PO33, PO40, PO45, PO51, PO56, PO63, PO69, PO74 and PO80.

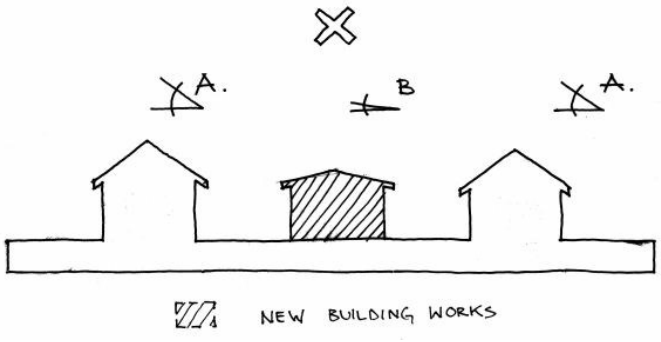

Figure SC6.2.3.2 Illustrates an example of unacceptable roof pitch

(3) Figure SC6.2.3.3a and Figure SC6.2.3.3b identifies some examples of compatible roof pitches found in various character residential precincts. These may be considered in addressing Character residential zone code requirements relating to roof pitch.

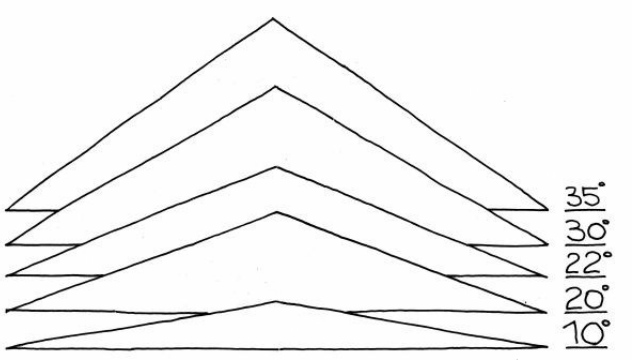

Figure SC6.2.3.3a Illustrates an example of common roof pitches in character residential precincts

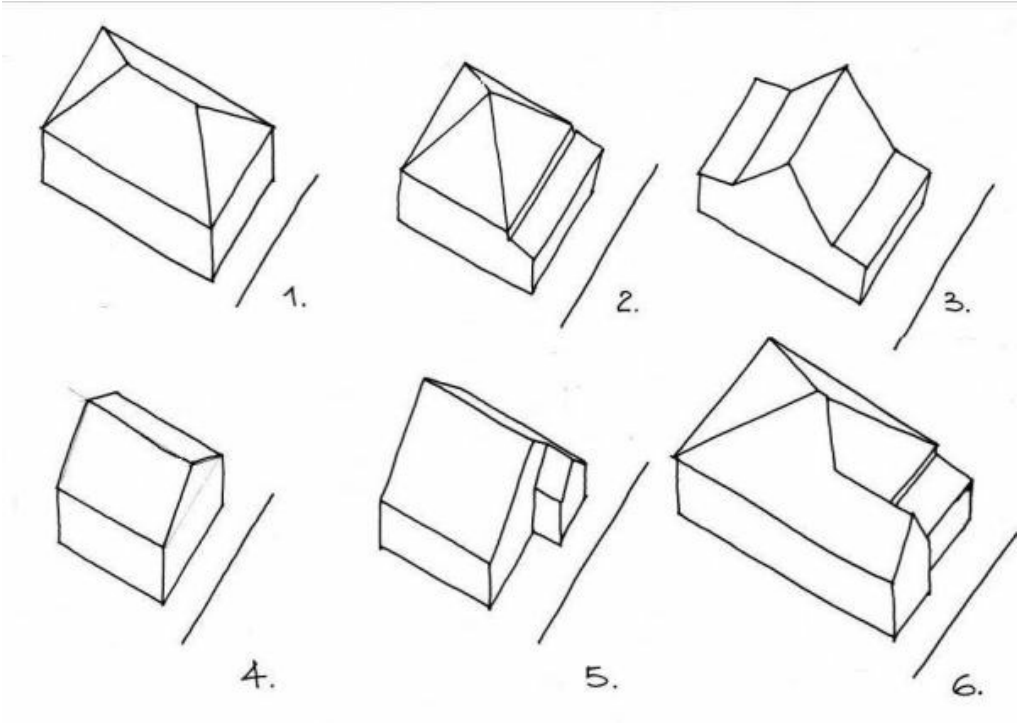

Note—the resulting roof may be expressed as a combination of any number of roof forms:

(1) hip roof;

(2) pyramid roof with skillion/lean-to verandah;

(3) side gable roof with skillion/lean-to verandahs;

(4) front gable roof;

(5) double gable roof (sometimes expressed as triple gable roof); and

(6) combination of gable and hip roofs, with skillion/lean-to verandah.

Figure SC6.2.3.3b Illustrates an example of common roof forms in character residential precincts

(4) Figure SC6.2.3.4 provides guidance on the identification of roof eave depth. This figure may assist in the determination of eave depth in particular, in relation to PO19, PO22, PO57, PO64, PO75 and PO81 of the Character residential zone code.

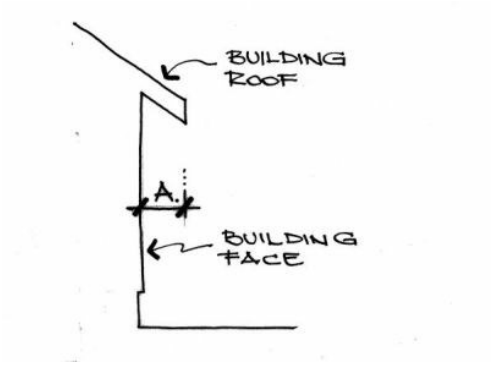

Figure SC6.2.3.4 Illustration of the roof eave depth which is shown by measurement "A"

SC6.2.3.2 Verandahs and front facades

A front verandah or an articulated front façade is commonly observed as a fundamental element of character within some precincts. This section of the policy provides examples of variation in verandah design, including scale (width, depth) enclosure, setback and height above ground level (see Figure SC6.2.3.5 for illustration of terms).

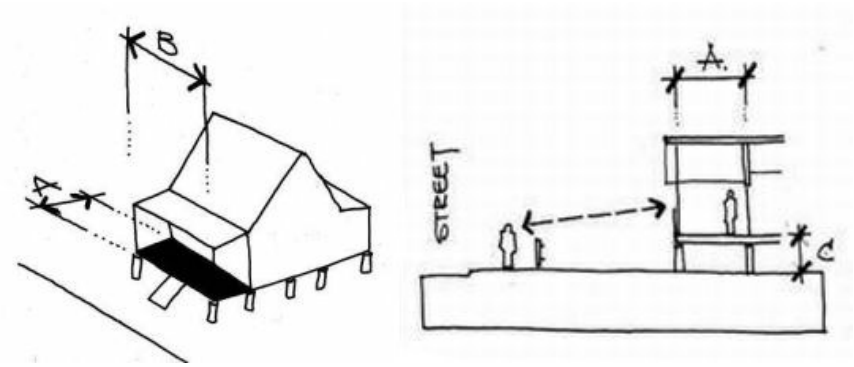

Figure SC6.2.3.5 - Demonstrating the width (B), depth (A), enclosure, setback, and height above ground level (C) of a front verandah

(1) Figure SC6.2.3.6 below illustrates 100% of the front façade width containing a verandah (left), and also an example of a property with a front façade including a verandah for a minimum 60% width of the front façade, wrapping down one side, and includes an asymmetrical projecting front gable (right). Both are open verandahs and are elevated above the natural ground level.

Figure SC6.2.3.6 Illustrates examples of a front verandah

(2) Figures SC6.2.3.7- SC6.2.3.9 illustrate examples of variation in verandah design including open, enclosed, and semi-enclosed and their supporting character elements.

Figure SC6.2.3.7 Illustrates an example of a front verandah, semi enclosed with screening and a door

Figure SC6.2.3.8 Illustrates an example of an open front verandah Workers Cottage style

Figure SC6.2.3.9 Illustrates an example of an open front verandah, Grand Queenslander style

(3) Figure SC6.2.3.10 and SC6.2.3.11 shown below, may be considered as a compatible outcome in relation to PO48, and PO71 and PO 78 of the Character residential zone code. The figures illustrate an example of projecting built forms that may be incorporated into building design in character precincts that do not include a verandah.

Figure SC6.2.3.10 Illustrates an example of a front façade with projecting gable features

Figure SC6.2.3.11 Illustrates an example of a front façade with single asymmetrical projecting gable

SC6.2.3.3 Windows

(1) Figure SC6.2.3.12 shown below, illustrates examples of sympathetic window scale and proportion. These examples provide guidance for addressing outcomes PO20, PO23, PO29 PO34, PO46,PO52, PO58, PO65, PO76 and PO82 of the Character residential zone code.

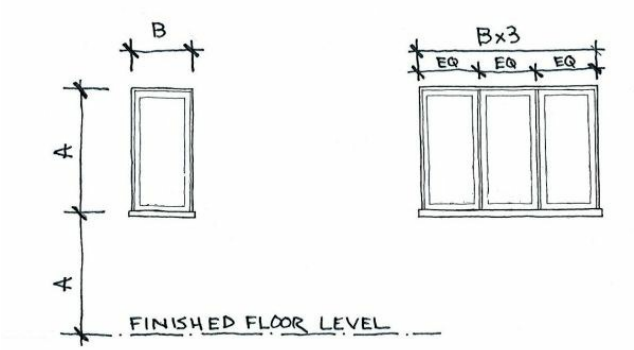

Figure SC6.2.3.12 Illustrates an example of half-height, vertically proportioned windows with one frame (left) and a set of three frames (right)

(2) Figure SC6.2.3.13 shown below, illustrates examples of window hoods in relation to the predominant character of the precinct. This information may be considered in addressing outcomes PO29 and PO34 Character residential zone code requirements regarding sympathetic window scale and proportion.

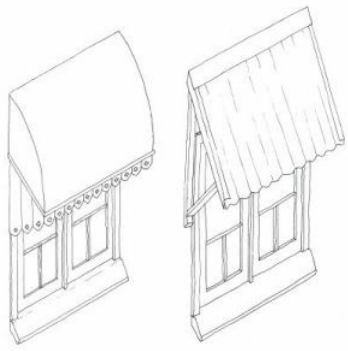

Figure SC6.2.3.13 Illustrates an example of traditional window with hood (left), and an acceptable new window with hood reflecting the same scale and proportions (right)

(3) Figure SC6.2.3.14 - SC6.2.3.17 shown below, illustrates examples of typical windows in character precincts. This information may be considered in addressing outcomes PO20, PO23, PO29 PO34, PO46, PO52, PO58, PO65, PO76 and PO82 of the Character residential zone code.

(a) casement windows and louvers;

Figure SC6.2.3.14 Illustrates an example of two vertically proportioned casements and louvers either side, centrally located under the apex of a gable projection

Figure SC6.2.3.15 Illustrates an example of five vertically proportioned casements located under the apex of a gable projection

(b) bay windows; and

Figure SC6.2.3.16 Illustrates an example of projecting bay window with four casement frames two located centrally and one either side

(c) full height windows.

Figure SC6.2.3.17 Illustrates an example of a full height window, acceptable in 1960's Defence Housing Precinct only

SC6.2.3.4 Building materials

Lightweight construction materials are typical within Townsville's character residential precincts. Lightweight construction materials are traditionally "timber and tin" products. New works within a character residential precinct can replicate lightweight construction using other materials, provided the appearance of lightweight construction is achieved. This section provides guidance on how to achieve PO15 of the Character residential zone code.

(1) Buildings and new works can use materials that are lightweight in appearance and sympathetic with the character of the streetscape. Where traditional lightweight materials are not able to used, non–lightweight materials are acceptable, provided the materials and methods used reflect the appearance of lightweight construction.

An example of an acceptable construction (Figure SC6.2.3.18, left) shows non-lightweight materials that reflect lightweight construction by referencing a raised appearance using textured cladding. An example of an unacceptable construction (right) shows a rendered wall that does not reference a lightweight appearance.

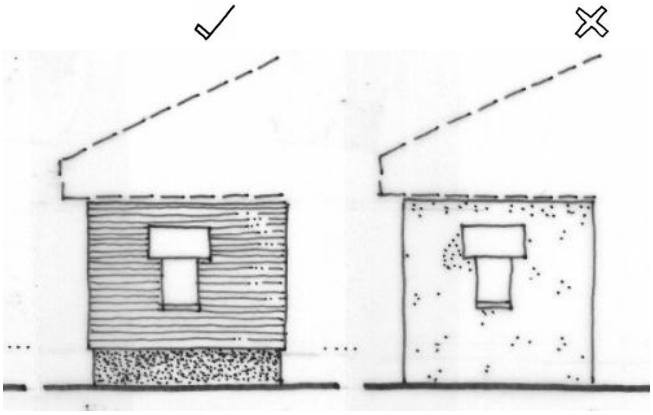

Figure SC6.2.3.18 An example of an acceptable construction (left), and an unacceptable construction (right)

(2) The design materials and principles below provide acceptable examples which can be considered for achieving PO15 of the Character residential zone code.

(a) Typical use of expressive materials in the Character residential zone precincts includes:

(i) chamferboard: A common exterior timber cladding. Several profiles of chamferboard exist, produced in several timber types, such as silky oak, cedar and hardwoods (as shown in Figure SC6.2.3.19);

Figure SC6.2.3.19 Illustrates traditional use of timber chamferboard on external walls

(ii) expressed studwork: Typical of traditional timber framed homes. A practice of fixing the weatherboards to the inner surface of the stud frame and leaving the outer surface uncovered. Evolved to be both functional and decorative (as shown in Figure SC6.2.3.20);

Figure SC6.2.3.20 Illustrates traditional use of expressed studwork walls

(iii) manufactured cladding: Exterior building veneer material. Can be used as an overlay to an existing exterior; some cladding products are known as siding. Manufactured cladding can be used to mimic traditional materials such as chamferboard (as shown in SC6.2.3.21);

Figure SC6.2.3.21 Illustrates new works using manufactured cladding in imitation of traditional lightweight materials

(iv) corrugated galvanised iron: A common roofing material in Australia (as shown in Figure SC6.2.3.22); and

Figure SC6.2.3.22 Corrugated galvanised iron is typical for roofing in Townsville Character buildings

(v) masonry is acceptable for use with external walls where it is finished in the appearance of lightweight construction, and/or used in conjunction with lightweight cladding materials (as shown in Figure SC6.2.3.23).

Figure SC6.2.3.23 Illustrates desirable outcome of a masonry constructed home with a "lightweight appearance"

SC6.2.3.5 Maintaining the street rhythm (scale and proportion)

Maintaining the street rhythm within a character residential precinct is paramount to preserving the character of any particular precinct. Street rhythm can be maintained by repeating the scale and proportions of the character buildings that are predominant in the streetscape. This can be achieved in terms of building heights, setbacks from the street, width of the front facades, and elevation of the floor levels.

Figure SC6.2.3.24 Illustrates an example of an acceptable ground floor enclosure

Figure SC6.2.3.24 illustrates an acceptable example; a raised character building that has been enclosed on the ground level, recessed the full width of the front verandah, using complementary materials and includes a valance in appropriate scale and proportion (this may be considered in addressing numerous Character residential zone code outcomes).

SC6.2.4 Non-residential contributing character buildings

SC6.2.4.1 Non-residential uses

This section of the policy provides guidance in relation to addressing outcome PO35 of the Character residential zone code. In particular, for those properties listed in Appendix 2 - Contributing non-residential properties.

In the South Townsville precinct, non-residential uses and buildings are a contributing element to the precinct's defined character. These non-residential buildings and uses reflect the early settlement and lifestyle of South Townsville.

(1) Typical elements of non-residential contributing character buildings in the South Townsville precinct include:

(a) no setback to street boundaries, and provide an awning and footpath for the full extent of the primary street frontage (as shown in Figure SC6.2.4.1 and Figure SC6.2.4.2); and

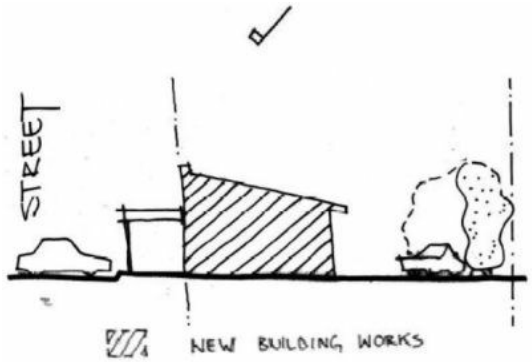

Figure SC6.2.4.1 Non-residential building with no setback to street boundary, awning over the footpath and parking on the street or behind the building

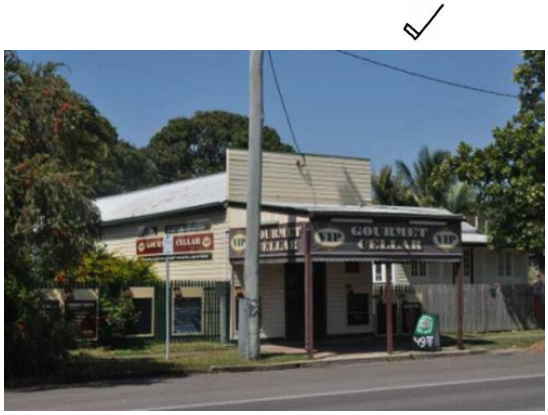

Figure SC6.2.4.2 Existing acceptable example of a non-residential use in an acceptable non-residential building (no setback to street boundary and awning over footpath)

(b) utilise on-street car parking, and/or on-site parking is behind the building and obscured by landscaping screen.

Note—where an existing non-residential non-contributing character building is not retained, the site may be converted to a residential use to match the scale and rhythm of adjacent contributing character residential buildings.

SC6.2.5 Reconfiguring a lot

The following design principle is provided as material for consideration when addressing PO11 of the Character residential zone code.

(1) To maintain the rhythm and consistency of the streetscape, the installation of a fence that is tapered in height from the street front to the front façade of the building may be considered (Figure SC6.2.5.1 illustrates an acceptable outcome).

Figure SC6.2.5.1 Illustrates access strip fencing tapered from the front façade of the building to the street boundary (measurements are provided only as an example)

SC6.2.6 Information that may support a development proposal

SC6.2.6.1 Elevations and streetscape

Development proposals should provide clear representations of the relationship between adjacent contributing character buildings and the proposed works to ensure that the design of development is undertaken with a clear understanding of the surrounding context.

Development applications should provide front/street elevations of the proposed works and of each adjoining contributing character building. References of key elements from adjoining contributing character buildings (roof type/pitch, floor elevations, windows, building materials, building height, setbacks, scale and proportions) should be made in all new works.

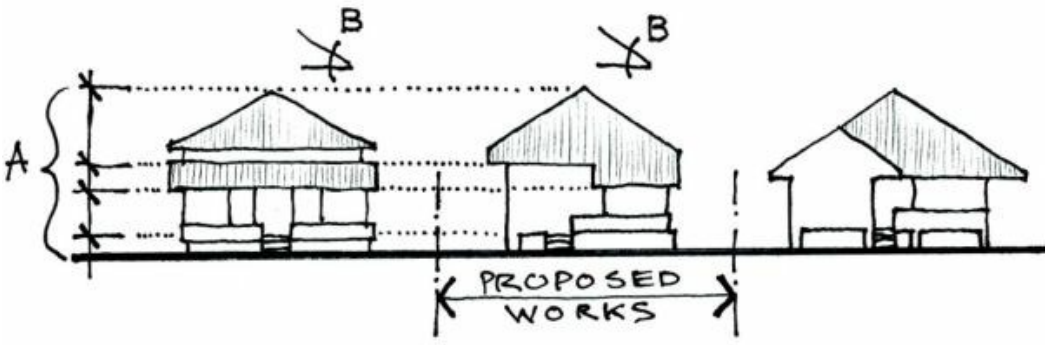

Figure SC6.2.6.1 Illustrates an example of clear elevations of the proposed works and adjoining contributing character buildings, with references made to key elements

SC6.2.6.2 Preparing an assessment report

The following is advice for preparing an assessment report for a property or building within the Character residential zone code. This may be required to demonstrate achievement with the relevant performance outcomes in the Character residential zone code.

An assessment report may provide specific information about how a proposed development will affect the character residential precinct.

The report should include the following:

(1) A brief description of the proposed development including:

- (a) type of development;
- (b) range and scope of work proposed;
- (c) timeframe for carrying out work; and
- (d) location of work in relation to the character residential precinct;

(2) A description of the setting and context of the place, including photographs and maps showing significant features that will be affected. Provide an analysis of the affect the development will have on the streetscape;

(3) A description of proposed changes to character including:

(a) what elements or aspects of streetscape are affected by the change;

(b) assessment of the proposal against the performance outcomes in the zone code;

(c) analysis of the impact of the change on the significance of the precinct;

(d) assessment of potential for detrimental impact on the significance of the precinct; and

(e) where the proposed change is assessed as having potential for detrimental impact, provide information about why the change is required, alternative solutions that were investigated, and what measures are included in the development to reduce detrimental impact that may result from the change; and

(4) References list documents referred to in the assessment report such as conservation policies, conservation management plan, condition report (i.e. demolition report), and specialist consultants' reports. (Adapted from Guideline: *Preparing a Heritage Impact Statement* Department of Environment and Heritage Protection, 2011).

SC6.2.6.3 Preparing a condition report

If an application is proposing demolition of a contributing character building, the applicant may be requested to provide a condition report. The condition report should, at a minimum, include consideration of:

(a) the structural stability of the building in the form of a structural engineer's report. The condition report must include a factual statement from an appropriately qualified structural engineer about the condition of the building; and

(b) a pest inspection report and other supporting documentation may also be provided.

Appendix 1

SC6.2 APPENDIX 1: Non-contributing properties in the Character residential zone

Precinct A – 1950's Post War Expansion

Address	Comments
79 Lancaster Street	Original house that has been re-clad with face brick, including brickwork fence. Original roof form and windows have been retained, however brickwork is out of character
18 Lockheed Street	Contemporary rendered blockwork slab on ground house with double garage facing the street and rendered masonry front fence.
62 Perroux Street	High-set house
10 McHardie Street	Blockwork house
14 McHardie Street	Blockwork house
29 Downs Street	Blockwork house

Precinct B – 1960s Defence Housing and 1960s Housing Commission

Address	Comments
55 Clements Crescent	Substantial tornado damage
2 Lancaster Street	Low-set house
3 Lancaster Street	"Ranch Style" high set house – different style to predominant character
4 Lancaster Street	Low-set house
46 Douglas Street	Oriented to other street – does not relate to rest of precinct

Precinct C – Worker's Cottages

Address	Comments
4 Fifth Street	Vacant Lot
6 Fifth Street	Vacant Lot
3 Fifth Street	High-set horizontally massed house with shallow pitched roof
2 Flowers Street	High-set horizontally massed house
16 Flowers Street	Low-set Blockwork house
26 Flowers Street	Horizontally massed with prominent carport
77 Ninth Avenue	High-set horizontally massed house
1A Doorey Street	Low-set rendered house with prominent carport to front boundary
66 Tenth Avenue	Low-set blockwork duplex
60 Eleventh Avenue	High-set horizontally massed house
63 Eleventh Avenue	High-set horizontally massed house
73 Eleventh Avenue	High-set fibre cement clad house
75 Eleventh Avenue	High-set horizontally massed duplex
12 Fourteenth Avenue	Low-set blockwork house
14 Fourteenth Avenue	Low-set blockwork house
13 Fifteenth Avenue	High-set horizontally massed house
40 Seventh Street	Low-set fibre-cement house with skillion roof
7 Third Street	Low-set blockwork house
9 Third Street	High-set horizontally massed house with shallow pitched roof
14 Third Street	Low-set blockwork house (obscured by garden)
19 Third Street	High-set horizontally massed duplex
31 Flowers Street	Low-set blockwork house
258 Boundary Street	Blockwork Duplex
288 Boundary Street	Horizontally massed high-set house
1 Cape Street	Blockwork House
2 Cape Street	Horizontally massed high-set house
2 Comet Street	Low-set fibre cement house with shallow roof pitch
6 Fourth Avenue	Low-set house with shallow roof pitch
30A Sixth Avenue	Horizontally massed house with blockwork arches
37 Sixth Avenue	Vacant Lot
26 Sixth Street East	Horizontally massed high-set house
52A Sixth Street East	Vacant Lot
53 Sixth Street East	Vacant Lot
55 Sixth Street East	Water Police Office
57 Sixth Street East	Vacant Lot
56-58 Sixth Street East	Vacant Lot
19 Eighth Avenue	Horizontally massed two storey house
26 Perkins Street	Low-set blockwork house
37 Davidson Street	Low-set block house with large setback
40 Davidson Street	Low-set coloured blockwork house
42 Davidson Street	Rendered low-set house with tiled roof and garage door on street
15 Baxter Street	Original character house – raised to two storeys and poorly enclosed front verandah.
21 Baxter Street	Low-set brick block of units
22 Baxter Street	Rendered low-set house with visually prominent garage
7A Garrick Street	High-set fibre cement house with shallow pitched front gable
12 Garrick Street	Low-set brick house
16 Garrick Street	Low-set blockwork house
9-11 Castling Street	High-set “Ranch” style fibro house with shallow pitched roof
8 Castling Street	Blockwork lowest house
15 Estate Street	Modern, unsympathetic new dwelling, inconsistent setback, subdivision not consistent with other blocks

15A Estate Street	Modern, unsympathetic new dwelling, inconsistent setback, subdivision not consistent with other blocks
17 Estate Street	Low-set house with shallow front gable
18 Estate Street	Horizontally massed house
26 Estate Street	High-set 1950s era house
28 Estate Street	Low-set masonry – only visible expression is front double carport
3 Townsville Street	High-set fibre cement clad with shallow pitched front gable
4 Townsville Street	High-set horizontally massed house
5 Townsville Street	Unsympathetically raised house
7 Townsville Street	Character house with blank blockwork wall in front
15A Townsville Street	Rendered low-set house with prominent front carport
27 Townsville Street	Vacant lot
2 Edwards Street	Low-set rendered house with very shallow roof pitch
7 Edwards Street	Recent house with disproportionate front setback and prominent front carport
7A Edwards Street	Recent house with disproportionate front setback and prominent front carport
17 Edwards Street	Gable fronted two storey units
18 Edwards Street	Low-set house with brick walls and single front gable
6 Lamington Road	Brick “six pack” unit block
12-14 Lamington Road	Blockwork units, tiled roof
13 Lamington Road	Blockwork units
6 Humphrey Street	Two storey brickwork units
14 Humphrey Street	Low-set blockwork units
15 Humphrey Street	Low-set blockwork house
25 Humphrey Street	Unsympathetically raised and renovated character house
5 Plant Street	Two storey blockwork “six-pack” units
6 Shaw Street	Oversized modern highest house with gable – out of scale
22 Shaw Street	High-set “Ranch” style
25 Shaw Street	Low-set blockwork duplex
9 Shaw Street	Blockwork units

Precinct D – South Townsville (Residential)

Address	**Comments**
66 Allen Street	Rendered two storey house with prominent carparking
75 Allen Street	Low-set blockwork house
30 Allen Street	Low-set rendered house
10 Bell Street	Low-set fibre cement house
15 Bell Street	Horizontally massed high-set house
17 Bell Street	Brick and tile house
21 Bell Street	St Andrews Villas – Brick low-set
37A Bell Street	Rendered duplex
37B Bell Street	Rendered duplex
183 Boundary Street	Horizontally massed high-set house
283-285 Boundary Street	Low-set blockwork house
1 Cannan Street	Contemporary house under construction
17 Hubert Street	Character house raised on disproportionately high stumps
41 Macrossan Street	Horizontally massed high-set house
55 Macrossan Street	Two storey blockwork house
5 Martin Street	Low-set duplex with very prominent garages
10 Martin Street	Low-set rendered duplex
7 Nelson Street	Brick and tile house
13 Nelson Street	Wide low-set rendered house
18 Nelson Street	Brick duplex with blank gable end facade
21 Nelson Street	Vacant lot
22 Nelson Street	Low-set blockwork house

43-45 Nelson Street	Brickwork units
46 Nelson Street	Contemporary skillion roofed house – lacks front verandah
50 Nelson Street	Brick and tile house
52 Nelson Street	Brick and tile house
54 Nelson Street	Low-set blockwork house
71 Perkins Street	Low-set rendered house
85 Perkins Street	Vacant lot
115 Perkins Street	Unsympathetically converted commercial building
8 Tully Street	Blockwork duplex
42 Tully Street	Two storey brickwork house
44 Tully Street	Mock heritage low-set house
73 Tully Street	Rendered two storey house – lacks shade elements
81 Tully Street	Two storey blockwork house
91 Tully Street	Low-set blockwork house
97 Tully Street	Low-set rendered house
105 Tully Street	Multiple units

Precinct D – South Townsville (Non-Residential)

Address	**Comments**
50 Allen Street	Rendered recent commercial building – built to front boundary, however lacks street activation and awnings to footpath
12-20 Bell Street	Large contemporary warehouse building – Sigma Pharmaceuticals
20A Bell Street	Shades By Prior – rendered recent commercial building built to boundaries, however lacks substantial awnings to footpath
22 Bell Street	Map to Mine – commercial offices with large front setback
8 Cannan Street	Sabre Marine – large light industrial shed with large setback to the street and front hardstand area
10 Cannan Street	Basic commercial building with large front setback and extensive front carparking area
12 Cannan Street	Basic commercial building with large front setback and extensive front carparking area
6 Hubert Street	NSS (Northern Stevedoring Services) Shed with large hardstand area to street
3-7 Macrossan Street	South Townsville Self-Storage – secure self-storage complex
11 Macrossan Street	Portside Self-Storage – secure self-storage complex
13-17 Macrossan Street	U-Store – secure self-storage complex
36 Macrossan Street	Home-grown Hardwoods – large setback to the street and prominent front hardstand and storage area
38 Macrossan Street	SSAF Sheetmetal – Light industrial shed built to front and side boundaries however lacks street activation or awnings to footpath. May be suitable for retrofitting or refurbishment to improve character values.
45 Macrossan Street	Black River Cattle Equipment – light industrial use and rear shed destroys character values of retained house.
47 Macrossan Street	Abraham Steel Fabrications – large light industrial shed.
53 Macrossan Street	C&C Motors Shed – light industrial shed
46 Morey Street	Furniture warehouse with relatively blank blockwork façade to street and lack of shade to footpath. Appears suitable for retrofitting or refurbishment to improve character values.
19 Perkins Street	Light Industrial shed setback from street with hardstand area to front
41 Perkins Street	Murphy Steel Fabrications – Open light industrial shed with general storage in fenced yard.
75 Perkins Street	Dick Yuen Wholesale – Large front setback and extensive front hardstand area
99 Perkins Street	Kirk's Automotive Service – Shed to street frontage – interrupts an otherwise consistent row of character houses. Shed to rear of site may have some character value however is not readily visible from the street.

113 Perkins Street	Hood the Sailmakers Offices – blockwork commercial building. Built to front and side boundaries however lacks street activation and awnings to footpath. Appears suitable for retrofitting or refurbishment to improve character values.
3 Tully Street	U-store – secure self-storage complex
17 Tully Street	Shed with large front setback
50 Tully Street	Commercial complex with relatively blank blockwork façade to street and prominent driveway.
58 Tully Street	Warehouse complex. Built to front and side boundaries, however blank blockwork façade and lack of shade to footpath. Appears suitable for retrofitting/refurbishment.
80 Tully Street	Woodfield Engineering – basic light industrial shed
102 Tully Street	Fenced site – otherwise vacant

Precinct E – Queenslanders

Address	**Comments**
12 The Avenue	3 storey blockwork “Six-pack” units
16 The Avenue	2 storey brick units
7 Ackers Street	Three storey blockwork units
16 Ackers Street	Brickwork units
24 Ackers Street	Blockwork units
26 Ackers Street	Blockwork units
29-31 Ackers Street	Blockwork units
32 Ackers Street	Blockwork units
39 Ackers Street	Brick and tile house
42 Ackers Street	Low-set duplex
57 Ackers Street	Blockwork units
64 Ackers Street	Low-set blockwork duplex
66 Ackers Street	Horizontally massed high-set house
68 Ackers Street	Horizontally massed high-set house
69 Ackers Street	Low-set fibre cement units
2 Ahearne Street	Vacant lot
19 Ahearne Street	Brickwork base, horizontally massed highset house
25 Ahearne Street	Horizontally massed high-set house
27 Ahearne Street	Horizontally massed high-set house
35 Ahearne Street	Blockwork units
36 Ahearne Street	Horizontally massed high-set house
38 Ahearne Street	modern duplex
47 Ahearne Street	Blockwork units
51 Ahearne Street	Two storey contemporary units – some sympathetic elements however overall bulk and prominent garages are detrimental.
52 Ahearne Street	Vacant lot
54 Ahearne Street	Blockwork Units
70 Ahearne Street	Brickwork house
7 Armstrong Street	Blockwork low-set units
16 Armstrong Street	Horizontally massed high-set house
18 Armstrong Street	Three storey blockwork units
27 Armstrong Street	Low-set brick units
28 Armstrong Street	Horizontally massed high-set house
30 Armstrong Street	Low-set brick units
39 Armstrong Street	Two storey brick units
41 Armstrong Street	Fibre cement building with shallow roof pitch – used as offices
44 Armstrong Street	Two storey blockwork with arches
50 Armstrong Street	Blockwork low-set house
54 Armstrong Street	Brickwork units

56-58 Armstrong Street	Blockwork units
64 Armstrong Street	Vacant lot
78 Armstrong Street	Low-set rendered house
36-38 Ackers Street	Two storey brick units
4 Campbell Street	Blockwork units
6 Campbell Street	Blockwork units
2 Marks Street	Horizontally massed high-set house
16 Marks Street	Two storey blockwork units
18 Marks Street	Two storey rendered units
13 Philp Street	Rendered low-set units
16 Philp Street	Blockwork low-set units
19 Philp Street	Two storey brick house
21 Philp Street	Low-set rendered house
27 Philp street	Brick two storey units
37 Philp Street	Vacant Lot, not gazetted address, part of 35 Philip but fenced off
42 Philp Street	Rendered two storey units
9 Campbell Street	Masonry rendered 2 storey house (actually rear of lot at 42 Philip St, but driveway is to Campbell & post-box has number 9 on it.
14 Summerfield Street	Vacant lot
2A Ralston Street	Low-set blockwork units
2 Ralston Street	Low-set blockwork units
16 Ralston Street	Two storey blockwork units
18 Ralston Street	Vacant lot
45 Henry Street	Two storey blockwork units
125-127 Francis Street	Church, modern brickwork
129 Francis Street	Masonry units
146 Francis Street	Low-set blockwork house with very shallow roof pitch
154 Francis Street	Low-set house with stipple render finish
36 Leigh Street	Two storey units – face brickwork with fibre cement chamfer boards
56 Leigh Street	Light industrial building
25 Stagpole Street	Prominent three storey blockwork units
30 Stagpole Street	Horizontally massed high-set house
32 Stagpole Street	Blockwork low-set house with shallow roof pitch
33A Stagpole Street	Newly reconfigured house
40 Stagpole Street	Low-set rendered units (“6 pack”)
43A Stagpole Street	Newly reconfigured house
49 Stagpole Street	Open light industrial shed
52 Stagpole Street	Low-set shallow pitched hipped roof house with high fence and low floor height
82 Stagpole Street	Horizontally massed high-set house
83 Stagpole Street	Shallow pitched skillion roofed fibre cement clad house
86 Stagpole Street	Low-set blockwork units
93 Stagpole Street	Horizontally massed 1960’s era high-set house. Front setback blocks views to “Wolverton”.

Precinct F – Interwar Gables and Queensland Bungalows

Address	**Comments**
14 Chubb Street	Rendered front parapet (addition) and tall rendered fence
16 Chubb Street	Rendered
15 Taylor Street	Horizontally massed high-set house
16 Taylor Street	Vacant lot
20 Taylor Street	Horizontally massed high-set house
12 McKillop Street	Brick house with prominent front carport
3 Mawai Street	Low-set blockwork house with high fence
8 Mawai Street	Horizontally massed high-set house

4 Mears Street	Horizontally massed high-set house
6 Mears Street	Horizontally massed high-set house
11 Mears Street	Horizontally massed high-set house
22 Mears Street	Brick and tile units
24 Mears Street	Street frontage dominated by double carport with roller doors
34 Mears Street	Two storey block of units with shallow pitched roof
30 Hammond Street	Horizontally massed high-set duplex

Precinct G – Interwar to 1950s Asymmetrical Gable

Address	Comments
34 Hooper Street	Low-set blockwork duplex
35 Hooper Street	Low-set skillion roofed house with prominent front carport
26 Hooper Street	Vacant lot
53 Princes Road	Units
14 Princes Road	Two storey units
29 Princes Road	Units
30 Princes Road	Units
16 Sussex Street	Blockwork low-set house
3 Batt Street	Modern rendered with skillion roof
9 Batt Street	Slab on ground, flagstone veneer
3 Purves Street	Slab on ground, rendered modern
21 Kenilworth Street	Low pitch mono gable horizontally massed
22 Kenilworth Street	Low-set render low pitched roof
23 Kenilworth Street	Brick veneer, two storey
24 Kenilworth Street	Not representative of character, but good tropical house
12 Kenilworth Avenue	Two storey unit development
6 Surrey Street	High-set fibre cement clad house
14 Surrey Street	Brick low-set house
16 Surrey Street	Brick low-set house
20 Surrey Street	Brick House
19A Surrey Street	High-set fibre cement clad house
21A Surrey Street	“Six pack” unit block
31 Townsend Street	Rendered blockwork house with prominent front garage
5 Burton Street	Low-set blockwork duplex
34 Townsend Street	Skillion roofed low-set house with rendered walls. Possible 1950s era
7 Burton Street	Low-set brickwork duplex
12 Burton Street	Low-set blockwork house
25 Burton Street	Low-set blockwork duplex
26 Burton Street	Horizontally massed high-set house
5 Ballard Street	Horizontally massed high-set house
11 Ballard Street	Horizontally massed high-set house
13 Ballard Street	Horizontally massed low-set house
15 Ballard Street	Rendered low-set house with shallow front gable
16 Ballard Street	Two storey, two car garage to front
40 Purves Street	Horizontally massed high-set house
51 Purves Street	Two storey unit building
55 Purves Street	Low-set blockwork house
57 Purves Street	Vacant lot
25 Mindham Street	Low-set rendered duplex

Precinct H – Churchill Street

Address	Comments
9 Churchill Street	High-set house with shallow pitched gable roof
11 Churchill Street	Low-set blockwork house with shallow pitched roof and lack of windows oriented towards street

Precinct I – Park Street

Address	Comments
22 Gladstone Street	Terrace Style Unit development. Width of building facing Park Street far exceeds character houses.
24 Gladstone Street	Pre 1946 house, however house faces Gladstone Street and does not contribute to Park Street Precinct streetscape.
20 Park Street	Unit Development. Incorporates some sympathetic features such as front verandah and fence.
21 Park Street	60's era High-set house with fake brick cladding
23 Park Street	Blockwork unit development with blank street frontage and no fence.

Precinct J – Grand Queenslanders

Address	Comment
17 Alexandra Street	3 storey brickwork units
26 Alexandra Street	Rendered house with shallow roof pitch and no front verandah
32 Alexandra Street	Low-set brick and tiled roof house
40 Alexandra Street	Two storey blockwork house
43 Alexandra Street	Two storey 1950s house with flush lower level and dominant rendered front retaining wall.
44 Alexandra Street	4 storey blockwork units
46 Alexandra Street	Rendered two storey units with tiled roof
1 Burke Street	4 storey blockwork units
2 Burke Street	Low-set masonry units
32 Paxton Street	Two storey rendered units with blank façade and prominent parking
21 Cleveland Terrace	Rendered Units – wide form/bulk, Mediterranean style
19 Cleveland Terrace	Brick unit building. Wide, horizontal massing.
11 Cleveland Terrace	Brick unit building. Setback from street does not align with neighbours
27 Cleveland Terrace	Building site – design appears to be modern house with materials that are not related to surrounding context.
34 Cleveland Terrace	Shallow gabled low-set house. Overly large front setback. Fibre cement wall cladding.
7-11 Hamilton Street	Very large site – Vacant apart from small 70s/80s era fibre cement clad dwelling.
3-5 Hamilton Street	Vacant
25 Melton Terrace	70's era fibre cement clad units. Dilapidated.
7 Victoria Street	Two storey rendered house with shallow roof pitch and prominent double garage
18-20 Victoria Street	Blockwork and tile duplex
15-19 Victoria Street	Ridgemont Motel – Blockwork and tiled roof
26-28 Victoria Street	Skillion roofed house
273 Stanley Street	Skillion roofed cottage
277 Stanley Street	Derelict cottage
279 Stanley Street	Brick units
37 Hale Street	Two storey fibre cement clad unit building – lacks front verandah.
39 Hale Street	Modest low-set house with large street setback and no front verandah.

Precinct K – French Street

Address	Comments
18 French Street	Blockwork unit block with large setback
16 French Street	Blockwork House with tiled roof
20 French Street	Modern unsympathetic units
27 French Street	Enclosed block work on ground floor and the removal of external front staircase
13 French Street	Low-set rendered masonry units

Precinct L – Mixed 1950's

Address	Comments
2 Goodwin Street	Blockwork low-set house
28 Goodwin Street	1960's era high-set house
56 Goodwin Street	Rendered contemporary low-set house
66 Goodwin Street	Horizontally massed high-set duplex
69 Goodwin Street	Blockwork low-set house
101 Goodwin Street	Blockwork low-set with tiled roof
3 McDougall Street	Horizontally massed high-set duplex
4 McDougall Street	Horizontally massed high-set duplex
27 Haig Street	3 storey unit development
3-5 Haig Street	Unit Development
2B Haig Street	Unsympathetic modern dwelling
6 Haig Street	Low-set house with prominent flat roofed extension facing Haig Street
10 Isley Street	Brick veneer, timber floor low-set house
12 Isley Street	Brick veneer on slab
146 Howitt Street	Three storey apartment complex
146 Mitchell Street	Two storey units

SC6.2 APPENDIX 2: Contributing non-residential properties

Address	Comments
38-42 Allen Street	Former Petrol Station – currently Motolec Auto Electrical. Current use of forecourt for fenced general storage is detrimental to precinct character; however, site contains former petrol station buildings that are part of the mixed precinct character. Site would benefit from refurbishment and new use with greater street activation.
39 Allen Street	Pre1941 commercial building built to front boundary with 2 shopfronts and awning over footpath.
34 Archer Street	Former basic light industrial shed – patina of weathered corrugated iron and surrounding gardens contributory.
25 Bell Street	Character house converted into two storey commercial building. No setback to front boundary and includes awning to footpath.
33 Bell Street	Pre 1941 commercial building built to front boundary. Character value reduced by added blockwork façade and lack of awning to footpath.
173 Boundary Street	Pre 1941 small chamferboard shop to street with awning. High chainlink fence to property boundary is detrimental to the character.
265 Boundary Street	Small row of shopfronts with awning to footpath. Parts appear to be pre1941. Unusual 1960's era two storey units on the same parcel of land – units appear to have potential for retrofitting/refurbishment.
32 Hubert Street	St Patrick's Catholic Church and former school building.
20 Macrossan Street	Commonwealth Hotel. Two storey corner hotel with wraparound verandahs over footpath. Very important contributor to local character.
30 Macrossan Street	St Johns Anglican Church
65 Morey Street	Bahai Community Centre
25 Perkins Street	Building materials site with pre 1941 twin gabled sheds built to Perkins Street Boundary. Current use of site for open storage is detrimental to precinct character however sheds have character value and appear suitable for retrofitting or refurbishment.
45 Perkins Street	South Side Engineering – light industrial gabled shed with some character values and appears suitable for retrofitting or refurbishment.
89 Perkins Street	Former 1950s era Art Deco influenced brick and tile house. Features curved walls and unusual plan. Currently used as offices for Family Emergency Accommodation Townsville – generally retains residential appearance.
115-147 Perkins Street	Heritage listed Warehouse building with brick components dating from 1899. Property is in relatively poor condition. Site is very large and mainly open hardstand – the heritage building occupies the Cannan Street end only. Sympathetic retrofitting or refurbishment will be required to retain the character values of this property.

SC6.3 Cultural heritage planning scheme policy

SC6.3.1 Introduction

Short Title -The planning scheme policy (PSP) may be cited as the Cultural heritage PSP.

SC6.3.1.1 Purpose

The purpose of the planning scheme policy is to provide applicants with additional information and guidance in meeting the requirements of the Cultural heritage overlay code and the Advertising devices code for signage in Flinders Street East.

SC6.3.1.2 Legislative authority

This planning scheme policy is made under Chapter 2, Part 3 of the *Planning Act 2016*.

SC6.3.1.3 Relationship to the Townsville City Plan

This planning scheme policy is to be read in conjunction with the assessment provisions specified in the Townsville City Plan, specifically the Cultural heritage overlay code and Advertising devices code.

SC6.3.1.4 Terminology

Terms used in this planning scheme policy are defined in Schedule 1 – Definitions. A term used in the planning scheme policy which is not defined in Schedule 1 – Definitions, is to be interpreted in accordance with Part 1.3.1.

SC6.3.2 Planning scheme policy details

The cultural heritage of Townsville continues to be a major contributor to the identity of the City and local communities. The Citation of Heritage Places Report provides information about each heritage place in Townsville. It highlights the criteria that were originally identified for each place and indicates its significant heritage features and eligibility for entry into Schedule 7 Places of cultural heritage value.

This planning scheme policy contains information to help individuals and groups identify, conserve and protect heritage places in Townsville. This policy provides applicants with guidance in meeting the requirements of the Cultural heritage overlay code and the Advertising devices code (where it relates to advertising devices for heritage places in Flinders Street East). The policy also details how to nominate to add a place to Schedule 7 Places of cultural heritage value and how to nominate to remove a place from Schedule 7 Places of cultural heritage value.

SC6.3.2.1 Finding your way around the policy

The policy is divided into the following nine sections:

(1) Information that may support a development proposal (SC6.3.3);

(2) Development adjoining a heritage place (SC6.3.4);

(3) Development within a heritage place, including advertising devices (SC6.3.5);

(4) Preparing a heritage impact statement report (SC6.3.6);

(5) Preparing a condition report (SC6.3.7);

(6) Preparing archival recording of a heritage place (SC6.3.8);

(7) Interpretive signage for the loss of a heritage place (SC6.3.8.3);

(8) Preparing an archaeological management plan (SC6.3.9); and

(9) Adding or removing a place to Schedule 7 Places of cultural heritage value (SC6.3.10).

SC6.3.3 Information that may support a development proposal

The information required for any development application will depend on the heritage significance of the heritage building, site or element and the proposed development. In addition to the requirements for development applications under the *Planning Act 2016* (PA) and the relevant Integrated Development Assessment System forms, the following additional information should generally be provided to council.

(1) To ensure that the design of the proposed development is undertaken with a clear understanding of the surrounding context and significance of "place", the proposed application should submit clear representations of the relationship between the heritage buildings and the proposed works.

(2) The applicant should submit a street elevation of the proposed development. The elevation is to be

(a) drawn to 1:200 scale;

(b) include the full width of the street frontage of the proposed development and the two adjacent neighbouring buildings (as shown in Figure SC6.3.3.1);

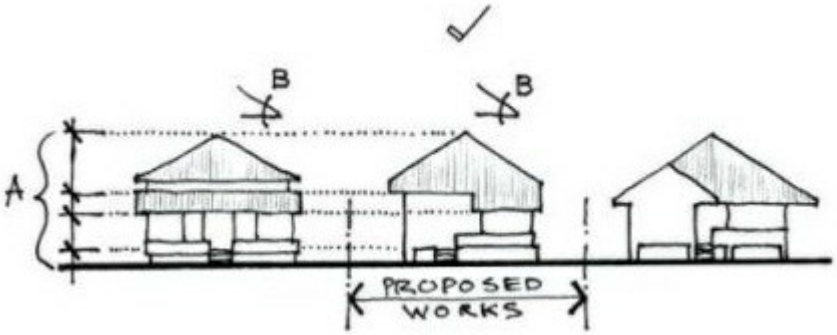

Figure SC6.3.3.1 Illustrates desirable outcome. 'A' denotes key building lines and 'B' is the referenced roof pitch. This may provide clear representations of relationship between the heritage place and the proposed works such as floor heights, dominant fascia lines, roof lines, roof pitch etc.

(c) provide accurate representations of the primary design considerations: setbacks, form, massing, height, materials, finishes, and key detail elements that contribute to the significance of the heritage place;

(d) for new buildings adjoining a heritage place, indicate key building lines in relation to the heritage place (as shown in Figure SC6.3.3.2); and

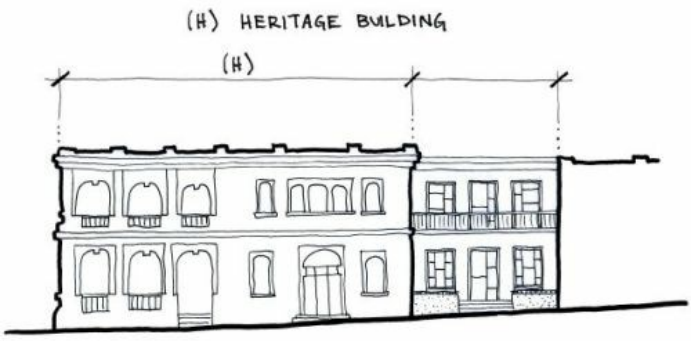

Figure SC6.3.3.2 Key building lines in relation to the heritage place

(e) for new works that are proposed to be visually obscured by a heritage feature, consider demonstrating view lines using a cross section drawing (as shown in Figure SC6.3.3.3).

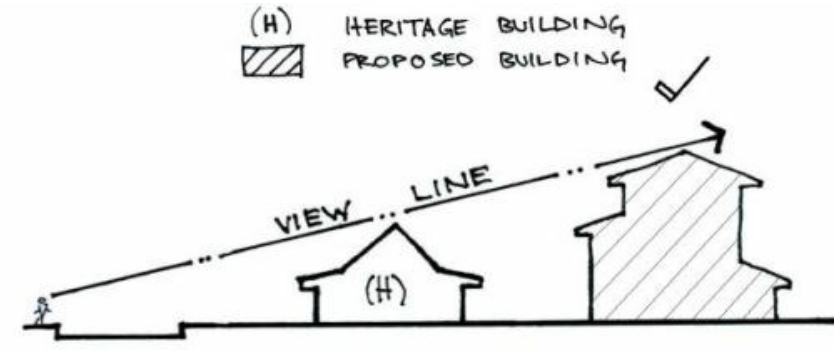

Figure SC6.3.3.3 View lines using a cross-section drawing

(3) In addition to the requirements above, for buildings with a height greater than 2 storeys, the applicant may be requested to submit:

(a) three dimensional perspective images inclusive of the adjacent neighbouring buildings; and

(b) in urban contexts in which the streetscape is of uniform height consistent with the height of the heritage place, provide an elevation drawing of the full width of the street block and nominate a "reference height".

SC6.3.4 Development adjoining a heritage place

This section of the policy provides guidance in achieving performance outcome PO13 of the Cultural heritage overlay code associated with setbacks for development, building height and scale and form of development adjoining a heritage place.

SC6.3.4.1 Setback for development

PO13 of the Cultural heritage overlay code requires that new buildings be consistent with the significant features and values of the heritage place, including, but not limited to, built form and setbacks, maintain significant views to and from the heritage place and ensure that new buildings are visually subservient.

(1) To achieve the requirements of the performance outcomes in the code and allow for significant views to and from a heritage place to be maintained, the following design guidance should be considered.

(a) in instances where the significance of the heritage place includes its setback in common with the established street pattern, the setback of new works ought to maintain this significance (as shown in Figure SC6.3.4.1);

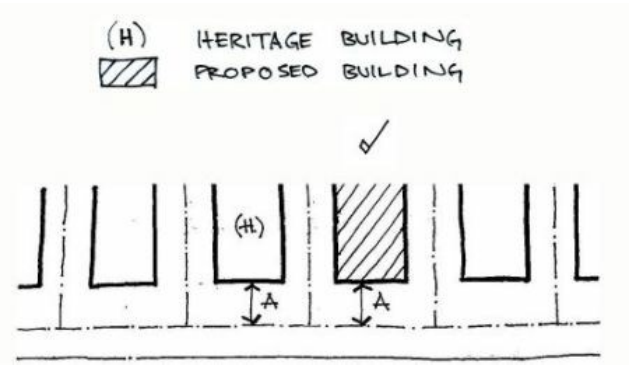

Figure SC6.3.4.1 Illustrates appropriate front setbacks for development adjoining a heritage place. "A" is the street setback distance.

(b) in instances where the significance of the heritage place includes its difference in setback to the established street pattern, the setback of new works ought to maintain this significance (as shown in Figures SC6.3.4.2- SC6.3.4.6); and

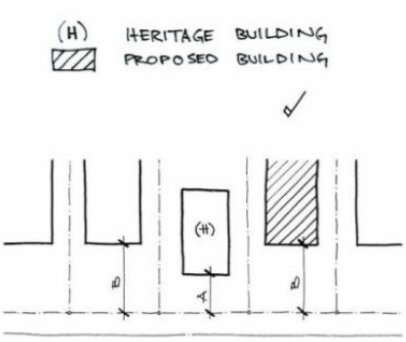

Figure SC6.3.4.2 Illustrates appropriate front setbacks for development adjoining a heritage place. "A" and "B" is the street setback distance.

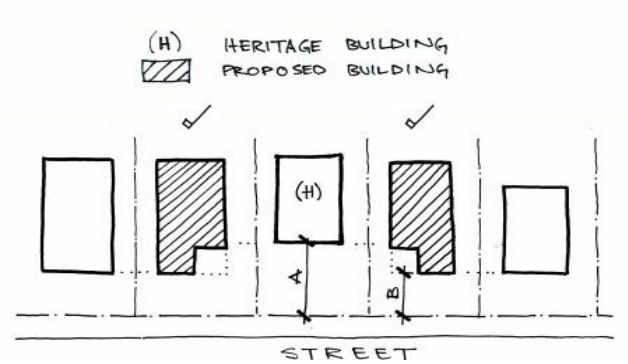

Figure SC6.3.4.3 Illustrates appropriate front setbacks for development adjoining a heritage place. "A" and "B" is the street setback distance

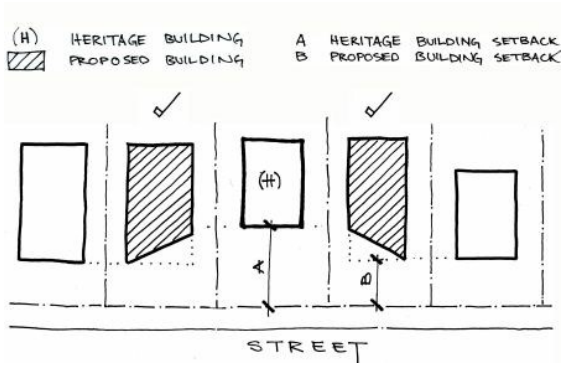

Figure SC6.3.4.4 Illustrates appropriate front setbacks for development adjoining a heritage place. 'A' and 'B' is the street setback distance

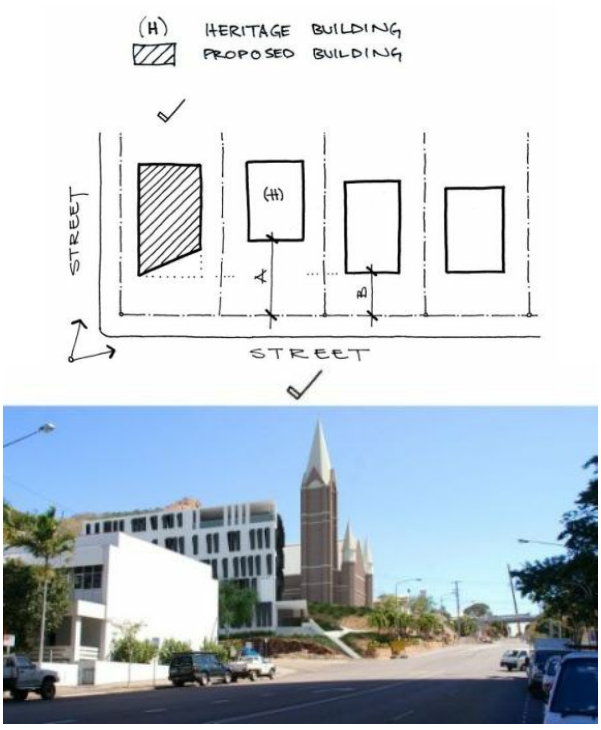

Figure SC6.3.4.5 Illustrates appropriate corner block front setback for development adjoining a heritage place. "A" and "B" is the street setback distance. The setback of new development is tapered to allow improved views to the heritage place.

(c) in order to achieve visual subservience to a heritage place in accordance with PO13, building form ought to be articulated into smaller elements to relate to scale, rhythm and spacing of the heritage place and its context (as shown in Figure SC6.3.4.6).

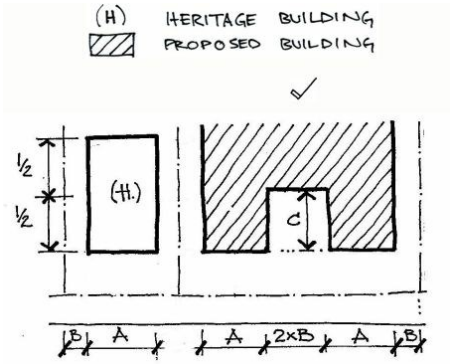

Figure SC6.3.4.6 Illustrates sympathetic building frontage rhythm. "B" is side setback; "C" (being the depth separation to get sympathetic building frontage rhythm) is 6m or ½ of "H" (heritage building depth)

SC6.3.4.2 Building height

(1) Where parts of the development are proposed to be taller than adjacent significant heritage elements, the following design guidance may be considered to demonstrate achievement of performance outcome PO13 of the Cultural heritage overlay code:

(a) proposed taller elements of the proposed new building are to be setback to diminish their impact (as shown in Figure SC6.3.4.7);

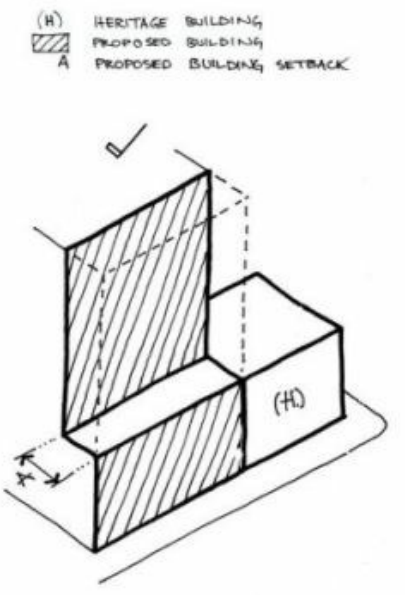

Figure SC6.3.4.7 Illustration of building setback of taller new building. "A" is equal or greater than 3m

(b) setback upper levels of the proposed new building to provide a transition between adjacent buildings of different scales (as shown in Figure SC6.3.4.8);

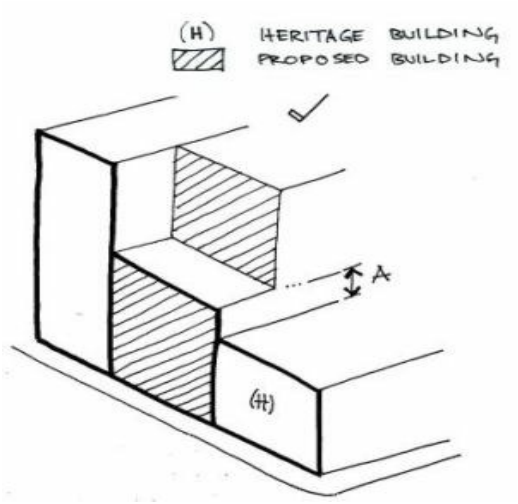

Figure SC6.3.4.8 Illustration of new building upper level setbacks. Dimension "A" is within 20% of the adjacent heritage building height

(c) provide an appropriate separation gap between the significant heritage elements and taller new elements (as shown in Figure SC6.3.4.9);

(d) building elements in the separation gap may be recessed and of lower height and/or different material than the heritage building, (as shown in Figure SC6.3.4.9); and

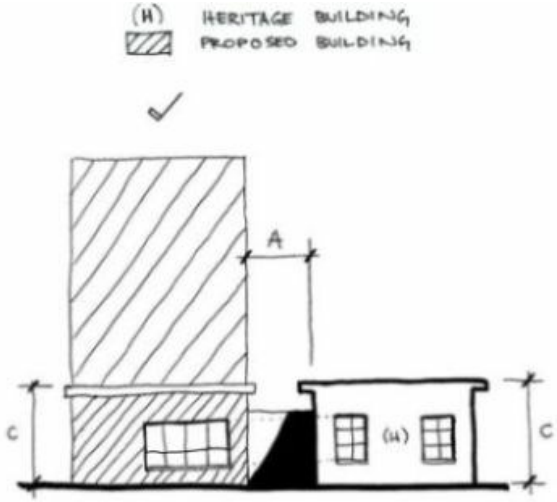

Figure SC6.3.4.9 Illustration of separation gap between contributing heritage elements and taller new buildings. "A" is Separation and "C" is the Common Reference Height

Figure SC6.3.4.10 An example of a desirable outcome – free standing tower provides a significant landscaped public piazza which acts as a separation adjacent to the heritage place

(e) new building works reflect a ‘reference height’ for the full width of the street frontage where the ‘reference height’ is consistent with the height of the adjacent heritage building (as shown in Figure SC6.3.4.11).

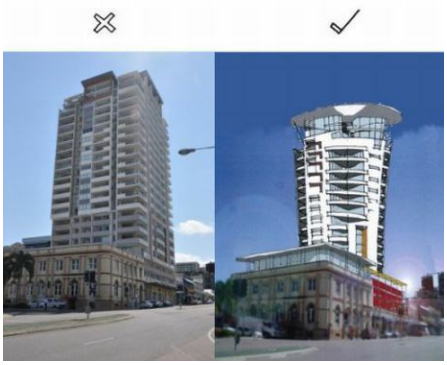

Figure SC6.3.4.11 An example of an undesirable outcome (left): tower element with no setbacks to the street boundary or adjacent heritage building which is detrimental to the otherwise uniform streetscape heights and the adjacent heritage building. An example of a desirable outcome (right): tower element setback from the street boundary and the adjacent heritage building to reduce the impact of its height and bulk. Podium element references the heights of the adjacent heritage building and streetscape.

SC6.3.4.3 Scale and form of development adjoining a heritage place

(1) The following design examples are associated with building scale and form and may be considered to demonstrate achievement of performance outcome PO13 of the Cultural heritage overlay code.

(a) in instances where the significance of the heritage place form includes its difference in scale to its setting, the scale of new works is to maintain this significance (as shown in Figure SC6.3.4.12); or

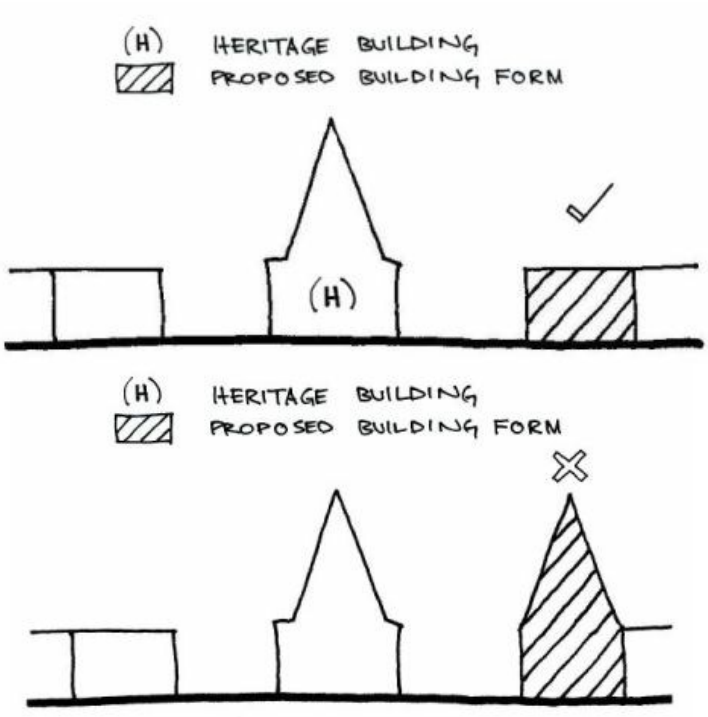

Figure SC6.3.4.12 Illustration of desirable and undesirable outcome

(b) in instances where the significance of the heritage place form includes its common scale and form to its setting, the scale and form of new works is to maintain this significance (as shown in Figure SC6.3.4.13); and

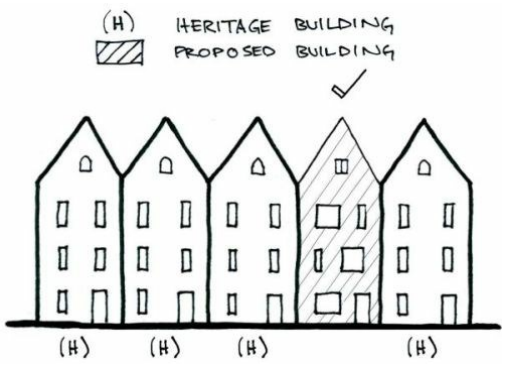

Figure SC6.3.4.13 Illustration of development maintaining common scale

(c) new building works should generally not directly copy the heritage place and as an example, should be readily distinguishable from it. Use of similar overall form, scale, proportions and materials is appropriate (as shown in Figure SC6.3.4.14 and SC6.3.4.15);

Figure SC6.3.4.14 Illustrates an example of appropriate scale and form

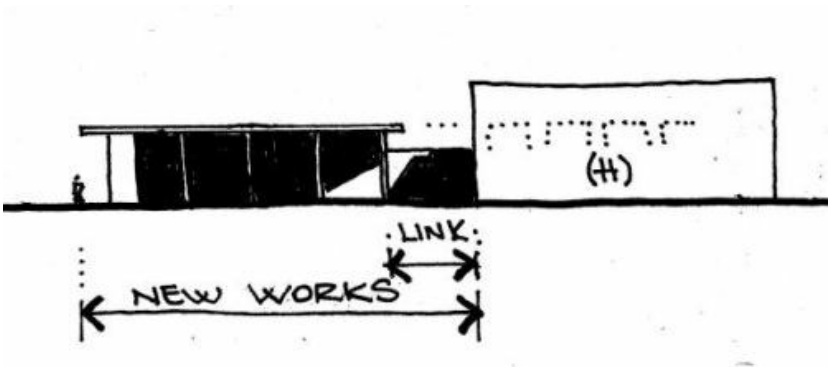

Figure SC6.3.4.15 Illustrates desirable outcome – pavilion type addition

(d) new building works should not reference non-significant features and atypical elements (as shown in Figure SC6.3.4.16 to SC6.3.4.17); and

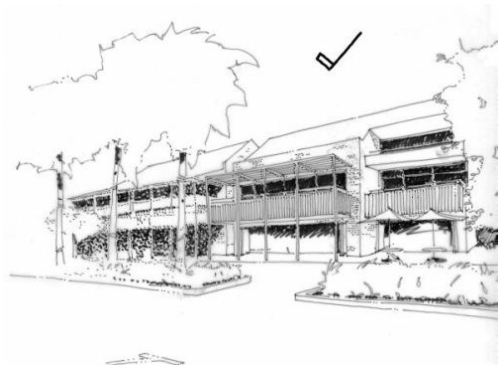

Figure SC6.3.4.16 Illustrates desirable outcome

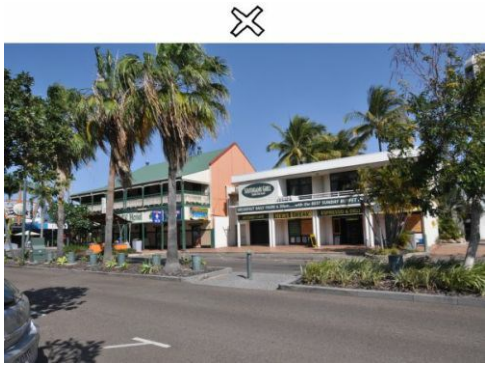

Figure SC6.3.4.17 Illustrates undesirable outcome - new building adjacent to a heritage place does not recognise characteristic articulation of materials, textures and colours (Palmer Street, Townsville)

Figure SC6.3.4.18 An example of an undesirable outcome: design of the new building referenced non-contributory features of the former streetscape, such as angled light poles that have subsequently been removed (Flinders Street East, Townsville)

(e) the quality of new materials is commensurate with those of the heritage place.

SC6.3.5 Development within a heritage place

This section of the policy provides guidance in achieving performance outcomes PO1, PO3 – PO6, PO8 – PO10 of the Cultural heritage overlay code associated with setbacks for development, building height, the scale and form of development, the heritage setting, landscaping and open space, building elements and advertising devices associated with development within a heritage place.

SC6.3.5.1 Setbacks for development

PO3 and PO4 of the Cultural heritage overlay code require that new buildings to be consistent with the significant features and values of the heritage place, including, but not limited to, built form and setbacks, maintain significant views to and from the heritage place and ensure that new buildings are visually subservient.

(1) To achieve the requirements of the performance outcomes in the code and allow for significant views to and from a heritage place to be maintained, the following design guidance should be considered.

(a) in instances where the significance of the heritage place includes its setback in common with the established street pattern, the setback of new works ought to maintain this significance (as shown in Figure SC6.3.5.1);

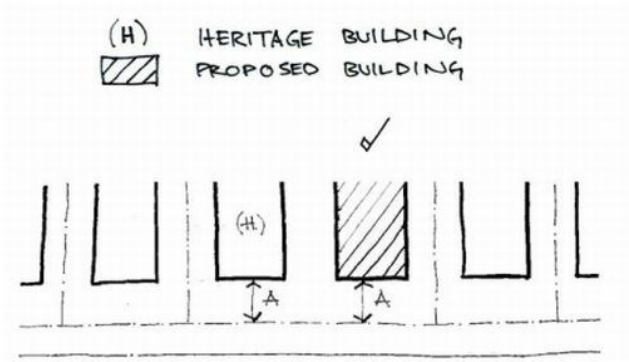

Figure SC6.3.5.1 Illustrates appropriate front setbacks for development within a heritage place, "A" is the street setbacks distance

(b) in instances where the significance of the heritage place includes its difference in setback to the established street pattern, the setback of new works ought to maintain this significance (as shown in Figures SC6.3.5.2 to SC6.3.5.3); and

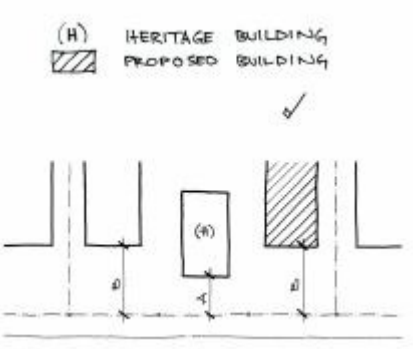

Figure SC6.3.5.2 Illustrates appropriate front setbacks for development within a heritage place, "A" and "B" is the street setback distance

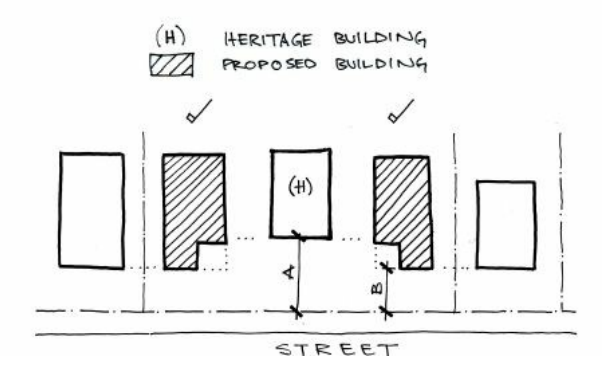

Figure SC6.3.5.3 Illustrates of appropriate front setbacks for development within a heritage place, "A" and "B" is the street setback distance

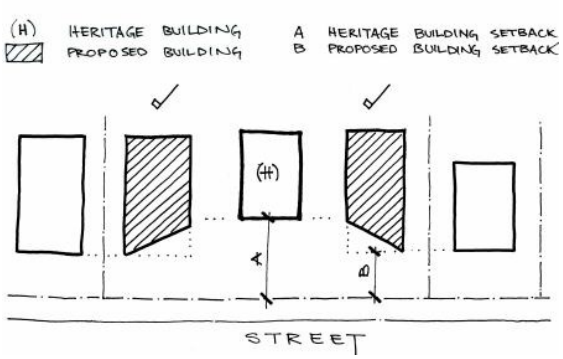

Figure SC6.3.5.4 Illustrates appropriate front setbacks for development within a heritage place and development adjoining a heritage place. "A" and "B" is the street setback distance

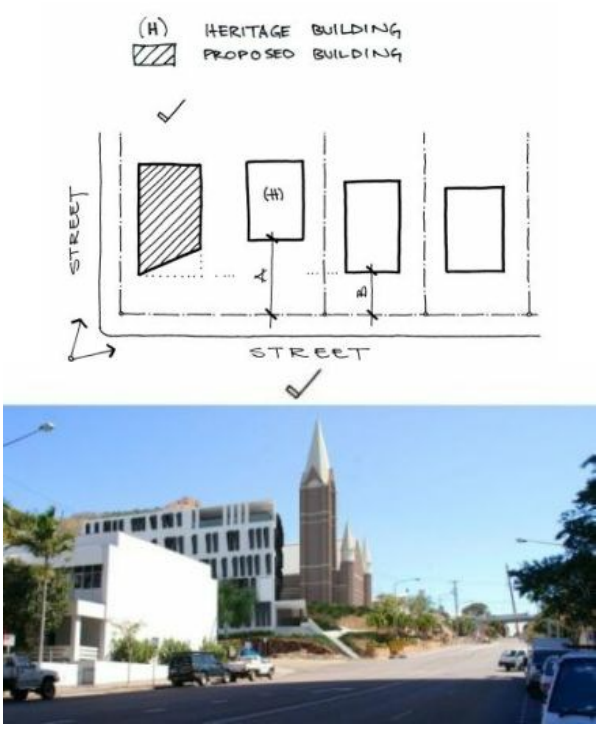

Figure SC6.3.5.5 Illustrates appropriate corner block front setback for development on a heritage place. "A" and "B" is the street setback distance. The setback of new development is tapered to allow improved views to the heritage place.

(c) new developments should adopt side setbacks that are common with the heritage place, unless this would diminish a significant feature of the heritage place (as shown in Figure SC6.3.5.6).

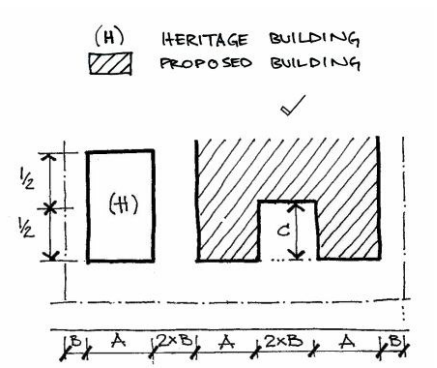

Figure SC6.3.5.6 Illustrates sympathetic building frontage rhythm, "B" is side setback and "C" (being the depth separation to get sympathetic building frontage rhythm) is 6m or ½ of "H" (heritage building depth).

SC6.3.5.2 Building height

(1) Where parts of the development are proposed to be taller than adjacent heritage elements, the following design guidance may be considered to demonstrate achievement of performance outcome PO3, PO4 and PO5 of the Cultural heritage overlay code.
